This historical research guide was assembled purely for pleasure and personal reference of hobbyists and those restoring game uniforms, and is not a publication of Major League Baseball. All team designs, trademarks, photographs and logos within are respectfully borrowed for illustration purposes only of its non-fiction subject matter. Illustrative photos documenting the use of team jerseys on-field are borrowed from MLB.com except where otherwise credited, or watermarked.

Because this guide contains thousands of photographs, many that readers have sent to me it, if a photo is used that belongs to you that is not properly credited or if you object to its inclusion, please notify me and it will be remedied. Throughout, low-res photos from news service. often watermarked are included under fair use to show these jerseys being worn in games.

Quoting or reprinting (including web posting) from this book is permitted so long as it is done selectively (no more than a few pages) and either the entire page is shown **(including the website address at the bottom of each page)** *or if in print by referencing the book's website with any inclusion:*

Foreword

As sports fans, we're used to having historical information at our fingertips, whether on the back of a baseball card, in a statistical almanac, or on the Internet. It takes only a moment to confirm that Wade Boggs hit .366 in 1988, or that Steve Carlton finished his career with 329 wins. But when it comes to uniforms, the historical record is much sketchier, with spotty documentation and lots of misinformation floating around. Simply put, there's no Elias Sports Bureau for uniform design.

But there's something close, at least for baseball uniforms of the past four decades: Bill Henderson's *Game Worn Guide to MLB Jerseys*. As a guy who's lucky enough to write about uniforms for a living, I'm doubly lucky to have access to this tremendous resource, which makes my job easier and more pleasurable on a near-daily basis.

Aside from providing a much more thorough and complete listing of jersey styles than any other available reference source (including coverage of patches, alternate styles, throwbacks, and other related issues), *Game Worn Guide to MLB Jerseys* also offers one huge advantage over other uniform databases: It's based on photographs, not illustration templates, so nothing is left to the researcher's interpretation and nothing gets lost in the translation from photo to template. Instead, you see photos of the actual uniforms, which ensures the most accurate information possible.

Someday maybe Bill will get around to providing us a similar resource for the flannel era, but that's another project for another day. For now, the pages the follow provide the best available documentation of the modern Major League Baseball uniform. Enjoy.

- Paul Lukas, "Uni-Watch" blog and columnist

Photo credit: Paul Lukas

Preface

It was some thirty years ago in 1996 that the modest "First Edition" of this book appeared. It was about 100 pages long, had no photos, and I printed it for the three friends who asked me for copies. With this Tenth Edition of 2025, we have now grown to more than 5,500 pages and have cataloged thousands of major facts as well as tiny obscure details into a body of work that would have been unimaginable to me "back then."

The original reason I started compiling this reference is more valid today than it was when I began: as a collector, I recognized there were a lot of fake "Authentic" jerseys out there, or supposedly team-used ones being represented as something they weren't. And the explosion of the Internet (which barely existed 20 years ago) has made the problem both better… and so much worse! "Better" in that there are so many jerseys being sold by so many individuals that there are opportunities and bargains galore. "Worse" in that the number of fakes, misrepresentations, counterfeits and frauds has increased exponentially.

Originally, my handwritten notes that eventually became this book simply detailed which years memorial and commemorative patches were used, when player names-on-back (NOB) were used or not, when nameplates were used, when team styles changed from pullovers to button-fronts, and a host of other details that would allow me to tell with a simple search when something was being represented as something it was not. Our research has grown to so much more.

Way back in 1995, teams brought some real meaning to the word "uniform," as in implying the definition of "common and unchanging." Teams had a home jersey, a road one, and a batting practice top. A few teams had alternate jerseys. And the phenomenon that became "throwback games" had only just started and by that point there had only been a handful of them, less than a dozen.

Baseball in the 1970s: Traditional themes began to give way…

...to mod colors and big hair. This was the era I grew up in.

© GameWornGuides.com

Fast-forward to 2014, and the vast majority of teams had at least one alternate jersey, while some had three or more. Several had adopted multiple batting practice jerseys as well. There are alternate uniforms worn on Sundays, Throwback Thursdays, Military Salute Wednesdays, Negro League Tribute Weekends, Ethnic Heritage Celebrations, Memorial Day Camouflage league-wide, and more Turn Back the Clock games than I could have ever imagined. For example, in 2014, the Cubs, one of the most tradition-oriented teams in baseball, and that hasn't substantially changed its home uniform in decades, wore a total of *fifteen different jerseys* in games that year alone, not counting warm-ups. Through it all, I have documented every single one of these games and jerseys. Had I not started tracking them in 1995, I can't imagine tackling the task of going back now to research them all from zero.

Our hobby exploded when performers in the popular music industry began wearing oversized MLB jerseys in the early 2000s. It suddenly became fashionable to wear team jerseys in public. This period brought amazing growth in the interest for both store bought (retail) and game-worn Authentics, but also polluted the hobby with more fakes and rip-off counterfeit jerseys than anyone could imagine. And these fakes will continue to surface, circulate, and resurface for years to come.

By 2015, the "hip hop" fashion craze has long passed. Today, getting a great deal on authentic jerseys on eBay or other auction sites is a real possibility–if you know what to look for. The truth is, there are many bargains out there among the fakes, because with all the junk being sold, many buyers have become gun-shy about on-line purchasing. That, coupled with a great increase in availability of game worn jerseys by the teams means that, *if you know what to look for* you can get some real steals. Keep this guidebook always handy on your tablet and desktop, and *you* will be one of those people who knows what to look for and doesn't get fooled, while picking up some great bargains as well.

Bill

I believe that game worn uniforms should not be banished to hang unseen in the closet. However, even my friends think I am a little bit bizarre when I show up wearing one in the local softball league (in Tokyo, Japan, where I lived 2003-2004, here, wearing game-used Pittsburgh Pirates Turn Back the Clock uniform, pants and all).

Classic Threads: 1979 All Star Game NL Team Photo

This photo is a classic to me, as it perfectly captures what baseball looked like when I was growing up. Taken as the away-team photo for the 1979 game, these players would have been dressed in their road grays. Yet look at what passed for "road gray" in 1979. There are a few grays, but mostly blues, orange, rainbows, golds as well as a smattering players wearing that new garment that came to be known as the "Batting Practice Jersey." Pete Rose (center row, sixth from the right) actually wore his Phillies maroon batting jersey as his game jersey during that All-Star game, for some reason.

Tenth Edition Notes

So much is new in this edition. It's been five years since our last update was released. While we had been on a three-year revision cycle for many years, we waited five seasons this time for a couple of reasons. When Nike took over making MLB on-field jerseys for 2020, they simply put their "swoosh" logo on Majestic's designs. Everything was the same as 2019; fabrics, garment construction, lettering, and trim. In actuality, Nike simply had acquired Majestic's production facility and even all its employees, continuing production with 2019's status quo. The plan apparently was for Nike to introduce their planned changes for the 2020 season. But… the pandemic intervened. It disrupted everything; shortening the season, prevented fans from attending ballparks for a whole year and messing up the manufacturing supply chain so that the materials that Nike needed to make and distribute its planned new product were simply not available. Nike decided to wait to make their changes until things settled down. That took until 2024.

For the 2024 season, Nike made major changes to nearly everything, and to be blunt, it was not well received. Besides changing the fabrics used to make the jerseys and the overall construction of the garments, they shrunk the size of front team scripts; altered front number fonts; eliminated embroidered sleeve patches, replacing them with cheap-looking printed ones; and made player names and numbers much smaller. You can read all about the many detail changes within, but there was an uproar of complaint from both players and fans, eventually causing Nike to make the unprecedented move to retreat back to older style lettering but still on the new style jersey template for 2025. More changes are planned for 2026, when we are told that Nike will abandon their jersey template and go back to the old Majestic designs and fabrics. This edition of The Game Worn Guide will be complete for the changes for the 2025 season up through June 1.

In this edition, aside from the usual error corrections, additional facts and improved photo substitutions, for the first time we are including dozens of actual authentication documents- my Letters of Professional Opinion on jerseys I have evaluated over the years. This is a valuable resource for those who want to take a deeper dive into authenticity. It might surprise to you to see how many jerseys featured in these letters have been restored by me to their original configuration, after their trip from MLB to the next year's spring training, then to the minor leagues. I hope you will enjoy and benefit from this enhancement.

Updating and editing a research book of this size and scope is a Herculean proposition, and I am grateful again for the assistance of Editor Rick Subrizio, who was responsible for nearly all of the post 2020 content within. Rick collected all of the data, news releases, and photographs for the Nike 2024 league-wide changes, and then did it all again for the 2025 "correction". I also want to recognize the contributions of collector Steve Kraljic who not only helped with this edition's content and error checking, but assisted by submitting photos of many jerseys from his own massive and diverse collection.

Since my retirement from corporate life in 2017 and starting my new business, the Dream Shop, I've been immersed in restoring and authenticating jerseys daily. And while some are from everyday players, I've had the privilege of handling some really rare and valuable pieces, including jerseys of Babe Ruth, Willie Mays, Jackie Robinson and Mickey Mantle among many others. It seems with every authentication and restoration, I learn something new. Sadly, I also see my share of things that are inauthentic and contrived, many with ill intent. I have updated the chapter in this edition regarding authenticity with some of my latest learnings. You can read about some of my work in the Dream Shop chapter of this book, visit my website, https://thedream.shop/; and please follow my blog on Facebook; https://www.facebook.com/gameworngguides.

The tenth edition of *The Guide* covers 55 seasons of history in exacting detail. While some readers enjoy casually skimming the content and pictures, others use it as a serious reference that they consult before investing in anything being sold as accurate and original. I am glad for all of you and our shared sense of community.

A part of my collection, "Phillies Uniforms of the last 50 years" in 1997, loaned out and on public display.

The Scope of this Research

This guide covers all Major League Baseball game-worn jerseys and All-Star Game batting practice jerseys from 1970 through 2025, as well as regular season batting practice jerseys issued through 2023. This edition includes all team uniform changes announced prior to July 1, 2025. Within, I have not attempted to include jackets, hats, stirrups, pants or any other uniform accessories, though sometimes we may mention them to add color or context.

Importantly, I always include information on the official manufacturer of each season's team-worn game jerseys. I have provided photographs of team tagging where space allows, and where I am unsure of any facts, I note this and avoid making any assumptions. "Team Tagging" is covered in detail within. Missing, falsified or modified team tagging are the most common ways that collectible jerseys are misrepresented in this hobby. Team tagging does not usually "fall off" or get lost without some help!

While I continue to study game worn examples with great interest, and I believe that all the examples I have shown in this guide are authentic, it is entirely possible that I have shown something believing it is correct and authentic when it is not. avoid using photos of claimed game worn jerseys of star players unless I have personally authenticated them, since the possibility of one of these being a fabrication is much more likely.

With each new edition, I have replaced photos that knowledgeable readers have called into question. Please always use caution and your own common sense.

I have striven for accuracy in this guide, but I am certain that it is not 100% error free. Every time I discover another bunch of old photos, I learn something new!

"Never" and "always" are words I try to avoid. Just when I think I have found an ironclad rule, it seems I will find an exception to it. It helps to remember that these uniforms were sewn by real people under deadlines in less than ideal conditions mostly without guidebooks, templates, or unbreakable rules.

I have used the best photographs I have of actual game worn jerseys wherever possible. I have backed up my research with period news photos and sports cards photographs. When I am unsure of a fact, I will note it by saying "More Research Required." I do not want to introduce my opinions as facts, and as I uncover evidence, I update my research for future editions. And always, comments and corrections are welcome! Please send them to me.

Some more information on how research for this publication was done is included in the final chapter, "Acknowledgments."

One final word – while I am accessible to all readers through email and social media, I have a firm policy of not casually offering comments on the authenticity of items, nor will I ever speculate on the value of items. Please do not take this personally. I provide my expert services as a professional authenticator to the trade, and one of rules that authenticators must follow is to *always* make thoughtful and thorough evaluations of all items. I charge fair fees for this service.

Should you have any item you want evaluated, please contact me. Keep in mind: this publication is a source that most authenticators depend upon as a reference, so in using it you may find evidence to allow you to make your own educated assumptions.

Bill

(2002) Sammy the dog (RIP, and I miss her) politely suggests a far better use of your author's time after watching him spend hours spreading shirts on the floor and climbing on the step-stool to take photos of them.

Chapter 1
Introduction

The Game Worn Guide to MLB Jerseys 1970-2025, Tenth Edition
William F. Henderson

The reference you are using is the most complete guide on the subject written, documenting every Game Worn and Retail Authentic Game Jersey covering the seasons 1970 to 2025. Since its modest first edition from 1996, it has found several avid audiences:

- Researchers and trade professionals including auction companies looking to determine the facts of authenticity of jerseys they are evaluating to buy or sell.
- Restoration professionals and lettering shops that are committed to lettering their clients' jerseys correctly.
- Fans and casual collectors, perhaps the largest group of readers, mostly people who find this an interesting topic, and this a fun reference book to own and refer to.

In this first chapter, we will discuss some categories and definitions for MLB jerseys that you will see frequently used throughout this book: **Game Worn**, **Team Issued**, **Retail Authentic**, and **Retail Replica**. We will complete this first chapter with a brief overview of the hobby of collecting MLB jerseys.

Definition: Game Worn Jersey

Game Worn (or Game Used) jersey: A jersey that is lettered/numbered, issued to and worn by a player in a game, even an exhibition/Spring Training one. It is also used to refer to player-used **Batting Practice jerseys** whether they were used in an actual game or not. Likewise, uniforms worn by coaches during the season and on the field of play are commonly referred to as "Game Worn" even though the coaches are clearly not playing in the game.

Many actual game worn jerseys prior to 2010 have no real provenance—or traceable concrete proof—that they were worn in an MLB game. And truly for the tens of thousands of jerseys worn over the years by thousands of everyday players, to most collectors that fact matters very little. 95% of all the game worn jerseys in the hobby are like these. Fans collect them because they want to have a piece of the game, or something worn by a real MLB player. In reality, most of these jerseys, especially from recent years, may sell for about the same as a retail-store Authentic lettered for a big-name player. In the case of non-famous, everyday players, especially those who had MLB jerseys made for them by the team in preparedness, but who never actually made a pro roster, their jerseys may often be purchased for a fraction of the cost of a new, blank retail one.

Photo of the some of the players taken during the 1979 postseason MLB Tour of Japan. Players wore their home-city uniforms as they toured, and the combination of colors shows just how colorful baseball looked in the 1970s.

The remaining 5% of the jerseys are something else entirely: they are claimed to have been worn by stars of the game, and/or they are said to be from a specific game of historical importance that makes them more collectible, and therefore more expensive and valuable to a collector. These jerseys really require proof to cement their collector value. It is an adage of collecting anything that *an item is worth only what the next buyer will pay to own it.* A whole chapter of this book is dedicated to the productive pursuit of "Game Worn" jerseys.

© GameWornGuides.com

Definition: Team Tagging

refers to team-added sewn-on tags usually found inside the garment, or on the outside on a normally hidden shirttail. These are often used for team inventory purposes. Most team tags are added at the very beginning of the jersey's life; even before a player name and number are applied. And, some game worn jerseys are team-tagged while others are not. Each team has its own tagging policy, method and tag coding and those will vary depending on the year of issue and the jersey's manufacturer. During the 1970s through the 1990s it was very common for a team to source jerseys from multiple manufacturers in the same year, and often the tagging is different depending on the jersey manufacturer. In this book we have tried to show as many examples of team tagging as possible, but we certainly do not claim to have every example for every team.

Additionally, some teams went long periods without applying team-tagging at all. These include whole blocks of years for the Marlins, Padres, Phillies, Devil Rays, Diamondbacks, Brewers, Royals and several other teams. When they tag, some teams may include a simple tab with the year on it, others have sewn in neck or tail tags with codes including a player number, size, year, set number and even the player's name. Some teams tag game jerseys but not batting practice jerseys. Your team's detail chapter will tell you what to look for in greater detail.

A varied selection of team tagging. Even on one specific team, tagging codes, styles and locations vary by manufacturer and by year. Rarely is a specific style used for more than a few years before it changes.

Definition: “Team Issued” Jerseys

Team Issued jersey is a term that can be vague and is used in a number of different cases. I will list some here, and you will note that as we move further down the list, definitions can become less clear and even be dishonestly applied:

- ***A jersey that was made for and indeed worn by a player in a game (or games) but is being sold without an authenticator’s mark that it certifies it as game worn.*** This is quite common, when all team jerseys are collected up by the team at the end of a season and sent off to be sold.
- ***A jersey that was made for team use and sent to the team, was an extra and never actually worn by the player whose name and number is on the back,*** or lettered and issued to a player who never made the team roster and therefore never played in a game.
- ***A jersey that was made for team use and sent to the team and was numbered with a random player number but never issued***, and then was sold by the team at the end of the year having never been issued to anybody.
- ***A jersey that might have been made for team use and sent to the team, was never numbered and never issued,*** and then was sold by the team at the end of the year having never been issued to anybody. It may carry team tagging, or it may not.
- **But, it can also be used to represent a jersey without team tagging that was never sent to the team but is made to “team specs”** and carries one or more hallmarks that only a very knowledgeable person would recognize, such as specific code numbers on a manufacturer’s tag. These jerseys are especially common at the end of manufacturer style runs, when teams change uniform designs, or manufacturer contracts end and when manufacturer inventory is being cleared out to wholesalers.

Left: *This Royals jersey was made by Russell for the team, then cleared out as disposal inventory when Russell lost the team’s contract to Majestic just before the 2005 season. When I got it, the numbers were on it but no name. I added the name and nameplate. There are no red marks on the jock tag to denote this as “disposal” merchandise.*

© GameWornGuides.com

Left: *This Indians jersey was tailored, team tagged and numbered by Russell, but never made it to the clubhouse for some reason. Perhaps it was because the person this jersey was tailored for did not play on the 2002 team?*

Far left: *the most common of the misleading "team issued" jerseys, the minor league jersey. How do we know? First, this specific design was never used by the MLB Padres, and Rawlings did not have permission to put its sleeve logo on MLB jerseys in 1997. Minors and MLB both wore the Jackie patch in 1997. Seller claims that this is authentic MLB.*

Left, and Above: *Russell never made this style jersey for the Padres, but clearly they made at least one team set before losing the contract. This one has no red mark on its jock tag. How would you know this can't be team issued? The charts in this book detail the manufacturer for every year as used by each team. Incidentally, the Padres also decided not to use this NOB font. So, while this is an interesting curiosity, it is just not game worn or team issued.*

© GameWornGuides.com

*"***Team Issued"*** can also be used sometimes deceitfully to represent a jersey that was used by one player and then converted to show the name of another (usually) star player when *it was not worn by that player.* To delicately skirt honesty, these jerseys are sometimes described like this: "Astros 1982 team issued and tagged jersey, #34 Nolan Ryan." There may be no overt falsehood in that statement, but the impression is clearly inferred that it was Nolan Ryan's 1982 Astros jersey when it was not. It was someone else's, converted to Ryan's number.

There are other scenarios as well--starting in the early 2000s and in increasing numbers annually, some teams routinely began to order extra uniforms for its players, knowing well that if they are not needed by the player that they can be sold in the team's Authentic store to eager collectors. Team issued uniforms will generally carry the same team tagging as game used ones.

But even in the 1980s and 1990s, it was very common for teams to order extra jerseys at the start of the year, in a variety of sizes, perhaps even sewn with non-issued and unused player numbers, so that a jersey could be made available at a moment's notice for a player called up from the minors. These jerseys sometimes carry a simple two-digit year mark, while jerseys issued to players at the start of the season may have a longer code. Again, especially before the 2000s, teams would commonly strip player names off of jerseys and reuse them for other players, or even use them in Spring Training the next year. Especially prior to 1990, teams would send whole sets of uniforms to the minor leagues and they would be reused there.

Removing names and numbers is relatively easy to do with a seam ripper and a warm iron, and this practice is the main reason why some teams have used nameplates for player names, as they are far easier to remove than individual letters in a name. Today recycling like this is less common, both because of the high cost of labor and the fact that used jerseys are easily sold to fans.

Actual team issued and game worn Phillies jersey from 1986, yet still may be fraudulently positioned as a blatant fake. How can that be? To learn its secrets see the chapter on ***Game Worn Authentication****, ahead.*

© GameWornGuides.com

In 2005, when Majestic won the contract to supply all game jerseys to MLB, they committed that they would sew and overnight-ship numbered and lettered jerseys to teams as needed and on demand. While this perhaps lessened the need to have lots of extras on hand at the stadium, surely some were always ordered in advance for emergencies. We have yet to encounter an MLB team that does not have a trusted local tailor or seamstress to use in a pinch.

My reason for going into all this detail? Simply, be aware that any jersey bearing the name of a famous player and with team tagging in place may well have been altered and re-lettered in the past. **Team issued** does not mean **famous player game worn**, and a jersey showing game use may not have been used by the star player whose name is lettered on the back. Team issued jerseys may have been sold by the team unused and unnumbered, or with a rookie call-up's name and number on back, only to be changed by a future owner.

There are a few ways to guess if Russell jerseys of the 1992–2004 period are team issued. And starting with Majestic's jerseys of the early 2000s, inside seam tagging codes tell even more about who the jersey was made for—the team or the retailer. We cover all of this in detail in the pages ahead.

Starting in 2001, MLB began to implement a hologram-based authentication system. Consisting of a tamper-resistant hologram sticker affixed to the garment, serial numbers allow one to look up the provenance/origin of the item. It is important to note that while nearly everything purchased by the teams is hologrammed today, it was not always that way**. From 2001 through 2010 (or so) only historically significant items were tagged**. But now, according to MLB, they have an authenticator on the field at every game, tagging game-used items on the spot, and team issued items in the clubhouse. Much more information can be found on the MLB.com website, by clicking here:mlb.com/official-information/authentication

Collecting "Team issued" is fun, and if you are a collector of game jerseys made prior to 1980, that's about all there is to collect, since very few non-team issued Authentics ever existed.

© GameWornGuides.com

(Retail) Authentic Collection/Diamond Collection Jerseys

"Authentic" jerseys made purposely for retail sale really did not exist prior to 1987. The Sand-Knit Company had a license to make "Authentic Merchandise" team jerseys for some teams from about 1980 through early 1986. In that time period, some teams offered team spec jerseys through special offers to a very limited population of buyers. Rawlings won the contract for on-field jerseys in 1986, and gained the license to make some teams' jerseys for retail sale in 1987.

But the actual real marketing of these Authentic-branded jerseys didn't begin until Russell won the contract for on-field jerseys for the 1992 season, and simultaneously earned the right to make the newly-branded *Diamond Collection* authentic jerseys for sale to fans for all teams. Sometimes, these **Retail Authentic** jerseys might differ slightly from team-spec (or team issued) jerseys in a few minor ways, detectable to the expert. Starting in 1992, all Authentic game jerseys sold in the store with Diamond Collection tagging were exclusively made by Russell, even though a specific team still might use Rawlings or Wilson jerseys on the field. (Russell and Majestic shared the BP jersey retail market.)

Most, but certainly not all of the jock tags found on Authentics since 1992.

© GameWornGuides.com

On the store-bought Authentics, the style or color of buttons might be different, certain patches or Velcro closures might be missing, some aspects of team logos may be layered twill instead of chain-stitched embroidery found on the on-field Authentics, and sometimes, especially with batting practice jerseys, the fabric of the store-bought models might be noticeably more lightweight. Starting in 1992 and coming right up to the present, you would generally not find Authentics for sale in anything but a specialty store, and even there, if any are on display they will usually be on the top rack behind the counter where you need to as a clerk's help to see them. Retail Authentic jerseys in 2015 typically sold for between $180 and $250 unlettered with player name or number, and by 2025 this jumped to over $400 in some cases; and when compared by most non-discriminating buyers to **Retail Replica** jerseys that they usually hang side-by-side with, they are not worth two to three times the price.

These photos from various teams' "Team Stores" show us that most of the display space is taken by replica MLB jerseys, which are less than half the price of Authentics, and frankly most people don't know the difference. ***Bottom right:*** *Team issued Authentics offered on a rack at the Mets Clubhouse store for $200 each.*

© GameWornGuides.com

Going back in time, we can divide the period of 1970–2025 into approximately six basic time segments that are useful for collectors to consider:

1970–1979 (or thereabouts): Teams issued players one or two sets of uniforms for the year, and often times used them a second year or sent them to Spring Training or to the minor leagues to be used until they literally fell apart. Game worn jerseys for common players or coaches had little cachet for anyone as memorabilia in the hobby so they generally were not saved or preserved. Authentic jerseys made to team spec were not generally available to the public in this time period, and demand for them is nonexistent. It may seem hard to believe today, but it would have been very strange for any adult to be seen in public wearing one of these, even at the game. You usually had to know somebody within the team to get one. However, extras for famous players were sometimes made to give as gifts by the player or the team. Team-spec replicas are therefore rare. A very high percentage of MLB jerseys were sent to the minors and reused to death.

My rule of thumb: for each year and each team, a few dozen were made.

1980–1986 (or thereabouts): Just like the period above, except now for the first time very, very limited availability of Authentic team spec jerseys are offered to the public, but only by some teams and these are usually sold through special team gift shops on special order. These were certainly not mass merchandised items; one had to be truly dedicated to try to find one. Making a convincing copy of this era's game worn jersey is possible, but requires real dedicated effort. Sending used MLB jerseys to the minors or spring training for reuse is still the standard procedure in MLB. Unused extras made for star players are more commonplace.

My rule of thumb: for each year and each team, hundreds were made.

Frank Fitzpatrick, longtime sportswriter for the ***Philadelphia Inquirer*** quipped something that I have always treasured, in an article called, **Old enough to recall a distant age** (June 13, 2007)**:**

"…I'm so old I remember when the only Philadelphia fans who wore team jerseys to games were 8-year-olds who didn't know any better."

© GameWornGuides.com

1987–1991: For the first time, manufacturer logos are permitted to appear visibly on jersey sleeves, and a small, limited channel of distribution begins. For the first time authentic team jerseys are sold at retail, but through a very few specialty outlets. Even "common" actual game worn jerseys gain some small collector cachet, and creating a convincing copy of a famous player's game worn jersey is now possible for almost anyone with the pressing desire. Wearing replica jerseys to games becomes acceptable and even common for fans, but seeing real Authentics being worn by fans is still rare. They don't make many, distribution is still extremely limited and few are willing to pay over $125 when they can buy a convincing authorized merchandise replica for $35 Famous-player replicas made by the team as gifts or specifically for signing events grow more and more common.

My rule of thumb: for each year and for each team, a few thousand were made.

My rule of thumb:for each year, and for each team, tens of thousands were made.

1992–1999: "Diamond Collection" branding is born, and while distribution is still limited and the jerseys out of the price range of most fans, some general marketing begins in mall specialty stores and through MLB Authorized catalog sales. Players on the field wear jerseys with the Diamond Collection tags on the shirt tails, and not all teams use inventory tagging. Creating a convincing copy of a game worn jersey is very easy indeed. Some teams begin to sell very limited quantities of real team issued and game worn jerseys to fans through team stores. Signing events are very common, famous player jerseys cited as "game worn" are frequently signing event jerseys.

2000–2009: Thanks to the fashion leaders in the hip-hop music world, in 2000, wearing a MLB Authentic jersey becomes very cool indeed, and this change happens nearly overnight. Millions of full-priced Authentics are produced and sold at retail, some convincingly lettered with player names and numbers by licensed shops, others lettered with a poor imitation of the real thing. At the same time, teams belatedly discover that game worn jerseys will sell for big money in their gift shops and through stores on-line. Some teams may make a dozen or more complete sets of jerseys for players to wear during the season, and after only a few games they are retired and sold at retail with an authentic game worn certificate. And thanks to the popularity generated by the rappers and the fashion market, Asian-made counterfeit "*Authentics*" make a strong appearance on the market. As the number of team-tagged authentics that have never been game worn grows, photo-matching grows as the primary accepted way to determine if a jersey is actually game-worn.

My rule of thumb: for each year, and each team, hundreds of thousands were made. I suspect by 2009 there are more retail counterfeit fakes being sold than real jerseys.

Uniform tops are available in numbers 10, 14, 19 and 20 only. No names.

Above left: *This ad and an order form was found on a full page of the Phillies "Phan-o-gram," their monthly newsletter for season ticket holders back in the late 1970s. This was the first time authentic Wilson uniform jerseys were offered for purchase by fans. I know, because I coveted getting one, and prior to this the answer was "not available." Notice the price—$45.95 each, with no player names were allowed and the numbers 10,14,19, 20 only (Bowa, Rose, Luzinski, Schmidt). By 1981 the price had jumped to $79, without a player number on back, which now costs extra. The brochure/catalog is at right. It took six weeks for my #10 baby blue jersey to arrive. And when I wore it, back then people would stop me on the street and ask, "Are you Larry Bowa?" That's how unusual it was to actually see an authentic MLB uniform back then. And If owning an actual player jersey was rare, actually wearing it in public was unheard of.*

© GameWornGuides.com

2010-and later: New to collecting? You are in luck. Never before have so many team issued and game worn authentic jerseys been available for fans to buy. If you want a real MLB jersey to wear or hang on your wall, you can get one worn by a "common" player usually for far less than the cost of a store bought Authentic lettered with a famous player's name and number. Teams no longer generally reuse and recycle uniforms within their system. Ordering new ones is too easy, and fans have shown a market for buying the old ones for reasonable prices. Couple with that the cost of labor for stripping old names and numbers off of used jerseys to re-use them, and it is simply not worth the teams' bother.

There is a stadium shop at almost every ballpark where fans can buy team issued or game-used jerseys. On eBay, if you stick to reputable dealers who list their merchandise by the hundreds of items on-line every day, you can surely get a good deal. Game used batting jerseys regularly sell for under $60, while many game used jerseys from common players sell for under $150.

But by 2015, some teams began to intentionally order dozens of extra team and player bar-coded "team issued" authentics from Majestic with the sole purpose of selling them at the stadium stores and other affiliated team-operated outlets. This really stretches the concept of "team issued" as this merchandise is being created specifically to be sold as souvenirs. Know what you are buying. Don't mistake team bar-coded merchandise as game used just because it has official looking stickers on it. Massive over-ordering of special events jerseys, like Father's Day and Mother's Day ones caused these to be dumped to discounters and sold for as little as $39. Check holograms and serial numbers against the MLB.com database. If it is not listed, it was probably never issued.

At the same time, "buyer beware" of the explosion of fake Authentic jerseys on eBay and other sites. There is an entire chapter dedicated to this topic in this book. Simply, if the deal appears to be too good to be true, it probably is a fake. I scan the on-line sites regularly, and I would say that perhaps 75% of the jerseys listed there as "authentic" are Asian imported counterfeits. (Notably, there are several reputable vendors who sell team surplus and manufacturer close-outs and their stuff is 100% good.)

Fashion trends have shifted and the rappers are not wearing MLB jerseys like they were in 2009, a lifetime ago. But now when visiting the stadium, nearly everybody in the seats is wearing some kind of team jersey. This is different from even ten years ago when actual player replica jerseys in the stands were relatively rare. My unofficial stadium survey of "authentic jerseys" reflects that three quarters of all of them are fakes too. I attended a Phillies game with a Majestic executive several years back, and began pointing out all the fake Majestic jerseys that walked past. By the third inning he had heard enough of me, bought me a beer and hot dog and politely asked me to shut up.

Unfortunately, he knew what I know—that counterfeiters are like cockroaches… crunch one and another one pops up someplace else. Referring to this book will at least help you avoid making unfortunate mistakes with your hard-earned cash.

1947

This press publicity photo shows Rawlings' 1947 opening day lineup display of flannel team uniform jerseys, satin and wool team jackets and wool caps. In those days, each team could make its own deal with a manufacturer to supply the team's uniforms, and winning a pro team's business was a real feather in the cap of the company to promote other business.

Many "salesman's samples" were made by the factory to use as highly coveted giveaways to prospective clients or loyal customers. Other than these, the only way to get a team issued jersey was to… make the team.

1985 Stock Baseball/Softball Uniforms

by **Wilson**

Master Tailor to the Major Leagues

It's not unlikely that when a pro baseball player suits up, he's putting on a uniform that was made by Wilson. That's because Wilson supplies 17 major league teams with their uniforms—including 11 for both road and home. And that means Wilson really knows how to please the pros.

In the past ten years, seven out of ten World Series Champions have played and won with Wilson uniforms.

In fact, Wilson is proud to have been the exclusive manufacturer of all four playoff teams' uniforms in the 1984 Championship and World Series. This same Championship quality is available in all Wilson stock and special order Baseball and Softball Uniforms.

Wilson provides uniforms to 17 major league clubs. However, the uniforms shown on these pages do not constitute sponsorship or endorsement of Wilson uniforms by the respective organizations. All of the above uniforms are made of VISA™, polyester warp knit.

*1985 Wilson team catalog used its covers to promote the fact that even **your** school or bar-league team could have its uniforms made by the same company that outfitted the pros… quite a selling point.*

(Paul Lukas Collection)

(Retail) “Genuine Merchandise” Replica Team Jerseys

While the focus of this guide is On-Field Authentics and Retail Authentics, **Retail Replica jerseys** are the most common licensed jerseys you will find, widely available in stores, on MLB.com, and in team shops. We will digress to provide a brief overview of them on the next few pages.

Historically made by the same company authorized to make the Authentics, these are very good-quality look-alikes, and are generally less than half the price of Retail Authentics. They will always have a different label on the tail (the Jock Tag), usually feature different fabric, different sewing construction, and almost always have the team designs or wordmarks on the front done in a separate patch or single-layer applique that is heat pressed and usually also sewn to the jersey. They are sized as Small-Medium-Large instead of being numerically sized (40-44-48). They lack the special underarm venting panels that game jerseys have. They may also be offered with special colors and trim never used on the field.

This Majestic Cooperstown Collection Astros late 1970s rainbow style jersey is of very high quality, certainly better made than counterfeits sold online with bogus “Authentic Collection” tagging.

Some Official Merchandise/Replica branding tags are shown on this page and the next for reference. And we will note that generally authentic replica-tagged merchandise is not targeted by counterfeiters the way the Authentics are. Surveying eBay and web-based sellers, a very high percentage of merchandise tagged as “Authentic” is counterfeit, while most merchandise tagged as “Replica” or and advertised as such generally is legit! When buying online, consider sticking with reputable retailers or resellers you know.

© GameWornGuides.com

Sand-Knit: The First Retail "Authentics"

Presented here almost as a footnote: for a few years in the early 1980s, Sand-Knit had a very limited distribution contract to make reproduction MLB jerseys. These were not widely available, and were mostly advertised to hardcore fans for mail-order sales in Sports Collector Digest. I do not have specific years (though I would guess 1980–1985) or exactly which teams' jerseys they made, but over the years of collecting I have owned a few, including a pullover St. Louis Cardinals home jersey with top-quality chain stitching. These appear for sale on eBay with some regularity.

They carry Sand-Knit "*Official Licensee MLB*" tags. The lettering and patches are indistinguishable from team issued jerseys, and I suspect these were supplied by the same suppliers to the on-field pro-makers. The tailoring on these are often odd; unlike what the player wore on field. They are generally short-waisted with minimal tapering. Team logos/wordmarks were often sewn oddly low on the garment. The colors of the logos and numbers were sometimes the wrong shade. Many have accurate, authentic team numbers but none I have seen have player names (almost surely a contractual restriction involving an agreement with the MLB Players' Union to include these). These were clearly not cheap retail items, and in the scheme of things, not well distributed or promoted, and not very many were made or sold.

© GameWornGuides.com

CCM & Ravens Knit: The First Canadian-Made "Authentics" and Replicas:

In the late 1980s and early 1990s, even after Rawlings had established U.S. marketing rights for on-field authentics at retail, Ravens Knit and CCM were licensed by MLB to market MLB replicas in Canada. As these are outside the scope of my research, we will give them but a passing mention here. These appear similar in lettering detail and somewhat odd tailoring to the Sand Knit replicas on the prior page. The fact that different products are sold in Canada is not surprising, import restrictions and tariffs encourage Canadian-made products to be sold north of the border, vs. importing American goods.

© GameWornGuides.com

Licensed Replicas/Genuine Merchandise may be sold blank on the back (unnumbered) or sold lettered with player names and numbers. The player lettering may or may not be in the team's authentic font, though today the trend lately seems to be that the team's official fonts are used. This had not always been the case in prior years.

Licensed replica jerseys are an excellent entry to the collecting hobby, and frankly few people other than other readers of this book will ever know the difference between **Replicas** and **Authentics**. Majestic (and earlier Russell) Retail Replica jerseys are of high quality and widely available. New Majestic licensed replica jerseys retailed for a price point of $79.99 to $99.99 in 2015.

Left: *Majestic Genuine Merchandise Phillies jerseys include exact appearing copies of the team's home and road jerseys, as well as "fashion" styles like the stars and stripes version on the far right that the team does not wear.*

Starting in 2014, Majestic Genuine Merchandise got even closer in construction to the Authentics, being sold with Cool Base tagged fabric. Especially in the BP jersey line, they are hard to tell from the real thing. ***Bottom row:*** *Mariners and Astros jerseys have additional sleeve end or placket trim that buyers often prefer when compared to plainer, team-spec Authentics.*

© GameWornGuides.com

2015-2019 Majestic Cool Base Replica Jerseys

Beginning with the 2015 Season, Majestic re-branded and relaunched their Cool Base line of Replica jerseys. I will quickly admit to not focusing on this merchandise, but the only changes I really noticed was to the front jock tag and the neck tags. The change to Cool Base fabric had happened the year before in 2014 (previous page).I will comment that the Cool Base fabric used on these replicas is not the same as the fabric used on the authentic on-field jerseys. It is decidedly lighter weight. The MLB Silhouetted Batter neck logo, previously reserved only for on-field and retail Authentics, now appears on these replica jerseys. Majestic says:

COOL & COMFORTABLE

This season, Majestic introduces the brand-new COOL BASE® jersey. Using the same COOL BASE® technology worn by the Major League Players on-field, this new release keeps fans cool and comfortable as they cheer on their favorite team. With an improved fit and breathable, moisture-wicking material, the new COOL BASE® jersey is the best way ever to stay cool when the game heats up.

I am not going to claim any inside knowledge to Majestic's marketing strategy, because I have none. But my intuition tells me that Majestic has worked to blur the lines between the ultra expensive Flex Base™ brand and the somewhat less expensive (but certainly not cheap) replica line. The price of these Cool base replica jerseys jumps to $99 (blank back) to $125 (for player numbered) for 2017. The small number of buyers who want the real thing know what they are looking for and will look hard for the very few places where it is sold. (That's you, folks.)

The replica line, now boasting the formerly exclusive on-field Cool Base tagging selling for half the price, is available in more outlets to people who simply notice the branding and the sewn-on lettering. These people are less likely to notice that the twill is one layer with the other colors all printed on, even with the stitching fake and printed; and that the front numbers (if used by the team) and sleeve patches (if any were used) are absent.

© GameWornGuides.com

Counterfeit/Fake Retail Authentic Jerseys

"Counterfeit" is a broad term used to describe *anything that is pretending to be something it is not and is being falsely represented*. So—any one of the four categories just presented also has a counterfeit version*. There is a whole chapter ahead dedicated to counterfeit* ***Game Worn*** *and* ***Team Issued*** *jerseys, ahead.*

But the most common counterfeit that angers and disappoints thousands of bargain hunting buyers each day is the **Counterfeit Retail Authentic.** These jerseys abound in massive numbers, sold mostly by on-line outlets and on sites like eBay. Quite simply, they are cheap copies of the real thing, but with "Authentic" tagging that make them look like expensive branded merchandise when they are rip-offs counterfeited in sweatshops of China and Southeast Asia. On a typical trip to the ballpark these days, surveying people in the stands and concourses nets a fake-to-authentic rate of close to 75%...or three out of four jerseys people are wearing are, say, tagged as "Majestic Authentics" when they are neither Majestic, nor Authentic. *There is an entire chapter on this topic ahead as well*. I can promise if used carefully this guide will help you avoid more than 99% of these fakes when buying.

The proportions aren't quite right, the tags aren't placed in quite the right places, the fonts might be a little off, or the team never wore this exact style jersey: some fakes are really hard to spot.

© GameWornGuides.com

An ultra-brief look back at the early days of MLB jersey collecting

We start our reference history in this volume with 1970, not just because it's a nice round number, but because it represents the very first year that the conversion to double-knit fabrics from the old wool-flannel blends began in Major League Baseball.

The Pirates were the very first team to wear knits on the field (part time), in the middle of the 1970 season and concurrent with their mid-year move to the sparkling new Three Rivers Stadium. The Cardinals followed in 1971, and the 1971 World Series between the Pirates and Orioles was the first all-double knit World Series, with the Orioles switching to the new fabric just in time for the Fall Classic.

By the end of 1972 most teams had made the switch from wool uniforms to polyester fabrics. A few teams waited until 1973: among them the Royals, Yankees and Expos. But by opening day of 1973, every team in MLB had converted 100% to double knits.

Braves

NEWS RELEASE

BETTER HURRY!

GENUINE GAME-WORN UNIFORM SHIRTS FOR SALE

We are now offering the 1985 Atlanta Braves jerseys for sale and auction. Both sets (home and road) are listed below and are in perfect condition with player names on back. All home uniforms for 1985 are unique in that they have a special patch on the left sleeve to commemorate the 20th. season of Braves baseball in Atlanta. They are for sale as listed below except for Murphy, Horner and Sutter, which are for auction only. Bids will be accepted by mail or phone and will close at midnight Wednesday, Nov. 20. Phone bids are 5% over next highest bidder.

This list is being sent out as a special mailing to over 400 people who have an interest in baseball uniforms and is being mailed to everyone on the same day, so please contact us immediately should you wish to hold a shirt of one or more of the most popular players. Ple
per jersey for mailing costs and make checks payable to:
To make bids or for more information, call: (

Note: Because the special patch appeared only on the home jerseys, all road jerseys are $5.00 LESS than the price listed below.
* = SOLD

NUMBER	NAME	Home or Road Available	SIZE	PRICE

			44	$ 150

From my files—this 1985 circular from the Braves to a mailing list of season ticket holders, offering the Braves' game worn 1985 uniforms for sale. Those were the days. Note in the first paragraph how auctions were conducted before the Internet existed.

© GameWornGuides.com

It may be hard to fathom in today's world, but professional sports uniforms were not deemed collectible to anyone but true die-hard fanatics even up to the mid-1980s. And, when they were collecting, these die-hards were usually looking for jerseys worn by star-players during record setting or historic events. A Babe Ruth or Lou Gehrig jersey was always highly collectible, but the hundreds of jerseys issued each year to the vast majority of common players were treated just like the rest of the team's inventory by the clubs. After their first season of on-field MLB use, one of several things happened to a team's uniforms:

1. They were re-used by the team a second or even a third year. The team might get a new set of uniforms, and last year's uniforms may be used as a "set 2" for the second games of doubleheaders, day games right after night games the day before, or kept for team spares in case equipment was damaged or lost.
2. They were kept for spring training use in future seasons at the team's spring training site. These jerseys are often identifiable by number changes to very high numbers, above #45 or so that were not generally issued in the regular MLB season. Spring training relegated jerseys might hang around and be used for multiple seasons in that role.
3. They were sent to the minor leagues to be used by the farm team. They often had their numbers and even the team crests stripped off by hand, and the minor league team names and/or player numbers sewn on in their place. Sometimes they were sent to the farm AFTER being used a second or third year in the majors. And after a year or two in the minors, they may have been sent to the next lower minor league club for still more use.
4. They might be sold or gifted to an amateur team, sometimes after the completion of all of the above.

By this time, these uniforms have been worn and washed perhaps hundreds of times. If there is any fabric left, it is threadbare, discolored, shriveled, puckered and mended in a half dozen places. So, had anyone been interested in collecting them when they were pristine, they were certainly not interested in them at this point when they were close to being mere rags.

***Top**: The Montreal Expos used uniforms harder than almost anyone. When the team sold them off they were not really good for much.*
***Bottom:** Three of my most well-worn gamers; the Twins jersey needed to be scrubbed with soapy bleach to get the red dirt out of it, and all numbers had to be replaced. Expos Rapp jersey shows darker cloth where a blank nameplate was sewn over the NOB while it was used in the minors. White Sox road jersey below has had its wordmark restored, but the knit trim is still in original tatters.*

© GameWornGuides.com

There is another key fact that led to the collectability of game-used jerseys, and that was the change in attitudes about fans actually wearing team garb in the stands, or if they were really odd—elsewhere in public. I can tell you this with great assurance, because I was there. Allow me to relate:

I bought my first authentic jersey in 1979—a store-bought authentic from the Phillies team supplier, for the princely sum of $49 (figure $130 in today's money). It was a baby blue 1978 style road jersey, lettered with Larry Bowa's number, #10. I was just seventeen years old and had saved lawn-cutting money for months to buy this rare treasure. I recall it had to be special ordered and paid in advance from the Phillies only local distributor (Gold Medal Sporting Goods), and it took longer than eight weeks to be delivered to me. When I first held it in my hands, I could not believe my eyes … but here it was made totally to team spec: tailored to a perfect size 42 (no "Small, Medium or Large" here!). it was lined on the inside of the placket with smooth satin, with the correct zipper to close the front, white and maroon trim on the sleeves and down the sides, and with finely cut and sewn twill numbers and letters. I could have gone to heaven.

I wore it to school the very next day…. and was greeted by curious stares everywhere I went. No one, and I mean NO ONE had ever seen a real Phillies jersey except on the back of a player at the stadium. For reference, boys in 1979 wore tight t-shirts and tighter blue jeans to public high school, the unofficial "uniform" that no one dared deviate from. Other guys and teachers wanted to see my jersey, to ask where I got it, and were unbelieving that it was really real, and really mine.

Your author in 1980, wearing the Phillies jersey discussed on this page, along with carefully selected matched maroon corduroy pants. 1980s haircut, striped tube socks and Adidas "Country" shoes complete the look.

© GameWornGuides.com

From that one day of celebrity, I wore it occasionally other places: to the movies, when I went into the city… and everywhere it was the same. People just stared. They asked me if I was on my way to play a game… once on the street in Philadelphia, a man ran up to me and asked me if I was Larry Bowa himself. He was serious…

I can't emphasize enough, in those days normal people just did not wear lettered team athletic equipment in public. I was a kid, and so I could get away with it…. But I cannot imagine the balefully disapproving looks I would have gotten had I been a *35-year-old man* wearing such a thing in public… *it was just not done!*

For proof, just look at the photos on the next pages of attendees at the ballpark in the 1950s (from the web) and the late 1970s and after (ones I took myself).

That same authentic team spec 1979 Phillies jersey today hanging in my office, now signed by Larry Bowa. For those of you with sharp eyes, I will beat you to the punch: those sleeve patches don't belong there, I sewed them on myself years ago to "modernize" them, and the "Schmidt" NOB is not authentically done. Back then, they wouldn't sew player names on jerseys purchased from the team's supplier. If you wanted a name you had to do it yourself. This was my self-made "best effort" in the pre-computer graphics days of the early 1980s.

Fan Attire at the Ballpark through the years

While the rest of this book is devoted to what the players are wearing on the field, let us share a view of what the typical fan has worn to the ballpark through the decades.

Everyone recognizes Willie Mays making "The Catch" in the photo above, from the 1954 World Series.

Zooming in on a sharper copy of that historic image, look at the way the fans in the cheap bleacher seats are dressed. Notice all the collared shirts, neckties and bow ties, and the total absence of baseball caps or in fact *any* team-supporting logoed fan attire. In these days, it was simply not done.

© GameWornGuides.com

In these photos from the early 1950s, count the number of men wearing fedora hats in one, and the number of neckties visible in the other. Notice the unsurprising lack of diversity in the crowd as well.

© GameWornGuides.com

This crowd shot was taken by me at Philadelphia's Veterans Stadium in August 1978. It was "Men's Bucket Hat Day." Other than all the giveaway hats visible (some red, some white), and a few red Phillies caps, notice how there is a complete absence of MLB jerseys which were simply *not available* at that time. In fact, only a few kids–certainly no adults–are wearing team gear at all.

2011

In this random photo snapped by me at Philadelphia's Citizens Bank Park in 2011, notice the number of fans wearing some sort of team-related baseball attire. There is not a single necktie or fedora in sight.

During the 1990s, collecting common game worn or team issued jerseys was either easy, very hard or impossibly difficult, depending on what team you rooted for! Some of the earliest teams to step up and begin to authenticate and sell team equipment were the Rangers, Cubs, Mets and Twins. Through relationships with outside authenticators, or doing it internally by themselves, these teams would retire sets of uniforms and make them available to fans to purchase. On the flip-side, some high-demand teams like the Yankees, Dodgers and Red Sox came late to the party. When early editions of this book were published, game worn jerseys from these three teams were nearly impossible to get, and more than for any other teams, people would send me photos of items they wanted to buy asking me “are these real?”

Then there were the large number of teams in the middle ground—teams that had a dedicated local following but were not hugely popular outside their geographic area, clubs like the Phillies, Mariners, Indians, Pirates, Tigers and Astros. These teams routinely shipped their big-league uniforms to the minors for re-use, sometimes stripping all the lettering from both back (and sometimes the front) to sew new lettering on, a time-consuming highly manual task that is hard to fathom at today’s labor rates.

By the late 1990s, each team generally had a dealer or two who specialized in their team gear, usually rather informally. Knowing who to go to was usually a word-of-mouth exercise. Those of us who wanted this stuff knew who to call: Dick Dobbins or Mike Quick for the Giants, Murf Denny for the White Sox, Ed Dolan for the Phillies, Tom Sharon for the Astros. These dealers usually had typewritten lists of jerseys available that they would Xerox (copied so many times it was barely readable) and send to you in the mail. No photos, only descriptions. The new year’s list usually was the same as the prior year’s, just with many items crossed out and a bunch of new ones typed in at the bottom.

Legitimate dealers like Ball Park Heroes, Kruk Cards, Yankees-Steiner Collectibles, Dodgers-Steiner Collectibles, MeiGray Group (Rangers) grew in prominence through the 1990s, often buying large lots of inventory directly from the teams, As I look through my own collection, I have dozens of Letters of Authenticity from these vendors and many others with whom I have enjoyed doing business.

Letters of authenticity should be stored in a safe place. The value of your game worn item drops dramatically if you can’t find it when you are ready to sell.

© GameWornGuides.com

While it is hard for many of us to remember a world before the Internet, it has "only" been since 2005 or so that the majority of commerce in this hobby began to take place there. Besides the aforementioned dealers developing a web presence (some more, some less) one of the best places to buy Game Worn, Team Issued and Authentic Collection jerseys is eBay. I might also offer that this also simultaneously became one of the worst places to buy Game Worn, Team Issued and Authentic Collection jerseys. In the early days of eBay, I would earnestly write letters to sellers of non-authentic merchandise informing them of their "error" in listing something claiming it was something that it was not. These "errors" included selling Minor League issue saying it was MLB; MLB jerseys with changed names and numbers being sold as having been worn by famous players; retail sourced Authentics with claims they were team issued; and replicas being offered claiming that they were Authentics. But for every polite "thank you" I received, I received two nasty letters and four no-replies. It soon became evident to me that many of these were not honest mistakes at all. I stopped writing letters. Let the buyer beware.

And then the Asian counterfeits showed up… with a vengeance. The first sellers were easy to detect. They were shipping from Hong Kong, Singapore and South Korea. But then US-based importers started stocking these rip-offs and shipping them locally. By 2010, the fakes being advertised as "Authentics" on eBay easily outnumbered the real stuff. But by then, a whole new class of buyers had emerged–people who seemingly did not care if an item was a genuine Authentic or not. Some of these fakes were easy to spot…but some were quite well made and even deceptively photographed. I will confess to having been fooled myself, on three or four occasions and each time making mistakes that I have documented here so others might not repeat them.

Since then, in an effort to become an upscale retailing site to compete with Amazon.com *et al*, eBay has made it much more difficult for people to repeatedly get away with selling counterfeit merchandise. In fact, safeguards they have put in place have made it increasingly difficult for honest sellers to use the site as well, as more and more hurdles are put in place. In 2024, eBay actually purchased Goldin Auctions, to me one of the finest and most reputable companies in the memorabilia business. *But* the cockroaches still appear, re-surfacing and selling under a new name until they are shut down yet again, and they move on to yet another electronic storefront name and start over. As of this writing, I would advise anyone using eBay to make all purchases with PayPal. The site's policies are very liberal oriented towards buyers, and if you have been ripped off, eBay will generally refund your money whether the seller agrees to it or not. All the buyer needs do is open an official complaint with eBay.

I have written two complete chapters on these topics: *avoiding counterfeit Authentics* and a *guide to buying game worn or team issued jerseys.* Of course, the safest way to avoid ending up with a fake is to buy directly from MLB.com and the associated MLB auction site. You will pay top dollar, for sure, but will end up with hologrammed goods that will have future value and will keep your blood pressure down.

MLB Game Worn Jerseys of the Double-Knit Era (1970-2009)

© William F. Henderson, Fifth Edition

2

Regarding typestyles, there are several common styles and many variants, as well as a raft of team-specific fonts. See our website for more information on jersey lettering.

Where a box is filled in with red type, it means that I am *reasonably sure* of my information but not 100% certain and am still looking for additional evidence.

The small photos on the left represent nearly every variation used in these years, and clicking on any thumbnail will bring you to the page dedicated to that jersey style.

Throughout, I have tried to present photos of game worn jerseys only, preferably complete and unrestored. I prefer "common" jerseys, those issued to regular, non-superstar players because these are the least likely to have been tampered with. In the few cases where I have been unable to find a game worn jersey to use as an example, I have used a reproduction jersey that I believe is sewn correctly. The dates shown in the photo captions are always intended to be the year of the jersey depicted. This is why you will see 1989 baseball cards with captions saying the photo is from 1988, the year the jersey was worn.

Chapter 2
The Basics: Fabric, Trim, Lettering

The Game Worn Guide to MLB Jerseys
1970-2025, Ninth Edition

William F. Henderson

Quick- *what team does he play for?*

The Uniform

u·ni·form (yo¯o'nəfôrm')

adj.

1. Always the same, as in character or degree; unvarying: planks of uniform length.

2. Being the same as or consonant with another or others: rows of uniform brick houses.

n.

A distinctive set of clothing intended to identify the members of a specific group: a police uniform.

In Major League Baseball:

1. In a glance of a single microsecond, tell the viewer what team he is looking at. This is visible through cues like color combinations and the shape of typestyle fonts.

2. In another instant, allow the viewer to know the player by seeing his number (and his name, if it is present)

A team's uniform colors and lettering are very important in establishing, projecting (and protecting) the team's image.

Some teams, like the Dodgers, Yankees and Red Sox, proud of their heritage and tradition, have had few changes of any kind in decades. Anywhere in the world I have visited, children wear these teams' hats and jerseys and know what they represent.

Conversely, some teams seem to use frequent uniform changes to try and reinvent themselves again and again. The Padres, Rangers and Astros are among those teams who change everything seemingly every few years, some all the way down to their team colors. Sure, merchandising is a factor, and people like to buy new stuff. I suppose they are simply trying to find a formula that works for them.

© GameWornGuides.com

Overview: Features of the Jersey

Throughout this book we will use a lot of terms when referring to MLB jerseys. Let's define some of them here.

Trim: on placket, at collar, and sleeve ends.

Commemorative patch

Manufacturer's sleeve logo on public display: not allowed prior to 1987. Very specific rules around when they are used and when they are not, all related to contracts and sponsorship.

Team Sleeve Patch –usually the team's secondary logo

Team Wordmark

Team Memorial Patch or Armband- in this case for a departed former player and coach

Player Name on back (or "NOB", sometimes on a nameplate

Placket (sometimes *"plaquet"*) refers to the double layers of fabric that hold the buttons and buttonholes in a shirt.

Manufacturer's label (or "Jock tag"), main manufacturer branding label but hidden from public view when worn. Often has washing instructions incorporated, sometimes the garment size designation.

© GameWornGuides.com

Pullover Jersey

No front numbers, No name on Back (No NOB)

Knit sleeve end/ collar trim

Button Front Jersey

Front Numbers

(Left) Manufacturer's collar tag with team tagging (Below) Jock tagging examples with size, year/set and tailoring notations. Tags are sometimes sewn on the outside tail, other times are hidden inside the garment

(T stands for "tapered")

Above: *Vertical arched* Name on Back, direct sewn.
Below: *Radially arched* NOB on nameplate

ABOVE: (left sleeve) team patch & manufacturer's sleeve logo. (right sleeve) team memorial patch

Knit trim (both on sleeve ends and around collar)

© GameWornGuides.com

Jersey Sleeve Types: Set-in or Raglan

Baseball jerseys are made with two sleeve types: *set-in* and *raglan*. Here are examples of both types. Make a note of what kind your team wears. They are easiest to see when the sleeves are a different color than the rest of the jersey. I have used two prototype Dodgers jerseys as my example.

Set-in sleeves are more common on MLB jerseys. On these, the sleeve is completely separate from the garment and if removed, you would have a vest.

According to Wikipedia*: "A raglan sleeve is a type of sleeve whose distinguishing characteristic is to extend in one piece fully to the collar, leaving a diagonal seam from underarm to collarbone giving the garment a relatively undefined look… It is named after FitzRoy James Henry Somerset, the 1st Baron Raglan who is said to have worn a coat with this style of sleeve after the loss of his arm in the Battle of Waterloo."*

Below, notice that the Yankees insist on the use of Raglan sleeves, making the pinstripes on the sleeves run vertically up the sleeves all the way to the collar. The Mets use set in sleeves which causes a geometrically necessary pinstripe misalignment at the shoulder seam.

Above: example of set-in sleeves, Below: example of Raglan sleeves; here easy to see because of the contrasting colors used. Every jersey uses one type or the other.

Yankees: Raglan

Mets: Set-In

Fabrics: Flannel Jerseys

"Flannel" is the general term used for the natural fiber-based fabric used to make baseball uniforms before the switch to man-made fiber (double-knits) began in 1970. By definition, flannel is *"a kind of soft-woven fabric, typically made of wool or cotton and slightly milled and raised."* Most who have worn it on a baseball field describe it as hot, heavy, scratchy, or with other unappealing words. While the fabric "breathed," it also became heavy when it absorbed moisture, it shrank and faded easily when washed in water that was too hot or with detergent that was strong enough to remove stains. It also did not stretch or "give" much in and by 1970 baseball players were beginning to wear their uniforms tighter and more form-fitting, which made all of these other aspects of the fabric even less appealing.

By 1970, most flannel fabric was being blended with man-made fibers in the weaving process to give the fabric more stretchiness and help it shrink less wear longer. But the writing was on the wall—man-made fabrics were the new miracle of the 1970s and starting in mid-1970, the Pittsburgh Pirates led the way and began to switch to uniforms made completely of double knit. By opening day of 1973 all teams in Major League baseball had switched completely and flannels were no more in the Majors, except possibly in Spring Training where old uniforms went to die.

In the hobby, game worn flannels are in a completely different realm of price and collectability. Because they were never made for retail sale to fans, almost the only ones that ever existed were those that were made for and worn by the teams. As we will discuss, used uniforms were almost always passed down from majors to minors and used, washed and washed again until they were nothing more than rags. This, combined with damage from insects and stains/mold/mildew from being stored while damp and it is easy to see why the price of game worn flannels pre 1972 are so high. In 2020 at this writing, MLB flannels in good condition, even those worn by common players, are usually over $1,000 per garment. Famous-name flannels with provenance and authentication are often sold for over $10,000, and sometimes much more.

Shown here are pages from the famous Sotheby's Auction of the Barry Halper Collection, which in total sold for nearly $40 Million in 1999. Though there has been controversy over the authenticity of some of the more valuable items, the auction helped set the basis of prices for "common" game worn flannels like those shown on this page, most of which sold for far more than the estimated prices printed in this three volume boxed catalog.

http://en.wikipedia.org/wiki/Barry_Halper

“Baggy Flannels?”

When people think of flannel uniforms, used up until 1972 in the Major Leagues, many automatically assume that they were all loose fitting and “baggy." This is not true– by the early 1970s tight fitting tailored uniforms were very much the style. Several period photos of Willie Mays are shown here, as he was among the first to be publicly say that he had his uniforms tailored so he would look better in them.

Author Marty Appel wrote, “Baseball players have worn the form fitting uniforms since Giants teammates Tito Fuentes and Willie Mays took their pants to a San Francisco tailor in the mid ‘60s and had them re-cut. Then when double knit uniforms replaced flannels in 1972-73, making the players look faster and sleeker, we were on our way.” (In the same article penned in the late 1990s he also amusingly wrote: *“I have a feeling we are going to see baggy baseball uniforms again in my lifetime. Or maybe in yours.”)* If he only knew.

Page 40

Paul Lukas Collection

This 1962 Wilson catalog promotes that 13 of the 18 Major League teams wore Wilson uniforms on the field in 1961. Notice the seven different types of flannel in different weights and blends that could be specified for making team uniforms.

Doubtlessly some of these blends, like the wash and wear kind, had a man-made fiber woven into the cloth. And speaking of “wash and wear," did that mean the other kinds needed to be ironed before use? I would say yes.

Note the reminder calendar for promoting timely team ordering.

Fabrics: Double Knits

double knit also dou·ble-knit (dŭb′əl-nĭt′) n.
A jersey-like fabric knitted on a machine equipped with two sets of needles so that a double thickness of fabric is produced in which the two sides of the fabric are interlocked.

Double-Knits addressed *almost* all of the downsides of natural fiber flannels. They stretched in use and then stretched back. They were lightweight, could be produced in bright, long-lasting colors, and were not as susceptible to staining, shrinkage and insect damage. They were tough in use, and could be washed with detergents and bleaches that would have destroyed flannels in short order. Their stretchiness also allowed them to be made into pullover uniform jerseys that would have been impossible to create with flannels. Players of the 1970s and 1980s wore their uniforms tight to show off their physiques as this was the new style.

But knits were not perfect. While they didn't absorb sweat, they also did not breathe like natural fibers did, making them very hot. Players always wore natural fiber (cotton based) undershirts between the knit jerseys and their skin for comfort, but the combination of two layers of fabric over hot skin on sweltering days in the sun for a game played in the hottest months of the year was still not a happy prospect.

I believe this Sand-Knit ad first ran in trade publications in 1974

© GameWornGuides.com

But man-made fibers were not invented in the 1970s! For example:

Rayon was the very first synthetic fiber used to make clothing in the 1950s, but it was actually developed prior to 1900 and is based on wood pulp and alcohol! It was inexpensive light and flexible and was easily dyed for colorful looks. But its problems were many, including that it tended to wrinkle as easily as linen and that its colors didn't stay true. Perspiration tended to discolor the fabric too easily, and when wet ,it would lose more than half its strength. In period advertising it was mainly promoted as a product use in making colorful, lightweight and sheer women's clothing

Orlon is a fiber that is stretchy and (sometimes combined with natural fibers) best woven into thicker wool-like yarn, and that's why you see it used to make sweaters starting in the late 50s.

While it made its first commercial appearance as bristles in a toothbrush, this is the first consumer advertisement for DuPont Nylon, February 28, 1935. (image courtesy of DuPont archives)

© GameWornGuides.com

Nylon is recognized as the strongest available synthetic clothing fiber, widely adopted in the 1960s. However when washing, Nylon tends to pick up colors easily from other fabrics. I once washed a black White Sox jersey with a white Pirates jersey-- both Nylon-- and the Pirates jersey was totally ruined, turned permanently murky gray by the wash water, which shocked me because I always assumed synthetic fabrics were completely colorfast. Stupid me. I also have a pink Dodgers jersey from a similar wash day accident, and no amount of Clorox has been able to fix it. Remember when they used to advertise that detergents had "Bluing for extra whiteness?" this was because in the 60s when Nylon was used as the synthetic fiber of choice, the blue dye in the detergent would adhere to the Nylon, counteracting the other colors it may have picked up. And to the human eye, oddly making something slightly blue makes it appear whiter and cleaner to us.

Some of the earliest Diamond Collection jerseys of 1992-1993 carried this "Intera Fabric/100% Nylon" tag. These jerseys seem to wrinkle more easily than later ones and are more easily stained by improper washing.

The earliest double knit jerseys usually don't have tags on them describing their fiber composition An example– the colorful uniforms worn by the Braves in 1972 have no content tagging on them, and these were known to have shrunk MASSIVELY when washed, which is why the surviving ones look like they were made to fit Little Leaguers. Likely these were made of 100% Nylon. Early Astros sweaters/ warm ups made by Sand Knit were actually tagged as ORLON, and from the ones I have seen, they were definitely inclined to shrink. The White Sox uniforms of the 1976-1981 period, the famous "softball/disco/leisure suit" style that featured with wide floppy collars and were meant to be worn un-tucked, are also examples of uniforms that shank incredibly from washing. I have owned several of these, and can say that especially those made by Capital Ace in Japan have shrunk two sizes or more in washing from their original measurements.

However, by the mid 1980s, the problems with fabric shrinking seemed to have been solved, and as the owner of dozens of game worn jerseys from this period, I can attest that many jerseys that have been worn and washed dozens of times still look and fit almost like brand new.

Though unmarked, this game-worn 1972 Atlanta Braves jersey is likely 100% Nylon and has shrunk more than two full sizes during washing. Originally a size 44 (Large), it is now only 20 inches across, making it effectively a size 40 (Small). It has also shrunk in length to only 24 inches from shoulder to hem! The Braves ordered many sets of these during 1972, eventually attempting to dry-clean new sets to prevent the shrinking. A fire in the dry cleaning plant resulted in many surviving jerseys to be badly stained.

© GameWornGuides.com

Polyester is a generic term for a family of fabrics where the threads used to spin the cloth are made of multiple types of synthetic fibers (Poly=many), perhaps a combination of Rayon and Nylon for example. The end result is a garment that might have the combined best qualities of the various filaments used: strength, stretchiness, colorfastness and resistant to shrinking. The filaments themselves are combined chemically, not just mechanically to make the resulting fibers that are then woven into cloth. Taking it one step further, polyester-cotton blends are made by combining the finished, thin Polyester fibers with similarly thin cotton fibers to make yarn (super-fine yarn that is really thread-like) that is then used to weave fabric to make things like undershirts. They are stretchy and lightweight because of the polyester, yet absorbent and soft because of the cotton.

Fabrics: Variations on White

An All-Star Game is one of the only times to see these variations on white next to one another.

All six jerseys below could be described as “white." Yet they represent six distinct shades. From left: Toronto Blue Jays 2003 common white; Diamondbacks 1998 home slightly off-white; Phillies 2008 Alternate home cream; Giants 2001 home cream; Mitchell & Ness flannel home jersey replica 1950 A’s; Houston Astros 1993 Road Cream.

© GameWornGuides.com

Fabrics: Shades of Gray

From left to right are five distinctly different shades of gray road jerseys:

- The 1994 Rangers jersey at far left is the most neutral shade of gray that is seen most often.
- The Astros 2004 jersey is purplish-tan.
- The Brewers mid 1990s uniforms were decidedly pale green (as are the 1990s Marlins),
- The 2005 Devil Rays' has a purplish tint.
- The Dodgers, at the far right has a bluish cast (same as the Mets).
- Below is how it looks when the wrong color nameplate is used to restore an old jersey.

When it comes to road uniforms, "gray" is a pretty general term used to describe the color of the fabric. It might surprise some to see that there have been many shades of gray used by different teams in the Majors. Here are the main variations for you to see. Never is it more apparent when a wrong shade of gray nameplate is used on a different-colored gray uniform. The best restoration specialty shops keep lots of different shades of both white and gray fabric in stock. Because these fabrics fade over time, from washing and from exposure to the sun, cloth cut from game worn pants is the most common source of matching fabric for properly restoring nameplates on old jerseys.

In recent years, Majestic has taken to standardizing the gray fabric used in road jerseys, so these variations are no longer quite so evident, save for teams that intentionally vary from the standard gray, such as the Diamondbacks starting in 2016. Nike continues this standardization from 2020 onward.

© GameWornGuides.com

Fabrics: Shades of Navy Blue

At the far left is the standard Navy-Blue jersey fabric used by many teams over the years on game jerseys and BP jerseys; including the Indians, Twins, 1980s Astros, Braves, Red Sox, Angels and 1990s Mariners. The center two jerseys are Midnight Navy, used by the 1990s Astros, the 1999 and later Mariners and the 2015-2020 Indians. At far right is black, as used by the Orioles, Pirates, White Sox, Diamondbacks and many others. Midnight Navy is so dark that, for some observers, the difference is only discernible when it is laid next to a black jersey for comparison. In the 1990s, the Astros actually used black in their home white and road gray jersey lettering instead of attempting to match the twill lettering to the shade of Navy on their alternate jerseys.

Fabrics: Nylon Mesh

Mesh fabrics addressed the problem of polyester fabric being heavy and hot by taking a direct route: weaving a lightweight but sturdy fabric with thousands of tiny holes per square foot to help the air circulate though. And while other sports, including European football and Japanese Professional Baseball adopted mesh garments like these as game jerseys, in MLB, mesh fabric was used for Batting Practice Jerseys, as a standard from the late 1980s through 2002.

The fabric was tough, lightweight, bright, and colorfast.

Majestic's Moisture-Wicking Tech Fiber Evolution

For all their benefits, double-knit polyester uniforms still retained one major downfall, and that was how hot they were to wear on summer days. By the early 2000s, several companies including Under Armour and Nike were piloting lines of technical fiber moisture wicking fabric garments for athletes that were meant to be worn next to the skin.

Majestic introduced their own technical fabric in 2003 on new batting jerseys that were released for every team simultaneously, the first time that this had been done. When sold at retail, these garments boasted of their new technology. I must admit my own skepticism at the thought of wearing a 100% man-made fiber shirt next to my skin, but these jerseys were actually lightweight and comfortable to wear.

They suffered two drawbacks in use, however. First, they were not very fade resistant. Certain colors, especially reds and blues, faded markedly in the sun. Second, the fabric was extremely susceptible to physical damage. Nearly anything, including rough skin, a fingernail, or the straps from catchers' equipment would cause pulls and runs in the cloth that made it look really ratty and unsightly in short order. This fabric was used exclusively on MLB BP jerseys for four seasons, 2003 through 2006, before being replaced league wide with a new generation of BP fabric for the 2007 season.

Here, from left to right, Nylon mesh fabric of the 1990s, in the middle Majestic's First Generation tech fabric of 2003; at right, Majestic's second generation Cool Base of 2007.

But during the 2005 season Majestic was busy testing a new game jersey fabric that they branded Cool Base. A few teams agreed to test the new jerseys in 2005 in a very limited way and without fanfare.

For 2006, MLB and Majestic unveiled a new line of jerseys constructed of the new Cool Base branded fabric. While still 100% polyester, this new fabric was significantly lighter-weight than traditional double knit game jerseys. Initially it was not meant to replace the standard weight MLB uniform jersey; instead it was designed to provide an alternative for teams to wear when playing on very hot days. When offered the chance to "try one," 29 of the 30 MLB teams adopted it as an alternate jersey choice for 2006.

Full-weight knit

2005 - Cool Base

Upper- Knit
Lower - Cool Base

Only one team did not, perhaps not surprisingly, the Yankees. Recall that the Yankees were among the very last teams to switch from flannel uniforms to double knits back in the early 1970s.

When I first had the chance to see one of these in late 2005, I was afraid that they would look cheap, like T-shirts in the way they hung on a player, instead of like the thick cloth of the uniforms we have grown accustomed to. Having myself lived for a while in Japan and watching many games in Japanese ballparks, I always would notice that the Japanese professional uniforms looked thinner and cheaper than MLB Uniforms, appearing more like MLB mesh BP jerseys from the 1990s. So, I was pleased to note that it was nearly impossible to tell the difference in use.

On the national stage, the Tigers wore Cool Base jerseys during one of the 2006 ALCS playoff games, a real national-exposure tryout, and I had to admit watching on TV, I could not tell the difference.

© GameWornGuides.com

Side by side, close-up photo examples of standard knit and Cool Base Marlins, jerseys both from 2006. Flex Base jersey design (its use starts 2016) still uses this Cool Base fabric.

© GameWornGuides.com

Cool Base Game Jersey Characteristics

Just picking one up, the difference in its weight is obvious compared to a regular jersey. The fabric is thinner and more shear, but does not look cheap.

Happily, it is not the same moisture wicking fabric as the Majestic 2003-2006 batting jerseys. That fabric, though advertised as more breathable for player comfort, snagged so easily and faded so quickly after even moderate use that they were rather disappointing performers.

The underarms are specially designed, almost fishnet, made of a different fabric than the body of the jersey reminiscent of the old time wool flannel jerseys with their four-gusset breathing holes

The logos and names/numbers are identical to regular game jerseys. The manufacturer tag and size tags look much more like the Majestic BP jerseys though.

In wearing comfort, the difference is remarkable. However they are designed, they do their job quite effectively. While wearing a standard weight pro uniform jersey on a hot day is uncomfortably hot, this jersey feels nearly as comfortable as a cotton T-shirt.

Prototype Majestic Cool Base Marlins jersey for 2006 laid atop a older, standard weight double knit jersey.

© GameWornGuides.com

Cool Base is remarkable in several ways. First, it is significantly lighter weight than its knit equivalent. A lettered Cool Base jersey feels like it might weigh as much as 1/3 less than a knit one. Secondly, for as thin and lightweight as they are, they are remarkably opaque. Dark undershirts worn beneath a Cool Base jersey are even less visible through the fabric than they are when compared to a significantly heavier knit jersey.

Some players commented that while Cool Base jerseys are lighter when dry, they feel heavier after absorbing the body's moisture if the player sweats a lot. This is why some players today specify regular weight knit jerseys (if their team offers the choice) and may wear them even if the rest of the team is wearing Cool Base.

Gusseted sewn-in underarm panels are made of a lightweight open mesh fabric that provides additional breathability.

For the teams who had uniforms in both fabrics it seems that in many games, players individually choose the style of jersey they prefer. We have photos that show players wearing a mix of uniform fabrics on the field in the same game.

Picking out whether a player is wearing a Cool Base jersey or not is not very easy. Unless you are up close and can see the texture of the cloth, the best way to tell is by looking at the underarm area, where a different type of mesh-like fabric is sewn in. The underarm inserts are noticeable because the insert's stitching is visible, they are usually slightly lighter in color than the rest of the jersey, and they seem to fade more quickly with repeated wear and washings to become still lighter as the season progresses. For pinstripe jerseys, the inserts are solid color and lack the stripes found on the rest of the garment.

Some detail obsessed fans have noted that the gray Cool Base jerseys sometimes do not exactly match the fabric color of the standard Double Knit pants they are paired with. From this author's point of view, unless they start making Cool Base game pants (they have not yet) this is something we will just have to get over and live with. Further, after looking at thousands upon thousands of game photos, I can attest that often the knit jerseys do not match the knit pants either.

One thing that is certain is that the introduction of Cool Base jerseys mixed with standard Knits generated a flood of additional game worn uniforms into the hobby,

To the hyper-observant, Cool Base jerseys do not always match the color of the knit pants. Of course, our observation is that knit pants sometimes do not match the knit jerseys exactly either.

Many teams have made a business of rotating gamers into the team memorabilia shop on a regular basis. If one looks at the isolated example of the Indians in 2008 and 2009, with four jersey styles available in both fabrics, and 50 players having been on the roster in each year, that is 400 game worn jerseys at a bare minimum for each year just for roster players. Collectors know that far more team-issued jerseys than this actually exist, as multiple sets of a given style are often ordered in a year to keep players looking good, spares are kept in reserve, and jerseys are made for coaches, manager and bullpen catchers. Add a complete set of team jerseys with the number “42” on back made for Jackie Robinson Day. Sets of jerseys are made for dozens of players who play in Spring Training but who do not make the big club in April. All of this production has driven the prices for commons down to, and below the cost of new store bought name-player jerseys.

In this 2008 photo, player #8 is wearing a Cool-Base jersey (note the mesh panels under the arms) and player #9 is wearing a regular fabric jersey.

© GameWornGuides.com

The top two jerseys are made of Cool Base, the bottom two are old style double knit. The presence of the Cool Base underarm panel is the most visible clue.

© GameWornGuides.com

Cool Base Underarm Panel Discoloration (2005-2015)

Uneven fading of the underarm panels after many washings is proving to be a point of dissatisfaction among MLB teams, 2005-2015. The Dodgers are one team that had considered asking that the underarm panels be removed and replaced with standard fabric. The 2012-2015 Toronto Blue Jays switched away from the fabric to back to standard weight double knit cloth, they claimed at the request of their players.

Cool Base Adoption, Year by year, 2006-2009

- **2006:** The first year of Cool Base availability, every team selected one jersey to try in the new fabric, with the exception of the Yankees who refused to play along, and chose none. No teams did a complete switchover of either their main home or road jersey to Cool Base, though a few chose an alternate jersey and made it Cool Base only. Most teams played it safe by simply adding a Cool Base jersey to the mix, usually duplicating one that was also issued in regular knit fabric.
- **2007:** 15 of the 30 teams stay pat with their 2006 jersey mix. 14 add a second Cool Base selection. And the Yankees stay only with full-weight knits.
- **2008**: The big change is underway. Six teams switch completely to Cool Base. Only the Yankees and the Rays (oddly, as they change their look entirely for 2008) use only double knits. The other 22 teams keep a mix of knits and Cool Base jerseys. The Indians are the only team who order up all their many uniform choices for 2008 in *both* Double-Knit *and* Cool Base.
- **2009:** This is the first year where teams begin to drop the old knits from their lineup. Eleven teams go 100% Cool Base, eleven teams have a complete set of uniforms in both Double Knit and Cool Base, and seven teams have a mix of both. Only the Yankees continue to avoid Cool Base entirely (and will until 2014!)

© GameWornGuides.com

Majestic Athletic (www.majesticathletic.com) was kind enough to supply complete data of which teams ordered up sets of Cool Base jerseys in each year, 2006-2009. This will be helpful in future years determining the year of issue of untagged jerseys, or helping to detect fakes. In some cases we did not get confirmation of which teams also ordered knit jerseys for those same years. So to fill in the blanks, hours spent poring through Getty Images helped validate whether or not knit jerseys were worn by teams in these styles in each year. In the charts that follow, entries that are noted in **bold green** were deduced by this method of careful examination of game photos. As the march away from knits progresses, it is always possible that a player noted to be wearing a knit jersey might be wearing last year's jersey. I am quick to note that I have not examined photos from every game for every team, and my concluding that there were no knit jerseys issued in this style in a year cannot be considered the absolute answer. I welcome evidence of team-issued knit jerseys that disprove my conclusions. Please send them along.

Key to Data in the Following Tables

BLACK is confirmed data, sourced from Majestic

GREEN indicates that information was gleaned from dated game photos

"?" Indicates that Majestic did not supply data and conclusive photographic proof could not be obtained.

Many thanks to fellow researcher Trevor Williams for his assistance in this section.

Double Knit detective work: for those Double Knit boxes marked with a green "NO" I invite your skepticism. This designation only means that I was unable to find evidence of the team wearing knit jerseys after searching through dozens of game photos. I focused on cold April days, where players are wearing long sleeved undershirts and teammates in the dugouts are wearing jackets. I assume that if the team had knit jerseys, these would be the type of days that players might wear them. In each case where a green *NO* is listed I was only able to find players wearing Cool Base jerseys, therefore my assumption that knit jerseys must not have been an option and therefore do not likely exist.

At left are Majestic's team orders for 2010 uniforms. You can see that all teams except the Yankees are using Cool Base, and 15 of the 30 have converted completely. Some continue to order selected styles in the older heavyweight knit. Some players may specify knit jerseys as their personal preference.

I did not collect data from Majestic for 2011. In 2011, I did still see some players wearing old-style knit jerseys mixed in, from time to time. The Yankees had still had not tried Cool Base.

The 2012 Blue Jays have switched back to regular knit fabric, and do not use Cool Base in 2012. By 2012, the Yankees are the only team that had not tried Cool Base.

After 2012, things begin to stabilize, and the use of Cool Base jerseys becomes commonplace for most teams. Majestic's data for 2014 shows that sixteen teams have gone exclusively Cool Base**: Astros, Braves, Brewers (With the exception of their Sunday nostalgia uniform), Diamondbacks, Dodgers, Marlins, Mets Nationals, Orioles, Phillies, Pirates, Rangers, Rays, Rockies, Royals and Twins. The Yankees allow some players to order Cool Base road jerseys (only) starting in 2014.**

Meanwhile, the Yankees *home jerseys* and the Blue Jays (all jerseys) use full weight knits exclusively.

That leaves us with only twelve teams that order a mix of Cool Base and full-weight knit jerseys in all styles. Majestic tells me that on those teams, generally players can decide what they want to wear, and that there are very few, old-school players who specify knit jerseys for their on-field use. Predominately players are switching to Cool Base when they have the choice.

Retail sale jersey configurations match the pro options. If a jersey is available in both full-weight knit or Cool Base, generally retailers will stock the Cool Base models only for simplicity. But in reality, fewer and fewer stores sell Authentic jerseys in lieu of Replicas; mostly authentics are sold in very limited quantities through specialty online vendors (like MLB.com) to a select group of fans who appreciate the difference.

Majestic/Nike Flex Base Uniform System - 2016-2023

"Flex Base" was Majestic's brand name for on-field game jerseys as well as retail-sale authentics for the 2016 season. The brand name describes the entire jersey, not just the fabric from which it is made. This is the first time in history that all teams in MLB have simultaneously adopted a new uniform fabric and style at the same time without any dissenters or hold-outs.

For a description, let's begin with Majestic's own words from their product sheets:

The New Flex Base jersey is the latest in uniform innovation designed for the modern baseball athlete. Tailored to the exact specifications that players wear during the game, the jersey features advanced lightweight fabrics for Enhanced stretch, moisture wicking, and breathability. Cool Base side panel mesh vents and patented Air Belt technology offer new cooling zones and flexibility.

- *Full or left chest authentic lightweight tackle twill decoration*
- *Cool Base side panel mesh gussets for cooling zones and flexibility*
- *Patented mesh Air Belt for better air flow and less bulk under pant line*
- *MLB center back neck CFX silhouetted batter patch*
- *100% Polyester Mock Mesh*
- *MLB Authentic Collection Apparel locker tag*

Majestic says that the new jerseys were designed with the input of 50 MLB players, and are designed to be lighter, more flexible and more comfortable than ever before.

Flex Base jerseys get the folded blue hang tag above; the white logo in the upper photo at right is actually a thick vinyl applique. Starting in 2016, only Flex Base jerseys get to have the "Authentic Collection" tag.

© GameWornGuides.com

Beside the above facts, there is the following:

- They claim the new style twill lettering will make each jersey 10-20% lighter than before (more on this shortly)
- Note that the fabric itself that makes up the jersey body is still called Cool Base, just like before, and that “Flex Base” is the brand name given to the entire “Uniform System” as they refer to it; including both jersey and pants.
- Mesh ventilation panels are sewn in the length of the sides of the jersey, and the pants are for the first time also made of Cool Base fabric, with ventilation panels sewn inside of the pants legs. The jersey side panels are especially noticeable on pinstriped jerseys, as the side panel is plain and interrupts the stripes.
- They eliminate the troublesome underarm panel that tended to discolor after wash and wear.
- The CFX logo sewn on the back of the neck is a sort of flexible plastic; it is no longer embroidered cloth.
- A new color-keyed per team Majestic sleeve logo is embroidered at the end of the left sleeve. It now includes the word “Majestic” along with a freshened triple-peak logo, and the hidden, embossed “” from before is gone. All teams have Majestic sleeve logos except the Yankees, who maintain that they cannot contractually display one. Yankees jerseys made for retail sale have the Majestic sleeve logo.
- The inside-seam tags that provided evidence to buyers about a jersey’s heritage, whether it was made for retail sale or for the team’s use, are changed. The code number 0730 is used for game ready jerseys, while 7300 is used for retail sale units. This code is now on the back of the tag.
- These jerseys are sold in numeric chest measurements, tailored as small as size 40 and as large as size 60. (retail Authentic jerseys are sold in sizes 40-44-48-52-56-60. However, MLB players can order in-between sizes: 42,46,50,54).

2005-2015 Cool Base (above left) features breathable underarm panels that tended to discolor in use. 2016-2019 Flex Base (above right) has “Cool Base” vented side panels. White perforated side panels disrupts pinstripes on all teams except Yankees who do not have the side panels! Below, Flex Base jersey has a comfort lining inside the collar, earlier Cool Base jersey does not. Inner-seam tag has code that designates if the jersey was made for team issue or retail sale.

© GameWornGuides.com

Notably, all teams have adopted the new Flex Base uniforms for 2016, including the Blue Jays, who had stayed with full-weight knit uniforms through 2015; and the Yankees, who never had accepted Cool Base home jerseys for use. The Yankees had been dissatisfied with the detail of the pinstripes as they appeared in Cool Base samples, wanting the pinstripes to have the identical pattern as the older style full-weight knits. Apparently, Majestic has now satisfied the Yankees, as they switched along with everyone else this time, however notably the Yankees pinstriped home jerseys omit the solid-colored, vented side panels that are present on all other teams' jerseys, so that there is no break in the pinstripes. Fashion at the expense of comfort, perhaps.

Prior to 2016, on many teams, if a player desired a full-weight knit jersey instead of a Cool Base one, he could order it that way. It is our understanding that starting with 2016, full-weight knit jerseys are no longer offered as a custom order option for players. I will note that several of the Turn Back the Clock uniforms worn during the 2016 season by some teams were still full -weight knit.

Majestic's Retail Authentic jerseys have all switched to Flex Base as well, and are visually indistinguishable from on-field jerseys. I'd like to spend a few moments discussing this, and offering my own opinions on the tiered branded marketing structure of Majestic Authentic jerseys.

First, make no mistake about it: these jerseys are expensive. On-field Authentic Flex Base jerseys are targeted at a very slim percentage of the fan base: those of us who want to wear the exact jerseys that our players are wearing on the field. They are retail-priced between $200 and $350 (even more for XXL sizes). The price *less reflects* what it costs to make the jersey and more what exclusive-minded buyers will be willing to pay. They are made in limited quantities, and targeted to a special audience who are willing to pay more for features that a common buyer does not value. The higher price adds an air of exclusivity that makes them even more special.

At left, 2005-2015 Cool Base. At Right, 2016-2019 Flex Base. Notice the addition of the vented "Air Belt" tail; the vinyl Silhouetted batter back of neck patch; the revised sleeve logo, still embroidered but now lacking the hidden secreted in the design. It takes a close eye to notice the new lightweight twill design. On the right, the white outline is now sewn on top and is sewn down with two courses of stitches, one on the outside of the line, one on the inside.

2012: Flex Base Test Jerseys

Bill Henderson Collection

In the competitive marketplace of supplying uniforms for professional sports teams, constant innovation has become a necessity. On-field uniforms not only have to be acceptable as work wear for hundreds of athletes, but they must also represent the vaunted brands of the teams they promote. Making changes to these garments is not a casual business. Rather, new ideas are developed, designed, and tested over a matter of years.

On this page and the next, we can share two examples. These are Majestic Flex Base test jerseys that were game used during the 2012 season, a full four years before the new Majestic Flex Base "uniform system" was introduced league-wide. This jersey features the "Air Belt" mesh tail that was eventually adopted for the final

Continued, next page

© GameWornGuides.com

product, as well as heat-pressed mesh logos and numbers that were not ultimately used. The strip tag indicates that this is a test issue, as does the wash tag "063T" code, where the "T" likely also stands for "test." We have seen several other such examples with similar strip tagging. All were "Test A" jerseys. It is unclear if any other versions were tested in this way, but given Majestic's propensity for multiple versions of prototype uniforms, it is possible there are other iterations out there, especially since Majestic said they worked with more than 50 players to design and test this new family of jerseys.

© GameWornGuides.com

Dodgers 2012 Flex Base Prototype

This Los Angeles Dodgers jersey is a Flex Base test issue that was made in 2012 for pitcher Clayton Kershaw to use, four years before all MLB teams adopted the Flex Base template. It appears not to have been worn during a game, however, we have seen examples of these test issues that were worn in Spring Training 2012 by other teams. Majestic says that it worked with more than 50 players to test the Flex Base jerseys, so it is likely that many such jerseys were made.

The Flex Base test jersey is similar to the regular issue jersey in many ways. The main difference is that the numbers and lettering are not tackle twill and sewn on; they are heat pressed. Also, the back tail of the jersey has a thinner mesh fabric. The wash code tag in the inside tail reads "063T." There is a strip tag in the collar that reads "22 Kershaw 50 2012 Test A" stitched on. The Dodgers' 50th Anniversary of Dodger Stadium patch is sewn on the right sleeve.

© GameWornGuides.com

2012 Tigers Flex Base Prototype

The Cool Base-tagged jersey is similar to the regular issue jersey in many ways. The main difference is that the numbers and letters are not tackle twill and sewn on. They are heat pressed on (see photo). It has vented mesh side panels and the back tail of the jersey is a sewn on sheer mesh, thinner mesh fabric. The wash code tag in the inside tail reads "063T." There is a strip tag on the tail that reads “24 52 ‘12 Test A" stitched on. That would decode to “player #24, size 52, 2012 Test A”

© GameWornGuides.com

New for 2015: Cool Base Replica Jerseys

To make things a little more confusing, Majestic had introduced a line of new Cool Base branded replicas in 2015. Prior to this, "Cool Base" branding had been applied only to the top-of-the-line on-field merchandise, but starting in 2015 it refers also to its retail "replica jersey" line, exclusively so starting in 2016. Frankly, these jerseys are not inexpensive either, coming in at around $100 without a player name and number, and up to $142 with a player's name/number on the back, but even at that, they are still half the price of an on-field Authentic. Here are my observations about the 2015-2019 Cool Base replica jerseys.

- They are not the same fabric as the 2005-2015 on-field Cool Base authentics… they are a breathable fabric, but it is more lightweight and sheer (cheap?) than ever used on an Authentic.
- The team wordmarks and player names/numbers are "Printed Tackle Twill" decoration. That means that all the colors and outlines are printed on a single layer of twill, and all detail including stitch marks are simulated: printed on. This single layer of twill is then sewn to the jersey.
- If your team uses front numbers (or sleeve numbers) these are left off the Cool Base series when you buy a player-lettered jersey.
- They lack the sleeve patches found on Retail Authentic and on-field jerseys. The Majestic sleeve logo is heat pressed, not embroidered.
- They lack the "Air Belt" tail and side venting panels found on the Flex Base authentics.
- These are sold in sizes Small-Medium-Large-XL-2XL-3XL-4XL, not in numeric chest sizes like the Flex Base authentics.

If one shops on the MLB.com fan store, it is very difficult to tell the difference between the two series of jerseys, as they are listed all together. If you don't already know what the difference is, you will probably buy the replica: the description *appears* nearly the same to the uneducated, and yet at half the price! One of the most common questions I am asked at my website and Facebook page is to explain the differences; and why seemingly identical jerseys sell for $140 as a replica, but twice that much as an Authentic. If you have to ask, you probably won't be buying the more expensive jersey.

On Field: Nike Vapor Premier Elite 2024

In December 2016, MLB announced that long-time uniform supplier Majestic would be replaced by Under Armour (in partnership with Fanatics) as the official manufacturer of MLB on-field jerseys for the 2020 season. Only two years later, after a significant drop in company revenue, Under Armour backed out of the deal without producing any MLB jerseys (though some of their prototypes do exist). MLB then turned to sportswear giant Nike to pick up the contract Under Armour could not fulfill. As part of the deal, Fanatics bought out Majestic's manufacturing plant, and began production for MLB jerseys, with Nike branding, for the 2020 season. From 2020-2023, all MLB on-field jerseys were simply Majestic Flex Base jerseys with the Nike logo applied. Over the course of the next few years, Nike worked with MLB to test a new template for on-field use, Nike Vapor Premier Elite (VPE), which some Kansas City Royals players wore in spring training as early as 2021.

Nike VPE jerseys officially debuted in MLB in the 2023 All-Star Game and became the league-wide standard template for the 2024 season. According to MLB and Nike, Vapor Premier Elite is a "new technology…engineered to improve mobility, moisture management and fit. Vapor Premier Elite's breathable, lightweight, high-performance fabric is made from at least 90% recycled polyester yarns. It also gives the jersey 25% more stretch and allows it to dry 28% faster, with moisture-wicking Dri-Fit ADV technology keeping players cool. Nike body-scanned more than 300 baseball players to find the ideal fit, which is more athletic and form-fitting than previous models."

Aside from the purported performance enhancements, the switch to the new template also caused aesthetic changes that were not necessitated by previous changes to Cool Base or Flex Base templates. These include:

- All "white" jerseys are now a subtle off-white color, much less bright white than Majestic jerseys.
- Narrower front-button plackets that place placket trim (for teams that use it) much closer together than previous designs. It also means that many teams' front lettering changes position, arc, or where script names break across the placket vs. older jerseys. The narrower placket also forces the back-of-neck MLB logo lower on the jersey, which, in turn, requires name on back lettering to shrink and appear in a tighter arch than on previous jerseys.
- All player name and number fonts are a consistent size for all teams: front numbers are 4″ high, back numbers are 8″ high, and NOB lettering is 2.5″

© GameWornGuides.com

On Field: Nike Vapor Premier Elite 2024, continued

high. NOB arch is also rendered in a consistent pattern across all teams, and is much more steeply arc-ed than before, almost exactly in a half-circle like NBA jerseys are laid out.

- Sewn-in trim around neck and sleeve openings that takes the place of previous neck and/or sleeve trim for teams that use it (moving all sleeve-end trim to the very ends of sleeves vs. on or above sleeve hem). Neck trim appears on all non-pinstriped jerseys and is simply rendered in the jersey base color for teams that did not use neck trim.
- The removal of mesh side and bottom-hem panels that Flex Base had used, which had previously interrupted stripe patterns for teams that use pinstriped jerseys.

The drive for lighter and cooler jerseys also brings with it the introduction of perforated/mesh front and back numbers for teams that choose to use it. Early indications show that pinstriped jerseys do not use perforated twill, even if a team with a striped jersey uses it for its solid jerseys. This is likely because the pinstripes showed through the perforations on some Minor League jerseys that used the same

Old above, new below.

Old at left, new at right

template and lettering. Team front lettering and player names remain solid twill. Kiss-cut lettering, which is lighter than layered twill, carries over from Flex Base.

As part of Nike's quest for consistency and simplification, teams are not only generally held to four primary jerseys plus a City Connect style, but many teams adopt a universal NOB and number font (Nike's version of Block) and lettering size regardless of prior team custom. That means formerly unique characteristics like the Dodgers large front numbers and Tigers tall NOB font are eliminated.

© GameWornGuides.com

On Field: Nike Vapor Premier Elite 2024, continued

Put simply, the transition to the new template was not without complications. As Spring Training began in February 2024, elements of the new design template were soundly criticized by media, fans, and even the players. Major League Baseball, Nike, and Fanatics (which bought out Majestic;s factory and was responsible for manufacturing the jerseys based on Nike's specifications) were put on the defensive about any number of concerns, and their responses were unsatisfactory in the limited cases when they responded at all. The Major League Baseball Players Association even issued a statement of concern, and the uniforms became the talk of the early baseball season, almost more than the game itself.

Typically, when a new uniform design or template is launched, team and leagues jump at the change to garner publicity and explain how wonderful their products are. In the case of Vapor Premier Elite, MLB and Nike sent out a couple of press releases touting that the jerseys were lighter, more flexible, and would enhance performance. They did not, however, explain why they had to change so much of the template to achieve these goals. As such, players and fans were left to wonder why every jersey had change its look to change its level of performance, which amplified the criticism.

When the uniforms began to appear in free agent signing press conferences and in Spring Training, the main concerns were the smaller NOB letters, homogenized number fonts, and the thinner plackets that made team front lettering split awkwardly. Fans complained that the jerseys looked like cheap knockoffs, and players said that they were not what a major league ballplayer would expect to see in his locker.

Next, photos from team media days made the new Nike pants appear to be more transparent and revealing than before, which became another topic of derision (where players had new pants - manufacturing delays led to many teams not receiving new pants, so many players wore recycled pants in Spring Training). That "see-through" critique was excessive, as the new pants were actually the same material as years prior, and the same situation occurred in past years in photos taken under bright studio lighting conditions.

Though the pants were the same material as before, the jerseys were not, and that caused problems with dying the fabric colors to match the pants. Several teams used their road gray jerseys and pants in spring games, where both appeared to be

noticeably different shades of gray. Nike and Fanatics did respond to this issue, saying that they were addressing it and would correct it, though as of the start of the season, the color difference was still apparent.

The change in jersey fabric also led to far more sweat-related color issues, especially on gray jerseys, where parts of jerseys would appear significantly darker once players began to sweat, causing garish multi-colored jerseys over mismatched pants. Nike said it would review this issue as well. Finally, the new jersey fabric, paired with ostensibly lighter lettering twill, made jerseys appear puckered in some of the areas around the letter stitching, adding to the "cheap replica" cries from critics.

To add insult to injury, several teams were unable to wear certain uniform sets at the start of the regular season, because they had still not received matching pants for the jerseys, or in some cases, the jerseys themselves. A week into the regular season, The Athletic reported: "The Twins are missing the pants for their cream 'Twin Cities' uniforms. The Mariners wore home whites Sunday because their cream-colored uniforms aren't in yet. The Cardinals were in road grays Sunday because neither of their Saturday alternates — ivory at home, victory blue on the road — had arrived. The St. Louis Post-Dispatch reported the club did not expect to have either Saturday uniform 'until June, at the latest,' due to production delays."

Eventually, MLB, Nike, and Fanatics conceded to fan and player outrage and promised changes to the jerseys, to roll out in the 2025 and 2026 seasons. The VPE template would remain for 2025, but several details reverted back to the way they were for 2023 and before.

© GameWornGuides.com

Comparison: 2023 Nike Flex Base vs. 2024 Nike Vapor Premier Elite

Nike Flex Base 2020-2023

To the casual fan, the difference in Flex Base vs. Vapor Premier Elite (VPE) may not be immediately obvious, especially when the two aren't side-by-side on-field. But when viewed together, the difference are more readily apparent.

- Flex Base white jerseys are a brighter, purer white. VPE is off-white, or cream color.
- Neck and sleeve trim elements are made of a different flat ribbon-like material, and are no longer sewn on top of the jersey material, but are now sewn in to the jersey at the seams. This forced changes for trim size on certain jerseys, including these Marlins home jerseys.
- The front placket is narrower on VPE, which causes lettering that crosses the placket to break differently. Notice the Flex Base break between the "a" and "i" in Miami above vs. the break cutting through the "a" on VPE below.
- The narrower placket, which also runs around the collar, means less space for the MLB logo on the back of the jersey. Rather than shrink it to fit, it is moved below the collar area.
- Flex Base had integrated mesh side and back tail panels, VPE does not.
- Player names are much smaller and steeply arched on VPE, and all teams use the same size names, seemingly following Nike's NBA template.
- Not visible on field, the interior code changes from MQ1H to MQHO on this Marlins example.

Nike Vapor Premier Elite 2024

© GameWornGuides.com

2023 Nike Flex Base vs. 2024 Nike Vapor Premier Elite, continued

Nike Flex Base 2020-2023

Nike Vapor Premier Elite 2024

Note that other elements of jerseys changed from the 2020-2023 Nike Flex Base to the 2024 Nike Vapor Premier Elite (VPE).

- Team logo patches, and in some cases sponsor patches, went from traditional embroidery (top) to printed cloth/twill (bottom), occasional with some accent embroidery stitching. This made patches lighter and more flexible, but it also changed some of the colors given differences in thread and ink pigments.
- Front and back numbers were kiss-cut twill in Flex Base (top), but became a lighter version of kiss-cut twill with perforations on the VPE jerseys (bottom). Like the patches, this made numbers slightly lighter and more flexible, but it also made them flimsier - in game action, some numbers appear to fold and drape in exactly the same way as the jerseys, making them look as if they were printed or sublimated rather than sewn.

2023 Nike Flex Base vs. 2024 Nike Vapor Premier Elite, continued

Top and middle rows: the Nike VPE is at left, Flex Base at right. From the outside, the two fabrics look very close in appearance, but flipping them over, the Nike fabric has a rough, textured wide-weave feel, as some have joked, like “A Bounty paper towel”. Notice the far narrower placket width on the new format, shown also in the placement of the MLB patch on the back of the neck which is now sewn below the placket seam instead of inside the placket border as before. From experience, I can tell you that while all tech fabrics lack strength once there is even a tiny hole or rip, the Nike VPE fabric is prone to rip wide open; any compromise to the weave causes almost certain fabric failure. This is not a durable material. Middle row, note the VPE number “3”next to a Flex base jersey “4” beside it. The new twill is thinner and less shiny and the lettering size is shrunk for 2024. The neck and sleeve trim is different from the traditional style we are accustomed to, (new on bottom) it is now a flat,smooth polyester ribbon The bottom row shows the traditional twill used for lettering on the left in each photo, and the new Nike style twill on the right. The colors are not *exactly* the same as old, but the main difference in each is the sheen, especially evident in the last two photos; as in the final photo a flash is used. The new fabrics are sometimes vinyl backed and are now applied with the same adhesive as used with vinyl lettering.

Nike Vapor Premier Elite: 2025 Changes

In response to player and fan feedback, MLB, Nike, and Fanatics have made changes to MLB jerseys for 2025 and promise more changes for the 2026 season.

The 2025 season brings many changes to road gray jerseys across MLB, as this style was the most maligned and problematic in 2024. The 2024 VPE jerseys suffered from significant sweat-staining issues during games, and often noticeably mismatched pant color, so 2025 gray jerseys revert back to the same base fabric used for Flex Base, but applied to the VPE template (no mesh side panels or “Air Belt” back panel). Other pre-2024 elements return, including neck and sleeve trim being sewn on to jerseys again rather than sewn in. The redundant, jersey-color neck trim used on jerseys without pinstripes is also eliminated from gray jerseys in 2025, though it remains on other jerseys in 2025. Despite the fabric and decoration changes, the overall template is still VPE, so placket size remains smaller than Flex Base, and the MLB logo on the back of the collar remains in its lower position from 2024. Some of these changes also apply to new City Connect jerseys introduced in 2025.

For all other jerseys in 2025, (except carryover City Connect jerseys) the VPE template, fabric, and construction remain the same, but player names and numbers are increased in size, often back to 2023 size, and perforated numbers are eliminated. Several teams who standardized their name and number fonts in 2024 revert to their own custom versions in 2025.

From what we have observed early in the 2025 season, City Connect jerseys that carry over from 2024 or before remain the same as they were in 2024, with smaller player names and perforated numbers. It is likely that Nike had to make concessions in bringing the changes “to market” so to speak, and concentrated on other styles, on which the 2024 changes were more noticeable.

Early inside information as of this writing (July 2025) tells us that the 2026 on-field jerseys will return wholly to the 2023 configuration. The Nike VPE template with its narrow placket and smaller team wordmarks with their often odd splits will be abandoned. The Flex Base template returns,complete with its vented side panels and vented tail. We will need to wait to see if tackle twill will return; though we expect the Nike style flat-finished twill will remain.

Here, Mets 2024 at top and 2025 “retro-revision” at bottom. Top 2024 features smaller front numbers that are a different than traditional, .Numbers front and back are micro-perforated, player names are in a much smaller font and are more steeply arched. Sleeve patches are lighter embroidered versions. In short, the 2025 jerseys apply the 2023 style lettering and patches to the new Nike VPE jersey template with the different fabric and narrower placket.

Nike "Authentic" and Replica Jersey Marketing Focus to Fans

While Nike might be a clothing manufacturer, above all they are an expert in marketing and branding... and that's why this topic is included. Nike's ability to make money from selling an image is their forte, and in taking over the MLB contract from Majestic, they were ready to go right to work.

Unfortunately, they were interrupted by the global pandemic of 2020, which disrupted the supply chain badly for an extended time, making it hard for manufacturers to obtain raw materials, and difficult to distribute finished goods to buyers. Adding to the upheaval, MLB banned fans from stadiums in 2020 completely, causing a bizarre season of baseball. Nike's planned changes were put on hold, finally blooming onto the field in 2024, at least two years after they were planned.

As an avid industry observer with a long professional career in marketing behind me, I will make these personal observations:

1) **Nike wanted to differentiate itself on the field from Majestic, shaking things up whether the teams and fans wanted these changes or not**. Adding the "Nike Image" to MLB was more than just displaying their swoosh on the jerseys' fronts (hidden on a sleeve end was so passé...) The goal was building a brand that would allow millions of dollars in additional revenue to flow from fans' wallets to Nike's bottom line, and to enrich MLB.

The Phillies Stadium Store at Philadelphia's Citizen Bank Park, photo by Bill Henderson

2) **Nike recognized the loss of licensed revenue from the immense intrusion of counterfeit, unlicensed MLB gear from overseas flooding the market.** Generally fans did not seem to care if what they were buying was the real thing or a Chinese copy, as long as their team's name was on it. Nike surely employs more lawyers than designers, and protecting their brand is their primary focus, and they were prepared to do battle with the counterfeiters, First, they would make their product ever-changing, innovative and harder to copy. But behind the scenes they were ready to fight by raiding illicit operations, seizing and destroying product, and frightening distributors into abandonment.

3) **Nike realized that fans are sensitive to "price points" and created new lines of product that were aimed at these price points.** They realized that only a small segment of customers really cared about buying the actual on-field jerseys, and stopped trying to market these Authentic Collection jerseys at a reasonable price point. The retail price of their new pro line rocketed into the stratosphere, pricing a pro-lettered on-field jersey in the $400-500 range. They instead created their own "Nike Limited" tier of jerseys with intentionally similar tagging that only an expert would notice as different. These cheaper jerseys look almost exactly like the

© GameWornGuides.com

The Phillies Stadium Store at Philadelphia's Citizen Bank Park, photos by Bill Henderson

on-field items, but are made of different fabric and are missing details like perforated numbers (2024), and stitched, layered lettering. They also have a feature attractive to fans and that is they are tailored to be worn untucked and are shorter in length. One of the common complaints about the on-field Nike jerseys is how long they are; they look unappealingly like ladies skirts when worn untucked by fans. On the next page is an overview of the three price points of the Nike jersey offerings.

4) Realizing that there was a limited market for selling teams' static home/road/alternate jerseys, Nike was not satisfied with the thought of selling a few extra jerseys to the devoted fan base with the occasional St. Patrick's day green jersey or throwback jerseys worn in a single game. They recognized the failure of the pink and blue Mother's and Father's Day jerseys (and their ilk) for other single-day holidays. Few people purchased the annual Players' Weekend jerseys. Instead, they needed to jazz things up with a major new idea, and this is where the City Connect jersey idea came from; where apparently it had worked for Nike in supplying the NBA where fashion and glitz seemed more important than tradition. Now, in this book we tried to avoid becoming overly controversial and judgmental, but purist would certainly say that this was not something that was on anybody's minds in baseball. Creating special jerseys for every team that somehow "connected them to the city that they were in" seemed to us like a silly idea, after all what was more deeply connected to New York than a Yankees jersey, or a traditional Red Sox jersey in Boston? Nike thought otherwise. In waves they began introducing garishly colored City Connect jerseys that many people shook their heads at with displeased wonder. But the goal was to sell merchandise— a lot of it— to a new generation of fans. Teams wearing City Connect jerseys once a week when they are at home became the standard. Further, the plan was for City Connect jerseys to change on a regular basis to new and fresh designs, every three years. It's hard to see this as anything other than a way to generate revenue from selling merchandise. Purists cringed, but the marketing drumbeat went on. Through 2025 nearly every team had succumbed to City Connect with the exception of the Oakland/Sacramento/Las Vegas A's (owing to their transitional status), and New York Yankees who have steadfastly resisted introducing one of their own. Considering that the Yankees have knuckled under to every other change, including allowing a manufacturers logo on their chest, wearing silly Players' Weekend jerseys, and adding a sponsorship patch to their sleeve, I wonder how long that holdout will last…

On the next few pages, and throughout this book, we will detail the changes to the on-field Nike jersey template for 2024, known pretentiously as Vapor Premier Elite (VPE). It would be an understatement to say that it was poorly received by everyone. It looked and felt cheap, and the players complained about many aspects of the new uniforms. We

© GameWornGuides.com

believe that Nike completely underestimated the importance placed by legions of fans on the traditions of major league baseball and by making wholesale changes that they did, they certainly gave themselves a major-league black eye. Reading form all of the forums on-line, the amount of venom and vitriol directed at Nike from fans and players was shocking.

Major-league baseball went back to Nike and demanded changes. Those changes happened quickly, 2025 saw the abandonment of the perforated numbers, and the tiny and steeply arched player names and smaller numbers. Reportedly by 2026 all jerseys will return to the former Majestic-designed Flex Base jersey template. Nike's CEO was fired at the end of 2024, the reason cited in the press was overall damage to the brand that had been caused under his tenure. I'm sure that the reasons go beyond what happened in Major League Baseball but it's hard to imagine that it was not a major contributor to his downfall.

As of 2025, Nike offers three grades/price points for licensed MLB jerseys

Before we begin, this is all somewhat confusing and I believe it is intentionally such. Nike does not clearly distinguish between these offerings on its own sales pages on the MLB.com store website. When searching "*Buy Nike MLB jersey*" on Google, I have found that the search brings the customer automatically to the MIDDLE grade jersey, (confusingly) called the "Limited". From there, the knowledgeable buyer can opt "up" to the "Vapor Elite" on-field authentic (but it takes some real effort to find these, they are almost hidden on the product listings pages and there is certainly no concerted effort to push you towards buying one), and the price-conscious buyer can drop down to the "Replica" jersey which is more easily found. I would suggest that this is the same marketing strategy as employed for expensive watches or elite perfumes, just as with these, there is no attempt to sell the customer on the high-priced and rare product by shamelessly touting its benefits. All the elite product "features" are somewhat vaguely referenced and cost unjustified, and the product is priced like caviar, without apologies. The strategy: "If you know, you know. If you don't know or care, we have something cheaper just for you, don't waste your time, and come right this way..."

I cannot resist sharing this Google search result that I got when today I searched "Nike MLB Jersey" (highlight is mine).

© GameWornGuides.com

Let's look at these in the same order of priority that Nike markets/promotes them.

"Nike Limited" the medium priced product: - This is the one they expect/hope you will buy. Priced at $179.99, it features lettering that is may be multi layered but has printed on stitching and is generally sewn on with a single course of zig zag thread that is there more for show than anything. Sleeve patches and front numbers (if used by the team) are present. The fabric is not the same as on field, but it is still a tech fabric only slightly thinner. The Nike tag on the front tail and the swoosh on the chest looks almost identical to the on-field jersey. They are tailored shorter to make them better to wear untucked. Make no mistake: this is the primary offering…there are rack and racks of these for sale in the pro shop at the ballpark. To the uneducated (95% of consumers) they recognize no difference at all between what the players wear and these replicas. And they are surely not "cheap": at this price point they are not something that someone would carelessly buy like a T-shirt. People buying this product assume they are getting something special.

"Nike Replica" - Well, if the "Limited" is too pricey for you, we can get you into one of these for just $134.95. Such a bargain. Notably, this is the only

jersey that Nike supplies close-up photo details of the features on the MLB.com website, surely to convince you that it *really is* a high-quality product. Lettering is heat applied with pretend printed on stitching, front numbers and patches if on the on-field jerseys, may be omitted on this product line. Cloth is decidedly thinner. Nike logo is a decal, heat pressed and prominent on the chest. These jerseys are sold at the stadium pro shop, but are also available widely at department stores and other retailers. They are typical "fan jerseys"

"Nike Vapor Elite"- the on-field version for people who *really* want one: Phillies version is priced on-line at $394.99. Even at the ballpark Authentic Shop, you have to go searching for these. They are not out front on display. Most people will choke on the price and turn away. While the details will be covered in the pages that follow, these are aimed at fans who absolutely *must* have what the players wear on the

field and have the funds to buy one.
This is a very small percentage of customers. In some ways they are not ideal to wear as sportswear, notably the dress-like length is something that is unappealing to potential buyers. And as much as fans complain, some people will shell out the 100%+ greater price differential to have something exclusive. Consider, both a Rolex and a Timex tell you what time it is, but only one of them tells people you are special.

One thing we notice is that these Nike photos of all three grades look exactly alike on-line! Notably, they are not selling features as much as they are setting price points. And frankly, this is the way people buying these goods most often make their purchase decisions: Start them in the middle and let them step up or step down to the product that fits their wallet.

© GameWornGuides.com

Side By Side, Nike Vapor Elite and Nike Limited

Consider the price differential first--- around $375 for the Vapor Elite (VPE/on field) to $179 for the Limited (top tier replica). Here, a close side by side examination of these two Angels 2022 City Connect jerseys show the differences that might cause you to wonder why one is more than twice the price of the other. In each photo the Vapor Elite is on the left.

Top left and Right: Look first at the differences in the jersey body fabric: they are not the same. Close examination shows the VPE has layered twill that is stitched around its edges. Nike “swoosh” is a thick embroidered and sewn on patch. Limited jersey a twill applique that is heat pressed and treated to an edge stitch that really isn’t for any other purpose than making it appear to be sewn. Below left, Here is an example of the tagging side-by-side. They are almost identical, and it’s not a mistake. Nike is trying to sell the replica jerseys, in fact it’s very hard to get an authentic, and it typically costs three times as much as a replica. Look at the far left of the tag for the only real difference between the two. The writing and the silver bar is embroidered on the authentic jersey, and it’s all printed in silver ink on the replica. On the left, this authentic jersey is a team issue therefore it has a barcode authentication tag from Major League Baseball. Not all VPE authentics will have this tag.

© GameWornGuides.com

In this picture the replica is on the top. It has a tag stitched in the neck, the VPE authentic one does not.

The VPE authentic on the right has a textured shiny, ribbed neck patch. The one on the right is printed and is flat

The patches are not identical but only slightly different, note that the text on the replica is a little bolder than on the VPE. The replica on the right has the patch heat pressed on only, the authentic has a zigzag stitch around the edge. Patches are one of the things that Nike caught heat for, and on regular issue game jerseys, embroidered patches returned for 2025. City Connect jerseys seem to be in their own orbit and appear mostly stay the same throughout their run.

© GameWornGuides.com

The authentic on the right has standard major league jersey style buttons. The replica on the left has white plastic buttons.

The sleeve stripes seem to be very similar on both. They are sublimated into the fabric. The authentic will include sleeve patches; while in the recent past Majestic Replica jersey omitted sleeve patches and front numbers (when used), Nike Limited jerseys include both details. In this case, the Nike Limited jersey is without the sponsorship sleeve patch; it may have been produced before the sponsorship deal was finalized.

The VPE authentic's tag with the style code 0890 on it is found on the right. The replica has a long tag with washing instructions in multiple languages printed on it, on the left.

Trim: Knit Sleeve Ends and Neck Opening

Nothing in MLB screams “1970s” quite like a tight pullover knit jersey with colorful, super-wide (3”) multi-striped sleeve end trim complimented by banded stretchy knit neck trim. The Pirates’ mid-1970 switch to knit jerseys concurrent with their move to the sparkling new multi-purpose Three Rivers Stadium (another icon of the 1970s) was the first time MLB had seen this look. Triple striped elastic sleeve ends were soon copied by the Baltimore Orioles, the St. Louis Cardinals, the Minnesota Twins and then by nearly half the teams in baseball by the middle of the decade. A few tradition minded teams, like the 1970s Yankees, Tigers and Dodgers, never deviated from their traditional button-front, no trim and no gimmicks looks on home jerseys, but all three have experimented with knit sleeve end trim on their road jerseys.

The added trim gave a place to show contrasting team colors in a bold way especially since the pullover’s removal of the button front placket had eliminated the need for the traditional colorful striped trim many teams used on either sides of the buttonholes.

© GameWornGuides.com

By the mid 1980s teams began to return to a more traditional look, some making the knit trim much narrower and more restrained (1983 Giants, 1987 Royals).

Others eliminated it entirely and went back to traditional looks of button fronts and soutache or sewn-on knit trim (1987 Braves) or even went entirely trim-less (1987 Twins).

Today, narrow knit sleeve trim remains as a tasteful element for just a few teams, either on home or road jerseys (or both) including the 2015 Phillies, White Sox, Blue Jays and Yankees. It is also used on all teams' versions of the 2014-2016 family of Majestic Batting Jerseys.

(Above) Restrained white/red/white striped knit sleeve end trim has been a part of the Phillies' road jersey since 1992.

(Above) Comparing the 2 ½" sleeve-end knit trim on a 1984 Royals road jersey with the 1" version on the 1988 jersey.

Trim: Piping, Soutache and Sewn-on Knit Trim

The names of the different kinds of trim on jerseys is often misrepresented in common use, and your author will admit a shame-faced role in perpetuating the incorrect use of terms in prior editions of this book. For this edition I have revised my terminology throughout to agree with the community of dressmakers, tailors and seamstresses the world over.

(Top row): Piping. (Bottom Row): Soutache

Piping: In strict sewing terms, piping is a flat or cylindrical braid that is *sewn directly INTO seams* from the back, so that it is visible in a thin line when the sewn fabric is turned right side out. In reality, the use of this technique in MLB jerseys is rare, and "piping" is routinely used incorrectly to describe the thin single color placket trim such as that on the front of a Detroit Tigers home jersey.

An example of piping on a MLB jersey is found in the shoulder seams of the 2003-2006 family of Majestic Batting Practice Jerseys (shown).

True piping cannot be removed from a garment without taking the seams apart.

Soutache: is a special style of single-color cord that is fine silky thread woven around a skinny rope. It is a holdover from the flannel era, and is used into the late 1980s by a very few teams like the Detroit Tigers and Boston Red Sox before it is supplanted by the more durable knit trim that looks nearly the same. . It is less durable than knit trim, and fades and frays in heavy use. It is sewn on top of the fabric, and can be removed by simply carefully cutting the stitching that holds it in place.

Typical soutache fraying on a heavily used Detroit Tigers home jersey

© GameWornGuides.com

Sewn-on Knit Trim: This is the flat, single and multi-colored striped knit trim that is so common on most teams' jerseys. It is sewn ON, and can be removed simply by cutting the stitching that holds it in place.* This narrow sewn-on knit trim is in the same family as the wide side stripes sewn on some teams' uniforms, especially down the sides of pants. That's the same stuff, only wider.

Single color red knit trim that mimics the old style soutache, but is more durable

From left to right, 2003 Montreal Expos Turn Back the Clock, 2013 Pittsburgh Pirates black alternate, 1993 Baltimore Orioles, 2013 San Diego Padres blue alternate, 2001 White Sox Sunday Nostalgia Jersey, 1999 Cincinnati Reds Road Vest. All use knit trim, slightly different in configuration and placement.

Trim: Set-in vs. Sewn-on Knit Trim

(Left, top) A Phillies jersey of the 1970s with sewn-on knit trim laid next to one from the 1980s with set-in knit trim. The difference is obvious only from the back. (Above, right) 1980s Mets and Expos with signature wide sewn-in "Racing Stripes"

This last category of trim has been used by relatively few teams. Set-in knit trim defines when the knit side trim is not sewn on top of, but instead is sewn between jersey panels as an integral element of construction. It was used in the early 1980s at the height of the side-racing-stripe period that lasted only a few years. Some examples of set-in knit trim are shown here. Similar to piping, set-in knit trim cannot be removed without taking the jersey completely apart.

Tackle Twill Lettering

Tackle Twill is a tough, nylon-based fabric originally patented by R. J. Liebe (www.liebe.com) the same company that today still produces the lettering and twills used by many pro and amateur sports teams of every kind. Tackle Twill was originally used to make football pants, thus its name. It has become the standard material for lettering team jerseys beginning during the 1960s, replacing wool-based felt.

Twill is very thin, very strong, resistant to shrinking or fraying, can be produced in many bright colors, and retains its colors even when washed many times. Generally the garment to which it is sewn will fall apart and the stitching that attaches the twill to the garment will fail long before the twill itself wears out.

It is available in dozens of standard colors and patterns like glitter (as used by many teams in the 90s and 2000s and still some today) and glacier (as used by the Mets for many years, it has a repeating "V" pattern woven in).

While today it is normally cut using a computer-driven machine like the *Ioline 300 series*, or more sophisticated laser or water-jet cutting machines, it can also be easily cut with scissors or a matte knife. It is normally adhesive backed, and when several colored layers are cut they are tacked together with a heat press, then the layers usually stitched together prior to sewing the lettering on the jersey with a zigzag stitch.

Twill lettering can also usually be removed if care is taken, allowing team jerseys to be renumbered when necessary.

There are 84 different and unique swatches of twill on this sample ring! (Courtesy Liebe/Webster Fabric)

Lettering: Front Wordmark, Layered Twill

There is little that is as important to a team's appearance as its front wordmark. A team's uniform wordmark is its identity: it is the consistent way that the team is identified to the world. One of the most common questions I am asked is along the lines of "What font is the Orioles team logo in? I want to make my softball/fantasy team uniforms like that." The answer is, nearly all team wordmarks are the work of talented graphic artists and are not made using a standard font that can be found on a computer or in a book. There are a few exceptions: notably road jerseys from teams like the Yankees, 1980s Red Sox or the mid-80s Mets, where a "Block" style font almost identical to those used for player name-on-back lettering is used.

Wordmarks are almost always made of layered tackle twill, adhered to the garment first with adhesive, then sewn with a very small zigzag stitch around the edge to the uniform front. Sometimes all the layers are sewn one by one straight through to the jersey, affixing the logo very firmly indeed, allowing it to survive hundreds of requisite washings in its life.

Lettering: Edge-Embroidered Twill Wordmarks

1972 Braves jersey with embroidered edge-stitched lettering, inset- how it looks from the back of the cloth.

A variation of the twill wordmark is the use of an embroidery edge known as a *satin stitch* in a contrasting color to partially construct or to attach the lettering to the jersey. This dense and wide stitching actually appears to be an outline color of another layer of twill, when it is simply a dense border of a bright thread. The Atlanta Braves used this technique on its jerseys of the 1970s and early 1980s, including adhering the player numbers in this way.

It is almost impossible to remove lettering from a jersey that is sewn in this way without damaging the lettering and ruining the jersey. But because of this, it is easier to ensure the authenticity of jerseys with embroidered-on lettering.

Lettering: Chain Stitched Wordmarks

The last type of wordmark uses chain-stitch embroidery, either embroidered directly onto the jersey fabric (like the Cardinals and 2000s Astros) or embroidered first onto twill (or earlier, felt) patches that are then sewn to the jersey (Phillies 1992 and after.)

Chain stitch needlework can be beautiful and rich in appearance, even looking three-dimensional when the depth and thread stitching direction is skillfully varied. However, it is very time consuming to accomplish, and the machines that do the embroidery are very complex and expensive. It takes Majestic more than three times as long to make a Cardinals jersey as it does for any other team. But today's technology is allowing smaller machines powered by simple consumer computers to do what only professional machines could do before. I am surprised at the recent number of Asian knock-off jerseys that have things like sleeve patches and the back-of-the-neck Silhouetted Batter incorrectly direct embroidered to these garments.

For comparison, 2001 Authentic Astros jersey with layered twill wordmark paired with 2009 model which had switched to chain-stitch. Inset photo shows how the stitching looks from the back of the fabric.

Functional Two Layer “White over White” Lettering

During the 1970s-1990s several teams added a white outline layer beneath the bright colored player name and number lettering that was sewn on their home white uniforms. The white outlines on the white jerseys were all but invisible on the field, and some have wondered why teams like the Reds, Dodgers, and Phillies would have gone to the expensive trouble of adding a seemingly unnecessary complicating and time consuming sewing step to the creation of player uniforms.

The answer was revealed to us when talking to some of our stitcher contacts in MLB. It was actually done to save money in the long run..

The long-standing practice in MLB had always been to strip and re-issue uniforms of traded players to new ones, and to send used uniforms to the minors for more use. For years, the clubhouse workers and local sewing shop operators were faced with the task of stripping the old names and numbers from the jerseys for re-use. But heat, glue, wash detergents and wear almost always caused the colors of the twill numbers to run and stain the nylon fabric of the jerseys, requiring lots of bleach and scrubbing to fade the stains enough to make the jerseys presentable for reuse. As the cost of labor rose, basic economics meant it was actually less expensive for the team to sew an extra boundary layer of white that would prohibit the dye transfer from the colored twill to the jersey and make them easier to strip for reuse. Now you know!

Reds jerseys like Paul Blair’s 1979 home issue often show major staining. Starting in 1985 they added a border layer of white as shown on the Oester jersey at left. Top right, typical staining addressed on Weaver jersey in restoration by removal of the lettering, then aggressive detergent-scrubbing and bleaching of the white fabric, then sewing the lettering back on. Bottom right, Dodgers began adding a nearly-invisible but functional white outline in 1980.

© GameWornGuides.com

Lettering: Heat Transfer (and “Screened On”)

Heat-transfer vinyl lettering or direct-screened on lettering is a relatively uncommon on MLB team-used jerseys. It was used briefly in the 1970s and 1980s on Batting Practice jerseys, and by the Houston Astros for their wordmark and star, and then just the star for a while. Heat-transfer player name and number lettering returned briefly on the Majestic BP jerseys of 2007-2010. It looked OK, but teams slowly began returning to twill back lettering, and all had reverted to twill by 2011.

Vinyl lettering is die cut on a Mylar backing, and then heat pressed in place.

Screened lettering (or “Silk Screened”) is done with ink and a squeegee that is dragged across the surface of a screen, depositing a thin layer of ink on the garment, or instead screening the design onto a filmy backing paper that is then flipped over and applied to the garment with a heat press. If you’ve ever gone to a souvenir T-Shirt shop, you know what this is, and I don’t think I need to describe it further.

Interestingly, the very first MLB team batting jerseys are attributed to the 1972 White Sox, who screened red team logos and numbers on white mesh shirts. When Mitchell & Ness recreated these in the 1990s, they used sewn twill, as they believed that buyers would see screened on logos as a cheap substitute for the real thing, and they would not sell!

© GameWornGuides.com

Lettering: Single-Layer Printed “Applique” Twill Wordmarks

Single layer printed twill with simulated printed-on stitching

Multi-layer sewn twill with embroidered compass mark

(Far left) 2016 Seattle Mariners home jersey wordmark close-up at left is a Replica, with single layer printed twill. The only course of stitching that is real is the outermost (green) one. All the other stitching is simulated; printed on. (Near left) Authentic jerseys have sewn, multi-layer twill and embroidered appliques. In this case, the silver layer is a metallic twill.

This book does not focus on MLB Replica jerseys, the retail grade merchandise (often called, confusingly “Authentic Replica” and “Authentic Merchandise”) that is approximately half the price and much more commonly sold to the public. A major difference between replica jerseys and on-field models is that all the lettering on Replicas is single-layer twill, with all the colors printed on. Even the color-dividing edge stitching is printed on for simulated realism. The only actual stitching is the outermost layer, where the twill is sewn to the jersey itself. Less material, less labor, less time, less cost.

(Far left, top) Authentic on-field Phillies Jersey uses a chain stitched wordmark. The Retail Replica shown immediately beneath uses single layer, printed applique twill, also shown in the close-up near left.

© GameWornGuides.com

Wordmarks on 2007-2010 BPs

In an effort to make warmup garments as lightweight as possible, the 2007-2010 official MLB Batting Practice jerseys were made of an extremely lightweight tech-fabric. These jerseys are noticeably lighter in weight than prior mesh or the first generation moisture wicking fabrics of the 2003-2006 BP jerseys. Also new, all team wordmarks on the fronts of these jerseys and the lettering on back are made of a synthetic material called Lextra, by the company Fibrelok Corp. It is applied by a method called *Electrotransfer*. Lextra is a type of heat-sealed, dimensional flocked graphics. The appliqués appear to have depth through a mix of textures and color shifting metallic finishes.

The jerseys look interesting, but feel as thin as pro soccer jerseys. It is safe to say they were not very popular, and in 2011 MLB goes back to sewn twill lettering.

Making Team Uniform Lettering the Old Fashioned Way

Today, we have become so accustomed to computers and high-tech automation making everything from pizzas to pool tables that it wouldn't occur to most people to think about how player uniform ornamentation was created in the years before computer automation.

Imagine a set of heavy duty "cookie cutters" with sharp leading edges, meant to be laid on top of a many sheets of twill and then pressed using a hydraulic ram to cut through the layers leaving perfectly formed letters to sew. Or, in smaller operation, these types of dies could be used to cut a single layer of twill by laying them onto the cloth and striking them with a wooden mallet from the rear.

The result are perfectly trimmed, instantly created twill letters created without the need for a fancy laser computer cutter, or even a pair of scissors.

The photos on these two pages are courtesy of Paul Lukas who had the opportunity to visit the Liebe facilities some years ago (www.liebe.com) a company with a long legacy, as the inventor of tackle twill fabric and for creating much of MLB's uniform lettering and other ornamentation.

At right top are the cutters for Wilson Varsity numbers as used on the front of Tigers uniforms (among others). You can see the cutters marked as "4" and whether they are the top or bottom layer. The "Correct-Incorrect" paper in the drawer shows how to distinguish the 6 from a 9.

At bottom are the cutters for the New York Mets front wordmark, in three colors as used on the 1988-1992 road jerseys. Notice how the dies are stored cutting edge facing down in the wood lined case, protecting both the cutting edges and workers' fingertips from damage.

Often, only the main color of the lettering was die-cut, the top layer was adhered to a backing color, then the outlines were cut by hand, and by eye, one letter or digit at a time. One of our contributors who worked for a shop that supplied the Orioles in the 1980s joked that, just looking at Orioles two-color lettered jerseys made his right hand involuntarily cramp up.

Paul Lukas photos, this page and next through the courtesy of R. J. Liebe Company, Chesterfield, MO,

© GameWornGuides.com

On this page are front wordmark designs and cutting dies that were part of the production of the authentic jerseys of the 1969-1985 Montreal Expos and the 1974 1986 Braves. They are owned by the historic Liebe Company that created and used them, in Chesterfield Missouri, a suburb of St. Louis. Shops that made jerseys in production volumes were very likely to use this old “cookie cutter” method. Making the dies was an expensive job left to a toolmaker, and this was low tech but highly effective way to make many sets of identical lettering for production use.

Shops that do a lot of custom lettering for multiple teams may use exclusively computer-driven cutters. Small shops may even still use paper patterns and a sharp pair of scissors, but this is surely becoming much more rare,

Patsy Elmer of Big Time Jerseys told Paul Lukas: (www.uniwatch.com, October 27, 2010) “I could identify with the White Sox ‘Wild West’ letters looking like they were cut by hand. When we did the old-style Phoenix Suns jerseys (1970s), we used patterns made of paper with tiny holes poked through to create the design of the letter/number. We laid this ‘pattern’ over the fabric and dusted it with a powder, which would fall through the tiny holes to create our cutting line. After we cut them out, they were pressed onto the next color of tackle twill, sewn, and then the second color was hand-cut. It was all done by hand in those days. In fact, my old employer didn’t get an Ioline cutter until just two years ago (2008).”

A Short History of Player Jersey Numbers

The below is excepted from Wikipedia, the free encyclopedia.

Rumor has it that the uniform number first appeared in the 19th century, but the earliest official record is from 1907, when the Reading Red Roses of the Atlantic League numbered its players' jerseys in an effort to help the fans identify them. While it is unknown if the team ever took the field with numbers, it did mark the beginning of the idea of uniform numbers. The uniform number appeared on the jerseys of the Cuban Stars, a traveling team of the early 1900s, in 1909. In an issue of the Chicago Daily News, star pitcher Jose Mendez is seen wearing the number 12 on his left sleeve.

Left: Jose Mendez of the 1909 Cuban Stars, seen with a uniform number on his left sleeve. Below, Babe Ruth first wears a number for the 1929 New York Yankees, who along with the Cleveland Indians the first teams in baseball to adopt player numbers for the 1929 season.

The first time a Major League team wore numbers was on June 26, 1916. Inspired by football's and hockey's use of numbers, the Cleveland Indians trotted on their home field wearing large numbers on their left sleeves. This "experiment" was tried for a few weeks, again the next season, and then abandoned. In 1923, the St. Louis Cardinals adopted uniform numbers on their sleeves. However, as then-manager Branch Rickey recalled, the Cardinals' players were "subjected to field criticism from the stands and especially from opposing players," so the numbers were removed. At this time, the Indianapolis ABC's of the Negro National League and the San Antonio Bears of the Texas League also tried out numbers.

In 1929, the New York Yankees were planning to start the season with uniform numbers on the back of the jersey. The Indians also planned to wear numbers in this fashion. The Yankees were rained out on opening day, April 16, while the Indians played, making Cleveland the first MLB franchise to wear numbers on the back. The Yankees debuted their numbered jerseys the following day. By the mid-1930s, all MLB teams wore numbers; in 1937 the Philadelphia Athletics finally began wearing numbers on both home and away jerseys, making numbers a universal trait in the MLB. The first MLB game to feature both teams wearing numbers on their jerseys was the game between the Indians and the Yankees on May 13, 1929.

Lettering Game Jerseys: The Traditional Steps

There are six distinct steps in lettering player jerseys

1) Using my own digitized version of the Phillies 1992-2020 player name and number fonts, I created a two-layer pattern in Adobe Illustrator. This is vector art, not an image. The computer can send this design to a cutting machine to cut the two layers simultaneously perfectly from a sandwich of tackle twill. Here, we'll show the colors cut separately for clarity and old-time's sake.

2) Al left, here is the red layer, newly cut on the *Ioline 301*. The larger white outline layer will go on the bottom, with the red layer pressed on top. This is called "Layered Twill," and is the exact way MLB jerseys were made for all the years before 2016. For designs with many outlines (some teams use as many as four layers) this can create a rather thick "sandwich" by the time we are done.

Today, almost this entire process as performed at the factory is automated. But since we are focused on history here, I thought it helpful to go through how this process was performed in the quaint days starting in the late 1980s, and on through today in smaller shops, like mine. Reasonably priced computer automation is available as a valuable assist. Follow along here as we letter a blank 2008 Phillies jersey from my collection.

3) The layers must be pre-heated and flattened, then carefully stacked and aligned, with a good eye and a steady hand. Once perfectly aligned, the industrial heat press activates the adhesive on the back of the twill and fuses the layers together for sewing

4) The two layers of each letter are sewn together before positioning them on the jersey.

5) The sewn-together design is carefully positioned on the jersey and tacked in place with spray glue, a tacky overlay or heat resistant tape and is heat-pressed in place.

6) Back again to the sewing machine, we stitch completely around the edges of every letter.

The finished product!

These three links show computer-driven twill cutting in action. The first two show the older technology knife-blade based cutter; the third shows laser cutting, which is how practically everything is done today.

Using the correct patterns

1990s and later: Player jersey numbers and names are cut from tackle twill using team-approved patterns that are very precise and are unique, team to team. For example, several teams that use the same basic lettering font will have variations in the sizes of their lettering, and their own preferences for the exact thicknesses of outlines, and rules as to whether they use a condensed typeface for players with longer names… or not.

The patterns are created and stored in computer vector graphics files (created in a program like Adobe Illustrator) and the computer directly drives a twill cutting machine.

In 2020, Nike has the contract to letter all teams' uniforms, but each team generally has a local lettering shop they use as well. Some teams may use the local shop for last-minute orders only, but at the other extreme, the Mets usually get only their first set of jerseys delivered "lettered" by the factory in March, and then subsequent sets (and memorial patch embroidery, etc.) have been procured locally from their long time vendor **Stitches** of Whitestone, NY.

The layers of lettering are cut from team-standard colors of twill, using the multiple vector layers of the computer pattern. Then, they are heat-pressed together, and if being sewn by hand, the layers are usually stitched together before they are sewn onto the jersey. It is far easier to manage sewing layers of small individual letters and numbers on a sewing machine platen than to manipulate a large clumsy jersey while doing it.

Jerseys that are mass produced for retail sale often have all layers sewn on the jersey, as the whole process is automated. Look at the back of the jersey's fabric to see how many rows and colors of stitching there are.

Above: A screen shot of my vector graphics template for Cardinals lettering 1989-1998 only (yes, the Cardinals lettering is slightly different for other years). The Cardinals version of this common-looking number/ lettering font is slightly bolder than used by other teams and uses a very narrow outline. No other MLB team uses this exact pattern. At left, side-by-side, the new cut lettering matched to a game worn Cardinals jersey from my collection to ensure it matches the original perfectly.
I have recreated hundreds of team and year-specific patterns for use in perfectly lettering Authentic jerseys. Visit my website, http://TheDream.shop for more details.

© GameWornGuides.com

Sometimes arched names are laid out on the computer then cut pre-spaced on a tacky backing sheet, then all the letters are pressed onto the jersey for sewing at once. This is far easier than trying to set up a perfect arch with loose individual letters on jersey. But pros can do it either way.

Above is a screen shot of my exact template recreation of the Orioles 1975-1983 orange alternate Rawlings jersey lettering. Though it may be similar to some other teams' patterns, it is unique only to this application!

Prior to sewing, the jersey is fully laid out "virtually" on the computer screen to create a client proof (at right). This helps ensure an error-free end result.

There are literally hundreds of distinct lettering patterns for the 31 MLB teams going back to 1970. If you are having your jerseys lettered, make sure the shop has the exact pattern for your team and year, not just one that is "close"… unless "close enough" is "good enough" for you.

Traditional Layered Tackle Twill Lettering vs. Lightweight Twill (or "Kiss Cut") Lettering

Multi-layered tackle twill, (and before that, layered felt) had been the common way that all jersey wordmarks and player numbers have been created since the beginning of time. As we have illustrated, the widest outline layer is the one on the bottom, and successive smaller layers are laid on top then heat pressed together, then the layers are sewn together. Finally, the completed applique with all its sewn layers is heat pressed to the jersey and sewn with one course of stitches around its edge.

The new method being used by Majestic starting in 2016 changes the technique, so that very narrow letter outlines are cut and then sewn on top of the solid main color. This technique is not actually "new," as it has been used for lightweight soccer jerseys for years, and more recently on NHL and NFL jerseys. Known in the industry as "Kiss Cut," the result is a team name or player number appliqué that uses less layered fabric, and is therefore lighter weight and more pliable than the older layered twill method.

In the past, I have commented on the stiff-cardboard-like wordmark and player numbers found on mid 1990s Marlins jerseys, for example, with their four-color outlines and extra thick (and sharp edged!) metallic twills. There is little doubt that the new method would address this problem. But for most teams that use single color outlines, the difference in weight and flexibility is barely noticeable.

I will make a couple of other observations about the new lettering technology. The first is that it is nearly impossible to cut and sew without highly automated equipment. A computerized "cut" file is created for an automated cutter, a file that contains all the color layers to be cut in a single, layered vector graphics file, nearly identical to a computer file that would drive a pen plotter used to make large engineering drawings.

New for 2016, *Kiss Cut* lightweight twill lettering on all MLB retail Authentic and on-field jerseys. Notice in the bottom photo that the blue outline, formerly the middle layer, is now on top of the "sandwich."

© GameWornGuides.com

Accomplished by Different Methods; Both End Looking Like the Figure At the Left

For ease in explanation, let's imagine a two-color number to be cut, one that is red with a blue outline.

The operator begins by first laying down the red colored twill on the cutting platen of the cutting machine. The red twill needs to be the type that is coated with heat sensitive adhesive. Next, the blue twill is laid over top the red twill layer. This must be a press-adhesive type of twill, so that it will stick to the red twill below. Now, the cutting machine cuts the inside edge of the number's outline layer with an exact stroke that goes only through the top layer of twill. Then it cuts the outside boundary with enough pressure to cut completely through both layers of the twill.

Standard Layered Twill

At left, the standard layered twill method features each layer's edge sewn to the layers beneath. At right, Kiss Cut allows narrow outlines, like this 1/8" player name letter, to have a single sewn edge. At far right, the ¼" border on the player number requires two courses of stitching.

Lightweight, or "Kiss Cut" Twill

The operator then "weeds" the top layer of blue off the center of the letter exposing the red beneath, and peels the entire two-color letter off the cutting platen. This process has three advantages: First, no manual alignment of layers is required before heat pressing the layers together. Secondly, the resulting twill applique is lighter weight and more flexible. The more colored outlines on numbers the more significant this can be. And finally, and perhaps most importantly, this method can completely eliminate a stitching step for objects with narrow outlines like player names. Less time stitching equals less cost. Truthfully, we think it looks cheap and messy. Will most people care? No, but for the target market buyers of Flex Base authentics, this is a key differentiator that buyers will look for.

Patterns: Traditional Fonts for Numbers and Names

Prior to 2000 or so, every team had its own variations in the patterns for numbers and alphabets. varied by team, by shop and even by year. In this book you will see frequent references to three basic common, fonts used by teams over the years: (Wilson) Varsity (Athletic) Block and Block with Serifs. In this introductory chapter allow me to offer brief definitions of these three.

Varsity (or Wilson Varsity): This is the "house font" used by Wilson to number team jerseys. And because Wilson has lettered the jerseys for so many teams over the years, it has become a standard and non-copyrighted font that has many variants when recreated by other shops. The red circles highlight the visual trademarks of the Varsity font. Notable are the four-sided inside openings of numbers like 0,6,8,9. The "feet" (or serifs, as they are formally known) on the numerals 1,2,4 and 7. There are diagonal strokes used on the 4,5,6 and 9.

Varsity has a corresponding alphabet, but this is seldom used in baseball, so we will not detail it in this overview. (It is used by the 1994-2004 Expos, but almost no place else)

Block (or Athletic Block): This font description is woefully generic, and is hardly commonly agreed upon by lettering shops. However, it is by far the most widely used player name and number font in MLB. The red circles highlight the visual trademarks of this font. Note the 8-sided inside openings for the numerals 0 and 8, and the multi-sided openings of the 2,3,5,6 and 9 that distinguish it from varsity. Also notice the lack of feet (or serifs) on the 1,2,4,7, and the flat sides (compared to Varsity) on the 4 and 5.

Block with Serifs (or "Full Block" as it is called by some shops) is almost a hybrid cross between Varsity and Block. It has all the features of Block as shown above, plus the extra serifs used on the Varsity 1,2,4 and 7.

The alphabet that goes along with the Block family numbers is shown below and is by far the most common in baseball. It is used in various degrees of compression (Condensed, Extra Condensed) by more than half the teams in baseball.

The Block Alphabet

Varsity (Wilson Varsity)

Block (or Athletic Block)

Block with Serifs (or Full Block)

Font Patterns: Front Numbers

Many teams have optional front numbers either for design harmony or to make players identifiable from the front. A few teams over the years, notably the 1992-2015 Phillies, the 1971-1975 Chicago White Sox and the 1978-1979 St. Louis Cardinals even had player numbers sewn on their sleeves. Others, like the early 1980s White Sox and the mid-1970s Houston Astros had their front numbers on their pants instead. And though the Colorado Rockies have worn the same home uniform jersey since their inaugural year in 1993 right through this writing in 2025, they added front numbers in 2000. The St. Louis Cardinals dropped front numbers for two years, 1997 and 1998, but brought them back for 1999. And in an odd move, the Oakland A's added front numbers to all uniforms after mid-season 1972, but in a completely different font than used for the back numbers. The front numbers were gone again for the start of the 1973 season.

Above: The Twins added front numbers to their road jerseys in 1973, but their home jerseys stayed without until 1974. Right: The A's odd half-year 1972 front numbers that didn't match the style of the ones on the back. Below: Three teams with sleeve numbers: 1971 White Sox, 1980 Cardinals and 1996 Phillies

© GameWornGuides.com

Patterns: Front Number Proportions Compared to Back Numbers

Outside the expert community, a little noted fact is that when they are used, MLB front numbers are different from the back ones: they rarely simply use a proportionally shrunken pattern of the back numbers. They are usually proportioned very differently; shorter and wider, with different proportional width outlines than the back numbers have. Many shops will simply shrink the back number patterns and use them for the fronts, which looks wrong, because it is.

Oddly, MLB does not include the templates for front numbers in its official restricted league-access-only style guides! For direct comparison, here, side by side are front and back numbers (top, bottom) as used by the 1992 Baltimore Orioles, purposely made the same size so you can see how different they actually are from each other.

For the 2024 season, Nike decided none of this was important and made the front numbers for all teams simply 50% reductions of the back numbers, causing them to appear tall and skinny with narrow outlines. This was just one of the things that Nike did that year that annoyed purists. After complaints Nike restored to appearance of front numbers to the traditional model for 2025.

Front Number Font

Back Number Font

© GameWornGuides.com

Patterns: Standard Number Font Sizes: Jersey Backs

Back in the days of flannel uniforms, before everything became standardized in MLB, there was not much attention paid to identically numbering all players' uniforms. Photos from the 50s and 60s show an occasional mix of number thicknesses and sizes from player to player on the same team.

As we eased into the start of the double knit era around 1971-1972, there were still mismatches on the field. Often times the road uniforms were numbered differently than the home uniforms. Player names were arched differently from man to man.

By the early 1990s, teams started following more of a formula. Back numbers were generally 8" if a player name on back (NOB) was used, perhaps 9-9 ½" if no NOB was present. Front numbers, if used, were between 4" and 5." However, it became more rare to see differences between players on the same field.

In actual practice, back numbers might vary by ¼-½" or so in size from player to player, if carefully measured. I suppose it depended on who was cutting the numbers on any given day.

For comparison, from left to right, Indians jersey with 6 1/4" numbers, and Tigers jerseys with (in order) 7," 8" and 8 ½" numbers. Top right, sloppily team renumbered 1972 Rangers jersey with one 8" number, and one 7" number

© GameWornGuides.com

"Standard" Back Numbers are generally between 7 and 8 inches tall. On game worn jerseys in my collection, the most common **total height** of a 2-color number is approximately 7 3/4". For consistency, in this guide, when I specify letter measurements, it will be the top to bottom measurement of the **top (inner-most) layer**. If they exist, outlines add additional height. A couple of teams' early 1970s numbers, like the Cleveland Indians, can be smaller than 7 inches. Keep in mind that over the years and many, many washings jerseys AND lettering shrink, sometimes by ½" or more, in extreme cases.

1986 Expos: 8"

1996 Cardinals: 7 ½" + 1/8" outline all around 7 7/8."

1980 Blue Jays: 7 ½"

1995 Tigers: 8" + ¼" total outline = 8 ½."

1997 Braves: 7 ½" + ¼ outline all around, total height 8."

© GameWornGuides.com

Patterns: Standard Font Sizes, Jersey Fronts

Front Numbers: Between 3 1/2” and 5”. “Normal” sized is around 4 ¼”. In this guide, when I say “Extra Large” or “Extra Bold” front numbers, they are usually bolder, (like the outline alone of a two-color letter) around 4 ¾” tall. Only a few isolated examples are larger.

1995 Tigers 4 ¼”

Examples: 1986 Expos 4” 1983 Twins 4 ¼” 1996 Cardinals 4 5/8” 2003 Rockies 4 ¾”

© GameWornGuides.com

Patterns: Outline Thicknesses

More important than the exact size, however, are the relative thicknesses of outlines on the lettering. Even from 50 feet away, a tiny 1/8” difference in an outline thickness can be detected by an untrained eye. Therefore, when restoring game worn or lettering new jerseys, I always look for an example to follow. With outlines, being “off” by 1/16” can make a difference that is noticeable close-up, while back numbers on a single uniform that are ¾” too small may go completely un-noticed unless one has a ruler handy.

Throughout this guide I do not give the specific measurement of outlines in fractions of an inch. By showing many photos, I am hopeful that restorers can do it the way I do… by eye.

There are some tricks. Look at the inside of the A. It is easy to visualize and to adjust the size of this small triangle to get the outline exactly right. Same goes for the inside of the O, B, D,P or R, the crossbar of the G and the complex shapes of the outlines for the M and N.

Errors on game worn jerseys: The Angels jersey at top has a outline on the J that is only 1/16” wider than the other letters, but it is very noticeable. The Outline around the 6 is too thin compared to the standard. The Rangers jersey below uses completely different font weights (Standard vs. condensed) for the E and the R

Drop Shadows

Drop shadows became a popular way in the 1990s to introduce black (the 1990s new hot color) to team uniforms and were added to the numbers and names for several teams, including the Mets and Reds. The effect that these provide is three dimensional, as the eye sees the off-center dark backing layer as depth. However, some teams (like the 2015 Miami Marlins and the mid-2000s Reds on their black BP jerseys) make their drop shadows light colors, which confuses the eye and simply makes the design look disjointed.

Block 3 Color regular (non-3D) Drop Shadow

Block 3 Color 3D or Three-Dimensional Drop Shadow

There is a very subtle distinction between the two types. Look at the circled areas to see the differences. When sewn, the regular drop shadow is constructed of one top layer, then two identical outline layers laid over each other and sewn off-set. In the 3D style, the 3D drop shadow letter has 3 distinctly different layers. The bottom (black) layer is shaped differently to give the 3D effect.

Player Name on Back- or "NOB"

When considering the long history of MLB, the universality of players with names on their backs is a relatively new phenomenon. As much as we have researched this topic over the years, the "actual rules" seem fairly vague.

The first MLB team to use player names on the backs of players' uniforms were the Chicago White Sox, who added them in 1960 with TV audiences in mind. The St. Louis Cardinals followed in 1962, odd in that the former team is seen as a rule-breaker and a renegade involving many things in baseball, including team uniforms, and the later is one of the most tradition-minded teams of all. The Tigers added names to road jerseys in 1970.

Teams gradually began adding player names to their uniforms through the 1970s, often adding them to road uniforms first, until all teams (except the New York Yankees) were wearing them on their road uniforms by 1992. In 2014, all teams with the exception of the New York Yankees and the Boston Red Sox had player names on back of their home uniforms. Neither the Yankees nor the Red Sox have ever worn player names on their home uniforms in their history.

1960: the White Sox are the first to add player names to jersey backs

The National League asked teams to sew player names to the back of all road uniform jerseys starting in 1979. If an alternate jersey is to be worn on the road, it too should have a name applied. No such guideline exists in the American League. However- in 2005-2006 the Dodgers omitted names on all uniforms, home and road, ignoring this "Gentleman's Agreement" from 25 years ago. The names returned in 2007, though.

© GameWornGuides.com

There have been instances where players have worn nicknames on their backs, including the incident in the often told story of Ted Turner, Braves owner and *bon vivant* having pitcher Andy Messersmith wear the word "CHANNEL" above his player number, 17 thus having him be a living advertising billboard for Turner's TV station. MLB was not amused and ordered this stopped, then ruled that any name other than the player's surname being used on a jersey needed to be approved first by MLB.

Several teams have dropped names on back for one or more seasons on their home uniforms, including the Dodgers (who eliminated player NOB on all uniforms 2005-2006), the Chicago Cubs in 2005-2006, and the New York Mets in 1999 only. Players complained, and the names on back returned the following year. The Dodgers' owner Frank McCourt explained the decision was prompted "… by a desire to stress a team approach and not focus on the individual."

An article by Paul Lukas contains much interesting history, called "Where the Jerseys have No Names" originally on ESPN.com. https://www.espn.com/espn/page2/story?page=lukas/041202

(Top left) Andy Messersmith of the 1976 Braves with his soon-banned NOB Uniform jersey. (Top Right) With no fanfare, the Cubs had two unique sets of blue alternate jerseys in 2005-2006. The road jerseys had player names on back, and the home ones did not. (Left) the Mets dropped player names from all home-worn uniforms in 1999, but they returned the next year after players' complaints. Seemed players liked being recognized.

Ponle Acento: “Put an Accent on it”

Above: A handful of jerseys featuring diacritic marks in players’ last names, along with MLB’s Ponle Acento logo, used to promote the addition of the marks in 2016.

Below: Three game worn jerseys from pioneers of diacritics on MLB uniforms (left to right) César Cedeño’s 1983 Reds road jersey; Tony Peña’s 1981 Pirates home jersey; Álex Treviño’s 1982 Reds home jersey.

There is no denying the impact of Hispanic ballplayers on Major League Baseball. From Lou Castro (born Luis Joaquin Bonifacio Vasquez Castro) the first recognized Latin American MLB player in 1902, to Roberto Clemente, to the stars of today, Hispanic players make up more than a quarter of MLB as of 2016.

In the spirit of recognizing these players and the proper ways to spell their names, Major League Baseball released a memo to clubs in 2016 requesting that teams work proactively with players to include any diacritic/accent marks on jersey backs. Though this process could apply to any player with such marks in his name, MLB and players promoted the drive with the “Ponle Acento” campaign.

Ponle Acento, which means “put an accent on it” in Spanish, brought about a series of updates to player name lettering across the league. Adrián González, one of the earliest supporters of the campaign, added the mark to his jersey and encouraged others, including then-Dodgers teammate Enrique “Kiké” Hernández, to follow suit. Soon, players from teams across the league were updating their jerseys to include the proper diacritics for their names, in what was as much a show of pride as an overdue correction.

Though the campaign expanded the use of diacritic marks widely in 2016, they have appeared on MLB jerseys dating back to the early 1980s with players including César Cedeño, Tony Peña, and Álex Treviño all using a tilde on their jerseys since at least 1981.

Though, as of press time, we have only seen the expanded use of the tilde (ñ), and the acute accent (é, á, í, ó, and ú) on MLB jerseys, as baseball’s impact continues to expand worldwide, it is only a matter of time until other marks make their way to jerseys across the sport.

© GameWornGuides.com

Patterns: Condensed and Extra Condensed Player Name Fonts

Some NOB alphabet fonts have CONDENSED and EXTRA CONDENSED versions to deal with fitting long player names in the limited real estate across a player's shoulders. Some teams use these variations, while others do not, even when they are available.

In some situations, a condensed version of a font is not available, and the team needs to perform clumsy sewing gymnastics to fit it all on using the full-width font.

Many teams' game used jerseys have their player NOBs removed before they get to the hobby. In restoring or recreating period jerseys, it is important to know how the team would have handled the player's name. Finding original news photographs is the best way to be sure. Among the most frequently seen with incorrectly restored NOBs are the 1970s and early 1980s Philadelphia Phillies and Kansas City Royals who used vertical arched names, then stripped them off. Restorers routinely replace these with radially arched names because it is easier to do, or because they are just uninformed.

(Above, left) Many teams like the White Sox and Twins have preferred to use a standard Block NOB font for all names and squeeze it all in by varying the degree of the radial arch, if need be. (Above right), the Cardinals have long used a Condensed version of Block for most names, and an Extra Condensed version for long names. Bottom right, when the font is big and clunky and the player's name is very long, you get…this.

© GameWornGuides.com

Patterns: Block Extra Wide and Block Extra-Extra Condensed?

This is a page of two extremes. At left is an example of the Pirates Black Descente (Japanese made) jerseys which oddly featured as many as four different fonts with four degrees of letter width depending on the player name's length. The shortest names of three and four letters received this extra-wide treatment. And at right is what is said to be the longest name in USA professional sports. Eric Stuckenschneider was originally a 1994 draftee of the Los Angeles Dodgers. His 16-letter name is so long that even Extra Condensed lettering is too wide to make it properly fit. So a custom, even more condensed version is used for his jersey. Notice that the outline color is filled in solid on letters like the U, N, H, R and D. Can you imagine if this fellow had played for the 1970s-1980s Cincinnati Reds?

© GameWornGuides.com

Patterns: Standard Sizes of Player Names on Back (NOB)

First thing to realize is: *There are no standard sizes for numbers or names.* Patterns are legacy, and many teams use patterns originally made by a local supplier, there are variations from team to team, and sometimes even on the same team from year to year.

Unless otherwise specified, assume the following guidelines hold true:

"Generally" standard Sized Names: Most player names are 3"- 3 ½" tall. The most common size in my collection for a 2-color name is 3 ½" tall- measured from outside color, edge to edge. Every team is different.

1985 White Sox- 3"

2002 Rockies- 3 3/8"

1998 Brewers- 3 ½"

1992 Angels 3 ½"

1985 Cardinals 3 ½"

1997 Atlanta Braves- 2 7/8"

1986 Montreal Expos- 3"

© GameWornGuides.com

Patterns: Radially Arched vs. Vertical Arched NOB

Both above and below at the left are original jerseys with their vertical arched names on back intact. (The Phillies used nameplates, the Royals did not.) Next to them on the right, both above and below are game worn jerseys incorrectly restored with radially arched names. This is very common, because the skill involved in doing it correctly is not commonplace, as is explained on the next page.

When sewing a name, “Radial Arch” layout is by far the most common, where all the letters are cut from the same pattern, arched in an arc, and sewn. But through the mid-1980s some teams used the classy lettering technique called “Vertical Arch” where every letter is cut uniquely depending on its position on the arch. I’ll explain more on the next two pages, but suffice to say it was a fancy but difficult method of sewing player names. One by one, teams dropped it. The Padres after 1984, Phillies and Twins after 1986, The Royals in 1994. The Braves were the last to use it in 2005, and by the start of the 2006 season it had been abandoned by everyone.

Many game worn jerseys in the hobby have had their original NOBs stripped, and in attempting to restore them, many have been fitted with incorrect radially arched names.

However, even when the whole team had vertical arched names, it was not uncommon for a late call up or a newly acquired player to get a jersey without the vertical arched lettering if the team was in a hurry. Note the photo at top right where Greg Maddux and Chipper Jones of the Braves are on the field together with different style arched names!

© GameWornGuides.com

Patterns: The Lost Art of Creating Vertical Arch Player Names

Perhaps you have seen the Vertical Arch effect, but probably did not know it had a name. Simply, the names slant uphill on the left side, are vertically straight in the center, and slant downhill on the right.

This lettering style necessitates that *every letter in the name must be drawn at a different angle*. Back when everything was cut using paper patterns this was a lot of work to do. Today, the effect is more easily obtained with automated computer graphics.

But sadly, by 2006, all MLB teams had abandoned it. The last team to use vertical arch names on game uniforms was the 2005 Atlanta Braves.

Any font can be arched, just like any font can be made italic. All three of these examples are slightly different typefaces, all vertically arched. On the next couple of pages I will show you how it is done.

© GameWornGuides.com

I have drawn an ellipse below the player name on this 1984 Phillies jersey of outfielder Gary Matthews. The arc of the ellipse nearly perfectly matches the curve of the name. We will use this example as we move ahead...

Vertical arch is the geometric compliment of Italic print. We all know what italic writing looks like… the bottoms of the letters are flat against the ruled line, and the verticals of the letters slant to the right.

THIS IS AN EXAMPLE OF AN ITALIC FONT.

Vertical Arch illustrates exactly the opposite concept. The vertical strokes of the letters are vertically straight up and down, and the bottoms and tops of the letters lean to one side or another to follow the arc or an arch. Note the vertical black lines I have drawn on the example at left. You may notice these lines don't perfectly match the letters on the jersey because this real life execution of Vertical Arch is not perfect.. But you get the idea.

© GameWornGuides.com

Now, measure the exact angle at the foot of the letter and of a straight line drawn across the ellipse at the letter's bottom (you might recall from high school geometry that this line is called a tangent). These tangents are shown in MAGENTA.

Take each angle and subtract 90 degrees. The resulting number is the amount of vertical angle skew that should be added to that letter.

This can be done one name at a time on a drawing board, by hand. Sometimes, patterns existed for each letter in its straight configuration, then there were different sets of patterns for +5, +10, +15, + 20 and possibly more. Then, letters for the other side of the curve were cut from patterns drawn at -5, -10, -15, -20 and more. That's a lot of patterns!

Today, with computers and graphics software like Adobe Illustrator, this is relatively easy to do. But when the Royals and Phillies and Twins were doing this back in the mid-1970s and early 1980s, you can bet it was being done by hand, and someone very artistically skilled and experienced was doing the layout, hand-drafting every letter, and doing the cutting.

This array of letters is created in Adobe Illustrator and took me just a few minutes to create from the pattern of a single basic, Block letter M

© GameWornGuides.com

The Final Step in Creating a Vertical Arch Name

There is often an important final step added, apparent in many old-time vertical arch player names-on- back. Most teams that employed this technique also “stretched” the height of the letters at the farthest ends of longer names to give an even more dramatic effect. Clearly, this was a manual process, and to me showed definite personalized artistry in the creation of player jerseys that seems to have fallen away in today’s computer-generated era.

Follow the pictures to see what I mean.

This top example is graphically undistorted at the ends. ”By the Book.” The bottom example is slightly distorted at the ends, the way most teams do it. See how it extends beyond the bounding box?

While I’ve used the San Francisco Giants in the examples here, most teams that used vertical arch names on back did this, including at some point the Phillies, Royals, Orioles, Padres, and Braves.

In both NOB examples shown here, the top player name is graphically undistorted: the letters at the ends of the name are the same height as the letters in the middle.

In the example at left, the black bounding box that surrounds the name is *identical* top and bottom. It is taller at the ends than in the middle .

However, the bottom player name has been distorted/stretched vertically at the ends to fill the box that matches the team template.

The difference is subtle, but most would agree that the bottom examples look better.

© GameWornGuides.com

Patterns: Vertical Arch Font Variations

The Phillies used slightly stretched tall variants of fonts we have referred to as “Block Standard “and “Block Condensed” for their vertical arched alphabet. But other teams have used their own variations of Block for Vertical Arched names.

- The 1980s Royals use Rawlings’ Block as the basis for their player name fonts.
- The 1980s Giants version of Block also provides an interesting variation for Vertical Arched names.
- The 1980s Twins versions are both extra narrow and extra tall.

Patterns: Nameplates vs. Direct Sewn NOB

Team issued Athletics jersey sewn by their team tailor and our friend, Steve Sale.

Player nameplates are the industry term for the piece of jersey-colored cloth, usually cut and hemmed in an arc, with the player's name sewn on. The nameplate is then sewn to the jersey, and the player's number sewn below. The alternative method of name attachment is "direct sewn" where the player name is sewn, letter-by-letter, directly onto to the back of the jersey.

You have probably noticed that some teams have used them frequently, and others not at all. Some teams that have used them put them only on certain styles of jerseys and even then, not in all years.

There are several good reasons that teams have used nameplates, but in MLB their use has dwindled markedly as the years passed. In 2018, the only two remaining teams still using them were the Indians and Rays; both stopped using nameplates after the 2018 season. Below are most of the reasons nameplates were used by pro teams:

1.Speed in having new uniforms ready at final roster and at mid-season call up: Sewing a player name takes a long time, and with the number of players on a team and the number of sets of home and away jersey that are needed, it is a big job. (Imagine how pleased the seamstress is when getting a jersey order for Jarrod Saltalamacchia.) Nameplates can be sewn by the team's tailor for every player in March, before a jersey is needed. When the team is chosen for the start of the season, the nameplates for the roster players are pulled and sewn on the jerseys of the players. The unused plates are then shipped north to reside with the equipment manager when the season starts. When a player is called up, the equipment manager can pull a properly sized and possibly arbitrary numbered jersey from the storage closet, and sew on the pre-configured nameplate. Fast and easy, and it can even be done at the stadium.

2.Mid-season equipment change: Jerseys are sometimes damaged or become dirty past the point of utility. Or, a player might request a jersey in the next larger size mid-seaspn. The equipment manager can quickly remove the plate from the old jersey and re-sew it to the new one. Sewing an arched name is a lot of work, and takes many times as long and more skill to do than to apply a player number.

3.End of season re-use of jerseys: When a season ends, jerseys in good condition had often been returned to service the following year. For sure, they were used in spring training the next year. Or, the jerseys are sent to a farm club for use. In either occasion, a quick way to remove a player name is needed, and the nameplate provides the answer. Without nameplates, each player name had to be unsewn letter by letter, stitch by stitch. That is a very time consuming proposition indeed!

4. General ease/speed in sewing: It is far more difficult for any tailor or seamstress to sew the many angles and lines of a player name when that name is affixed to the top-back of the player. Conversely, sewing the player name to a small plate is far easier to handle at the sewing machine. This fact was especially true in the days of the pullover uniform that started in the mid 1970s.. Manipulating a large, turned inside-out jersey on a sewing machine, and trying to sew a player name onto the top of the back shoulders is a very clumsy exercise.

A selection of used and removed Orioles nameplates. Note the different styles of lettering from different years and done by different manufacturers. These details are often missed in jersey restorations.

© GameWornGuides.com

Now having said all of this, why didn't every team use nameplates?

The first reason is that many think they look bad. If not sewn of identical material They can often pucker and pull away from the jersey, as the fabrics may shrink at different rates.

Teams like the Dodgers have never used them, believing that the look cheapens the team's image, making players look like temporary employees. Why not just attach them with Velcro?

Pinstriped jerseys are particularly offensive (to many, including your author) with plain white nameplates. The Phillies of the 1970s-1980s used them, and though we were accustomed to them, it just didn't look right. But starting with the 1992 team redesign, even the Phillies conceded and stopped using plates on pinstriped jerseys, though they kept using them on solid color jerseys (road gray and red BP) for another few years.

In some cases, if jerseys were never expected to be sent to the minors, they would not have nameplates from the start. A good example of this is when the team's road jerseys have the MLB city name on them. These are less frequently sent to the minors, as they don't work.

By 2019: Nameplates are no longer used in MLB

There are several reasons why: First, team jerseys are sold to fans, sometimes only after being worn a few games. MLB was ridiculously late in realizing that game worn player jerseys had cachet with fans, and now teams often order many sets of uniforms for name players in a season so they can be marketed as game used items in the team store. The days of minor league reuse of old MLB uniforms is long over.

Secondly, automation. While final sewing onto the jersey is still done by a person at a manual machine, all the cutting, pressing and alignment is done by sophisticated equipment. Much of the prep, cutting, preliminary layer-sewing and setup time has been reduced and at the same time the quality has been improved.

In 2018, the two last teams still using nameplates were the Indians and Rays. We must assume that they liked the old-fashioned look. But they too have now abandoned the past, with both teams eliminating them for 2019.

Top: Phillies used rather obvious white nameplates on pinstriped jerseys from 1975 through 1991. Left: Three Pirates late 70s nameplates show that they clearly made by different stitchers in different places. This lack of consistency did not seem to bother teams then. Above, late 1970s Mets home jerseys used a steeply arched nameplate resulting in very low number placement, obvious here since the plate has been removed.

© GameWornGuides.com

Perhaps unsurprisingly, the large majority of jerseys that were originally sewn with nameplates no longer have that original nameplate attached. The jerseys were reused, as planned, in the minor leagues or frugally reissued to new MLB players in a second or third year of use. Some teams simply regularly stripped all player names from jerseys before selling the jerseys off to the hobby. As a result, there are a lot of jerseys with restored names on back, and often these are incorrectly done. Here are a few things to know about restored nameplates.

- Check the charts in this book to see if a team/year jersey originally had a nameplate when new. Some jerseys show signs of having blank nameplates sewn over top of an originally direct-sewn NOB
- Check this Guide, as well as with a web search of period news photos, to see the exact style of the original NOB as would have been used when the jersey was new. Many jerseys originally sewn with vertical arched NOB now are restored and lack that detail. Make sure the NOB is exactly the correct font as well. It is a lot easier to get it wrong than right.
- The nameplate should be made of matching jersey color and style of fabric. The Wilson/Rawlings/ Majestic factories kept extra jersey fabric on hand from which they made nameplates. For re-issue, teams often made them from old pants. The fabric should match in color, and absolutely should not be made from twill.
- The edges of the plate should be serged before it is sewn to the jersey. (there are some exceptions, notably the late 1980s Braves sewed raw-edged plates to the jerseys simply using a zig zag stitch.)
- Generally (but not always) nameplates have a backing layer of fabric INTERFACING sewn to them. This is a stiffener that prevents the fabric from puckering or bunching when the nameplate is sewn to the jersey.

Click here to see how a nameplate edge is serged

(Clockwise from top left) 1) Either a double layer of fabric or a piece of stiffening interfacing (brand name *Pelon*) is cut and heat pressed to the back of the nameplate prior to stitching on the lettering to minimize puckering. Note that the nameplate is made from a piece of matching fabric from a donor blank jersey. 2) Lettering is stitched in place and the nameplate is trimmed to size. 3) The edge of the plate is surged to prevent fraying. 4) The finished nameplate. 5) The nameplate sewn to the jersey. I find that a double layer of mesh is needed for a BP Jersey nameplate to prevent seeing the white backing through the holes.

MLB Back Collar "Silhouetted Batter" 2000-2005

New for the 2000 season, all Authentic on-field jerseys were adorned on the center of the back collar with the MLB logo, the "Silhouetted Batter." This feature was added to retail sale authentics as well (and to Cool Base replica grade jerseys in 2015). Each team had the traditionally red, white and blue emblem potentially customized in its own team colors, though 12 of the 30 teams used the logo in its original red/white/blue colors. Official charts showing the emblems as published by MLB are shown on the next pages.

The Migration to Plastic Patches

Since the 1940s, team sleeve patches had been embroidered the traditional way, using a dense matrix of colorful threads on a fabric backing. As automation methods improved and became highly computerized in the 1990s, patches became more common and very detailed. With the 2016 introduction of Flex Base jerseys, every team got its first taste of the new patch style when the back-of-neck Silhouetted Batter changed over to a shiny, flexible and iridescent plastic patch in each team's unique colors.

Two companies are supplying Major League Baseball. One is Fibrelok Technologies, branding their product as "Chromaflex", a high-tech product designed to allow maximum color, reflectiveness and detail. (Recall Fibrelok Technologies was also responsible for the 2007-2010 applique lettering on MLB's BP jerseys.) Also suppling plastic patches to MLB under their brand name "EmbossTech" is The Emblem Source, who for years has made many of MLB's traditional cloth-stitched emblems.

The new patch style is being used more and more frequently from 2016 on, for Spring Training, All-Star and event patches, for single event sleeve patches (like on the sleeves of Players Weekend jerseys) and for Postseason play. So far, teams are not using them for their standard team logo sleeve patches. A flexible vinyl, they are usually zigzag stitched on to jerseys using invisible (clear) nylon thread.

In my editorial opinion, they are distinctive but certainly not traditional. They are shiny, flashy and reflective; some view them as leading-edge, others think they look cheap. MLB is apparently also using them to define exclusivity. Often, but not always, the licensed authentic patches sold separately by MLB or sewn on Authentics offered at the team shop are not the new plastic types, but rather are cloth / embroidered copies of the actual on-field plastic ones. This practice has irritated collectors looking to modify their own authentic jerseys with correct All-Star and postseason patches.

© GameWornGuides.com

Individual Teams' "Team Sleeve Patches"

The term "team patches" refers to the standard, non-commemorative patches, usually on the sleeves, that are included on all team uniforms for a given year, or for multiple years.

There are hundreds of these patches with many variations. Within this Guide, I have attempted to show all of these patches and their annual changes with each team's detail. Through 2023, these "team patches" were still embroidered cloth. However- once advertising patches started to appear in 2023, some teams either ditched their sleeve patches to make room for advertising ones, or they varied the sleeve the team patch appeared on (player by player) to allow the advertising patch to appear on the more prominently visible sleeve on TV.

2024's patches were cheapened to printed vinyl, and after an outcry embroidered patches returned in 2025.

Vest "Sleeve Logos"

When teams began wearing vest jerseys again in the 1990s, Russell and Rawlings added their logos first on the center of the back of the neck of the jersey, and then when the MLB Silhouetted Batter patch took that spot in 2000, all (later adding Majestic) moved the embroidered branding logo to the TOP of the left armhole, an inch or so from the edge. This certainly came about after it was clear that players were often not going to wear the standard team-issued undershirt which bore the manufacturers' logo on its sleeve.

Top right and bottom right: Official team undershirts with team patches and Russell logos. Center: Russell began tagging vests on the back of the collar, (bottom left) then on the shoulder near the left armhole starting in 2000.

© GameWornGuides.com

Team Undershirts

Until the early 2000s, most MLB teams did not enforce a policy on what style of shirt players could wear under their uniform jersey. Some teams, like the Cardinals and Yankees have always been very strict about the uniformity of the under-garment, since it shows plainly at the collar and sleeve ends. Other teams have been more lax over the years, allowing players to wear whatever they want underneath. (Interestingly, the MLB rules officially require players to wear the same undershirts.)

By 2000, "*Authentic Collection*" undershirts are available to both teams and fans, emblazoned with the team name and/or logo at the neck. The all-important manufacturer's logo is always sewn on the sleeve in a place it can be seen on TV.

While MLB did not yet force players to wear the official undershirts, starting in the early 2000s, it began to be more strict about what colors players can and cannot wear under their jerseys. Today, many players are choosing to wear non-team logo skin-tight body armor style undershirts.

Clockwise from top: Reds and Pirates wear official undershirts with their vests; team patches sewn to sleeves. Note the Russell R on the Reds' undershirt. Dodgers and Giants official undershirts are shown as well. Bottom left-The Phillies' Pat Burrell nearly always wore a nonstandard black undershirt with his game jersey.

© GameWornGuides.com

Amapro Team Undershirts: 1993-1994

The Amapro company of Farmingdale, New York *("Styled for the Pro")* was the first undershirt supplier that was allowed to include the "Diamond Collection" branding in its advertising. This agreement appears to have started in 1992 or 1993, and continued only through about 1994 or 1995. This was at the very dawn of MLB's marketing efforts, and Diamond Collection gear had very limited, spotty distribution. Team-used undershirts generally did not survive the transition to the collector market, and the only game used Amapro undershirts I have seen have been paired with 1993-1994 Marlins vest jerseys. The Reds and Blue Jays' examples shown here still have their retail paper hang-tags attached.

© GameWornGuides.com

Russell Team Undershirts

Russell was awarded t he official “Diamond Collection” label for long sleeved undershirts around 1995, and kept it through around 2001. They were offered in both turtleneck and mock-turtleneck styles, some with half-gray bodies and others with full-color bodies. Some had Authentic Collection tagging on the tails, most did not. When Russell lost the exclusive MLB outfitting contract, these were dumped by the ton to the discount outlets.

© GameWornGuides.com

Nike Undershirts: 2010-2025

Starting in 2010, Nike undershirts made their appearance. Surely as the result of a complex promotional contract, suddenly formerly team-logoed or plain undershirt collars were replaced nearly universally with a “Swoosh” hovering under the chin of nearly every player. These are quite intentionally clearly visible on every TV close-up, on every scoreboard head shot and in every news photograph. Most wear them, some have resisted.

While many decry the practice often called “Logo Creep," from a business perspective, I recognize that the money that teams gain from these exercises helps pay the unfathomably high salaries owed to Major Leaguer players, taking some of the funding burden off of the ticket buying public. I confess more personal annoyance at paying $45 for a second level seat than I do at seeing a swoosh on a player’s shirt. The Nike contract for supplying logoed player undershirts runs through 2019, and is extended when Nike earns a 10-year contract to produce jerseys, base layers, game day outerwear, and training apparel starting in 2020.

Chapter 3

Game Jersey Manufacturer Tagging

Game Worn Guide to MLB Jerseys

1970-2025, Tenth Edition

William F. Henderson

Intimate secrets are held within manufacturers' garment tags; secrets that can reveal much about a baseball uniform jersey, such as exactly when it was made and whether it was originally made for team use or retail sale.

Sometimes known as "jock tags," these relatively large branding labels are usually found sewn either inside the neck or on the inside or outside of the shirt tail. They are not meant to be seen by the public. What material they are made of, where and how they are sewn onto the jersey, and exactly what they say, all provide clues to a jersey's age and origins.

Outside sleeve logos are designed to be seen by the public and are considered paid advertising. The first game jersey sleeve branding appeared for the 1987 season.

Between 1970-2025, 15 manufacturers have supplied game uniforms that have been worn on the field to the Major Leagues. However, only four of these makers have had permission to display their brand names where the public can see them: Rawlings, Russell, Majestic, and Nike.

In this section, we will take an obsessively close look at manufacturer tags and logos, both hidden and not, and offer a lesson on how they can provide clues on the authenticity of Major League Baseball jerseys.

*This chapter covers **game jerseys** and **Spring Training jerseys from 2016-2025**. Batting practice jersey tagging is covered in Chapter 8.*

In this chapter, we'll start with Nike, the official supplier to MLB since 2020, and work our way backwards through the suppliers who provided game jerseys starting in 1970.

Listed last are the "spot players," companies that have provided game jerseys for Turn Back the Clock games or to specific teams in a small number of seasons.

Consider jersey manufacturers grouped in these general categories:

"Official Supplier to MLB": Since the classification was introduced before the 1987 season, only four companies so far have received this status, and have been allowed by contract to show their sleeve logos on the field of play. These are Rawlings, Russell, Majestic, and Nike.

Unofficial Supplier (but Major Contributor): There are some significant team uniform suppliers who, while they made many on-field uniforms in the period covered by this book, were never afforded the privilege of displaying their company logos for the public to see; Wilson, McAuliffe, Medalist/Sand-Knit, and Goodman & Sons.

Spot Players: Most are best known for being a specialty provider for Turn Back the Clock games, though a few provided regular season game jerseys. These are AIS, Bobcat Athletic, Ebbets Field Flannels, Mitchell & Ness, Spalding, Capital Ace, and Descente.

© GameWornGuides.com

Overview of MLB Jersey Manufacturers and Visible Sleeve/Chest Brand Logos

The chart on this page shows the rather specific and complex contractual rules that dictate the display of manufacturer sleeve logos on MLB game jerseys, 1970-2025. No logos are displayed prior to 1986.

The rules are different between 1987 and 2002 for game jerseys and batting practice jerseys, and then team issued/retail versions of each.

Starting 2004, the contracts for all types are awarded to Majestic and things become more consistent throughout.

Since 1987, only Rawlings, Russell Majestic, and Nike have been contractually allowed to display their logos on MLB jersey sleeves. Other makes, like AIS, Wilson, Sand-Knit,McAuliffe, and Goodman have never been permitted to do so. Jerseys with other logos on sleeves advertised as "game worn" are very likely Minor League issues.

A chart like this one covering batting practice jerseys is placed in Chapter 8: Batting Practice and Spring Training Jerseys.

Years	Team Issued Game Jerseys	Retail Sale "Authentic" Game Jerseys
1986 and Prior NO MLB-wide official supplier	Each team is permitted to make its own individual contracts with jersey manufacturers. Some use multiple vendors at once. No manufacturer logos are allowed on sleeves or in public view.	Sand-Knit has an agreement to sell very nice licensed replica jerseys, nearly identical to team specs. No manufacturer logos are present on sleeve. Each team may also have an arrangement to sell a few team-spec jerseys through specialty retailers. Distribution is very limited, and few are sold.
1987-1991 Rawlings Official Supplier	Rawlings becomes the official supplier of game jerseys to MLB. However, if a team has a current contract with another vendor, it is not required to switch to Rawlings. Those teams that do use Rawlings jerseys display the Rawlings script on the sleeve end. Teams that use non-Rawlings jerseys display plain sleeves. Early issue jerseys from 1986 sometimes feature small sewn-on jersey colored cloth patches with the Rawlings logo embroidered on them. Later jerseys have direct embroidery. Exception: Yankees jerseys always have plain sleeves with no logos showing.	For those teams that use Rawlings jerseys on the field, Rawlings makes the sleeve-logoed Authentics for retail sale. Other teams may opt for Rawlings-logoed jerseys to be made for retail sale, or may refuse and continue the limited distribution of jerseys made by their own contracted manufacturer, but without any sleeve logos showing at all.
1992-1999 Russell Official Supplier	Russell takes over as official supplier of game jerseys to MLB, and Russell-made jerseys feature the Russell "R" embroidered on the sleeve end. While most teams switch to Russell for 1992, some do not. Teams that use other manufacturers' jerseys must leave the sleeves plain with no logo. Exception: Yankees jerseys always have plain sleeves with no logos showing.	Russell's contract as the official supplier to MLB gives them exclusivity to all retail game jersey sold in stores, whether the team uses Russell jerseys on the field or not. All retail jerseys (including the Yankees) have the Russell "R' embroidered on the sleeve end.
2000-2002 Co-Official Suppliers, Russell and Rawlings **2003-2004** Co-official suppliers, Russell and Majestic	Russell remains the supplier to most, but not all teams, and those jerseys supplied by Russell to teams on the field still feature the Russell "R" embroidered on the sleeve end. However, between 20002002, a few teams jump ship to Rawlings, and these teams can display the new oval Rawlings logo on their game jersey sleeves, an R surrounded by an ellipse. In 2003-2004, a few teams switch to Majestic, and these teams can display the Majestic "M" on the sleeve. Exception: Yankees jerseys always have plain sleeves with no logos showing.	Russell remains the supplier to most but not all teams, and those teams sell retail jerseys featuring the Russell "R" embroidered on the sleeve end. However, from 2000-2002, a few teams jumped ship to Rawlings, and these teams can display the new oval Rawlings logo on their retail authentic jersey sleeves, an R surrounded by an ellipse. In 2003-2004, the teams that have switched to Majestic can display the Majestic "M" on the sleeve of retail authentics..All retail sale jerseys are sleeve logoed by their respective maker, Russell, Rawlings, or Majestic, including the Yankees.
2005-2019 Majestic Official Supplier	Majestic takes over as official supplier of game jerseys to MLB. All teams without exception use Majestic jerseys on the field. All teams except the Yankees display the Majestic "M" on the sleeve end. Yankees' sleeve ends remain plain. Team spec full-weight knit jerseys feature an inside seam tag printed with "0062"; 2005-2015 Cool Base Jerseys "0063"; and 2016-2019 Flex Base "0730".	Majestic takes over as official supplier of retail authentic game jerseys to MLB. All teams without exception have their retail authentics made by Majestic. All teams including the Yankees display the Majestic "M" on the sleeve end. Team spec full-weight knit jerseys feature an inside seam tag printed with "6200"; 2005-2015 Cool Base Jerseys "6300"; and 2016-2019 Flex Base "7300"
2020-2025 Nike Official Supplier	Nike becomes the official supplier of game jerseys to MLB. All teams, without exception, use Nike jerseys on the field. All teams INCLUDING the Yankees display the Nike "Swoosh" logo on the right upper chest.	Nike is now the official supplier of retail authentic game jerseys to MLB. All teams, without exception, have their on-field retail authentics made by Nike. All teams, without exception, display the Nike "Swoosh" logo on the right upper chest.

Manufacturer Label/“Jock Tag” or “Locker Tag” Placement 1970s-2000s

Front 1970-1986, there were no retail authentics. Teams ordering jerseys could specify exactly where they wanted tagging to be sewn.

Since first made for sale in 1987, retail authentic jerseys have featured the manufacturer’s label sewn to the outside of the left front shirt tail *(top left).*

But still, when made to team specifications for player on-field use between 1987-2005, the team sometimes specified a different location for the tag to be sewn.

This was true up until about 2005, when teams began issuing Cool Base and then Flex Base jerseys (starting 2016), all of which have the jock tag consistently affixed to the outside of the left shirt tail.

Clockwise from top left, outside left shirt tail (the most common location); inside left shirt tail; inside the back of the neck; inside the back shirt tail; and “front and center” either inside or outside the garment.

Running Changes in Manufacturer Tag Styles, Over Time

In all the detail pages that follow, you might notice considerable overlap in the dates of use of tag variants. I will suggest a reasonable but unverified explanation for this.

Why do manufacturers change tags at all? There are two basic reasons. One is for branding, image, and promotion. When a company changes its logo or colors, it wants that branding to extend to all its collateral, and that certainly includes its product tagging. Branding changes generally cause an immediate tag changeover.

But a second more utilitarian reason is to add or change washing instructions, adding instructions on what detergents to use and how hot the wash water should be. Once the tags are changed, how quickly the new tags replace the old tags in production might be an issue of frugality. Unwilling to dispose of expensive inventory if they can avoid it, businesses will often use up the old stock before switching to the new. I assure you they had given zero thought to the use of how collectors and authenticators might use this data in thirty years' time.

Uniform manufacturers order up tags in huge lots. When they make a change to the tag, like adding a new wash instruction, they will generally continue to use the old tags concurrently until they are used up, possibly mixing in the new style. While it would be nice to have hard and fast rules of start and stop dates for every label variant, this just isn't the way it happened.

Our data is gleaned from our examination of thousands of game worn jerseys. It is easier to determine the introduction date for a new tag style than it is to determine the last time a certain style of tag ever appeared. Why? Well, one can imagine boxes of new-style tags being delivered to the manufacturer, and the workers in the factory being encouraged to use up all the old stock before opening the new boxes. Yet, it is also easy to imagine that new shipments of tags may probably have been stacked on top of the old boxes, and when replenishing the line, workers grabbed the boxes nearest to them, regardless of what they had inside. That's just the way life is.

For some manufacturers, a study of on-field tag use on year-tagged jerseys shows with near certainty the date a new tag first came into use. In many cases, the old and new are used seemingly interchangeably over a period of even a couple of years. In these cases, the breakdown of the phase in/phase out of old and new tags observed might look like this:

	Tag Style A	Tag Style B
1993	100%	0%
1994	90%	10%
1995	67%	33%
1996	10%	90%
1997	0%	100%

Notably, some teams seem to have a much higher percentage of the OLD tags used on player-issued jerseys in a transition year than others; the Red Sox and Twins are good examples. Perhaps these teams just got their orders into Rawlings, Russell, etc., before the others, and therefore they were stitched earlier. Or maybe they were sewn in a different building or place where the stock of old tags had not been exhausted yet.

When examining jerseys offered auction, I have observed that star player jerseys frequently will have the later style tags, and common player game worn jerseys have earlier style tags. My explanation for this is that once the actual SET 1 and SET 2 uniforms have been stitched for the team and have been shipped for opening day, *only then* does the factory take a breather, then get busy making what we call "Salesman's Samples" or extra jerseys for the player or the club to give to good customers, vendors, and to sell to fans. The factories might have made 500 extra year-tagged ("team issue") Cal Ripken jerseys in 1998, or Nolan Ryan jerseys in 1986, from the sheer numbers of them we see at auction. These jerseys were most often manufactured later in the year than the ones actually issued to the player to wear. As an authenticator, I use tag styles as just one of many indicators of the actual manufacturing date and the likelihood of the team issuance of a jersey.

I am always especially alert for jerseys said to be of a certain year with tagging affixed that is likely from a later year. For example, it is not uncommon to find a jersey for a star player claimed to be from 1993 but affixed with tagging that was not used until 1994. While it may be an outright counterfeit, there is also the chance that it was made by the factory in November, making special orders for the player, jerseys for autograph sessions, gifts for friends and good clients, all after the season had finished, and they used tags that were ordered and planned for use the next year.

© GameWornGuides.com

Nike: Official Supplier to MLB 2020-2025

Nike is the supplier to all teams in MLB starting with the 2020 season. The Nike Swoosh is stitched (not direct-embroidered) to the upper right chest of every MLB on-field and retail-authentic jersey. Meaning, this is the first time on-field Yankees jerseys will have manufacturer logos visible on them.

The jerseys themselves remain identical to the 2019 Majestic Flex Base pattern through 2023, and the jerseys are made in the same factory by the same people as the 2019 Majestic Flex Base ones. Even the patent number on the inside seam tag is identical to previous. It's the same jersey with Nike branding and tags the only real change.

The tail tag is now a sewn-on black/silver embroidered one, replacing the heat-pressed Majestic tag. The "Authentic Collection" branding remains, but the logo design is different. The white inventory tag with size, set, customization info, and QR code carries over from the Majestic jerseys as well, just with the new Nike branding added. This tag changes some small details of shape, material, and printing for the 2023 season, but remains very similar otherwise.

Team-issued and game worn examples now have an 0890 code on the back of the interior wash tag, replacing the 0730 code from Majestic's era.

At retail, there are some slight differences. First, retail jerseys have neck tagging that is not present in team-spec jerseys, and predictably, the inventory tag under the Nike tail tag is omitted. Interior wash tags have an "8900" code on them, rather than the "7300" code from Majestic jerseys. Nike retail jerseys also carry paper hang tags that include a green hologram sticker as a speed bump for counterfeiters.

Above: All MLB jerseys have the Nike logo on front right chest, replacing the Majestic logo on the left sleeve. Thus, sleeve patches, like those seen on this Brewers example, can now be located closer to sleeve ends.

Right: 2000-2023 laundry tag, same as Majestic Flex Base version, front and back. The only change is the style number for team-issued Nike jerseys is now 0890 vs. 0730 for Majestic.

2000-2022, black Nike embroidered tag at top, white heat-pressed inventory tag at bottom. White tag is carryover from Majestic Flex Base style, with Nike branding added

2023-2024, black Nike embroidered tag at top (same as 2020-2022), white heat-pressed inventory tag at bottom. White tag is shaped differently from previous version, the material of the tag is textured and feels more durable, and the printing, fonts, and spacing on the printed part of the tag is also different.

© GameWornGuides.com

Nike: Official Supplier to MLB 2020-2025 Continued

Fun fact, every team has the same color Nike logo on their white and gray jerseys except the Red Sox, who have a red swoosh on the white jersey and a blue one on the gray jersey. With their rebrand in 2023, the Twins join the Red Sox in this odd asymmetry, but with the opposite color pattern for the logos.

For the first time ever, the Yankees display a manufacturer's logo on their jerseys with Nike's MLB takeover in 2020. The Yankees still stand out with their custom, extra inventory tag, located just below the Nike inventory tag. The Yankees-specific tag is a carryover from their Majestic jerseys.

Nike retail authentics, like this Padres jersey, have neck tags not present in team-spec jerseys, and the inventory tag under the Nike tail tag is omitted. Interior wash tags have an "8900" code on them, rather than the "7300" code from Majestic jerseys. Nike retail jerseys also carry paper hang tags that include a hologram to discourage counterfeiters.

Nike Vapor Premier Elite 2024-

The 2024 season brings the introduction of Nike's new Vapor Premier Elite (VPE) jersey template to MLB, replacing Nike's version of Majestic's Flex Base that was used from 2020-2023. The changeover to VPE was delayed from the original plan, and when it was made, it was controversial, something we elsewhere in the book.

In terms of tail tagging, VPE continues with the 2023 style seen on Flex Base jerseys. Starting in 2025, some jerseys include a white version for the embroidered Nike tag. It is not clear how this choice is made, or if it is a response to a 2024 situation in which black tags showed through players' pants when photographed in certain lighting conditions. So far, we have seen it used mostly on white jerseys, so this could be to make it blend in better with the jersey and not show through white pants. It may also have been done for retail purposes.

Interior wash tags change with VPE, and we have seen examples with one or two tags that include washing instructions. Rather than having style codes on the backs of these tags, there is now a new, separate tag, usually sewn below the wash tags, that carries that info. Team-issued and game worn examples now have an 09B0 code on the back of that tag, replacing the 0890 code from Majestic's era. We have also seen occasional, and inconsistently used 09P0 codes on pullover jerseys, like the Nationals 2024 one-year-only pullover alternate. Some of the team-spec jerseys use it, but others have the standard 09B0 instead. It is likely that the "B" then refers to a button-front jerseys, while "P" is for a pullover.

Retail authentic VPE jerseys have some slight differences. First, retail jerseys have neck tagging that is not present in team-spec jerseys, and predictably, the inventory tag under the Nike tail tag is omitted. Interior style code tags, located under the wash tags, have an "90B0" code on them, rather than the "8900" code from Majestic jerseys. Nike retail jerseys also carry paper hang tags that include a green hologram sticker as a speed bump for counterfeiters.

In response to negative criticism of the 2024 VPE jerseys, Nike will be rolling out changes to the jerseys over the 2025-2026 seasons. The 2025 changes are outlined here, and will report more about the 2026 updates in the next edition.

Top: Tail/jock tags from a 2024 jersey, which carried over from the 2023 Flex Base jerseys.

Bottom: New for 2025, a white version of the Nike tag is used on some jerseys, mostly (but not exclusively) on white home jerseys. The heat-pressed inventory tag changes again for 2025, with corners squared off more than before, and a single "tab" extending from the left side only rather than from both sides.

Top: Size/style codes are now located on a separate interior tag, sewn into the seam beneath wash tags. The "09B0" code (left) is the standard used for team-issued VPE button-front jerseys. The "09P0" (right) is an inconsistently used code for a team-issued VPE pullover.

Bottom: (Left) We have also seen 0P10 codes used on pullovers, like this one from a 2025 Mets alternate blue jersey. (Right) The tag used in a retail authentic jersey will have a 90B0 code. We have not yet seen if a retail pullover has 90P0.

Nike retail authentic VPE jerseys, like this Astros example, have neck tags not present in team-spec jerseys, and the inventory tag under the Nike tail tag is omitted. Interior wash tags have an "90BO" code on them, rather than the "8900" code from Majestic jerseys. Nike retail jerseys also carry paper hang tags that include a hologram to discourage counterfeiters.

Majestic, Co-Official Supplier to MLB: 2000-2004
Sole Official Supplier to MLB 2005-2019

2000-early 2012 (Rounded M)

Late 2012-2015 (Squared M)

2016-2019 (New Twin Peaks)

In 2000, Majestic begins to supply game uniforms to a handful of MLB teams. By 2005, Majestic has secured the exclusive contract to supply game uniforms to all MLB teams, as well as the right to make all retail spec "authentic" game uniforms sold in stores. In 2015, Majestic renewed this agreement through 2019.

Starting with 2000 and through 2019, all teams using majestic jerseys display the Majestic sleeve logo on game jerseys except the New York Yankees who contractually have bare sleeves.

Majestic "team spec" full-weight knit game jerseys have a white tag sewn inside the side seam with an "0062" on it. "Retail spec" jerseys have a "6200" tag number. Cool Base jerseys have "6300" or "0063" respectively.

Below, typical embroidered game jersey sleeve logos. Majestic game jersey sleeve logos are always single-color and are often keyed to coordinate with the team's colors. Look for the secret hidden debossed ® in the embroidered Majestic sleeve logo, which until recently was a *pretty good assurance* you were getting an authentic Majestic jersey. Then, counterfeiters got wise, and I have seen it on many fakes, 2015 and later.

In 2000, a few teams used small, sewn-on Majestic sleeve logos on some styles of jerseys. This was likely because these teams (the Brewers and Cubs for example) had just switched to Majestic from Russell, and the sewn-on logos were a temporary bridge to the embroidered design.

2000 sewn-on Majestic logo patch (only a few teams, one season only)

Embroidered Majestic sleeve logos with hidden ® symbol

Majestic Flex Base Visible Marks and Tagging, 2016-2019

Shown here: Minnesota Twins 2016 Alternate jersey, as used in 2016 Spring Training.

At top, the "standard" Silhouetted Batter applique as it usually appears on teams with blue and red in their color palate. Below it, in one of many custom color-keyed combinations as it appears on teams that don't use blue and red.

The embroidered sleeve logo changes to include "Majestic" text, and the secret hidden ® from prior years is gone.

The change to Flex Base authentic jersey construction and branding began in 2016 on all game jerseys as well as the new Spring Training jerseys. The Flex Base tag is a rubberized applique heat pressed to the front left tail, and each tag includes the jersey size printed on it. There is no inside-the-neck tag on either team issued or retail sale versions.

The Majestic "twin peaks" logo is **embroidered** on the left sleeve and is color keyed to the jersey: usually white on dark jerseys, and team-colored on light colored and white jerseys. There is no longer a hidden debossed ® mark in the embroidery.

The MLB Silhouetted Batter logo is sewn on the back collar of all on-field jerseys. It is made of a shiny, rubberized vinyl and has two colors, often keyed to the team's colors. The standard color of the logo is blue/white/red, if not keyed to the team. There is no externally visible difference between team spec and retail spec Flex Base jerseys. The only difference is the code on the inside seam tag (see pages immediately ahead).

© GameWornGuides.com

Majestic Cool Base Game Jersey Visible Tagging: 2003-2015

Majestic Authentic Cool Base jersey tagging first appeared on Cool Base batting jerseys of 2003. It included a 3 ¼" x 1 ¾" rectangular tag on the left outside jersey tail, as well as a small 1 ½" x ½" x fabric tab sewn into the side seam. Starting in 2006, similar tags appeared on all authentic retail and on-field Cool Base game jerseys. Note that game jersey jock tags include a small add-on box with the jersey size that the BP jerseys lack. Teams now could now no longer choose a different placement for this jock tag; it was always applied on the left front tail. The tag itself is a rubberized applique, and has simulated stitching around the edges. However it is not stitched on. Many "counterfeit authentic" jerseys have a facsimile of this tag reproduced on a stitched-on cloth patch.

The Majestic "Twin Peaks" logo is embroidered on the left sleeve end of all Majestic Authentic Cool Base game jerseys. It is identical to the one found on full-weight knit jerseys on the prior page, including the hidden ® mark.

Shown here too is the same style Authentic Collection patch on an orange Orioles Alternate jersey which also includes an MLB-hologram authentication. Batting jerseys got their own special tagging starting in 2011, which included the team name and small logo. These can be seen in both the Batting Practice Jerseys chapter, as well as the individual teams' chapters.

Cool Base game jersey jock tags are always heat-pressed to the left front of the tail. Massive numbers of counterfeit jerseys exist where this tag is sewn on. 2005 to early 2012 use the "rounded M" Majestic logo, late 20122015 Cool Base jerseys have a tag with the "sharp" M in Majestic. The bottom tag pictured here also has an MLB on-field authentication hologram, which is covered in the "Is It Game Worn- A Basic Guide to Authentication" chapter.

© GameWornGuides.com

Majestic Game Jerseys: Store Bought vs. Team Spec

Retail jersey may or may not have special anniversary patches sewn on the sleeves. Affixing a one-year memorial patch on a jersey can make it obsolete after its current year, earning it a trip to the discount bin. Jerseys without such a patch may remain as current inventory for a longer time. The decision on including a patch is really up to the retailer.

Retail jerseys will almost never have memorial patches (like this one, below) sewn to them. These are reserved for team issued jerseys only.

Retail spec, full-weight knit example

Team spec version

Neither version has a collar tag.

Sometimes there is a Velcro closure inside here that is not sewn into the retail version.

Jock tag is the same, though team spec jerseys are also made in in-between sizes (42,46,50) that are skipped for retail sale.

Rarely ,the team spec jersey has special buttons not used on the retail version.

Notice that this game worn jersey does not have a year tag. Not all teams use them consistently.

There are not very many differences between Majestic retail spec authentic jerseys and ones made destined for team issue. Majestic is proud to say that jerseys made for the public and those made for the team are made in the same place, by the same people on the same sewing machines.

On this 2005 jersey, note the code on the tag sewn inside the right side seam, visible only when the jersey is turned inside-out. In this time-frame, knit jerseys carry a 0062 designation when they are made for team use, 6200 when they are made for retail sale. Cool Base team spec game jerseys carry an 0063 designation, 6300 when they are made for retail sale. (See information detailing these inside tags a few pages ahead.)

Team spec jersey <u>might</u> have a year tag, and/or special tailoring tags. Retail ones as a rule do not.

© GameWornGuides.com

Nike's/Majestic's "Secret" Inside Seam Tag on Game Jerseys

It's nothing more than a tiny tag containing a bunch of cryptic codes, sewn hidden into the side seam at the time of the jersey's construction. It would be very easy to reproduce. But the fact is, only the very well informed would even know to look for it, and even fewer experts would know how to decode what is written on it.

With prior editions, we could suggest with confidence that the presence…or lack… of this tag was your best guarantee. But since then, we have now seen some fakes with these tags in place. Not perfectly identical ones… but seam tagging nonetheless!

Keep in mind we are talking here only about Majestic and Nike jerseys from about 2000 to present, but this is a good start as they represent a large percentage of the jerseys being bought and sold online.

It would be wonderful if I could provide you with a list of all the codes used by Majestic and Nike, but I cannot. Even my contacts at manufacturers were unable to give me a complete list of codes that vary from the "standard set." But I have gone through some of my collection and offer some examples you can trust are real, against which you can compare your jerseys. We can simply say this: If the jersey you want has a tag that looks very much like one of these, it is likely authentic, unless the counterfeiters have gotten wise in a hurry that readers of this book are "on to" them and adjust their fakes accordingly!

Note that, since 2020, Nike has "manufactured" MLB jerseys. In reality, it is their branding on a jersey made by Fanatics, who bought out the Majestic factory to continue production. As such, since nothing has changed in jersey production between Majestic and Nike as of this writing, these tags remain even with the "new on-field manufacturer"

© GameWornGuides.com

Common Majestic Inside Seam Tag Codes; Game Jerseys

Majestic Game Jerseys	Team Issued	Retail Sale
Full Weight Knit 2000-2017	0062	6200
Full Weight Knit Turn Back the Clock	62TB or TB62	No separate designation
Cool Base 2005-2015	0063 or 0630	6300
Flex Base 2016-2019 (Includes Spring Training jerseys)	0730	7300

These are the most common codes. There are other variations used that are not listed here.

2000-early 2012 **Late 2012-2015** **2016-2019**

Full-weight knit 2000-2019 Full-weight knit TBTC

2005-early 2012 **Late 2012-2015**

Cool Base game jersey 2005-2015

Note that on Flex Base jerseys, the style number is on the flip-side of the tag from the size marking.

Flex Base game jersey and Spring Training 2016-2019

(A page similar to this one covering BP jerseys is included in the Batting Practice Jerseys chapter.)

Majestic's Team-Specific Inventory Tagging, Pre-Barcode Tags 2000-2014

When Majestic won the contract to supply on-field uniforms for all 30 MLB teams for 2005, it also took on the obligation of tailoring and sewing names and numbers on all players' jerseys. Still, all teams always keep a local stitcher "just in case" to do repairs, tailoring, sew mid-season memorial patches and put names and numbers on blank jerseys for last-moment call-ups. And some teams like the Mets use a local stitcher for most/all of their mid-season work, using Majestic only for making the first uniform set of the spring.

In taking over this customization responsibility, Majestic did its best to satisfy each team, and that included sewing coded set tags onto uniforms in the very specific manner and place that each team requested. Some tags were very simple, like the Phillies' requirement for a two-digit year under the bottom button on the shirt tail. Others were far more specific. The Cubs' code contained the player number, the jersey size, the two-digit year, and the set number. Still others, like the Brewers, frequently included the player's last name on the tag. These tags would be sewn in the specific place each team required, and all were unique… inside the back tail, inside the back of the collar, or inside/outside the right or left tail. Some used white fabric, others used a piece of same-colored jersey fabric.

Surely, having every team requiring a different code format and a different method and place to sew their inventory tags was a hassle for Majestic. It seems that Majestic tried to get teams to standardize on a common method if they were willing: a white felt tag, sewn under the jock tag on the front left tail, containing the size, two-digit year and the set number, and with each year, more and more teams adopted this standard.

By 2015, these small embroidered felt tags, custom for each team, had all but disappeared. Teams had switched to the new QC-encoded Mylar tags, shown on the next page.

Above, top to bottom: Phillies, Cubs, Brewers, Braves, Blue Jays. These are examples of Majestic tags, recognizable by their style and the fact that they are sewn on felt. Each team designates the codes used. Beware of faked strip tags on famous-name player jerseys.

© GameWornGuides.com

Beginning 2013: Majestic's Team Inventory QC Barcode Tagging

While **team tagging** is covered in Chapter 6 under Authentication, this is a topic that crosses boundaries. Starting in 2013, Majestic began to offer teams standardized QR-coding inventory tags on player jerseys as an alternative to unique individual teams' tagging. In the first couple of years of this effort there were some takers (including Astros, Padres, Cardinals and Mets) and this method become more widely accepted, until it became universal for Flex Base jerseys starting in 2016. These permanently affixed vinyl tags feature a standard square "QR" code in the upper right corner which contains a standard set of data for each jersey. These aid in authentication, because, while not impossible to reproduce by any means, they add yet another hurdle for counterfeiters to jump across to make fake team issued or game worn jerseys.

The example at top left is from a Mets pinstriped home jersey. The basic information contained in the QC barcode is printed in alphanumeric code below. It says that the jersey is #25, in is a size 50 with standard taper added to the waist, the date of issue is 2013, and it is part of the first set of jerseys made by Majestic for team use at the start of the season.

At the top right is a Padres alternate camouflage jersey that is size 48 with standard taper, has a 3" longer body and 1" additional length sleeves, from 2014.

At bottom right is a similar jersey made to team specs – perhaps called "team issued" but it was probably made from the beginning as an extra, destined for retail sale if not needed by the player. Its code simply says "size 46 2014" Now, keep in mind that more data can be stored in the code than is printed on the cryptic line below, including perhaps the NOB information and the color of the jersey. One thing it can not tell you is whether or not the jersey is game worn! That is the job of the MLB Authentication Hologram, and that information is covered in our chapter on **Game Worn Authentication**.

© GameWornGuides.com

Here are more examples of Majestic QC code tagging, this time on two similar *Los Mets* jerseys. Tracing the MLB Authentication codes helps us uncover more information here. (At left) EK 656925 (on the hologram) tells us that it was made for the Mets "Team Issued Collection"– in other words, it is his size and could have been made for him to wear, and *he <u>might</u> have even worn it, but no authenticator witnessed him wearing it in a game.* Tagging says #16, size 46, 2013, set 1. Note the inside seam barcode, which is paper and not meant to be permanent, showing additional data about this jersey. These "extra" team tagged jerseys are a money-making proposition for the team, as they know they can always be sold to fans hungry for team issued/tagged merchandise.

At the bottom right is the tag from an identical-appearing Los Mets jersey, except this one is authenticated as game worn by David Wright, July 29, 2014 (hologram EK 656825). Notice that the tag shows different data: Player #5, size 46C (C is for "custom tailoring specification), + 1" body length, minus ½" sleeve length, 2014, set 1.

© GameWornGuides.com

Russell Athletic, Official Supplier to MLB: 1992-1999, Co-Official Supplier (with Rawlings) 2000-2004

In 1992, Russell replaces Rawlings and is awarded the contract to be the new official supplier of MLB game jerseys. Most but not all teams switched to Russell jerseys on the field; some teams had prior contracts with other manufacturers and could continue. However, starting in 1992, only Russell's "R" logo can be displayed on the sleeve of game jerseys used on the field. Teams that continued to use competitors' jerseys wore them with their sleeves devoid of manufacturer's logos. In the stores, Russell replaces Rawlings as the retail maker of jerseys for all teams and Russell logos appear on all teams' sleeves. While teams like the Cardinals, Yankees, Braves and White Sox (among others) continued to wear Rawlings or Wilson jerseys on the field, these teams "Authentic Collection" jerseys sold to the public were made by Russell and bore the Russell "R" on their sleeves.Russell loses its exclusivity when Majestic and Rawlings are co-suppliers to MLB from 2000-2002, and Majestic is co-supplier from 2003-2004, providing sleeve-logoed on-field and retail jerseys for a handful of teams.

Early 1992:

When Russell first secured the MLB on-field contract from Rawlings, a brief time passed before the familiar Diamond Collection tagging was adopted. In my years of collecting, I have seen only a small number of these type tags on MLB jerseys; a style which had been used by Russell prior to their MLB contract. Russell continued to use this style tagging for a brief time thereafter on jerseys made for college and other non-MLB teams. Note the early Intera tag on the one at left.

Sleeve Logo: As the "official" provider of MLB jerseys to teams, if the team wore Russell jerseys on the field, they displayed the Russell "R" on the sleeve end. An exception- Yankees sleeves are always bare. The "R" is usually in one-color keyed to the team, but sometimes (and not always!) if the team has both red and blue in its logo, the "R" will be two-colored like the official Russell logo type.

(A) 1992- Most of 1993:

The first Diamond Collection tags. Note the rather flat orientation of the "Diamond" script and the words "Major League Baseball" written in the base path of the logo. The silhouetted batter logo sits in the center of the green "infield."

Both "100% Polyester" and "Intera Fabric" tags are seen on these early Russell jerseys. Only certain teams seemed to have jerseys with the Intera tags. I do not know if there was a different specification to those jerseys with Intera Fabric tags. But they were noted to be 100% Nylon and not "Polyester" (defined as having multiple synthetic fibers, not 100% Nylon). To me, those so marked seem to be a slightly silkier, smoother and lighter fabric that wrinkles more easily. Russell neck tags noting the garment size are a feature of retail-sale jerseys only. Russell jerseys made for the teams' use omit neck tags

1992-1999 jerseys have the R on the right sleeve. In 2000 the R moves to the left sleeve; the same year that the Silhouetted Batter appeared on the back of the neck. All Russell jerseys made in 2000 and later have the R on the left sleeve.

© GameWornGuides.com

(B) "4-line washing Instructions" Late 1993-1998: The "Major League Baseball" text disappears, and the "Diamond Collection" script is now slanted at a steeper angle. "Third base" in the green field of the logo disappears, now covered by the script logo, and the Silhouetted Batter logo moves lower, now partly covering the lower white "base path." These are used less and less often 1994-1998 until they disappear from use before 1999.

(C) "5- Line Washing Instructions" 1994-early 2000: Nearly identical to the other style, but the washing instructions change slightly, and now take up five lines instead of four. These first appear in 1994 and are used more and more frequently until they are the only style used by 1999 and were used in along with the style on the next page in 2000 until the stock was depleted.

Note the date-overlap in use of these styles. It would be very nice to be able to say that tagging styles switched over on a certain date, and that all jerseys made after that date used a new style tag. In real-life it doesn't work that way. Unless a major corporate change of ownership or contractual rebranding happens, which would require an immediate switchover, when there are minor changes to logos or washing instructions, to save money old tags are simply used until they are gone. I suspect as new style tags are ordered, the new boxes of tags start to get mixed in with the old ones until gradually, the old tags are depleted. The table below shows my casual, unscientific observation of the use of the Russell tags on these pages on year-tagged on-field MLB jerseys. One notable fact is that on supposed-team-issued star player jerseys offered at auction. More often than not, the NEWER style tag is present. My suspicion is that many of these jerseys are created far after the start of the season or perhaps even after the season has ended, to be used by the player as gifts to friends, for signing events, or by the manufacturer as gifts to loyal customers and vendors.

(D) 2000-2001: The tag is completely redesigned. Russell loses its exclusivity as the only manufacturer allowed to display its logo on field-worn MLB jerseys. The top half of the tag is now a common design that is shared among Russell and other manufacturers of Authentic Collection jerseys, Rawlings and Majestic. These were used into 2001 until the stock was depleted.

(E) 2001-2003: Later in the 2001 season, this new tag replaces the old, and the Registered Trademark symbol (®) moves down to sit next to the word "Athletic" from its earlier position next to the word "Russell."

(F) 2004: In the last year of their contract, the Russell Athletic logo is slightly redesigned with an italic type face and a color modification.

For more information, ESPN News- 2003: Russell loses MLB contract after 2004: http://espn.go.com/sportsbusiness/news/2003/0806/1591412.html

© GameWornGuides.com

	Tag Style A	Tag Style B	Tag Style C	Tag Style D	Tag Style E	Tag Style F
1992	almost 100%	0%				
1993	85%	10%	<5%			
1994	0%	95%	<5%			
1995	0%	95%	<5%			
1996	0%	80%	20%			
1997	0%	20%	80%			
1998	0%	5%	95%			
1999	0%	0%	10%	90%		
2000	0%	0%	10%	88%		
2001	0%	0%	0%	80%	20%	
2002-2003	0%	0%	0%	0%	100%	
2004	0%	0%	0%	0%	0%	100%

This table documents what I have observed over the years. The near-concurrent use of tag styles B and C for several years is notable, as the only difference between them is a change in the washing instructions. The odd appearance in 2000 of a handful of 1992-1993 tags might simply mean that someone pulled an old dusty box of obsolete tags off the back of some storeroom shelf and put them into production. Significance: beware mostly of claimed-older jerseys with tags that are too new to have been offered in that year. For example, I have encountered famous player jerseys year-tagged as 1998 with manufacturer tagging that did not exist until 1999. While one could cynically assign fraudulent intentions to such an event, it is always possible that the team (or the player) ordered up a bunch of extra year-tagged jerseys after the end of the 1998 season, meaning for them to be used as gifts for friends and associates. This is a common practice.

1994 tagging examples, for your consideration: ***The left grouping of two tags are both from 1994-dated Yankee jerseys****. The Kamieniecki one has the earlier-style four lines of washing instructions. The Paul O'Neil one has the later five-lines.* ***The right-side group of two are from 1994 Red Sox jerseys****. The left tag is from a common player jersey and has the earlier, four-line washing instructions. The right one with the "1994" notation has the later style five lines and is from a purported Roger Clemens jersey. I am always suspicious of any jersey claimed to be from a star player (like O'Neil or Clemens) because the chances of seller fraud are so much greater. Fewer than 5% of the 1994 jerseys documented in my photo archives have the 5-line wash instructions. My guess is that the star player jerseys with the later style tags were made either later in the season or perhaps even after the season had ended. Also note the notably greater wear on the left tag in each set. Take these as my own observations and draw your own conclusions.*

1992-2004 Russell Game Jerseys: Retail Store Bought vs. Team Spec

Retail version nearly always has a collar tag. Team spec jerseys do not.

Special sleeve patches may be included on both.

Sometimes, but rarely, the team spec jersey has special buttons not used on the retail version.

Jock tag is the same, though team spec jerseys are also made in in-between sizes (42,46,50) that are skipped for retail sale.

Sometimes there is a Velcro closure inside here that is usually not sewn into the retail version.

Tiny "100% Polyester" flag tag is found on most team spec jerseys. Notice that this game worn jersey does not have a year tag. Not all teams use them consistently.

Retail Spec

Team Spec

There are a few small differences between Russell team-spec jerseys compared to ones made for retail sale.

The most common difference is that the retail version usually has a collar tag, and the team spec ones do not. But this is not always the case. Especially after 1999, collar tags were often omitted from retail sale jerseys as well.

The most consistent difference is the presence of a tiny "100% Polyester" fiber tag sewn below the front jock tag on team spec models.

Team spec jersey <u>might</u> have a year tag, and/or special tailoring tags. Retail ones as a rule do not.

© GameWornGuides.com

...But Be Careful of End of Style Run Exceptions

All of these jerseys were purchased from discounters, and they are indeed team-spec jerseys, not retail sale models. When styles are discontinued or a manufacturer loses the contract to sell authorized merchandise (as Russell did after 2004) everything that remains in stock is dumped without ceremony to the discounters.
Buyer beware, as both of these jerseys at the top of this page have since been lettered with famous player names and numbers and can easily be passed off as "team issued" or "game worn."

Just remember that the current owner and seller is not necessarily responsible for the deception. As these jerseys are bought and sold, their history often becomes obliterated. Your seller may truly believe that his jersey is game worn because that is what he was told when he bought it. As a buyer, it is your responsibility to make an educated judgment.

(Left) At press time, I found these newly-discontinued Majestic 2014-2016 Mets and Yankees BP jerseys at a retail discounter at the start of the 2017 season. All the ones on the rack I examined had the "on-field" 0380 code on the inside seam tag, not the retail sale 3800 tag! Easy to turn into fake star player "team issued" jerseys for someone with a profit motive and a low standard of ethics.

Rawlings On-Field Tagging 1970-2002

Rawlings of St. Louis, MO was a major supplier of uniforms to MLB teams since early in the 20th Century. But in 1987, Rawlings made news by being named the first official uniform supplier to Major League Baseball. The award had several immediate impacts:

1. They offered their uniforms to all MLB teams to wear on the field, though if teams already had existing contracts with other makers, these deals were respected. Teams were not required to switch to Rawlings on field uniforms. Three teams (Braves, Blue Jays, and Yankees) stayed exclusively with Wilson in 1987, and several others sourced their uniforms simultaneously from Rawlings and other manufacturers during the entire period of Rawlings' contractual relationship.
2. For the first time, they were authorized to display their company brand on the sleeve of all on-field uniforms they supplied. No other manufacturer was afforded this privilege.
3. Rawlings was authorized to sell retail jerseys for all the MLB teams, all with the Rawlings logo on the sleeves, regardless of whether the team was wearing Rawlings or other-branded uniforms on the field. This was the first time that authentic on-field jerseys were sold to the public, even though distribution was sparse.

1970-1971

This tag style is the same as used toward the end of the flannel era during the 1960s, and these appeared on the very first Rawlings double knit jerseys worn in 1970-1971 by the Cardinals and the Pirates. Washing instructions are provided on a second separate tag sewn near the manufacturer's logo tag.

1972-1984

The classic rectangular "Action Tailored" solid red tag appeared first in 1972 and continued without any changes for fifteen years, through 1984. Washing instructions appear on three lines below the "Mark of a Pro" slogan.

1985-very early 1988

The rectangular "Action Tailored" solid red tag changed very slightly for 1985-1987, with the remaining supplies used up during early 1988. Washing instructions become more specific and now take up four lines below the "Mark of a Pro" slogan. The tag is slightly taller than before, presumably to fit the extra words in.

Uncommon: Late 1986-1987

Of the thousands of jersey photos in my collection, I have come across this style tag only a few times, on a few teams' game worn 1987 jerseys. I have seen a single reasonably verifiable 1986 example.

© GameWornGuides.com

1988 - 1990

The new-look white "A Figgie International Company" tag. Use in 1988 started after the 1987 style red tags were used up. Used on greater than 95% of 1989 jerseys while the tag below phases in, with this tag also appearing on 5% of 1990 jerseys.

Late 1990 - 1991

Tag loses the "Made in USA" and "Do not use in automatic dryer" lines of text. Seen on fewer than 5% of 1989 on-field jerseys, but 95% of 1990 jerseys, and all early 1991 jerseys before a mid-season phase in of the tag style below. *(I suspect this tag was introduced postseason 1989 and found its way onto (mostly) samples of star players made for year-end gifts for special customers.)*

Mid 1991- 1994 The "Action Tailored" red tag returns, but this red tag is larger than the earlier ones. "Figgie International" is no longer mentioned. "Made in the USA" returns and is at the bottom right, under the size. These phase in after the 1991 season starts and seem to appear on the mid-season 1991 TBTC uniforms first.

Late 1994 - 1995 The red tag loses the jersey size, which now moves to a separate sewn-on flag tab. The washing instructions now take up four lines, and "Made in the USA" moves to the bottom and is centered. These are occasionally seen on 1996 year-tagged jerseys, as old stock was used.

Late 1995 - 1999

Most 1995 jerseys have the previous style red tag. The smaller tag below is usually sewn in the collar.

2000 - 2002

Rawlings tags can carry the "Authentic Collection" logo for the first time in these two years, and then Rawlings disappears as a supplier of on-field MLB apparel. Rawlings has not made MLB jerseys since Majestic was awarded the MLB contract in 2004, a sort of sad end to nearly one hundred years of MLB uniform history.

This black Rawlings tag appeared on a few 2002 on-field Turn Back the Clock jerseys made by Rawlings, like those for the Rangers and Blue Jays. It's hard to see, but the Rawlings "R" in an oval is woven into the fabric background pattern in the upper left. It is visible only in bright light and at an angle. Zoom in to see it.

© GameWornGuides.com

Rawlings Authentic Jersey Sleeve Logos 1987-1991

For the 1987 season, Rawlings won the contract to become the “official supplier” of game jerseys to Major League Baseball, a contract that carried through the end of the 1991 season. Starting in 1987, and continuing through 1991, teams that wore Rawlings jerseys had them adorned with this small, 1 ¾” long embroidered logo on the end of the right sleeve. Some jerseys instead had the logo on a small patch. In many cases, I suspect the small sewn on tags were added to finished goods inventory after the legal approval was granted to include them. In this way, all the old stock was brought up-to-date and used until it was depleted. Note the example on the pinstriped Twins jersey at right.

Not all teams wore Rawlings game jerseys. Those teams with existing contracts with other manufacturers could continue with their current vendors such as Wilson or Sand-Knit. However, these teams wore these jerseys with no visible manufacturers’ logo.

Jerseys with the Rawlings logo glued to the left sleeve are Minor League jerseys.

(Left) Examples of sleeve logos from game worn Rawlings jerseys 1986-1991, From top: Cardinals, Mets,Expos road jersey, Twins home jersey, Rangers home and road.

© GameWornGuides.com

Rawlings Authentic Collection Jersey Sleeve Logos 2000-2002

There were no MLB authentic or game worn jerseys with Rawlings sleeve logos made from 1992-1999. Under contract, only Russell was permitted to display its logo on team jersey sleeves between 1992-1999.

But Russell's exclusivity on branding MLB uniform sleeves for the world to see ended in 1999. While Russell still supplied uniforms to most MLB clubs, and still displayed their logo on their sleeves, teams that could make a deal with Rawlings were permitted to display the logo of that maker on their sleeves. A few teams, like the Rangers, Cardinals and Pirates, contracted with Rawlings for their game jerseys and displayed the new Rawlings "R" sleeve logo during these three years only on game jerseys.

Russell also lost *exclusive* rights to making retail jerseys in 2000, so if Rawlings made a team's on-field jerseys, they were entitled to make and logo the retail-sale version of the jersey as well.

© GameWornGuides.com

Rawlings *Retail Authentic* Tagging, 1987-2002

1987 Retail: When Rawlings won the right to market pro, on-field jerseys at retail, some jerseys got this hastily concocted papery fabric printed tag *(top)* sewn on the outer left tail instead of the pro red tags. They were poorly attached, sewn on only two sides, and often fell off after a few washings, leaving only the zig-zag attaching thread behind. Others got the standard Rawlings red tag *(bottom)* but stitched on only two sides instead of all four.

1988-1990

1991

Late 1991

1988-1991: The same style tags are used on BOTH on-field jerseys and retail authentics during these years, though the exact cut-off of years of use were less strict since they likely used up all available old stock before changing to a new tag. While team issued spec jerseys have the Rawlings tag sewn all the way around on all four sides, jerseys made for retail sale have the tag sewn on only two sides like the ones above. The cheap, paper-like shirt tail tag at the far left guarantees a store-bought example. If you find a jersey with the tag factory-sewn on only two sides, you have found a retail sale jersey.

1992-1999?

None. While Rawlings contractually continued to make on-field jerseys for several teams, by new rules starting in 1992 they were no longer permitted to make or sell any branded examples to the public at retail. Legally, that right belonged to Russell alone. The lesson: Know what manufacturer(s) made your team's on-field jerseys for each of these years and be educated and aware when someone offers a Russell branded one as "team issued" when it really may be a retail authentic.

Sleeve logo, 2000-2002

2000-2002- Rawlings briefly contractually resumed making on-field jerseys eight teams: The Angels, Diamondbacks, Dodgers, Mets, A's, Pirates, Cardinals and Rangers. As such they could sell only these teams at retail with their sleeve logo and tags in place. Tail jock tags are the same as team issued, and now sewn on all four sides but lacking year or size flag tags. The size tag is in the back of the neck.

© GameWornGuides.com

Rawlings Minor League Tagging & Clues

Besides making jerseys for the MLB, Rawlings enjoyed a strong business outfitting baseball's Minor League clubs. Often, MiLB teams used the same designs and patterns as their MLB parent. It is not uncommon to see these advertised for sale as MLB-issued jerseys when they are not. This is not intended to be a full tutorial on Minor League jerseys, but here are a few things to look for:

1) Starting in 1987, Rawlings had the right to embroider their logo on the sleeve end of on-field MLB jerseys they made, and on the sleeves of all "Retail Authentics" 1987-1991 period. The MLB logo was embroidered on the right sleeve, Minor League jerseys had a smaller, glued on Rawlings applique logo on the LEFT sleeve. Below are two Indians jerseys made by Rawlings for years when other manufacturers had the contract to make Indians' on-field jerseys. These jerseys have a small embroidered appliqué glued to their sleeves.

(note the somewhat rare Olin-Crews patch at left, this patch was also worn by Indians MLB and Minor League affiliates in 1993).

2) The specific style of jersey is different than any I have cataloged for the Texas Rangers. The MLB Rangers never wore this attractive blue mesh jersey, but one of their Minor League affiliates did. Note the red tag sewn on only two, not all four sides.

3) The jersey uses screened-on graphics and numbers. There are very few examples of MLB jerseys that use heat pressed lettering, and all are called out in this book. Most of the ones with screened on graphics are Minor League issue.

© GameWornGuides.com

Wilson Team Spec Tagging: Late 1960s-1985

Though Wilson has been the supplier of on-field jerseys to many different teams over the years, its licensing agreement has never included permission to display its logo to the public, therefore on MLB jerseys, Wilson tags are always hidden inside the collar or on the shirt tail. Note that Wilson's trademark has never been displayed on the sleeve of any MLB jersey, neither on those worn by players nor on those sold in stores. Wilson does, however, supply jerseys to Minor League clubs as an "official supplier," so there are jerseys advertised as "game worn" with Wilson tags on the sleeves. If advertised as game worn, they are from the Minor Leagues with certainty.

Late 1960s-1973

1974-1977

(Late) 1977-1985

These three styles of Wilson tags shown above, used between 1970-1985, are all sewn in the inside back of the jersey's collar

Features red vertical line and bold stylized red jersey size numbers with small serifs. Washing instructions are short and to the point and take up five lines.

Red line disappears, and jersey size numbers change to a slightly different font (notice the shape of the "4"). More complex washing instructions now take up seven lines.

Tag is slightly shorter and more oblong. The ® symbol moves lower. The red Wilson logo changes slightly: notice that the tail on the "n" is shortened and that the "s" and the "o" are no longer connected. Garment size number font changes slightly again (notice the "foot" or serif on the bottom of the "4").

© GameWornGuides.com

Wilson Team Spec Tagging 1986-1999

1986-1988: Wilson tags move to the shirt tail for the first time in 1986 and gain the slogan "Tailored Exclusively for Prestige Teams." Recall that in 1987, Rawlings had been named the "official supplier of game uniforms for Major League Baseball" for the first time. This slogan was a way of Wilson saying: "*We may not be Major League Baseball's official supplier, but obviously this team preferred us and chose us anyway.*"

The Wilson W in a circle logo is stitched in the background in lighter red. For the first time, the size is on a separate flag tag that can be attached to either the right side or the bottom of the larger tag. Small tag also says: "care on reverse."

1986-1997- The tag design and shirt tail placement stay the same, but the tag is now slightly smaller. Size tag is now a smaller square and loses the "care on reverse" wording. Size tag is sewn on the right side of, or below the larger tag,

1998-1999: By 1998, Wilson is the vendor for only a couple of teams, and even then, they are supplying only one style and/or set for those teams. This style tail tag is used only on Braves and White Sox jerseys made during this period.

1988-1994

1995-1997

1998-1999

These styles of Wilson tagging are seen on Blue Jays on-field and retail Authentics 1988-1999. During this period, Wilson makes only select styles for the team. There are no tail tags, only neck tags. The style used 1988-1994 is printed on a vinyl-like fabric, and after a season of use the writing can wear completely away. This tagging also appears on Wilson-made minor league jerseys and is often accompanied there by a sewn Wilson "W" on the sleeve not permitted in MLB.

© GameWornGuides.com

Decoding Wilson's Cryptic Date Codes

Shown here is a white mesh jersey that might have been a spring training issue. It has screen printed graphics and a high number on back. It might also have been a minor league jersey. But what is of special interest here is a small tag sewn in the collar that says simply "EP". We've been aware of date tagging that Wilson had used on NFL jerseys. There, they used two alpha characters which refer to the year and month of manufacture. The first letter uses A through K to designate the year, oddly with A meaning year ending in 8, B ending in 9 etc. This pattern repeated every ten years. The second letter was for the month, with O meaning January, P = February, etc, through Z for December. When single characters are used it means the year only, with no month designated.

This jersey is coded as "EP" which would correlate to February 1992, reasonable for this jersey style and the type of Wilson tag used in the collar.

Year Code		Month Code			
A =	1988				
B =	1989	O =	Jan	U =	Jul
C =	1990	P =	Feb	V =	Aug
D =	1991	Q =	Mar	W =	Sep
E =	1992	R =	Apr	X =	Oct
F =	1993	S =	May	Y =	Nov
G =	1994	T =	Jun	Z =	Dec
H =	1995

Sand-Knit/Medalist- 1971-1973

Sand-Knit tagging from Braves' 1971 (test)-72-73 jerseys

1973 Brewers

This Wisconsin manufacturer and supplier to the NFL and the NBA first appeared in MLB as the supplier of the Braves' new and very flashy 1971 "test" double knit uniforms while they still were wearing wool flannels almost every day. The Braves adopted Sand-Knit as their uniform manufacturer for 1972-73. Sand-Knit tags almost always appear in two parts, either sewn directly beside each other, or directly above and below each other. One tag (the size tag) has the manufacturer's name and the garment size embroidered on it; the second tag has a specific team designation such as "Designed & Tailored Exclusively for the Milwaukee Brewers." Sand-Knit jerseys made for retail sale lacked this second tag (sometimes referred to as the "Exclusive Sand-Knit" Tag by collectors).

As you will see on the next few pages, Sand-Knit tagging is usually sewn in sets of two different tags together, and there is a great deal of inconsistency. Clearly, changes were made in tagging styles and old stock was used up as new styles were phased in.

© GameWornGuides.com

Sand-Knit/Medalist -1974-1975

1974: Brewers jerseys sported these tagging set variations, similar to the Braves 1971-73 tags shown on the prior page. Three versions of Brewers 19741975 tag sets are shown here.

Note lower case "M"

Note no hyphen in "Sand-Knit"

1975: All four manufacturer's tag sets are from 1975 year tagged jerseys, but all are slightly different! Red circles highlight a few differences. Sand-Knit jerseys had a new tag that said: "Medalist Sand-Knit," with a picture of a small gold medal between the words.

© GameWornGuides.com

Medalist/Sand-Knit -1976-1979

"Medalist" is now named first on the Sand-Knit tagging and is always started with a capital letter. Tags remain this same style from 1976-1979. One tag is a standard manufacturer tag containing the size designation. The other tag is the "Made exclusively for…" with the MLB team name following. Tags can be sewn either side by side or vertically, one above the other.

Medalist/Sand-Knit -1980

In 1980, Sand-Knit tags change again. Still keeping the critical information spread over two individual tags, both are now sewn almost exclusively side by side. Few exceptions do exist where they are vertically stacked. The word Medalist is now white outlined in black, and on top, and Sand-Knit is bold and stylized, directly below. "Made in USA" is at the bottom of the size tag.

Notice the subtle differences in the two (orange jersey) 1980 Astros tags. I have circled the differences to make them easier to see.

The tag at left is from a retail-sale model, "store bought" authentic Astros jersey from this same time period . Note that the size is designated as "Medium" not, say "Size 42."

© GameWornGuides.com

Medalist/Sand-Knit: 1981 through early 1984

For 1981-83, and seen on some 1984 issues, the word “Medalist” is solid black and placed on top. Sand-Knit is black and on bottom. The “Exclusive” tag is usually sewn to the left of the size tag.

Outlined hollow-letter style year and size tags were most likely applied by Sand-Knit at the factory where they were lettered. This style tagging is seen on Astros and White Sox jerseys of this period.

“S” may stand for “short.” “T” usually means tapered.

© GameWornGuides.com

Medalist /Sand-Knit, Late 1983 through early 1985

First appearing in late 1983, the tags change very slightly again. The size tag returns almost identically to the 1980 style except at the bottom it now says “Berlin, WI, USA”. The 1980 tags simply say: “Made in USA.” “Medalist” is again no longer capitalized. Each team still gets its own name on the “Exclusive” tag usually sewn immediately to the left.

Sand-Knit/MacGregor, Late 1985 & 1986

Before the end of the 1985 season, the tags drop the word “Medalist” from the size designation tag only. Sand-Knit became the major words on the size tag. “MacGregor Sporting Goods” is added below as the company was acquired in this time frame.

1986 is the final year that Sand-Knit makes game jerseys for any MLB teams.

© GameWornGuides.com

Goodman & Sons Jersey Tagging (1970-1992)

Goodman & Sons was a local, family owned business in the Los Angeles area. For many years, they made the uniforms for the local Dodgers and Angels, but also supplied uniforms to the Mets, Astros and a couple of other teams for brief periods. Goodman also made high-quality game worn jackets for many teams.

1975-1984 tags say, “Wash in 120º water”, seen on some early 1985 year tagged jerseys also. Garment size number font is very plain with no serifs.

1985-1992 tags say, “Wash in lukewarm water”. Garment size numbers are in a slightly more ornate type font with small serifs.

1980 Dodgers Only, Goodman – Mizuno Tag. Tag reads *“Manufactured exclusively for W.A. Goodman & Sons by Mizuno Corporation, Osaka Japan.”* Garment size is on tiny additional tag attached to the bottom right of the larger tag. The 1980 Goodman Astros jerseys I have seen do not use this tag.

McAuliffe Uniform Corp. Tagging (1970-1982)

Tim McAuliffe Inc. was a relatively small business in suburban Boston that got its start as a distributor of hats in the 1930s, then rose to prominence as supplier of Red Sox uniforms in the 1940s.

McAuliffe was a distributor, not a manufacturer, and after owner Tim McAuliffe's death in 1969, manufacturer Stall & Dean acquired the brand and formed the McAuliffe Uniform Company. Uniform supplier to a handful of teams during the flannel era, by the time the double knit era began they served only the A's and Red Sox. They still made caps for a number of teams, and eventually was sold by 1986 and became part of the company known *New Era.*

McAuliffe tagging nearly always consists of four individual tags: Manufacturer's Tag, Garment Size Tag, Washing Instructions Tag, and Year Tag. These four tags can be sewn in any order, and either all together in one place on the garment (as is usually the case with the A's) or split between the collar and the front tail (as is often the case with the Red Sox).

Since McAuliffe never had a broad retail distribution presence, I have presented what I believe to be authentic examples of game worn McAuliffe tagging from 1971 through 1982. A set of 1982 uniforms were made for the A's but were said not to have been used by the team.

Important Note: Operating before the era of "Licensed Team Apparel," McAuliffe willingly made custom orders for individuals of any MLB jersey it manufactured, and even some jerseys for teams it did not supply. These show up on auction sites occasionally. For a long time we believed that there might be a subtle difference in tagging between retail jerseys and ones made for the team, but we have sensed determined that this is not true. This practice makes it difficult to tell what is truly team issued/game worn from what may have been a custom-made individual order.

Descente (1977-1984)

Known primarily as a leading manufacturer of high quality sportswear and especially cold-weather gear, and based in Japan, they are a major supplier to the Japanese Baseball League. Descente made a cameo appearance in the United States, with only the Pirates (1977 to 1982) and 1981 Orioles using their products here, and in a limited way. Descente made the Pirates' crazy bumblebee pinstripe jerseys in 1977-1979 and their black jerseys starting in 1977, and because of fears that they would be too hot to wear, most were made from mesh, a first in MLB but not uncommon for Japan.

Descente had unique, odd lettering fonts, and one could tell if a player was wearing one of these Descente jerseys simply by looking at the lettering! Notably, on the Pirates black jerseys, there were at least five different widths of alphabet fonts used simultaneously on the field, depending on the length of players' names, perhaps an example of Japanese precision run amok!

(Right) 1982 and 1977 Pirates tagging (black), 1981 Orioles tag; (below) Five different degrees of compression of the Descente alphabet; rather excessive.

© GameWornGuides.com

Spalding (1970-1972)

Spalding was a major uniform supplier to teams during the flannel era, including the 1970 Orioles, Mets and Yankees. They appeared only briefly at the start of the double knit era, making uniforms for the Twins, Orioles, Angels and Astros. They were gone from the MLB scene after 1972.

I have heard it reported on several occasions that the Spalding-labeled knits of 1971 and 1972 were made FOR Spalding by an outsourced provider, likely Rawlings. And in examining small stitching details, like chain stitched tagging “handwriting” and the use of common number fonts, I believe that to be true. The Spalding brand was later acquired by Russell in 2002.

© GameWornGuides.com

AIS Custom Uniform Company (1995-2015)

AIS is a privately-held and relatively small company based in Huntington Park, CA, founded in 1984. AIS made some sets of uniforms for the Mets from 1995-1999 and has made a significant percentage of MLB's Turn Back the Clock uniforms over the years, specializing in Negro League reproductions.

AIS uniforms are double knit recreations of uniforms that were originally made of flannel.

AIS made very high-quality products for MLB, as well as being a major supplier of uniforms to Minor League Baseball and schools. Because they are not under contract as an "Official Supplier to MLB," contractually they are not permitted to show their logo to the public on game uniforms, and need to keep their tagging hidden on the tail or inside the jersey.

At left, AIS tail tag used up through 1998. Above, tag used 1999-2015. Mets jerseys with the AIS logo on the sleeve are Minor League issues; no MLB Mets jerseys have an AIS logo visible.

© GameWornGuides.com

Capital Ace (Japan) (1979-1981)

Almost an afterthought here, Capital Ace is a Japanese uniform manufacturer used in MLB solely by the White Sox for some of their white and blue “Leisure Suit” uniforms of 19791981, in both solid fabric and mesh. 1979 and 1980 issues are flag-tagged, but I have not seen any tagged 1981 examples. In my experience, many authentic game worn examples shrunk massively in use.

How there came to be a Japanese connection here, I still do not know.

© GameWornGuides.com

"Turn Back the Clock" MLB Game Jersey Suppliers

As Turn Back the Clock games began to become popular in the early 1990s, three basic rules were established: 1) The "Official Supplier" to the home team had the right of first refusal to make their Turn Back the Clock uniforms. 2) The home team was responsible for ordering and paying for the visiting team's uniforms. 3) Only the league's contracted authorized supplier could display a sleeve logo, If another company made the uniforms they were not permitted to display their branding.

During 1992-1995, the early years of these nostalgia games, official team providers Russell and Rawlings made Turn Back the Clock uniforms and sometimes displayed a sleeve logo (but not always, *perhaps* omitting them at team request for nostalgic authenticity?).

But as time went by in the 1990s, more and more, the nostalgia game business was passed up by the official suppliers and instead went to several makers specializing in team-worn, on-field Turn Back the Clock uniforms: Mitchell & Ness, AIS, and Ebbets Field Flannels. These uniforms always had logo-less, bare sleeves.

(Left) 1992- Russell had been the contracted official supplier to MLB and therefore is entitled to display its logo on game jersey sleeves. This 1992 Phillies TBTC jersey is a good example. (Below left) Likewise, Majestic, as an official MLB supplier in 2003 is entitled to sew its logo on the sleeve of this Cardinals TBTC jersey. (Below, right) The Royals often used AIS to make their Negro League tribute uniforms. The sleeves are bare of a manufacturer's logo per contractual rules.

We will not detail AIS here again, as we covered them just a few pages prior.

© GameWornGuides.com

Mitchell & Ness Turn Back the Clock Tagging

Recognized as the originator of the concept of making nostalgia uniforms, and maker of the highest quality cotton and wool flannel replicas, Mitchell & Ness was the first to supply flannels for the early TBTC contests in the 1990s. They broadened to include knit replicas and on-field Negro League reproductions (in cooperation with Ebbets Field Flannels) in a short time.

Mitchell & Ness team-spec TBTC uniforms often, *but not always* include a felt tag embroidered with the scheduled date of the contest. But beware that a few- or a few dozen- extras are made by the company for retail sale, so not every date-tagged example was actually used in a game.

Collectors should note that a huge percentage of the Mitchell & Ness non-game worn jerseys offered for sale on the Internet are sadly overseas-sourced counterfeits.

Some discussion on collector forums suggests that jerseys made for the teams have the felt date tag <u>beneath</u> the jock tag. Retail ones have it to the <u>side</u>. I have no confirmation of this as fact.

Mitchell & Ness tail tagging 1992-1998

Mitchell & Ness tail tagging 1999 and after

© GameWornGuides.com

Rawlings Turn Back The Clock Tagging

Rawlings was the first supplier of TBTC uniforms, for the first such contest in 1990 hosted by the Chicago White Sox. They made several teams' uniforms for 1991 contests in their final year of their contract with MLB before Russell took over in 1992, and therefore should then have been allowed to display their script on the sleeve. However, none of the 1990-1991 TBTC uniforms have the Rawlings script on the sleeve. *Perhaps* this was a gracious nod to tradition, since the old uniforms had no advertising on them?

1991

No Rawlings sleeve script is found on this 1997 jersey. Russell is the only company allowed to display their brand mark in 1997.

1995-1999 Rawlings tag

2000 and after Rawlings tag

Rawlings returned as an official supplier to MLB 2000-2002 and is again allowed to display their sleeve logo for this brief time. Examples of neck and jock tags are shown. Rawlings' sleeve logo is on this 2002 jersey because, at that time, Rawlings was an official provider to the Rangers, and therefore contractually they could display it there.

© GameWornGuides.com

Ebbets Field Flannels Turn Back the Clock Tagging

Ebbets Field Flannels has been called on by just a few teams over the years, often by those who wanted real flannel uniforms to wear in TBTC contests. However, they have crafted uniforms in double knit as well, such as for the 1997 matchup of the Royals and Mariners wearing 1977 style knits. They have partnered with Mitchell & Ness (by supplying lettering) on some M&N-logoed Turn Back the Clock jerseys.

Ebbets Field Flannels' creations are first rate in quality, with a notable commitment to accuracy when compared to originals. For Turn Back the Clock games, they have made replica flannel Minor League uniforms for the Tampa Bay Rays, Negro Leagues Tribute uniforms for the Orioles and Tigers among others.

At left, the older style manufacturer's label used on this Kansas City Monarchs jersey worn by the Royals in 1995. At right, the Dodgers 2007 road jerseys featuring the newer style label.

© GameWornGuides.com

Bobcat Athletic Turn Back the Clock Tagging

Bobcat Athletic of Huntingdon Park, CA was selected by the Dodgers to make uniforms for their first two Turn Back the Clock games in 2011. As is the practice, the hosting team orders the uniforms for the visitors, so it is no surprise that the opponents in both games, the Cubs and Braves, had Bobcat uniforms as well.

Dodgers' tags are hidden inside the back tail, visitor tags are on the outside of the front tail. Following licensing rules, Bobcat is not allowed to display its logo in view. Notably, Majestic supplied the Turn Back the Clock uniforms in this same style for the Dodgers' final three Turn Back the Clock games in 2011, and these indeed did have the Majestic logo visible on the sleeve.

A Fun Quiz: Authenticity Secrets Found in Manufacturers' Brand Tags

As we have seen, in a given year, a different maker may have had the rights to sell "authentic" jerseys in the stores as compared to the manufacturer who actually made the uniforms for the team to wear on the field.

Even when the same manufacturer made both on- and off-field jerseys, they sometimes made slight changes to the tagging, sleeve logos or details between the two types that can show if a jersey started its life on a rack in a retail store instead of in a player's locker.

Each manufacturer's tagging varied from year to year. Even if a jersey has no year tag sewn in (or does have one that someone put in it to fool you) the jock tag can disclose the approximate time frame in which the jersey was manufactured.

(Above) This tag is from a Twins Kirby Puckett road jersey tagged "1992" and claims to be legit, but it just can't be. What is wrong?

Quiz answers are on the next page.

(Above) What clue from the jersey above screams "Bought at The Sports Authority" instead of game worn? (Below) Why can't this Texas Rangers jersey possibly be authentic – and what is a giveaway that it is probably a Minor League issue?

Several clues on the claimed "game used" jersey above set off alarm bells. But the one we will focus on here is the fact that the Rawlings tag at right shows characteristics of jerseys made for retail sale, not ones made for the team to wear. How many other flashing yellow lights can you find?

© GameWornGuides.com

Quiz Answers:

Tag style late 1993 and after

Correct for 1992-early 1993

Twins Jersey: This style of Russell Diamond Collection tag is not used in 1992. It appeared in very, very late 1993. It did not start to become common until 1994.

Royals jersey: The Rawlings tag is sewn on two sides only, indicating a retail sale item. Other "flashing yellow lights" are the incorrect number font for the player numbers and the fact that the year tag style is not the same as any other Royals jersey we have seen.

Yankees jersey: Only Yankees "authentics" made for retail sale ever carried the Russell "R" sleeve logo. The Yankees never wear jerseys on the field displaying a manufacturer's logo.

Rangers "Texas" jersey: Wilson has never been an official sponsor for MLB uniforms, and has therefore never been allowed to display its "W" logo on the sleeve of any garment made for either team use or retail sale. This jersey happens to be a Rangers Minor League issue.

Chapter 4

MLB Commemorative Uniform Patches

Game Worn Guide to MLB Jerseys

1970-2025, Tenth Edition

William F. Henderson

Commemorative Uniform Patches - Overview

All-MLB; American League; National League; Postseason Play, and All-Star Game

In this chapter we will cover **Memorial patches worn by multiple teams**, commemorating an event, a person or an anniversary are included here.

Not included in this chapter are:

- **Standard team (logo) patches :** These are generally the team's secondary logo on a patch, sewn to the sleeve of many teams' player uniforms. These are included in the section for each individual team and are not covered in this chapter.
- **Individual teams' memorial patches** are included only in the team chapter only, not here.

So, in summary, this chapter includes:

Commemorative patches worn by most or all MLB teams marking an anniversary or event.

Commemorative patches worn by one league only (American or National) for one game or multiple games in a season are included.

Postseason patches as worn by postseason teams are included.
They are also listed in each team's chapter.

All-Star Game patches, which starting in 1978, have had the distinction of being worn by all the players on the hosting club all year long. And beginning in 1988, the individual players invited to join the All-Star team wear the patch on their sleeve during the All-Star Game events. You find All-Star Game patches listed twice: in this chapter, and also in the hosting team's chapters.

Single-day ribbon patches and commemoratives worn by *many or all teams on the same day* are covered here, but those worn by single teams or in one game to mark local events are mostly NOT covered here. They are found instead in those individual teams' chapters.

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

1994: 125th Anniversary of Professional Baseball

1994: 27 of 30 Teams wore the version above. The Expos wore the version below.

1994: Reds-only patch above left, with print version below left.

There were no all-MLB memorials from 1970 through 1993, a span of 34 seasons. In 1969 (one year prior to the period chronicled in this volume) all teams had worn a "100th anniversary" (of professional baseball) sleeve patch.

1994 marked he 125th anniversary of professional baseball and it was commemorated with a metallic-gold, red, and blue rendition of the "Silhouetted Batter" logo embroidered on black with the words "125th Anniversary" spelled out beneath it in a tall and ornate type font, also in metallic gold.

- All teams except two wore this patch, and all on their right sleeve.
- The Reds alone wore a special 125th anniversary patch which was a super-miniature team photo of the Reds 1869 squad, embroidered in metallic gold thread over a black background. It made a poor transition to fabric, leaving everyone who viewed it from a distance any further than two feet away wondering what it was, your author included. This patch is super rare today.
- The Expos alone wore a French language version of this patch
- The Pirates did not wear the patch at all, wearing the 1994 MLB All-Star game patch on both their home and road uniforms instead.
- The Indians wore the anniversary patch on their gray road jerseys only, and wore a Jacobs Field commemorative patch instead on their home whites and navy alternates in 1994.
- The Texas Rangers wore the patch on their road jerseys only. Some teams wore the patch on their warm-up BP jerseys as well, though we do not have a definitive list of these.
- Many reproduction 125th patches were made with non-metallic thread, and also marginally larger than the authentic ones.

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

1997- Jackie Robinson "*Breaking Barriers*"

1997 was a noteworthy year in Major League Baseball, when a concerted effort began to acknowledge the slow progress during the first part of the century in racially integrating baseball.

The 50th anniversary of the debut of Jackie Robinson on the Brooklyn Dodgers' squad is marked by all teams in professional baseball (including the Minor Leagues) having the opportunity to wear a special patch all year long. In MLB use, the patch came in four slightly different versions, all shown here.

The Indians did not wear the patch at all until after the All-Star break, instead wearing the 1997 All-Star game patch the first half of the season. They then added it to their home whites only. Giants and White Sox wore the patch on their home jerseys only.

Standard version, worn by 27 teams

Dodgers Only

Marlins only, "color keyed" to their uniforms

Expos home only (French)

From Wikipedia: *"In an unprecedented move, Commissioner of Baseball Bud Selig announces on the 50th Anniversary of Jackie Robinson's debut that the number he wore with the Brooklyn Dodgers, number 42, would be unilaterally retired throughout all of Major League Baseball during a mid-game ceremony in a game between the Dodgers and the New York Mets at Shea Stadium. Rachael Robinson, Jackie's widow and President Bill Clinton attend the event as well. The number (could) be worn by players during the anniversary of his Major League debut, and would still be worn by players who started wearing the number before the announcement, most famously the New York Yankees' Mariano Rivera, until he retired after the 2013 season, thus officially retiring number 42, as he was the last player to wear the number 42 jersey on a regular basis."*

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

1997: Interleague Play Patch

1997 was the first year of Interleague Play. It was touted as a major change in tradition for Major League baseball, as for the first time, teams would meet opponents from the opposing league for a few regular games during the season. Prior to this, the only time that the two leagues ever met with one another was in the World Series and the All-Star Game. This patch depicted bald eagles in blue and red, marked “National” and “American," fighting over a baseball in between them. It was offered to all teams to wear during Interleague games. However, it was worn only by the Giants and Rangers, and only during their very first Interleague Series, June 12-13, 1997.

This patch is extremely rare, A small number are in circulation and finding one is quite difficult.

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

2001: MLB - Wide Commemoration of 9/11

The tragic coordinated terrorist attacks on America on Tuesday, September 11, 2001 shocked this country to its core. Life simply was put on hold after the disaster, and all scheduled MLB games were canceled for the rest of the week. When games resumed the following Monday, every player had an American flag patch sewn on the back of the collar, over top the MLB Silhouetted Batter patch that was there already.

These flag patches were worn through the end of the season, meaning that a great number of game worn jerseys from 2001 were sold with the flags intact.

In 2002, flags were sewn on all caps, leaving the jerseys alone. This article has interesting observations on MLB's commemoration of the events:

https://www.sbnation.com/2011/9/11/2414430/mlb-response-9-11

© GameWornGuides.com

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

Mother's Day, Father's Day

Older non-bordered style ribbons at left, and at right, white-bordered ones that have been used since at least 2012. They are each about 2 ½" tall.

Beginning 2006 and annually since then, worn on the chest of every Major Leaguer, Mother's Day pink/Father's' Day blue ribbon patches.

Mother's Day observance is for breast cancer awareness, **Father's Day** is for prostate cancer awareness and is often paired with the theme "Keep Dad in the Game." Many players also wear one-day pink or blue accessories, like wristbands and some use special pink or blue bats.

These small embroidered appliqués are glued in place, and removed after the games. Many game worn uniforms exhibit glue residue from where these have been removed.

In 2016 and 2017, all teams wore special pink- or blue-trimmed jerseys for these days. The actual jerseys worn on field by players have the ribbons applied, but usually ones made for team shop sale, even those advertised as "team issued," do not.

Note that these and other one-day glued on patches were once generally removed from jerseys, and the jerseys used from that point forward with the patch gone. More and more recently these are being left on jerseys and the set is sold to the public.

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

July 4, 2009 ALS Commemoration

July 4, 2009: All players on all teams wear this ALS awareness patch. The date of July 4 was selected because it was the 70th anniversary of Lou Gehrig's retirement from baseball, and his famous "Luckiest Man" speech on July 4, 1939 after suffering the progression of the disease which came to bear his name.

The patch was unfortunately poorly applied with adhesive only, many of these simply peeled off and landed on the ground during the games. Generally, patches were removed from jerseys after the game and the uniforms continued to be used for future games.

© GameWornGuides.com

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

2011: 10th Anniversary Commemoration of 09/11/01

September 11, 2011: Commemorating the tenth anniversary of the terrorist events of 9-11-2001, and remembering all the lives that were lost that day, all players on all U.S.-based teams wore the American Flag patch affixed over the MLB logo on their jersey back collar. The Blue Jays wore a patch with crossed U.S. and Canadian flags instead (shown in their team chapter).

Generally, the flag patches were temporarily affixed for this single game and then removed after this date, and players continued to wear the same uniforms.

© GameWornGuides.com

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

2013: Opening Day Newtown Memorial

The patch is adhesive-backed and is applied using heat. Most teams simply removed the patch after the game, though we have seen some game used jerseys for sale with the patch attached.

The 2013 season started with every team in MLB wearing a patch on Opening Day commemorating the tragedy of the Sandy Hook school shooting in Newtown, CT on December 14, 2012 in which 26 children and teachers died. Originally, the patch was to be worn only by the Red Sox and Yankees, the two teams closest to the locale, but after consideration, the commissioner of baseball asked the other 28 clubs to participate in the memorial as well.

© GameWornGuides.com

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

2014: ALS/Lou Gehrig 75th Patch, July 4, 2014

July 4, 2014 marked the 75th anniversary of Lou Gehrig's tearful retirement speech from baseball; his career cut short by ALS (amyotrophic lateral sclerosis), a central nervous system disease that has come to bear his name. All players in both leagues wore this one-day patch on their chests. MLB donated $300,000 to the ALS Association, funded partly by the auction of player uniforms worn on that day through their website MLB.com. These uniforms were sold with this patch affixed, so there are a significant number of them in the hobby. Collectors should note that the patch was available for purchase separately, so the presence of such a patch on a jersey alone does not assure it was actually worn on the field.

MLB and all 30 clubs to pay tribute to Lou Gehrig

MLB Press Release | June 19, 2014

Major League Baseball and its 30 Clubs will pay special tribute to Hall of Famer Lou Gehrig on the 75th Anniversary of his iconic "Luckiest Man" speech by joining forces with ALS (Amyotrophic Lateral Sclerosis) organizations to raise awareness for the disease, otherwise known as Lou Gehrig's Disease. Major League Baseball will donate $300,000, collectively, to these organizations that are leading the fight against ALS - ALS Association, ALS Therapy Development Institute (ALS TDI), Muscular Dystrophy Association (MDA) and Project A.L.S. - while Clubs playing at home on July 4th will conduct special on-field ceremonies to commemorate the anniversary of the speech and honor the legacy of Gehrig, who passed away on June 2, 1941 at the age of 37.

"When Lou Gehrig delivered his historic farewell speech at Yankee Stadium 75 years ago, he indelibly linked our National Pastime to the fight against the disease that would bear his name," Baseball Commissioner Allan H. (Bud) Selig said. "As the fight continues today, it is our privilege to pay tribute to the Iron Horse's enduring legacy of courage and nobility. In his memory, and for all those who are affected by ALS, Major League Baseball is honored to do its part to advance the cause in the hopes of finding a cure."

As part of this effort, Major League Baseball is unveiling a special commemorative 75th Anniversary patch, which will be worn by all players, managers, coaches and umpires on July 4th. The New York Yankees will be commemorating this initiative on July 2nd. Additionally, a special video will be played in all ballparks featuring one first baseman from each Club reciting a line from Gehrig's speech.

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

2014: National Baseball Hall of Fame's75th Anniversary Commemoration

July 27, 2014: This patch was worn on the jersey fronts of all players (and umpires) for games on that Sunday. It was heat pressed on and not sewn, and most teams removed the patch and continued to use these uniforms. A few clubs may have retired and sold this set of uniforms to fans, but based on the relatively few patched uniforms we have seen for resale, most probably did not.

(inset) The patch commemorated the 100th anniversary of professional baseball in America, It was available to be worn by all teams in both the Majors and Minors all season during 1939. The opening of the Baseball Hall of Fame was another event that was a part of that centennial year.

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2024

"Play Ball" Patch: May 14-15, 2016 and June 3-4, 2017

"Play Ball" is an initiative that was kicked off with public events in June 2015 by MLB, designed to promote the sport of baseball, mainly among children. Realizing that fewer children are getting involved in the sport, especially in cities, Play Ball emphasizes that one does need two teams of nine players, fancy equipment, umpires or uniforms to practice the skills needed to enjoy baseball.

MLB players participated in events with children in several cities, and the events were covered by the news media including *Sports Illustrated Kids*. They emphasized playing pitch and catch, Wiffleball, the old rundown game of "Hotbox," home run derby and pickup games with whoever was available to play.

The project also launched a website and a mobile coaching app available online.

For 2016, for the first time, all players on all teams wore a special ChromaFlex patch on their left chest for games on May 14-15, 2016. Some teams sold this set of uniforms through their team stores. The promotion returned for June 3-4, 2017 with a slightly updated patch, adding USA Softball's logo as well.

Gold Ribbon Patch for Childhood Cancer, 2016-2024

MLB to go gold for Childhood Cancer Awareness Day

By Mark Newman / MLB.com | September 2nd, 2016

Labor Day Weekend will begin with a purpose.
Major League Baseball announced on Wednesday that it has launched a league-wide effort by dedicating a special Childhood Cancer Awareness Day at all of its ballparks hosting games today -- starting with the potential postseason-preview day game at Wrigley Field between the Giants and Cubs, and followed by a full slate of night games around the Majors.

In partnership with Stand Up To Cancer, MLB has encouraged clubs to support this new initiative in commemoration of Childhood Cancer Awareness Month through a variety of special events. All Major League players, coaches, umpires and grounds-crew members will wear gold-ribbon decals and wristbands to further promote awareness for childhood cancer, which is the leading cause of death by disease in children aged 15 and under in the United States…

"Advocating for the health and well-being of young people affected by this terrible disease is a cause that Major League Baseball and our clubs are proud to support," Commissioner Rob Manfred said. "Through our league-wide effort, we will join Stand Up To Cancer and many organizations dedicated to this fight in a unified demonstration of our sport's commitment to ending childhood cancer."

Worn on September 2, 2016; September 1, 2017; September 1, 2018; September 8, 2019; September 5, 2020; September 1, 2021; September 2, 2022; September 3, 2023; September 1, 2024

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

2018-2019: Jackie Robinson Day 42 Patch

April 15, 2018 and April 15, 2019: While all players have worn 42 on Jackie Robinson Day since 2008, a new tribute to Robinson was added to the celebration in 2018. For April 15 games that year and in 2019, all players also wore a new patch with Robinson's 42 over crossed bats and a stylized infield. The CFX patch was worn on the right sleeve of all jerseys on those dates. In 2019, it was worn directly above the MLB150 patch.

2019: Major League Baseball 150th Anniversary Patch

Uniform patch to mark 150 years of pro baseball

By David Adler, MLB.com, 2/12/19

All 30 Major League teams will wear special "MLB 150" patches on their uniforms for the entire 2019 season in honor of the 150th anniversary of the 1869 Cincinnati Red Stockings, the first openly all-salaried professional baseball team.

Every club will also sport MLB 150 patches on its caps on Opening Day, March 28 -- the first time a league-wide anniversary will be commemorated on caps.

The patch, which will be worn on the right sleeves of jerseys, features "MLB" in blue and "150" in red surrounding the MLB logo.

MLB previously honored the 1869 Red Stockings with commemorative 100thanniversary patches in 1969 and the 125th anniversary season in 1994.

Reds 2019 home and alt red

Reds 2019 road gray

Note: Contrary to the facts in the article shown here, the Reds did not wear this patch, instead, they had their own 150th anniversary patches for the 2019 season (see images far right).

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

2019 and 2021 Armed Forces Day and Independence Day

MLB ends the use of special uniforms for Independence day after 2018, replacing it with a new patch, and adding a similarly styled patch for a new recognition of Armed Forces Day in 2019. The COVID-19 pandemic eliminated these patches in 2020. The patches returned again in 2021, but did appear on the field again in following years.

2019 & 2021-2025 Memorial Day "Lest We Forget" Poppy Patch

MLB's league-wide, weekend-long promotions involving special jerseys for Memorial Day after 2018. It is replaced by a new patch, affixed to team's regular season jerseys with adhesive, for one day only in 2019. This new Memorial Day patch features a poppy, with a "Lest We Forget" banner – both traditional symbols of remembrance of those lost in war, which originated in Great Britain after World War I. The COVID-19 pandemic precluded the use of these patches in 2020, but the patch returned in 2021 and after.

July 23-24, 2020: Black Lives Matter/United for Change Patches

MLB Allows Black Lives Matter, Social Justice Jersey Patches

By The Associated Press, July 22, 2020 Major League Baseball players have the option of having a patch with "Black Lives Matter" or "United For Change" on a jersey sleeve on opening day of the pandemic-delayed season…

Jersey patches would go on the left sleeve unless a team has an existing patch there, in which case the new one would go on the right sleeve. The special patches will be used Thursday and Friday.

The initiatives that start Thursday were designed to allow players to show support for social justice generally, and diversity and inclusion in baseball. They were deliberately made flexible, allowing players to make individual decisions.

Players were given the option of wearing one of the patches if they desired. Many players wore both, most often on the left sleeve. These are temporary adhesive patches, so many fell off during games, and some players added patches in-game as well. Note: The Dodgers and Giants were the only teams to play both July 23 and 24, but only wore the patches July 23.

MLB Press Release, July 22, 2020

MLB -- in collaboration with The Players Alliance, individual MLB players and the Players Association -- has provided guidelines that invite players to support social justice and diversity and inclusion in baseball and life. MLB supports the players' need to express themselves, while also recognizing that the way they choose to do so will vary from player to player.

In that spirit, MLB is providing flexibility for players to show their support for social justice that reflects their individual values and personalities. After consulting players for guidance, MLB has offered…a patch, which reads "Black Lives Matter" or "United For Change," that can be affixed to the player's sleeve.

August 16, 2020: Negro League Centennial Patch

MLB had planned to honor the 100th anniversary of the founding of the Negro Leagues on Saturday, June 27, 2020, when all players, managers, coaches, and umpires were to wear a commemorative patch to mark the occasion. However, given the late start of the 2020 season, the Salute to Negro Leagues game was moved to August 16, 2020.

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

2021 and 2022-2023 Lou Gehrig Day Patches

2021

2022-2023

MLB declared June 2 as Lou Gehrig Day throughout baseball in 2021, exactly 80 years after the legend's death. The new annual Gehrig day is marked by on-field patches worn by all uniformed personnel that day. The patch for the inaugural Gehrig Day was rectangular and featured an illustration of the Iron Horse at bat, while the patch for 2022 and subsequent years was round and made of a rubberized material, similar to 3D helmet logos worn by some teams. Both versions are adhesive and meant to be removed after the game.

Patches honoring Gehrig were also worn on the 70th (2010) and 75th (2015) anniversaries of his "Luckiest Man" speech from July 4, 1939. The are listed earlier in this chapter.

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

2024-2025 Lou Gehrig Day Patch

2024

Gehrig's retired number disk at Yankee Stadium's Monument Park is shown here, a possible inspiration for the 2024 Lou Gehrig Day patch.

MLB changes its Lou Gehrig day patch for the third time in four years, introducing a simple "4" patch for the 2024 season on June 2. This version of the patch is much easier to see and understand compared to prior years, which were much more detailed and contained text that was difficult to read on television and in game photos.

The patch is similar to Gehrig's retired number at Yankee Stadium's Monument Park, though the "4" is a different font and it lacks the pinstripes of the stadium monument.

Like the last version, the 2024 patch is a textured, rubbery material, and is temporarily affixed with adhesive. Some teams do pull that day's jerseys for sale and auction, so there are examples in the hobby of game used jerseys bearing the patch.

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

2020-2024 Roberto Clemente Day Patch

The standard Clemente Day patch is shown at top, the Roberto Clemente Award Nominee patch is at bottom.

September 9, 2020, September 15, 2021-2024: MLB declares its first official Roberto Clemente Day in 2020, and solidifies September 15 as its annual date in 2021. For that game players have the option to wear a “21” patch in honor of Clemente, while that year’s nominees for the Roberto Clemente Award may wear a patch specific to that honor. In addition, in 2020, all Puerto Rican players were permitted to wear 21 as their uniform number that day, which was extended to all uniformed personnel of Puerto Rican descent in 2021, plus all 2021 Roberto Clemente Award nominees, and the six active players who had received the Roberto Clemente Award to that point. The Pirates, in turn, had their entire team outfitted with number 21 starting in 2020. By 2022, some entire teams had decided to wear 21, along with the patch. Most teams wear the patch on left chest starting 2023 to avoid conflict with advertising patches.

2023-2025 MLB Debut Patch

Excerpted from MLB Press Release

Fanatics Collectibles, MLB, MLB Players Inc. unveil first-ever memorabilia patch created specifically for trading cards

"Today, Fanatics Collectibles, the trading cards and collectibles division of Fanatics, and Topps, its cornerstone sports trading card brand, unveiled MLB Debut Patches, the first-ever memorabilia made in partnership with a professional sports league specifically for inclusion on trading cards. Created in partnership with Major League Baseball (MLB) and MLB Players Inc., the business arm of the Major League Baseball Players Association, all players making their MLB debut this season will have the Debut Patch worn on their jersey. After appearing in their first game, the patch will be authenticated under the auspices of the MLB Authentication Program and then placed directly onto their rookie card in a future Topps set.

When a rookie is called up to the Majors for the first time, the Debut Patch will be placed on their jersey. Following the game in which he sees action for the first time, the patch will be removed, secured and authenticated under the auspices of the MLB Authentication Program for inclusion in an upcoming Topps product.

With MLB Debut Patches, fans will be able to collect and connect with the most important moments in players' careers. The first-ever MLB Debut Patches will make an appearance on baseball fields around the country on Opening Day, and throughout the entire MLB season as players make their debuts."

Commemorative Patches Worn by All Teams in Major League Baseball 1970-2025

2025 Gold MLB Logo Patch for Season Award Winners

Excerpted from MLB Press Release

Gold stars: Ohtani, Judge, Skenes among six who'll wear special MLB uni logo in '25

"Six of baseball's top players are adding a little extra shine this season.

In collaboration with Topps, Fanatics and Nike, MLB is introducing a special Gold MLB logo patch for the 2025 season to celebrate a group of '24 award winners: MVPs Shohei Ohtani and Aaron Judge, Cy Young recipients Chris Sale and Tarik Skubal and Rookie of the Year honorees Paul Skenes and Luis Gil.

These six players will wear the emblem on the back of their jerseys throughout 2025. Following the season, 10 authenticated game-worn patches from each player will be transformed into exclusive autographed Logoman trading cards. The gold patches will also appear on retail versions of each player's jersey.

Ohtani became the first player to sport the embroidery on Saturday, wearing it for the Dodgers' exhibition game against the Yomiuri Giants at the Tokyo Dome. True to form, the superstar slugger crushed a two-run homer in the third inning. The Dodgers and Cubs are in Japan for the Tokyo Series, which will get underway Tuesday, kicking off the 2025 campaign.

The Gold MLB Logo Patch promotion follows the Debut Patch initiative that launched at the beginning of the 2023 season. Those patches, which adorn a player's jersey during his MLB debut, are also authenticated by MLB and utilized in Topps trading cards."

© GameWornGuides.com

2023-2025 Advertising Patches

MLB and the MLB Players Association agreed to a new Collective Bargaining Agreement in March 2022 which, for the first time, allowed teams to sell space on jerseys for corporate advertisements. The patches could be a maximum of four inches square, and could appear on either sleeve. By the end of the 2023 season, 16 teams had advertising patches on their jerseys. As of press time (August 2025), 28 of 30 teams had them, the White Sox and Rays being the outliers.

The overall approach to design of patches varied across MLB. Some teams used the same patch across all jerseys, some had different versions for different jerseys, and the Cardinals matched the background of their patches to each of their jersey colors. Some teams used the ad patches on throwbacks, some did not. The Mets, Diamondbacks, and Padres announced patches that differed by the time they reached the field, or were quickly changed once they were first seen on field.

The placement of the patches varied from team to team too. Generally, the location of the patch varied based on whether the player was left handed or right handed. Many teams put the patch on the opposite sleeve from a player's throwing hand, since that side faces the center-field camera while at bat, or is the front-facing sleeve for a pitcher. The Red Sox took a different approach, orienting position players' patches opposite the throwing hand for position players and on the throwing side for pitchers, so that every players' patch faced the center-field camera when the player was in action.

© GameWornGuides.com

2023-2025 Advertising Patches Continued

The variable location for ad patches also changed how teams handled their standard uniform patches. For teams with more than one standard sleeve patch, like the Angels, or specific jerseys with two patches like the Padres' camo alternates, teams deleted one existing patch to make room for the ad. Several teams who did not even have ad patches in 2023 still varied their standard team patch locations from player to player, just in case they struck a patch deal during the season.

In some cases where teams had a "directional" sleeve patch, new versions of the patch were created. The Reds' made a second running Mr. Red patch for their home jerseys with Mr. Red facing the opposite direction to ensure he faced forward regardless of which sleeve the patch was on.

And where certain commemorative patches would have appeared on a sleeve opposite a normal patch, like the 2023 All-Star Game patch that would typically have been put on the Mariners' right sleeve opposite the team disc patch, the commemorative patch replaced the typical patch to keep one sleeve open for a sponsor, even where no sponsor yet existed.

Ironically, at the same time Nike had been working hard to reduce the number and variation of each team's jerseys, the ad patches made one element of production harder, leading to occasional errors. Advertising now meant that uniform patch placement was no longer uniform at all.

The Mets debuted one ad patch (top left) but changed to a new patch that was "more Mets" soon after (top, second from left). The Diamondbacks did something similar, wearing a rectangular "Avnet" patch in Spring Training, but moving to one that took on the shape of the sponsor logo for the regular season. A handful of teams used different color patches to stand out better on different jerseys, like the Red Sox MassMutual patches shown above right.

Some teams that did not even wear an ad patch in 2023 still varied the location of their regular patches as if to make room for a future patch, like the Nationals as seen above left. Above center, the Reds' Running Mr. Red patch now comes in two versions so the character is still running forward regardless of which sleeve he is on, an issue created by the variable location of the ad patch. The "reversed" Running Mr. Red, which is worn on the right sleeve, has his Wishbone-C logo on the wrong side of the character's jersey as a result of the change. (Image from uni-watch.com) All of these new patches, in different versions, appearing on variable sleeves, can wreak havoc on manufacturers and clubhouse staff, as seen in Rafael Devers' upside-down ad patch, above right.

Postseason Patches

The first postseason patches worn in MLB were during the 1987 World Series. World Series patches have then been worn annually, with the exception of the 1997 World Series, where both teams (Indians/Marlins) continued to wear the patches they had been wearing during the season (Indians: Jackie Robinson Patch on home whites and All-Star patch on road grays and alternate blues; Marlins, Jackie Robinson on all jerseys).

Patches for earlier playoff rounds were tried in 1995 and 1996, then dropped again until 2013 saw them return.

Usually a team makes up a whole new set of uniforms for its players if it is headed into the postseason. The teams want to look their best on worldwide television, and uniforms worn and washed over 80 times at that point might look shabby. Therefore, it is reasonable to find real game used jerseys from a World Series year for a team and see no sign of the postseason patch on the sleeve.

World Series Matchups 1970-2024

While 1972 was the big change-over year to knits in Major League Baseball, and in 1971 only a few teams had experimented with knits, oddly enough, 1971 was the first *all-double-knit World Series*! The Pirates had first adopted knits in the 1970 season. The Orioles wore knits for the first time during the 1971 season when they wore alternate orange uniform for two games. They then wore new, regular uniform knits for the first time during the 1971 World Series.

World Series Patches 1987-1991

In World Series games prior to 1987, the players did not wear special patches on their uniforms.

Cardinals-Twins
(The Twins did not wear the patch during the World Series)

Dodgers-Athletics

Giants-Athletics

In the 1990 Series, both teams also wore an American flag patch to mark Operation Desert Shield

Reds-Athletics

Braves-Twins

1990 and 1991 patches are slightly larger than the 1987-1988 ones.

The first style "family" of World Series logos that were worn on players' sleeves are shown here. Notice how the 1989 logo was modified to commemorate the fact that the San Francisco Giants and the Oakland A's were playing each other. This was the year that a major earthquake happened during a Series game, causing damage in the both the cities of San Francisco and Oakland and suspending series play. This World Series that year did not end until after the beginning of November.

© GameWornGuides.com

World Series 1992-1997

Braves-Blue Jays

Phillies-Blue Jays

Braves-Indians

Braves-Yankees

Marlins-Indians

This is the second style "family" of World Series logos worn on participants' uniform sleeves. Recall there was no World Series in 1994 due to the Players' strike.

Neither the Marlins nor the Indians wore this patch in the 1997 World Series. Instead, the Indians wore the same patches they had worn for the second half of the 1997 season: the 1997 All-Star Game patch on road and alternate blue, the Jackie Robinson patch on the home whites. The Marlins wore the Jackie Robinson patch in the Series.

Pre-1987 World Series Patches? Nostalgic patches are available from many memorabilia vendors for World Series games going back to the early 1900s. These are artistic recreations of period art, and were not used by the teams.

© GameWornGuides.com

World Series Patches 1998-2003

Padres-Yankees

Braves-Yankees

Mets-Yankees

Diamondbacks-Yankees

Giants-Angels

Marlins-Yankees

This group of patches gets a little more artistic and colorful. The related 1998-1999 patches bear some resemblance to the earliest patches. The 20002003 patches feature a baseball circling the globe.

© GameWornGuides.com

World Series Patches 2004-2011

Cardinals-Red Sox

Astros-White Sox

Cardinals-Tigers

Rockies – Red Sox

Phillies-Rays

Phillies-Yankees

Giants-Rangers

Cardinals-Rangers

The 2004-2007 family of patches have a boxy-angular, graphic look that to me have a family resemblance to logos for something like the *World News Tonight* on television. 2008-2011's patches are more classic in appearance.

© GameWornGuides.com

World Series/Postseason Patches 2012-2016

2012

Giants - Tigers

There are no other "postseason" patches in 2012

2013

Pirates, Reds, Cardinals, Rays, Red Sox, Indians, Braves, Dodgers, Tigers, Athletics

Cardinals - Red Sox

2014

Royals, Athletics, Giants, Pirates, Orioles, Tigers, Nationals, Angels, Dodgers, Cardinals

Giants - Royals

Sleeve patches for all teams participating in the postseason return in 2013. If your team was in the postseason in these years and did not advance to the World Series, the team's playoff set of uniforms usually will still have these patches affixed as they make their way to the hobby.

2015

Rangers, Blue Jays, Cubs, Cardinals, Astros, Royals, Mets, Dodgers, Pirates, Yankees

Mets-Royals

2016

Blue Jays, Orioles, Cubs, Giants, Mets, Indians, Red Sox, Rangers, Dodgers, Nationals

Cubs-Indians

World Series Patches 2020-2022

Starting with the 2020 postseason, MLB no longer had teams wear a special patch for Division Series and League Championship Series games, so only the two teams participating in the World Series would have a special patch for that honor. In 2021, however, global supply chain issues resulting from the COVID-19 pandemic made it logistically impossible to manufacture, distribute, and apply World Series patches for retail use. As such, MLB brass decided not to use a World Series patch on field either, because fans would be unable to get their hands on it. It is an unfortunate, but sadly unsurprising story of the cart leading the horse with MLB uniforms, where what fans will want to wear at home directly influenced what players wore on the field, rather than the other way around.

For the 2022 World Series, the sleeve patch returned to the field in CFX form, though the available retail versions appeared to be limited to traditional embroidery.

World Series Patch 2023-2024

A new Collective Bargaining Agreement (CBA) between Major League Baseball and the Major League Baseball Players Association allowed for a new addition to every team's uniform - an advertising sleeve patch. Not every team had a patch in 2023, but most made provisions for adding one by deleting a sleeve patch if their jerseys had two, or determining the position of a team sleeve patch based on the handedness of the player in preparation for an ad patch. This uniform update meant that the position of the World Series patch, which was typically uniform from year to year, may not be so for 2023. To avoid the issue, starting in 2023, MLB created a smaller version of the patch, and affixed it to the left chest of the teams in the World Series. The 2023 patch was adhesive, and was not sewn on. For 2024, patches were sewn.

1978-1985 All-Star Game Patches

The tradition of the hosting team's players wearing that year's All-Star commemorative patch on their jersey all season long began in 1978, when the Padres hosted the midsummer exhibition.

Starting in 1988, when the All-Star players played in the game, each player wore the All-Star patch on his sleeve for that game only. In many cases, the team makes up a new uniform for the All-Star player with the proper patches sewn on exclusively to be worn at the All-Star Game. Prior to 1988, All-Star Game players did not wear the All-Star patch in the game.

The Mariners adopted the 1979 All-Star patch as their team logo and it remained on their uniforms for the next few years!

1981- The Indians did not wear their All-Star Patch in 1981, nor did players wear it in the All-Star Game that year.

1985- The Twins elected not to wear their All-Star patch that year. It was only seen at the game as a souvenir in 1985

2008-2017 All-Star Game Patches

2008

2009

2010

2011

Repeating what had been done in 2002 by the Brewers, the patch the Diamondbacks wore all season (top) included the small team logo. The one worn by all the players in the actual game (bottom) had the team logo replaced with the letters "MLB."

2012

2013

2014

Logos for the 2014 game displayed at the Twins' home Target Field included a small Twins script that was left off all patches- including the one worn by the Twins all season.

2015

2016

Embroidered version, Padres in-season

ChromaFlex version, All-Star Game only

2017

Embroidered version, Marlins in-season

ChromaFlex version, All-Star Game only

Continuing the theme, each All-Star patch borrows elements from the home team's palate of colors, type-fonts and symbolism. Starting in 2016, host teams wore an embroidered version of the patch on their regular-season jerseys, while players in the All-Star Game wore a ChromaFlex version that day only.

© GameWornGuides.com

2018-2020 All-Star Game Patches

2018

Embroidered version, Nationals in-season

ChromaFlex version, All-Star Game only

2019

Embroidered version, Indians in-season

ChromaFlex version, All-Star Game only

Like the 2002 Brewers and 2011 Diamondbacks, the Indians wore a city-specific version of the 2019 All-Star Game logo all season. The “Cleveland” script was replaced with “MLB” for the patch worn in the All-Star Game.

Continuing recent trends, the All-Star Game patches pick up the colors and visual elements of the host teams and cities. Again, the version worn by the host team during the season is embroidered rather than the CFX version worn by players in the All-Star Game.

2020

The 2020 All-Star Game was a casualty of the pandemic-shortened season. The host Dodgers wore this patch on their sleeves in both March and the July resumption of Spring Training but eliminated it in the shortened regular season.
Based on recent history, we can assume that the embroidered patch the Dodgers were to wear in 2020 would have been made in CFX for the All-Star Game, but less certain is if the “LA” logo would have been replaced by “MLB” for the game itself.

© GameWornGuides.com

2021-2022 All-Star Game Patches

2021

Embroidered version, Braves
April 1 only

Embroidered version, Rockies
Starting April 21

ChromaFlex version,
All-Star Game only

The Atlanta Braves were to host the 2021 All-Star Game, but the day after their first game of the season on April 1, MLB moved the game to Colorado. MLB said the move was "in response to an election bill signed on Wednesday by Georgia Gov. Brian Kemp, which opponents say disproportionately disenfranchised people of color." The patch was covered, then removed, from their jerseys for subsequent games.

2022

Embroidered version, Dodgers

Screened twill version, All-Star Game only

The 2022 All-Star Game patch worn by the Dodgers in season was identical (except for the updated year) to the one they wore in 2020 before the season (and All-Star Game) were shut down by COVID-19.For the first time in many years, the in-game version of the patch differed significantly from the team version. All-Stars wore a black and gold version of the logo, minus the Dodgers' "LA" ligature,which was thickly screened gold ink on a black twill patch.

2023-2024 All-Star Game Patches

2023

Standard embroidered version, Mariners

Lighter embroidered version with sponsor logo, All-Star Game only

The 2023 All-Star Game patch was worn by the host Seattle Mariners throughout the season in place of their usual team disc patch. The version the team wore was standard embroidery. The patch used in the game included the MasterCard sponsor logo, and was done in a much lighter type of embroidery on a thin, twill background. This style of patch is much lighter than a traditional embroidered version, and it allows for greater detail in design. The 2023 All-Star Game jersey was the first MLB jersey in Nike's Vapor Premiere Elite template, so this type of patch is one of the enhancements that template brings to MLB jerseys.

2024

Standard ChromaFlex Version, Rangers, WORN ON CAP ONLY

Lighter embroidered version with sponsor logo, All-Star Game only. American League version at left, National League at right.

For the first time in many years, the host team, the Texas Rangers, did not wear an All-Star game patch in the regular season in 2024. Given the team's standard team patch on one sleeve and ad patch on the other, the year-long patch was relegated to the team's caps only. Like the 2023 All-Star Game, the patch used in the game included the MasterCard sponsor logo, and was done in a much lighter type of embroidery on a thin, twill background. The 2024 patch was made in two colors to match each jersey.

© GameWornGuides.com

2025 All-Star Game Patches

2025

Standard embroidered version, with sponsor logo, All-Star Game only

For 2025, the host team, the Atlanta Braves, did not wear an All-Star game sleeve patch in the regular season. The year-long patch was relegated to the team's caps only. For the game itself, MLB returned to having players wear their own teams' home or road jerseys, for the first time since 2019. Each player wore an embroidered version of the All-Star Game logo with the sponsor logo as well. The patch sleeve varied based on player handedness, and replaced any team ad patch that would normally appear on jerseys.

2011-2016 All-Star Game: Collar Stars

07/01/11 11:44 AM ET
All-Stars to wear stars before the big game
By Mark Newman / MLB.com
For the first time, players chosen for the All-Star Game will be distinguished by uniform for regular season games. During the July 4-10 games leading up to the 2011 All-Star break, any players selected for the 82nd Midsummer Classic on July 12 in Phoenix will wear caps and jerseys adorned with stars. Rosters will be announced at noon ET Sunday during the 2011 MLB All-Star Game Selection Show Presented by Taco Bell on TBS.

Two gold stars, outlined with team colors, will be affixed to either side of the MLB silhouetted batter logo on the back of the jersey for all games July 4-10, as well as the back of the cap for all games July 5-10. You will be able to get this look, because during that tribute week, the MLB.com Shop will have those special-star MLB Authentic Collection jerseys from Majestic and caps from New Era.

In addition to the 66 players who are announced Sunday, fans will add the 34th men for each team via the 10th annual All-Star Game Final Vote Sponsored by Sprint. One player from the American League and one from the National League will be chosen from that ballot, which launches at 1 p.m. ET Sunday, and after being announced as winners at 5 p.m. ET on Thursday, they will have their uniforms distinguished with those stars for games through July 10.

Starting July 4, 2011, players who are selected for the 2011 MLB All-Star Game are eligible to wear small stars on their jersey collars, on either side of the MLB Silhouetted Batter patch. The jersey stars are gold with contrasting color outline specially matched for each team. Caps with plain gold stars without outlines and the 2011 All-Star Game patches for are also provided for the players.

Uni-Watch (my favorite source for all important news items such as this one) had reported that the Yankees and Cardinals refused to apply the stars, that Dodgers pitcher Clayton Kershaw did not want to wear the stars and asked them removed (after removing the stars from his hat by himself), and Orioles representative Matt Wieters, who removed his as a “team gesture” according to manager Buck Showalter. The idea was not repeated in subsequent years, though the stars were still worn for the All-Star Game only through 2016.

2011-2016 All-Star Game: Collar Stars

Through 2016, the stars are worn by players in the All-Star game itself. The stars are two-color and are color coded to match each team uniform. These two jerseys were ones actually worn in the All-Star Game. Notice that they have the All-Star patch on the right sleeve

(This page also appears in the All-Star Batting Jersey Chapter)

© GameWornGuides.com

2017-2019, 2022 All-Star Sleeve Patch

Starting in 2017, collar stars give way to a CFX patch, shaped like a star, displaying the number of times a player has appeared in the All-Star game. The patch is black and gold in 2017, then changes to black and sliver for 2018-2019. During the game, it is worn on the left sleeve in 2017-2018, and the right sleeve in 2019. A new type of this patch, with heavy gold print on black twill, appeared on the left sleeve of All-Star jerseys in 2022 as well.

Finally: Licensed Authentic, But Non-Player Worn MLB Patches

Here is a selection of patches that were authorized by MLB, but none of these were worn on player jerseys during games. They are official patches licensed by MLB and marketed as souvenirs by MLB and the teams.

© GameWornGuides.com

Footnote: Team-Specific Commemorative Patches

So far we have covered patches that are worn by all of baseball, by a single league, or by players participating in the All Star Game or in the Postseason.

However, another category of commemorative patches are those worn on a jersey by a single team. These commemorate an anniversary of something (stadium, a city Bicentennial, a championship), the passing of a beloved player or coach. They might commemorate a special event to be held in their city, like the All-Star Game or World Series.

There are hundreds of these patches. In each of the team chapters that follow, I will try to illustrate them all. Patches used by all teams or an entire league, the All-Star Game and World Series have been shared here and will be repeated in each team's chapter in a separate section near the end.

Chapter 5
Special Event Jerseys

Game Worn Guide to MLB Jerseys 1970-2025, Tenth Edition

William F. Henderson

Special Event Jerseys

Prior to 1990, a Major League team wearing something in a game other than their normal team uniform was simply unheard of. Most teams had a home uniform and a road uniform. A couple of had used a colorful alternate jersey at some point in the 1970s or 1980s; rule-breakers like the A's and the Padres. But in 1990, only the Orioles still had an alternate jersey in their stable.

By 1990, the sport seemed to be returning quickly to its roots, discarding pullovers, colorful road jerseys and alternates, while returning to belted pants and button-front jerseys. Teams were going back to the idea of white jerseys at home, gray on the road.

It was in this environment of nostalgia that the concept of the "Turn Back the Clock" game was born, perhaps unleashing a flood of alternate one-game uniforms in the sport.

In this chapter, we will look at the times when a team wears something other than its usual uniforms, including Turn Back the Clock games, St. Patrick's Day and a few other special uniform days that now have become somewhat commonplace, and have made collecting more accessible for more fans, as nearly all of these one-day uniforms make their way to the hobby.

In this chapter:

Turn Back the Clock (1990-2016)
Turn Ahead the Clock (1998-1999)
Negro League Tributes (1994-2016)
Jackie Robinson Jerseys (2004-2016)
St. Patrick's Day (1978-2017)
Ethnic Appreciation Event Jerseys
Memorial Day Jerseys (2013-2016) Independence Day "Stars and Stripes" Jerseys (2015-2016)
Mother's Day (2016)
Father's Day (2016)
Opening Day "Champs" Jerseys (2005-2016)
Other Miscellaneous Event Jerseys

Turn Back the Clock Games

While some younger fans may never remember a time when Turn Back the Clock games were not a part of MLB's regular event schedules, 1990 was actually the first year that one was played. The first MLB Turn Back the Clock game was played between the Chicago White Sox and the Milwaukee Brewers.

The occasion was the celebration of the imminent closing of the Sox's longtime home, Comiskey Park, in anticipation of a new stadium opening the next year. The White Sox wore replica copies of their 1917 World Series uniforms, but the Brewers dressed in their normal duds. Ballpark ushers wore old fashioned uniforms, megaphones were used to announce the lineups from the field, the ticket prices were rolled back, including 50-cent tickets for general admission.

The event was so popular that the White Sox (wearers of the most eclectic and constantly changing array of uniforms over the past two decades) brought out a "nostalgia"-based home uniform featuring black pinstripes and a old-fashioned "SOX" chest wordmark, and after a few tryout dates in 1990, it became the team's official home uniform for the next season. And, 30 seasons later in 2020, it remains as the team's official home uniform.

Photo: whitesoxinteractive.com

© GameWornGuides.com

Noting the popularity of the nostalgia concept, a few more teams decided to try it out the next year. In Philadelphia, the Phillies hosted the first such game with both home and road teams playing along. Also hosting “Nostalgia Games” (as they were then called in 1991) were the Giants and Orioles.

In 1992, many more teams included a Nostalgia Game on their schedules. Several teams had more than one in that same season. 1992 participants included the Giants, Indians, Mets, Phillies, Pirates, Reds, Tigers, Angels, Athletics and Cubs.

In standard practice, the home team was responsible for outfitting the visiting club (if they wanted them to play along). That meant doing the historical research, creating the uniform design for the visitors and ordering/paying for the uniforms from the vendor. The uniforms were auctioned at some point after the game, usually to benefit the team’s charity of choice.

Early on, it was decided that the official uniform supplier to MLB would have the right of first refusal to make the uniforms for these events. But, if they decided to “pass” on making the uniforms for the game, the team was free to go to another uniform supplier to have the uniforms made, but that other maker could not display its logo on the garment in a place it could be seen in use. This policy has continued through this writing as of 2025.

Top left: A jersey from the first-ever MLB Turn Back the Clock game in 1990. Top right: 1994 White Sox Turn Back the Clock jersey made by Wilson, meaning that Russell (the official supplier to MLB) must have passed on the opportunity first. Bottom right: Pirates tagging from their first nostalgia game in 1992.

© GameWornGuides.com

In 1991, the official supplier to MLB was Rawlings, and Rawlings made all the "Nostalgia Game" uniforms for the games in 1990 and 1991, though none displayed a Rawlings logo on the sleeve the way that the regular everyday team uniforms did. Russell took over the MLB contract in 1992 and made all the uniforms for the games in that year (a total of 13 teams' uniforms) and none had the Russell "R" on the sleeve. But starting in 1993, when ten teams wore throwback uniforms, Russell made only two of them. Mitchell & Ness made the other eight of them that year, making five out of old-time flannel, and the others in knit.

The number of throwback games continued to increase each year. In 1994, Wilson and Ebbets Field Flannel joined the pack of vendors for these games. In 1995, Victory Athletic made Turn Back the Clock uniforms for the Astros joining the others already mentioned (though this would be their only dance). In 1996, AIS joined the group, and Rawlings in 1997. So, while Russell contractually had the first right for all of these games, during the 1990s, Mitchell & Ness outfitted more participants than any other, with Ebbets Field Flannels coming in second. Russell actually elected to make very few of the uniforms for these games at all. When Mitchell & Ness and Ebbets Field Flannels had made the uniforms, during those early years, they were often made of actual flannel. However, as time went on, this practice changed and most of the replicas became knits by 2000 and after, regardless of what the original uniforms had been made of.

© GameWornGuides.com

Negro League Tribute Games

The 1994 season brought a new reason for throwback uniforms, as that was the year that the Kansas City Royals and Detroit Tigers played the first Negro Leagues tribute game, memorializing the shameful time that lasted far too late into the 20th century when professional baseball remained segregated. That series continued in 1995 and 1996, with the New York Yankees joining in. But 1997 was the banner year for nostalgia games, as this was the year that all of baseball (Majors and Minors) celebrated the 50th anniversary of Jackie Robinson breaking the color barrier in MLB during the 1947 season. In 1997, there were four tribute games involving eight teams, all outfitted in Negro Leagues uniforms. These Negro Leagues tribute games have continued annually in many cities since then, becoming annual events for the Tigers, Royals, Pirates, and Brewers, and occasional events in most other cities.

During the 2000s, for both types of Turn Back the Clock games, AIS grew more and more in prominence and became the vendor of choice for several teams, including the Tigers, Royals and Pirates. Majestic made its first appearance as a uniform supplier in Turn Back the Clock games during 2002, a huge year for these games, with more than 22 teams outfitted. By 2014, Turn Back the Clock games had become a regular feature for most (but not all) teams. Teams without a long history of their own to draw on (like the Padres, Twins, Marlins, Mariners, Rays and Brewers) but who wanted to participate in the fun often wore the uniforms of minor league or even college teams (in the case of the Rays). The result to the hobby has been a huge increase in the variety and quantity of game worn uniforms available for collectors to buy, and ultimately, has made collecting more affordable for everyone. When supply goes up markedly, even with increased demand, prices generally come down.

Source photo: MLB.com,

Turn Back the Clock Uniform Authenticity

In this book, we have devoted many pages to individual games and the uniforms of the teams who played in each throwback contest, commenting on the accuracy of each one with great specificity. Most of the time, we have looked for original photos of the uniforms that had been copied to so we could do a factual, historical comparison. So the comments made here are rather “broad brush.”

In general, the earliest Turn Back the Clock games were true labors of love for the teams that hosted them. The uniforms for the first handful of games were crafted with care by Rawlings, and while they were all knit copies of originally flannel uniforms, they were generally tailored to look like the eras they represented. Players wore them properly with high-cuffed pants, colorful stirrups, the right color shoes and accessories. Some teams even had properly-colored and logoed batting helmets made to go along with the old style uniforms and so the overall look was remarkably accurate. When Mitchell & Ness and Ebbets Field Flannels got involved, quality remained high, as both of these companies prided themselves on their recreation of history; accuracy was important to both of them. The manufacturers began to make the first real wool and cotton flannel replicas, so some of these on-field replicas were quite realistic indeed… right down to being itchy and hot like the originals. Likewise, the early Negro League throwbacks were also a labor of love for the historians, sponsors and the manufacturers.

As a historian and a graphic artist, I had begun to collect and document many of the early team player number fonts and team wordmarks. A few teams, notably the Mariners and Astros, contacted me for help in those early days to provide correct artwork so their uniforms would look their best. I also supplied correct period fonts to Mitchell & Ness when they asked for help. And I was proud when I saw my artwork used on the field.

The retro jerseys? As perfect as they get. But the Orioles didn’t wear striped orange stirrups in 1994. Good thing this book doesn’t cover stirrups; so we will let it slide.

© GameWornGuides.com

But things started to change in the late 1990s and especially the first decade of the 2000s. As more and more teams wanted to play along, a few things happened. First, the historical accuracy suffered for many games. I have tried to be balanced and fair in my comments, but there were some really poor recreations of some team uniforms during this period that were quite unfortunate. Wordmarks were inaccurate: too small or too large, sewn too low, player numbers and names were in incorrect fonts, sleeves were too long, knit trim on sleeves, neck and sides was disproportioned, and fabric and trim colors were way off; among other indiscretions. I will also comment that (probably) since the home team had the responsibility of ordering and paying for the uniforms of the visitors, it certainly seemed likely that sometimes far less care might have been given to recreating the accuracy of the visitors' suits compared to those of the home team.

August 14, 2007, Cardinals at Brewers. my vote for the worst Turn Back the Clock uniforms ever.

© GameWornGuides.com

But a second thing happened as these games grew more numerous, the players stopped "playing along." As a rule, most were disagreeable to wearing the uniforms anywhere properly tailored to suit the era they were supposed to be representing. More and more they appeared wearing baggy pajama pants with hems dragging in the dirt and covering their shoes, having their jerseys fitted three sizes larger than any player in the era being represented would have worn them, not wearing colored socks or stirrups, and accessorizing with modern cleats, wristbands, gloves, body armor and non-period helmets that, when taken together, made many of these games seem farcical. Some players even hacked off the sleeves of the period uniforms they found uncomfortable. And perhaps I can't fault them: these are a highly paid, select group of men being paid to do an extremely specialized job that few can do, and forcing them to be costumed for our amusement like circus performers while they did these difficult jobs perhaps was not fair. Nevertheless, when I saw photos or TV coverage of some of these games, I just cringed with discomfort at what they looked like.

(Top row)- *In his defense, Ryan Howard (at left) never grew up wearing skin-tight knit uniforms and probably wouldn't be comfortable playing in one just to please the fans. But the 1970s style knits were worn that way, as shown by Schmidt and Luzinski (top center and right). (Bottom row) The original 1975 Indians and Reds never wore their uniforms this baggy, hip-hop style. Notice Johnny Bench in 1982 with his skin-tight uniform at left. Wearing throwback uniforms without wearing them properly looks, well, stupid.*

© GameWornGuides.com

The reaction to these costume-farces in social media among fans was often rather severe. Reading the chatter in the online Uni-Watch blog in the days following these spectacles showed that many purists held passionate opinions about these games… and were annoyed at the commercialization that permeates everything in the multi-million-dollar world of professional sports. While they were probably a minority, they were a vocal one. And, while it would be easy simply to blame the uniform makers, we suspect the fault lay further back down the line. It is highly likely that the authentication research done by the teams' scheduling their home events was sorely lacking, which led to poor specifications for the orders for the games' uniforms, which led to the creation of inaccurate uniforms being delivered. How else could one explain examples where a team wore beautiful throwbacks at home in June and just a month later wore completely inaccurate ones on the road? As a researcher, I can say from experience, it is easy to get things wrong, and difficult to get them right. In scheduling a Turn Back the Clock event, there are a whole long list of things for the team's planning and promotion department to do… and ordering tailored sets of uniforms for the home and road teams is just one of the things on that list. It is safe to say that those planning these dates are probably better at event logistics than historical research.

The messages must have gotten through, because something started to change after the first decade of the new century had passed. Between 2010 and 2014, several teams, including the Angels, Dodgers, Rangers, Astros, and Cubs, held year-long celebrations of their teams' histories which included regularly scheduled Turn Back the Clock games.

Each of these teams did an admirable job of research of not only their own historical uniforms, but also of the uniforms worn by the visitors. The Cubs' year-long celebration of the 100th birthday of their beloved Wrigley Field in 2014 was the most ambitious Turn Back the Clock effort of all time in any sport, with the Cubs and their opponents wearing eight different uniforms from eight different decades in games that season. The execution of this feat by both the Cubs and uniform maker Majestic was nearly faultless, and was surely no accident. The Reds upped the ante in 2019 by staging a staggering 10 throwback games across the season, to wonderful result, with Majestic providing all of the uniforms. Unlike the Cubs in 2014, however, they did not outfit their opposition for these games.

Above: The Cubs' eight throwbacks from 2014 on display. Right: The Reds' 10 throwbacks from 2019 modeled by their players.

© GameWornGuides.com

Above: The 1974 Braves play the 1980 Phillies… in 2003. Below, The 2003 Pirates and Red Sox recreate the 1903 World Series in Pittsburgh

Notice the differences between the original jersey at top and the 1999 Mitchell & Ness Turn Back the Clock version below. The original's team logo is taller, the letters narrower and they are spaced closer together. The front numbers are significantly taller on the original vs. the replica, and are not the exact font, but instead are "something close." The name on back is in Vertical Arch type on the original. Finally, look at the tailored cut of the garment. The TBTC replica has very loose, wide sleeve ends and is much wider than the original at the top. Dave Parker, at 6' 5" and 230 lbs. wore a very big size- but the replica is even larger, to fit a smaller man. This is a fairly representative example of the level of accuracy one will find in many Turn Back the Clock jerseys; some are better and some are worse.

Collecting Turn Back the Clock Uniforms

Because nearly all of these game worn uniforms were sold by the teams, or auctioned for charities, there are a large number of these jerseys for sale from dealers and on eBay at all times. Usually, they were originally offered with letters of authenticity, and with luck, those documents would remain with the jerseys as they are resold. Many are autographed as well, and because most were only worn in one game, they are not tattered and torn (though some collectors appreciate that look).

A point of interest is the fact that Majestic, the official supplier of uniforms to MLB, has become very involved in these throwback games, where for many years the participation of Majestic and Russell (the prior official supplier) were spotty and infrequent at best. The participation of the "official" uniform maker means that often limited quantities of jerseys destined for retail sale were also made. While these were often just sold locally (in the participating teams' home cities) or on team websites around the time for the game, enough were made that they show up on the secondary market. And while one would think that the Asian counterfeiters would have better things to do, sadly in many of these cases, imported fakes bearing "Majestic Authentic" tagging have shown up as well.

In the cases where the game uniforms were made by other suppliers, like AIS, Rawlings, Mitchell & Ness and Ebbets Field Flannels, availability of team-spec but non-game worn authentics has ranged from spotty (in the case of Mitchell & Ness) to nearly non-existent (all the others). Searching reputable dealers' inventories and eBay is your best bet, but as always, buyer beware.

The uniforms from this 2014 game for both teams were auctioned on MLB.com. Photo credit: MLB.com

A selection of KC Royals special throw-back uniforms from reputable sellers– and a couple original vintage jerseys thrown in on the bottom row to show what it might cost to collect the "real thing." The Royals hold many special games, so the uniforms are plentiful for collectors and therefore often reasonably priced. Keep in mind that, unless it says "Buy it Now" for this price, the prices shown are bids in progress. But note directly below, a game worn example for under $100.

Directly above, hologram marked items sold on MLB.com will be the safest buys, but usually the most expensive.

1998 & 1999 “Turn Ahead The Clock” Games

This promotion was originally the isolated brainchild of the Seattle Mariners, who in 1998 hosted a game with the Kansas City Royals that wondered aloud “what would baseball look like in 2027 (the Mariners’ 50th Anniversary year)?” Apparently what it meant was all sense of good taste and tradition would be ignored as teams would wear garish, un-tucked jerseys with huge logos spread across the entire front. Game time PA announcements and other sideshow activities provided a bizarre glimpse into how we would supposedly be living in the future.

MLB picked up on the idea for 1999, offering the concept to all teams, inviting each team to host a Turn Ahead the Clock day in their city. Century 21 Real Estate (appropriately) sponsored the promotion.

While many teams did hold the event, eight of thirty declined to participate: Chicago Cubs, Los Angeles Dodgers, New York Yankees, Texas Rangers, Houston Astros, Toronto Blue Jays, Montreal Expos and Cincinnati Reds. Some teams were ‘lucky’ enough to have two games, home and away-to play in.

This whole thing was very poorly received; especially by the players, who complained about the cartoonish, foolish looking uniforms. Various press accounts of the games across the country were bitingly unkind as well. This is not a theme-day we are likely to see repeated. Probably due to their bizarreness, these have developed a cult following and the uniforms (including the relatively few replicas made for resale) command very high prices. Reportedly, most actual game jerseys were given to the players.

The final scheduled game between the Red Sox and Tigers, two tremendously tradition-oriented teams, was skipped and the special event was never rescheduled. See the Tigers’ chapter for some additional thoughts and insights on this un-played game.

SF Chronicle: Michael Macer

A List of the Turn Ahead The Clock Games Scheduled in 1999

Oakland at Anaheim	June 26	Colorado at St. Louis	July 30
San Diego at San Francisco	July 21	Tampa Bay at Kansas City	Aug. 14
Kansas City at Detroit	July 22	Atlanta at Colorado	Aug. 18
Milwaukee at Florida	July 23	Arizona at Pittsburgh	Aug. 20
Seattle at Minnesota	July 24	Cleveland at Chicago White Sox	Sept. 10
Anaheim at Baltimore	July 25	Philadelphia at Arizona	Sept. 11
Pittsburgh at NY Mets	July 27	Detroit at Boston (not played)	Sept. 18

1999 Turn Ahead the Clock, National League

Pictured on this page and the next are the official MLB art proofs for the 14 planned TATC games. Notice that some teams played in two such contests, while eight MLB teams did not participate at all in the promotion.

All of the National League's scheduled games actually took place. See each team's chapter for details on all the uniforms pictured here.

© GameWornGuides.com

1999 Turn Ahead the Clock, American League

The American League games did not all go off as planned, when the final scheduled game on September 18, 1999 was played in regular uniforms when the special uniforms were not ready in time. I strongly suspect that after the promotion was postponed, the novelty had worn off, the season was near its end, and no one felt the need to continue this silly concept any further. Regarding that game's jerseys: Very few of the Red Sox's jerseys are around; I have never seen a real example of the gray Detroit Tigers one.

The Tigers' road uniform for this un-played game did not look like this model after all. Details in the Tigers chapter.

Jackie Robinson Day Jerseys 2007-2017

The Mets lineup on Jackie Robinson Day 2009

The Cubs and Reds on Jackie Robinson Day 2007

The 50th anniversary of Jackie Robinson breaking of the MLB color barrier was celebrated the entire year of 1997. In that year, it was decided that Robinson's number 42 would be retired by all MLB teams. All players currently wearing #42 were allowed to continue wearing it, but the number would never again be issued to a new player. Starting after 2004, each April 15 was reserved to celebrate *Jackie Robinson Day* in Major League Baseball.

In 2007, Ken Griffey Jr. asked for permission to wear Jackie Robinson's #42, and commissioner Bud Selig granted his request, and encouraged other players to wear #42 also if they desired. More than 240 players wore the number in 2007, including the entire rosters of seven teams.

In 2008, 330 players wore #42, including the complete roster of nine teams. Starting in 2009, all players on all teams wore Robinson's 42 for the day, marking the first time of the annual league-wide recognition in this way.

During this era of Jackie Robinson Day jerseys, no player name on back is used with the "42" and the back number appears in the team's usual font. The jerseys are otherwise unchanged during these years, including using 42 as a front number for teams that wore them.

For collectors, Jackie Robinson Day means another *full set* of teams' uniforms available to the hobby each year. Most teams sell off Robinson Day jerseys. Figuring about 50 uniformed personnel on each of 30 teams, that is an additional 1,500 game worn uniforms per year sold to the public. Common players' jerseys regularly sell for under $200. This hobby just keeps getting more accessible to the newcomer.

Source: http://en.wikipedia.org/wiki/Jackie_Robinson_Day

© GameWornGuides.com

Game worn Jackie Robinson Day jerseys abound for sale from dealers, auction houses and websites, and often for extremely reasonable prices. Consider that for 15 years, all 30 MLB teams have been participating, which has injected *at least 22,500* game worn #42 jerseys into the hobby, many of them with MLB holograms. One fact about these jerseys for the new collector is that, lacking player names, and all with the number 42 on back, the jersey of the third string catcher looks the same as the one worn by the biggest-name superstar. Owning a Jackie Robinson Day jersey is a great way to get into the hobby.

© GameWornGuides.com

Jackie Robinson Day Jerseys 2018-2022

Jackie Robinson Day jerseys continue annually with slight modifications from prior years. Starting in 2018, in addition to wearing 42 in their own team's font on the backs of their jerseys (still without a name on back), players also wore a new blue and tan patch with Robinson's 42 over crossed bats and a stylized infield. For 2020-2021, the sleeve patches were redesigned in different versions for each team to match team color and number styles, while each player still wore 42 on their jerseys in team fonts. The jerseys are otherwise unchanged during these years, including using 42 as a front number for teams that wore them.

For the 2022 season, the team-color/style patches continued, but to celebrate the 75th anniversary of Robinson's breaking the color barrier in 1947, every team used a bold, blue "42" on the backs of their jerseys to appear like the numbering the Dodgers used in 1947. This was a nice tribute, but it created occasional jarring mismatches with team jersey colors. For the first time this season, teams that wore front numbers omitted them from the jerseys for the day, keeping the focus on Robinson's 42 in Dodger blue on back.

2018-2019 All Teams

2020-2022 Rays

2020-2022 Red Sox

Left, top and center: In 2018-2019, all teams wore the same "42" sleeve patch, and retained their own jersey fonts for back numbers. Left bottom: Starting in 2020, "42" sleeve patches matched team colors and fonts, see two examples here.

Right top: Teams kept their front numbers for Jackie Robinson Day through 2021.Right bottom: In 2022, all teams used bold, blue "42" on back, and omitted front numbers, as seen in the Pirates example.

© GameWornGuides.com

Jackie Robinson Day Jerseys 2023-2025

MLB carried the Jackie Robinson Day tradition on in 2023, but with some minor (and curious) modifications. Holding over from 2022, all teams once again wore a bold, blue “42” on the backs of their jerseys, with no name on back, and no front numbers for any team. However, the “42” patch that had been worn by all teams in some form since 2018 was scrapped. All of that made sense and was consistent across the league. What was harder to explain was the seemingly random disappearance of typical team sleeve patches for some clubs but not others.

Nine out of 23 clubs that would normally have a patch on the jerseys they wore for April 15, 2023 did not have them, while the other 14 did. There seemed to be no pattern as to why these particular teams did not have patches while others did. Of the seven teams that had ad patches by that date, all seven wore them, six with other team patches, and the Padres without. Meanwhile, the Nationals were the only team to keep a memorial patch (though they deleted the team patch), while other teams (like the Cardinals and Giants) did not wear them.

Athletics - No elephant patch

Cardinals - No memorial patch

Giants - No team disc or memorial patch

Nationals - No team disc but memorial patch remains

Orioles - No team disc patch

Padres - No Swinging Friar patch but ad patch remains

Rays - No anniversary patch

Rockies - No team disc patch

Twins - No Minnesota patch

St. Patrick's Day Jerseys

The first team to wear green on St. Patrick's Day was the 1978 Reds (see article on the next page), and since then, a handful of teams has worn special green uniforms on March 17 each year to the delight of fans. Many more teams wear green caps only. Besides being fun and whimsical, it is a nice way to guarantee some welcome, widespread pre-season TV publicity on all the news programs just before the start of a new season.

There are a few things to know about teams' green jerseys. The most important one for collectors to know is that not all teams wear green jerseys and those that do often don't wear them every year. This book contains a fairly accurate inventory of the years individual teams have participated. Some teams almost always participate (the Phillies since 1986 have been rather regular participants) and some teams almost never participate (like the Yankees, who have never worn green on St. Patrick's Day). I mention this here because when going on-line to the retailers, including MLB.com, "authentic-labeled" green St. Patrick's jerseys are almost always now available for every team, whether they wear them or not.

Another thing to know is that these game worn jerseys are among the items sold to fans each year, and as they are Spring Training items often lacking team tagging, a retail one may look very much like a game worn one to the unsuspecting buyer. Where the original green team jerseys of the 1980s were usually the full-weight knit jerseys, over time, they were nearly all batting practice jersey models until the Flex Base template arrived in 2016. A selection of these jerseys through the years is shared on the next pages. As of 2023, no teams wore green for St. Patrick's Day. *The Boston Globe* reported that Nike stopped making the green jerseys.

How St. Patrick's became baseball's holiday

Cincy GM Dick Wagner turned the Reds green in '78

By Tom Singer / MLB.com
03/17/10 12:00 AM ET

Throughout Florida and Arizona, baseball goes green today, and it has nothing to do with recycling or carbon footprints. Green caps, green bases, maybe an occasional green bat donut -and sure and begorrah to all.

But long before St. Patrick's Day became sort of the unofficial holiday of Spring Training, even long before the Majors had their own snakes to cope with -- the Diamondbacks, of course -there was only a former Ice Capades honcho with an eye for hoopla.

Back in 1978, March 17 around Spring Training camps was known simply as ... Friday.

Maybe Cincinnati Reds general manager Dick Wagner was bored after tooling the Big Red Machine into back-to-back World Series winners in 1975 and 1976. Maybe he grew nostalgic for the days when his gimmicks popularized the Ice Capades. Or maybe he just liked pulling a fast one. Whatever it was, months before the Reds departed for their Spring Training camp in Tampa, Wagner had this brilliant thought. Most people struck by ingenuity would be eager to call others and share their idea, but Wagner went the other way: He kept it to himself.

The sole exception was Koch's Sporting Goods, the Reds' longtime outfitter. Wagner had the team's equipment manager, Bernie Stowe, order a roster's worth of green uniforms, with specific instructions of where and when to deliver them, under a veil of airtight secrecy.

"This was not a situation where there was a lot of discussion in our offices during the winter," recalled Jim Ferguson, at the time the Reds' public relations director and one of the first recipients of MLB's Bob Fishel Award for PR excellence. "It was a tightly held secret, perhaps with Wagner alone, plus Stowe, who had to make all the arrangements. It was not out of character for Wagner to have made this a one-man production."

"Wagner was this stern German, but he was always thinking out of the box," said Dennis Tuttle, a Maryland-based sports historian. "A real Jekyll-and-Hyde guy who was always coming up with these cockamamie ideas.

"And this was a real stealth operation. No one is quite sure how they managed to do that."

The fact that the information superhighway had not yet been paved helped. Cincinnati fans and media were far more intrigued by how Tom Seaver's first full season in a Reds uniform would affect their chances of retrieving the title they lost in 1977 than by what kind of uniform Koch's was packing in those Tampa-bound boxes. Spring Training progressed routinely for weeks, manager Sparky Anderson optimistically steering the Big Red Machine through drills and the first half of the Grapefruit League schedule.

On March 17, Al Lopez Field crackled with electricity: The Reds were hosting the team that the previous season had inherited their World Series laurels, the Yankees.

The Reds went through the typical pregame rituals -- batting practice, infield -- in their regular uniforms. Show business as usual. But while the players were on the field, gremlins -- or were they leprechauns? -- were busy in the clubhouse.

After workouts, the Reds dragged their perspiring bodies off the field and retreated to the clubhouse -- closed, uncharacteristically, to the media - took a look and then did a double-take at their lockers ... green uniforms hanging in front of each.

"Did we get traded to Oakland?" catcher Johnny Bench asked.

Shortstop Davey Concepcion squinted at his green No. 13 uniform and said, "I'm not wearing that. I'm Venezuelan, not Irish."

But they all giddily changed into the head-to-toe green.

"Everywhere that was usually red had been changed to green -- the team name, the logo, the player's name on the back, socks, all the trimmings," Tuttle said. "The hats were solid green with a white 'C.'

"Everyone stayed out of sight until game time ..."

... When, lined up single file with Anderson in the lead, the Reds -- er, Greens -- marched out of the clubhouse and onto the field.

"It was a total surprise," recalled Hal McCoy, the Hall of Fame-recognized baseball writer who, in retirement from the Dayton Daily News, still covers the Reds through his blog on the newspaper's Web site. "And it created quite a shock."

Hordes from both the Cincinnati and Tampa media were on hand, having been alerted that they wouldn't want to miss something special, without having a clue of the mysterious goings-on. And when the secret was revealed, reporters and photographers had a field day, starting a news-flash brushfire that continued raging the next day, with national network television coverage.

Bob Hertzel, the Cincinnati Enquirer's cheeky baseball writer, got in the spirit in his coverage of the Reds' 9-2 victory over the Yankees by Irish-izing all the players' names in his game story. Pete O'Rose, Johnny O'Bench, George O'Foster and Joe O'Morgan were all Cincinnati Reds for a day.

For all the attention paid to Wagner's prank, the rest of baseball did not immediately follow suit. The Dodgers began wearing green caps and running green bases in Vero Beach in the early '80s, and the Phillies, Mets and Astros had also gone green before the end of that decade.

From that point on, the tradition quickly spread. Today, three years after Wagner's death, his impulsive idea will be celebrated by players, on diamonds and at concessions stands from Hi Corbett Field to Space Coast Stadium. So the least we can do is raise a toast in Wagner's memory:

May the lilt of Irish laughter
lighten every load.
May the mist of Irish magic
shorten every road...
And may all your friends remember
all the favours you are owed!

Tom Singer *is a reporter for MLB.com. This story was not subject to the approval of Major League Baseball or its clubs.*

Examples of on-field worn St. Patrick's Day uniforms, starting from the top left: Mid 1980s Detroit Tigers full-weight knit, this one signed on the back by then owner Tom Monaghan of Domino's Pizza fame; Minnesota Twins mid-80s silk screened mesh jersey with non-official front wordmark that would never be allowed today. Phillies full-weight Wilson green pinstripe knit 1986 jersey of Von Hayes, 1980 Astros jersey with all-screened lettering and bar league caliber sentiment on the back; 1993 Rangers with screened-on lettering, similar vintage White Sox jersey also has screened-on/iron-on logo and numbers. They were made for the one-day smiles, not to last.

© GameWornGuides.com

Time marches on: 1989 Phillies green jersey for a road St. Pat's game, Twins before their 2008 game, Mets green included orange-and-green-striped pants for 1990; Red Sox wore white with green lettering in 2009, and green with red-outlined white lettering in 2006; Cardinals green from 2004 and Dodgers in 2011 below.

© GameWornGuides.com

On this page we feature a number of "Authentics" that were never worn on the field. At top left, the Yankees so far have never worn green on the field. The Reds, Brewers and Cubs examples all wear "Authentic Collection" tagging but were not worn by the team.

Bottom row: Mets jersey is a popular Mitchell & Ness reproduction. The two game photos of the Reds and Giants show that in the same year as green jerseys were being marketed on line, the teams wore only green hats on the field.

© GameWornGuides.com

Other Ethnic Heritage Appreciation Days

If St. Patrick's Day is a celebration of Irish ethnic heritage, many teams have done their part to ensure that no other ethnicity is left out of the celebratory mood.

While many teams have had promotional days at the ballpark featuring ethnic music and food, (Hispanic Heritage seems to lead the way), it wasn't until 2005 that the San Francisco Giants actually changed their uniform script for the day to reflect the celebration. Now, annually the Giants (*"Gigantes," por favor!*) and several other teams–notably the Mets, Diamondbacks and Brewers–have at least one game every year where they wear special Hispanic uniforms, usually two games.

The Brewers are the all-time kings of ethnic variety. They have worn "Cerveceros" (Beer Brewers) jerseys in no fewer than four colors and styles over the years, but have also worn jerseys in Polish, Italian and German. The Brewers are notable in their willingness to attire the visitors in ethnic attire as well, making for some… unique uniforms for the Pirates, Cardinals, and Diamondbacks, among others. By my count, through 2014, 11 of the 30 teams in MLB had worn special uniforms for these themed games at least once.

© GameWornGuides.com

Memorial Day Jerseys

2013

On Memorial Day in 2013, for the first time, all teams in Major League Baseball wore uniforms with camouflage wordmarks and player names/numbers (along with camo caps) in tribute to our men and women of the Armed Forces.

In part, from a 2013 MLB.com press release: "***MLB will commemorate the occasion in grand style, at all 15 home ballparks. Teams and fans will pause to participate in a national moment of remembrance at exactly 3 p.m. ET, punctuating about half of the day's full docket of games, or in moments of silence at later games. Giant flags will unfurl. Players will wear special digital camouflage jerseys and caps licensed by the U.S. Marine Corps, raising awareness and funds for Welcome Back Veterans."***

We will note that before this league-wide commemoration in 2013, both the Pirates and Orioles had held separate camouflage-trimmed Memorial Day events in 2012; the Orioles replacing the wordmark on their home jerseys with camo and turning names and numbers to solid khaki/olive. The Pirates went full-camo jersey for their game. And we will note that a few other teams, most notably the Padres and more recently the Reds and White Sox, had alternate camo uniform days. But the 2013 all-MLB event was the first time this was done on a universal scale. After these game, most teams' jerseys were auctioned off to benefit veterans' charities.

Top: Marlins 2014 use of black jerseys makes the writing semi-readable at best. Bottom left: 2014 Blue Jays are the only team who used Canadian Military camouflage which provided better visibility. Bottom right: Dodgers were at home and wore these monochromatic suits.

See full article: http://m.mlb.com/news/article/48722988/memorial-day-patriotism-on-full-display-across-major-league-baseball

© GameWornGuides.com

This whole idea has generated a heated debate, and thanks to the Internet, all can participate. In response to MLB teams' Twitter "tweets" about the upcoming event, fan reactions were mixed. For every message posted that said, *"Support the troops! …Cool, when do these go on sale?"* there seemed to be three that said things like: *"Not what Memorial Day is about. And please stop with the camouflage gear"…"Ridiculous. Memorial Day is not a day to honor vets (that's Vets day), it's to mourn the dead. Armband or a moment of silence would be better"…. "Memorial Day isn't for honoring vets it's for honoring men & woman who DIED while serving in the Armed Forces."*

And it is true, if you look it up, Memorial Day is not for honoring living veterans, though one would not know that they understand that from reading MLB's announcement. To many, this action just rang with a hollow thud of the chance to sell yet more themed gear to the public.

On top of the political sentiment, many expressed the reservation that the uniform tampering was just ugly. For one thing, it made the writing– wordmarks, names and numbers–practically impossible to read for many teams. After all, the sole purpose of camouflage is that *it is designed to be highly invisible,* making it a particularly poor choice when the goal of uniform lettering is to be highly VISIBLE to the people sitting in the seats.

The resulting look was passable for some teams, most notably those who had a dark color outlining the camouflage twill, like the Rangers, Orioles and Braves. But for most teams the result was ridiculously invisible… the Pirates, for example, with camo lettering outlined with yellow on a gray background? The Padres with camo lettering outlined in white on gray?

Starting at the top: Phillies 2013 Memorial Day jersey worn by first baseman Ryan Howard with its nearly invisible lettering. Below, Baltimore Orioles' gray jersey benefits from the fact that the lettering is outlined in black. At the left, note the USMC logo hidden in the cap fabric, causing wisecracking Uni-Watch.com to ask if this counts as an advertising logo.

© GameWornGuides.com

https://www.thestar.com/sports/baseball/2014/05/26/blue_jays_don_canadian_forces_cadpat_camouflage_to_celebrate_us_memorial_day.html

So it was perhaps surprising that the promotion was repeated for 2014 and 2015 without modification to the twill colors. Clearly, somebody must have thought it was a good idea. “MLB Honors Ultimate Sacrifice With Butt-Ugly Jerseys” said the headline of Uni-Watch, which made me smile.

However, in both 2014 and 2015, a few of the most invisibly-lettered teams modified a colored-body alternate jersey instead (Angels, Rockies, Royals) to provide at least some greater visibility.

2014

2104 is a repeat of 2013’s uniform design. Some home teams in 2013 are on the road in 2014, and some teams choose to apply the camouflage treatment to an alternate jersey instead; so there are a number of new jerseys. For 2014, the Toronto Blue Jays are allowed a twill color exception, and instead of desert sand camouflage, they alone use a greener themed design called CADPAT (Canadian Disruptive Pattern). It is not an exact copy of the official Canadian military pattern, as use of this pattern on any civilian garment is against Canadian law. Its darker contrast makes it far easier to see on the field than the Americans’ sandy tan camouflage. (see link at the top of this page)

2015

The 2015 Memorial Day jerseys featured one small change; the Silhouetted Batter back-of-the-neck logo patch was changed to one that is white and two shades of tan (show images), compared to 2013-2014, where the regular team-color patch was used.

The Blue Jays continue to use their own different Canadian military camouflage pattern.

(Above) New for 2015, universal color-keyed camouflage-style Silhouetted Batter patch on the back of the neck is added, replacing prior “standard” team specific color-keyed versions.

© GameWornGuides.com

2016

The Memorial Day event is repeated for 2016, and while the all-team camouflage jersey lettering theme continued, several changes were made. Political anxiety aside, I would deem most of these as graphical improvements over the 2013-2015 designs.

First, all jerseys were now of Flex Base construction and labeling. Adding to the uniqueness of these jerseys, and perhaps unifying the design more completely, the following changes are made:

- All teams have their primary team logo and player numbers colors replaced by an MLB-licensed woodland-pattern camouflage twill that includes shades of green, tan and brown.
- All camo lettering and team wordmarks are outlined in black for higher visibility than before.
- All outlining is simplified. Teams (like the Marlins) that have multiple-color outlines and drop shadows on their normal game jerseys simplify this outlining so that black is the only visible color.

2016

Courtesy SportsLogos.net

© GameWornGuides.com

2017-2018

The Memorial Day event is repeated, and extended over several days, for May 27-29, 2017 and May 26-28, 2018, with both years adopting the same style. Gone is the camo pattern on numbering and lettering, with a new approach across all teams:

- All teams have their primary team logo and player numbers colors replaced by olive green/black lettering (in some cases, just olive green for teams with only one layer of twill). For some teams, this means their multi-layer twill is reduced to just two colors.
- Player names are exclusively black.
- All team jersey trim, regardless of its normal color, is changed to black.
- Because the promotion stretches over several days, some teams have both home and road versions in the same year, though less so in 2018 than 2017.
- A few teams use alternate jerseys in 2018, creating a shocking color clash.
- The back-of-collar MLB logo and team patches switch to an olive green and black treatment.
- A green bar patch with five black stars, representing the five branches of the U.S. military, appears on the right sleeve. The Blue Jays do not wear this patch.
- The Majestic sleeve logo is embroidered in black for all teams.
- As with other Flex Base game jerseys, the lettering is sewn in the Kiss Cut style compared to the old layered twill approach. (See the Flex Base pages in Chapter 2 for more detail.)

Independence Day Jerseys – Starting 2015

MLB first began to mark U.S. Independence Day in 2002 by applying small American flags on all players' caps. This was the year following the terrorist events of 2001, when in remembrance, all players had worn American flags sewn to their uniform jersey collars for the final month of the season. For Independence Day 2008, the cap flags were dropped, and all teams wore blue caps with stars-and-stripes-adorned team logos. In 2009, this was repeated except this time with red caps. All of this was OK for many teams, but for the Rockies, Athletics, Pirates and a few others who lacked blue or red in their color palate, it looked odd.

White caps were used in 2010, with either red or blue brims, again with a star-spangled team logo on the cap's front. In 2011, all caps had a white front panel, and then a red or blue brim and cap body. In 2012, the caps were standard team colors but oddly featured camouflage team logos which just looked muddy from a distance. The use of camouflage on Independence Day caused Paul Lukas to quip sarcastically in his ESPN column of July 2, 2013 "Makes sense -- after all, camouflage is what the founding Fathers wore when they signed the Declaration of Independence. No, wait, camouflage is what the colonists wore when they fought the British during the Revolutionary War. OK, so there's actually no good reason to wear camouflage on July 4, unless you think camouflage is an all-purpose symbol of patriotism."

With all teams wearing special camouflage-themed jerseys for Memorial Day starting 2013 and 2014, it was no surprise that MLB upped the ante and added special jerseys league-wide to go with the annual parade of Independence Day hats starting in 2015. As a side note, interestingly, the Washington Nationals had announced a special stars and stripes themed jersey as a part of their standard uniform set to be worn on "special occasions" for 2009, as did the Atlanta Braves in 2014; and of course, Independence Day was one of these days these teams wore them. Now the rest of baseball would follow suit.

Here, 2015 Stars and Stripes jersey details are featured; the first year of special jerseys for all teams. Clockwise from top left, Angels jersey looks pretty good considering that red and dark blue are already the Angels colors. Other teams didn't look so normal. Special Silhouette Batter patch on the back of every team's collar There were two stars and stripes twill patterns offered, and both are shown here.

© GameWornGuides.com

2015 Independence Day

29 of the 30 MLB teams wore special Stars and Stripes jerseys on July 4, 2015. Only the Toronto Blue Jays wore their usual jerseys (though adorned for the day with an American Flag on the right sleeve). The 2015 jerseys for all teams followed a general theme. They were all Cool Base construction (except for the Yankees who were at home, and had full-weight knits).

All jerseys had a U.S. flag patch sewn to the right sleeve. The team wordmark on the jersey front was made of a special patterned twill that featured EITHER a blue field with sublimated large white stars outlined in red, and a larger number of light blue stars sprinkled throughout, OR one with the colors reversed with red as the primary color. The wordmark was then simply outlined in the opposite contrasting color. Teams with multiple-colors of outlining on their usual uniforms were treated to a simplification in design, as the additional outlining layers were eliminated on these jerseys.

© GameWornGuides.com

2015 Independence Day, continued

- Player numbers used the same patterned twill, and like the team wordmark, were treated to a single color, contrasting outline. Player names (when used) were single color, red or dark blue.
- The MLB "Silhouetted Batter" collar-back logo was replaced for all teams with a stars-and-stripes version.
- All team patches and trim were untouched; they remained in the same colors as the team's normal jerseys.

Overall, the look of the jerseys league wide was acceptable. The bold white stars on a colored field were visible from more than a few feet away, and if one could get past teams like the Rockies, Diamondbacks and Athletics wearing colors that are not in their team palate, everything was OK. I'll admit to being a fan of bold and simple, so to me, the simplification of multiple outlining that was executed for some teams made their uniforms look cleaner.
And what of the Nationals and Braves, both of whom already had their own special stars and stripes jerseys in their uniform closet "just for" this occasion? To get the maximum marketing payoff from this event, both teams were prohibited from wearing these uniforms, and were issued different stars and stripes jerseys to match the rest of the league.

Note that while every jersey has the USA flag on the right sleeve, other sleeve team sleeve patches in 2015 are unchanged from normal colors.

© GameWornGuides.com

2016 Independence Day

The event was repeated, and while the every-team stars-and-stripes lettering theme continued, several changes occurred. First, all jerseys were now of Flex Base construction and labeling. Adding to the uniqueness of these jerseys, and perhaps unifying the design more completely, the following changes are made:

- The twill pattern is changed to a much more complex graphic incorporating repeating either blue or red interlocking stars drawn with very fine lines over a contrasting red or blue background. From more than a few inches away, the stars become invisible. There are so many stars that from even a short distance, they simply blend into a random looking mottled purple-hued pattern. Then, because the lines that make up the pattern are so light in stroke and low contrast that from any more than a few feet away, the entire pattern becomes nearly invisible, and it simply looks blotchy and washed-out.
- Player numbers front and back use the same patterned twill.
- An American flag patch is sewn to the right sleeve.
- All outlining is simplified. Teams (like the Marlins) that have multiple-color outlines and drop shadows on their normal game jerseys simplify this outlining.

The two available twill patterns for 2016 are shown top left. This year, all team patches are newly color keyed in shades of red and blue with white. The American flag remains as before on the right sleeve. A new vinyl stars and stripes Silhouetted Batter patch is sewn to the back if the collar. Majestic sleeve logos are keyed in white, navy or red.

2016 Independence Day, Continued

Player names on back (if any) are sewn in one-color, either red or blue, again making them more visible.

Jersey trim (if any) is changed to red or navy blue, replacing the individual team color-keyed trim that is normally used.

Sleeve patches (if any) are either sewn or embroidered in red, white and blue to harmonize with the design.

The back-of-the-neck Silhouetted Batter tag is now the thick rubberized type, in a stars and stripes red/white/blue pattern.

The Majestic sleeve logo is embroidered in red, white, or blue for all teams

As with other 2016 Flex Base game jerseys, the lettering is sewn in the new kiss cut lightweight style compared to the old layered twill approach. (See the Flex Base pages in Chapter 2 for more detail.)

Special matching American flag themed caps are worn.

2017-2018 Independence Day

The 2017-2018 Independence Day jerseys, shown at right, are effectively the same concept as 2016, with a two colors of a new stars-and-stripes twill pattern available to teams. A major change is that all four types of “Special Event” jerseys will be worn for multiple games. In 2017, the Independence Day jerseys will be used July 1-4, which means many teams will have two versions of this jerseys, as their scheduled games will be both at home and on the road. Thus, there will be 51 versions of this jersey in 2017, not just 30. The 2018 version runs from July 2-4, which results in 30 versions, based on the schedule. In both years, the Blue Jays wear their normal blue alternate with a Canadian flag patch on the left sleeve and an American flag patch on the right (July 3-4, 2017 and July 4, 2018).

Otherwise, the jerseys follow much the same pattern as the 2016 versions, including:

- The twill pattern again features multiple stars, but this time, also includes subtle stripes that are very difficult to see, even up close.
- Player numbers front and back use the same patterned twill.
- An American flag patch is sewn to the right sleeve.
- All outlining is simplified. Teams (like the Marlins) that have multiple-color outlines and drop shadows on their normal game jerseys simplify this outlining.
- Player names on back (if any) are sewn in one-color, either red or blue.
- Jersey trim (if any) is changed to red or navy blue, replacing the individual team color-keyed trim that is normally used.
- Sleeve patches (if any) are either sewn or embroidered in red, white and blue to harmonize with the design.
- The back-of-the-neck Silhouetted Batter tag is the thick rubberized type, in a stars and stripes red/white/blue pattern.

Mother's Day Jerseys 2016-2017

From 2006-2015 and 2018-2019, all teams wore a simple, small pink ribbon applique on the upper left chest in honor of Mother's Day Sunday. But for May 8, 2016 and May 13-14, 2017, all teams wore special pink-trimmed uniforms for Mother's Day. These games were promoted with the tagline "MLB Honors Mother's Day by Going Pink-Going to Bat Against Breast Cancer." All jerseys are of Flex Base construction with the Flex Base rubberized tag applied to the front left tail. Notably, these jerseys also have the normal primary team color on the wordmark and player numbers replaced with bright pink twill.

Besides this change, the following uniform alterations are made:

- The MLB-logo, pink folded ribbon applique is glued on the front upper chest.
- The small Majestic left-sleeve-end logo is embroidered in pink.
- The back-of-the-collar MLB Silhouetted Batter patch has its colors switched to dark pink/light pink/white.

The concept of special pink and blue jerseys for Mother's/Father's Day is dropped after two years, likely because these generated little interest among collectors, selling for giveaway prices on auction sites.

© GameWornGuides.com

- Most teams' trim is switched to charcoal gray replacing the normal team color, though some use pink (Diamondbacks, Dodgers, Tigers, Twins, Nationals) or white (Padres).
- For most teams, the player name on back is sewn in one-color charcoal gray, and is in a special tall, light-stroke version of block that is seen on many teams' jerseys on the special Memorial Day/ Mother's Day/Father's day/Independence Day jerseys only. Some teams have pink lettering for player names (Diamondbacks, Dodgers, Tigers) or white (Padres).
- If any, team sleeve patch is rendered in shades of pink, gray, and white.
- Many players also wore accompanying pink socks, shoes, undershirts, batting gloves, and wristbands to intensify the look. All baseballs that day were stitched with pink thread, and many players used pink bats. All game worn jerseys were tagged, and many were auctioned on MLB.com with the proceeds benefiting breast cancer research.

2016

Courtesy Sportslogos.net

All team jerseys feature pink wordmarks, most with simplified charcoal-colored outlining, pink player numbers, pink ribbon applique on front chest, pink Silhouetted Batter patch on collar back, pink Majestic logo on the end of the left sleeve, and if the team has a sleeve patch, they are recreated in multi-shaded pink. Names on back are generally in charcoal gray.

© GameWornGuides.com

2017 Mother's Day

The 2017 Mother's Day jerseys, shown below, are the same as 2016, with pink replacing the main color of teams' twill. The major change is that all four types of "Special Event" jerseys were worn for multiple games in 2017, with Mother's Day observed May 13-14. Unlike Memorial Day and Independence Day promotions, all teams played in a single location over the 2017 Mother's Day span, so there were no instances of teams wearing more than one jersey for this promotion.

Father's Day Jerseys 2016-2017

From 2006-2015 and 2018-2019, all teams wore a small blue ribbon applique on the upper left chest in honor of Father's Day Sunday. However, on June 19, 2916 and June 17-18, 2017, all teams in MLB wore special uniforms Father's Day. All jerseys are of Flex Base construction with the Flex Base rubberized tag applied to the front left tail. Notably, these jerseys also have the normal primary team color on the wordmark and player numbers replaced with light blue twill.

One odd exception is the San Francisco Giants, who keep their primary orange color for team lettering.

Besides this change, the following alterations are made:

- The MLB-logo, light blue folded ribbon applique is glued on the front upper chest.
- On white and gray jerseys, the small Majestic left sleeve-end is embroidered in light blue (on colored jerseys , it is left white).
- The back-of-the-collar MLB Silhouetted Batter patch has its colors switched to royal blue/light blue/white.

© GameWornGuides.com

2016

- If necessary, jersey trim for most teams is switched to charcoal gray replacing the normal trim color. The Diamondbacks, Royals, and Giants use light blue trim, while the Padres use white trim on their blue camo jerseys.
- On most white and gray jerseys, as well as the Angels red jerseys, the player name on back is sewn in one-color charcoal gray. The Diamondbacks, Royals, and Giants use light blue name lettering, while the Padres use white name lettering on their blue camo jerseys.
- The team sleeve patch(es) have their colors altered and are rendered in royal blue, light blue and white.
- Special charcoal caps with light blue/white logos were a part of the uniform. Many players also wore accompanying light blue socks, undershirts, batting gloves, wristbands and shoes to intensify the look. All baseballs that day were stitched with light blue thread, and many players used light blue bats. All game worn jerseys were authenticated by MLB, and many were auctioned on MLB.com to benefit men's cancer research charities.
- The Angels and Padres used alternates for 2016 Father's Day, all other teams used either home or road jerseys.

2017 Father's Day

The 2017 Father's Day jerseys, shown below, are the same as 2016, with light blue replacing the main color of teams' twill (see 2016 entry for more specific details). The major change is that all four types of "Special Event" jerseys were worn for multiple games in 2017. Unlike Memorial Day and Independence Day promotions, all teams played in a single location over the 2017 Father's Day span, so there were no instances of teams wearing more than one jersey for this promotion.

Camouflage MLB Jerseys

All MLB teams wore camo-trimmed jerseys for Memorial Day from 2013-2016, and olive-green lettering in 2017-2018, as a salute to the Armed Forces. But military design elements on MLB jerseys, especially in the form of camouflage, can trace its roots to the Padres in 1996.

Back in 1996, it was a real news item when the San Diego Padres wore camouflage-patterned jerseys for a single day to salute the city's large and transient military population, a group often well-represented in the stands at the stadium. The Padres continued this event once-annually through 2005, and starting in 2006, the Padres designated the camo jersey as an official alternate, wearing the camo jerseys often, on Sundays and other holidays. The camo changed styles over the years (woodland, desert, digital) and, in 2016, the Padres added a second, blue version in honor of San Diego's large U.S. Navy presence. The blue is replaced by a green-hued camo, to join the brown version, with the team's rebranding for 2020.

© GameWornGuides.com

Camouflage MLB Jerseys, Continued

Other teams followed in their footsteps to various degrees. In 2008, the Reds and White Sox introduced camo jerseys and wore them for a single game. Later, the Reds and Mets add camo jerseys as regular rotating alternates; the Mets for 2014-2015, and the Reds for 2014-2017. The Pirates donned camo jerseys for two games per year in 2012 and 2013, before adding a full-time camo alternate to their uniform choices for 20152017. Several other teams had one-off promo games with military-influenced designs, using camo twill for the top layer of one of their usual jerseys (like the 2013-2016 Memorial Day designs) including the Angels, Cubs, Orioles, Pirates, Rays, Rockies, White Sox, and of all teams, the Yankees.

As of this writing, 2017 was the last season any team aside from the Padres carried a camo alternate in their wardrobe, though the Reds and Pirates have continued their military focus including a special jersey with olive green lettering from 2018-2020, these identical to league-wide Memorial Day jerseys.

Camo and other military influence on MLB jerseys has waxed and waned since 1996, starting with the Padres, moving to all of them, and back down to the Padres alone. Still, MLB and all 30 teams continue to support the military through fundraising and on-field recognition – even if not with full-out uniform tributes.

“Opening Day” Champs Jerseys

In recent years, it seems to have become an acceptable (and even an expected) celebration event for the team that had won the prior year’s World Series to wear special uniforms for the first game or the first series of the new season. The tradition began with the Boston Red Sox on opening day of the 2005 season, after the Red Sox had won their first World Series Championship since 1918 (a span of 86 years) and had unbelievably come back from a four games to none deficit (against the hated Yankees) to force and then win a seventh game of the league Championship Series and win the pennant. They then became a team of destiny that swept the Cardinals four straight games in the World Series to take the crown. Providence seemed on their side, and perhaps they earned the opportunity to gloat a little.

© GameWornGuides.com

For their April 11, 2005 home opener ring ceremony, the Red Sox wore their home white uniforms modified with metallic gold outlining around the team wordmark and the player number on back, with a special “2004 World Series Champions” patch. Aside from the patch, it was a subtle touch…unless someone told you it was there, you might have missed it. By game time, the team switched to normal home uniforms, though the patch was present, but only for that day.

The Chicago White Sox won the 2005 Series after having last won the crown in 1917- two years longer than even the Red Sox had waited! Apparently, the White Sox were considering a similar celebration, as we have photographs of a gold-trimmed White Sox jersey prototype, but perhaps humility got the best of them, because they were never worn for the celebration that followed opening day of 2006.

But the die had been cast. Since the Red Sox started the trend in 2005, all but three World Series winners wore special uniforms for either the opening game or opening series of the next season. The holdouts in that period were the 2006 White Sox (who prototyped the look but opted against wearing it) and the stoic Yankees of 2009 (who also never wear “World Series Champs” patches either), and oddly, the 2008 Red Sox.

Celebrating winners of 2008, 2011 and 2010 World Series at that team’s home opener of the following year.

City Connect Jerseys 2021-2025

As a uniform manufacturer, Nike had made its mark on every major American professional sport, and many collegiate sports as well. Its entry to MLB in 2020 was reasonably quiet, partially because of the COVID-shortened season, and partially because it bought out the factory that had produced Majestic's jerseys and simply re-tagged them with Nike branding for the 2020 season. In 2021, however, Nike moved aggressively to create another of its trademark, league-wide "programs" to create special alternate uniforms for every team in the league - the City Connect program.

According to a press release from Nike and MLB, City Connect "was created to celebrate the bond between each Club and its city. This uniform series explores the personality, values and customs that make each community and their residents unique. Nike and MLB Clubs partnered to design jerseys inspired by their cities to celebrate new baseball traditions and invite more fans into the game of baseball."

What they don't say, was that the program is also a perfect way to add more styles to a team's identity that are less about baseball and tradition and more about the city the team is from - which, it seems, would make the jerseys and caps more marketable to people who don't care about the sport, but want to represent their cities. In much the same way that Yankees, White Sox, and Dodgers caps have become cultural icons beyond the field, City Connect was a league-wide attempt to make every team have its own cultural moment, regardless if it was contrived.

This point was made clearer by the marketing campaign for each design, which used "local creatives and cultural influencers" as models for the designs in addition to players. From each jersey's introduction, it was shown as being something that cool, hip, young people wore, not just a uniform for a sport that has lost ground to countless other entertainment vehicles. And because style is always changing, the original plan was for each team to wear a City Connect design for just three years before getting a whole new look on field, and in stores.

And, in many ways, it worked. The styles became popular and visible throughout the ballpark. Sales soared for most of the designs, even as traditionalist balked at styles that were far more related to a place and its iconography and storytelling than they were for the team that wore them. Like Nike's

© GameWornGuides.com

City Connect Jerseys Continued

uniform churns for other leagues, the City Connect uniforms got tons of press on launch, received polarizing reviews, and were unavoidable on-field, with some teams wearing them weekly at home, and, of course, replicas were in all the stores.

By the end of the 2023 season, 20 of the 30 MLB teams had a City Connect uniform, with eight of the remaining 10 slated to get them in 2024. The original three-year cycle was extended to four years to start, with the original seven teams who debuted uniforms in 2021 to keep them through the 2024 season. Last we heard, those teams will be refreshing their City Connect uniforms for 2025, except for the Dodgers, who announced they would use a new design in 2024.

Each team took a very different approach to designing their jerseys in collaboration with MLB and Nike. Some were hyper-focused on a local event (such as the Red Sox with the Boston Marathon), others focused on baseball tradition in their area (Royals), while others leaned more toward cultural and geographic history and trends. Even though they are called "City" Connect, several teams reached out more broadly into their region or even states for inspiration.

One element of City Connect that also had an impact on teams was its role in Nike's so-called "4+1 rule" in which teams were allowed to have four jerseys in their rotation with the City Connect being the "+1." This was part of Nike's drive to simplify the variations across the league (which was also seen in the standardization of many teams' player name and number fonts for the 2024 season). As such, teams that had more than four jerseys before had to whittle their selection down to four at most. And though 4+1=5, in this case, teams had no choice but to use the City Connect as their fifth jersey, so some teams had to eliminate jerseys they might not otherwise had deleted. This included some special jerseys like green St. Patrick's Day uniforms, and even some traditional gray road jerseys (like the Rays).

Overall, the long-term impact of City Connect remains to be seen. Clearly, the program has been a hit at retail, which has become an increasingly important element, and sometimes now the driver, of what teams wear and do on-field. But seeing how these types of league-wide uniform programs have caught on and stuck around in other major leagues, courtesy of Nike, it is unlikely that this program will disappear any time soon.

© GameWornGuides.com

Other Miscellaneous Special Jersey Days

Just in the past few years, for when a patch is just not enough, teams have found multiple reasons to wear "special" uniforms other than those we have covered in detail. We won't show them all here, but will provide a selection. The complete, unabridged details appear in the sections for each team.

In conclusion- what do I think of all these "special uniforms?" Well, some people think it is harmless fun, and it makes the hobby more accessible to more people by adding hundreds of game-worn jerseys to the collectors' pool. But I can't help but think it dilutes and cheapens it as well. There is something about a *"uniform"* that dares you not to mess with it, and the great proliferation of special uniform days has singlehandedly added more than 250 pages to this book since its 2012, and 250 more *just two years later* in its 2015 edition. As a collector, I have given up on ever hoping to own all the different jerseys worn by my favorite team. There are just too many to aspire to, and unless I win the Power Ball lottery, I just don't have the resources.

Indians August 10, 2007 "Larry Doby Day," Reds July 5-6, 2008 "Red, White & Blue Weekend," Reds 2008 Opening Day salute to Joe Nuxhall, Brewers 2011 "Gold Out" day, which invented this jersey.

© GameWornGuides.com

White Sox annual "Halfway to St. Patrick's Day" in September of each year; Yankees July 13, 2013 Military Salute day was the first time that the Yankees ever voluntarily messed with their iconic uniform without outside involvement. Red Sox wore green-lettered jerseys for Earth Day, April 22, 2009, and #6 jerseys for Johnny Pesky's memorial August 21, 2012.

© GameWornGuides.com

Red Sox 2008 wore green on June 20 to celebrate the Boston Celtics' championship. Pirates have worn camo jerseys at home for Military-related events several times including in 2014 for "Military Appreciation Day." They hardly originated the trend, which the Padres started back in 1996. Orioles wore stars and stripes wordmark for the birthday of the Star-Spangled Banner on September 14, 2014. Blue Jays wear red jerseys annually for Canada Day on July 5, then added Canada Baseball day starting in 2013. Orioles wore camo on Military Appreciation Day 2012.

© GameWornGuides.com

A Footnote:

In this book: Classifying Jerseys as "Special Event" or "Team Alternate"?

This sounds like a very fine point, but it is included here to answer a reader question that comes my way occasionally. In this book, jerseys are categorized in their team chapters *following the way that their teams have registered them with the league.* Sometimes, teams register a special event jersey as a team alternate with MLB. I am told that the distinction appears to be that, once a jersey is approved as a full-fledged alternate, the team does not need to notify the league and request special permission for each time they wear it.

Here is an example: the Padres began wearing camouflage jerseys at home occasionally each season starting in 1996. But not until seven years later in 2004 did the team register its camouflage jersey as an alternate jersey, pre-approved by the league to wear whenever they chose. And, in recent years, the Padres have chosen to wear the camo jersey in every Sunday home game.

Conversely, in 2015 and 2016, the Padres wore throwback jerseys every Thursday home game throughout the season, yet never registered these jerseys as official alternates, treating them each time as "event" jerseys. Therefore, you'll find these jerseys in the Special Events section. On the other hand, the Pirates have worn Sunday throwback jerseys 2014-2017, and list them as official "team alternates" and therefore you'll find them listed with the alternate jerseys.

The same is true with ethnic heritage jerseys worn by the Reds, Mets and a few other teams. In some years and by some teams, these jerseys have been registered with the league as full-fledged alternates; in other years they have been treated by the league as single-game alternates.

In this book, we follow MLB's uniform designation for any given year. If the jersey is listed as a team alternate, it will be found in the "Home, Road and Alternate" section. Otherwise, that jersey will be found in the "Special Events" section.

As an illustration, (above) the Reds wore this camouflage jersey July 5, 2008. It was not submitted by the team to MLB as an official "alternate jersey," therefore it would be found in this book's "Special Events" section. The Mets camouflage jersey of 2014-2015 was listed as an alternate, therefore it will be found listed with the other home/road/alternate jerseys. (Below) The Mets wear these "special event" Hispanic jerseys multiple times annually without counting it as a team alternate, but the Reds count their jerseys as an official team "alternate." For the sake of consistency, each jersey will be listed in this book the same way the team classifies it with MLB.

Chapter 6

"Fake Authentics"

Spotting Counterfeit Retail Jerseys

Game Worn Guide to MLB Jerseys
1970-2025, Tenth Edition

William F. Henderson

Authentic jersey at top; Fake below.

Oxymoron: “Fake Authentics”

au·then·tic ôˈTHen(t)ik/

adjective

1. of undisputed origin; genuine.

Few of us are fortunate to be financially well-off enough to allow us to hunt big-name game worn jerseys. And if we want to wear authentic jerseys with the names and numbers of well-known players, we need to be satisfied with the store-bought kind. No apologies needed; after all, there are only so many game worn jerseys to go around. And given the prices asked and paid for choice examples, few of these are purchased for wearing anyway.

This chapter addresses the oxymoronic concept of Counterfeit Authentics: store-bought (or, more usually, Internet-sourced) jerseys that purport to be authentic like those worn on the field, but are actually sweatshop-sewn fakes designed to defraud buyers, legitimate manufacturers, and even the MLB players whose names they bear.

Fashionable luxury clothing and accessories have been targeted by counterfeiters for generations. Making and selling fake Gucci handbags, Rolex wristwatches, Calvin Klein denims, Nike backpacks, Izod tennis shirts, and Ralph Lauren polos is a multi-billion dollar business centered mostly in places like Korea, Thailand, and China, where copyrights and trademarks are generally not institutionally respected, and blatant manufacturing of bogus merchandise is not policed, or might even be encouraged, by local authorities.

Sure, now and again you will read of the government seizure and destruction of fantasy Rolexes, a trailer-load of fake DVDs, or boxcars of pirated software, but these seizures represent only the tip of an iceberg.

© GameWornGuides.com

My business career has taken me to many of the counties of Asia, including China, Korea, Singapore, Indonesia, and Japan.

Occasionally stopping into street-side or back-alley markets, I first began to see examples of bogus Mitchell & Ness throwback baseball and basketball jerseys in the early 2000s. This was easy to understand, I reasoned. These authentic garments were incredibly expensive, and rather hard to get, because of limited distribution. By conscious choice, Mitchell & Ness had chosen to limit its distribution to a handful of legitimate outlets; when their wares became all the rage for rappers (and *wannabe* rappers) around 2001, it came as no surprise to see the knockoffs appearing in the back alleys of Asia at less than half the price of the real deal.

But I recall the sick feeling I got in 2004 when I saw my first Majestic “Fake Authentics" on a trip to Singapore. They were proudly displayed in racks in an open-air market; I had to hold them to see for sure. The front shirttail “Authentic Collection” tags were identical to those in high-end U.S. stores, but to my educated eye, these jerseys were obviously not the real deal. They were made from noticeably cheaper cloth, with sleeve trim slightly too wide, team logos close but not quite exact, and player names and numbers sewn in puckered twill in the wrong fonts, and easily a half-inch larger than regulation. They were all there: Yankees, Cardinals, Astros, Phillies, Cubs, Mariners, Red Sox, Braves. Tagged at about $50 U.S. each, haggling could certainly get them for less. I was disgusted, but moved on -- glad that what I was seeing was 9,600 miles from home.

© GameWornGuides.com

Associated Press: A German customs officer overlooks the shredding of fake designer branded shoes in Hamburg, northern Germany, on Tuesday, Nov. 14, 2006. German customs officers have seized what they said could be the world's largest haul of counterfeit goods, including nearly 1 million pairs of 'knock-off' Nike sneakers. The customs department in the northern port of Hamburg said it had confiscated a total of 117 shipping containers filled with fake goods since the end of August. The equivalent amount of genuine branded goods would be worth about Euros 383 million (U.S. $490 million), it said in a statement. The goods included 101 containers loaded with 945,384 pairs of counterfeit Nike sneakers, and 10 more containers with about 105,000 pairs of fake Adidas and Puma sports shoes. Also impounded were 76,760 fake watches and 1,454 toys.(AP Photo/Kai-Uwe Knoth)

Jump ahead to 2009:

These Asian fakes had flooded eBay and off-Main-Street retailers all over the United States. A search for “Authentic Phillies jersey” on eBay returned 139 results. Of these, two-thirds were certainly fake. Most, but not all, sellers were U.S.-based, indicating that mass quantities of these garments had reached our shores. They are not being shipped here one at a time from Korea anymore. Some of these sellers also boasted retail shops, showing photos of these wares hanging in their U.S. store windows. My inquiries to these shopkeepers about why they were selling fakes were mostly answered with polite surprise: The sellers told me that they bought these jerseys from their regular, reputable suppliers of sportswear, and could I please tell them how I knew they were fakes?

Being realistic, surely not all of these sellers were surprised by my insinuations. But the fact that an overwhelming majority of them had positive feedback from their on-line buyers was troubling to me. Their customers were clearly satisfied with what they bought at the price they paid.

I do not expect this trend will stop anytime soon. As long as the real thing goes for more than $150 apiece, and as long wearing them makes a statement to someone, the fakes will continue to spread.

Because you are reading this book, you care about the authenticity of your MLB gear. Perhaps I can help you avoid getting taken. On the next few pages, I will provide you with visual clues about what to look for, to decide if the purchase you are contemplating is a bargain or a bust.

© GameWornGuides.com

Clues: Look for the “Hidden” ® in the Majestic Sleeve Logo, 2000-2015

Majestic has hidden a small, embossed ® symbol embroidered within the “Twin Peaks” sleeve-end logo on every game jersey from 2002, and some BP jerseys (2000 and later). It is so faint that it is almost impossible to see in a photo, but it becomes more apparent when you can view the embroidery from different angles.

Bottom left: An example of a sleeve logo on a fake jersey from around 2005. It lacks the embossed symbol.

Not surprisingly, the counterfeiters got wise to this and took action. I have seen several counterfeit jerseys during 2016 with the symbol there (bottom center).

Beginning in 2016, with the launch of Flex Base game jerseys, the secret mark has disappeared from the new-style logo (below, bottom right).

© GameWornGuides.com

Clues: Look for the “Clumsy” Silhouetted Batter

At right: Blue pinstripe is authentic. Red pinstripe is a fake. Look at batter’s misshapen head. In this close-up, notice how closely the counterfeiters have duplicated the look of the Cool Base fabric weave.

In 2000, MLB began sewing a small embroidered, team-color-keyed “Silhouetted Batter” MLB logo patch on the center of the back collar of all on-field jerseys and retail authentics. That patch changed to a rubbery ChromaFlex one for the 2016 season.

Makers of counterfeits generally don’t get this detail perfect, though it takes a sharp eye to note the differences. The real MLB patch is sewn on. The fakes often, but not always, have this detail direct embroidered.

Two things to look for: I notice that the fakes’ white border corners are too sharp. The real patch has more rounded corners. The batter himself is often misshapen in some way -- especially in the hat brim, nose, and elbows.

Grouping at left: Top row three are as phony as $3 bills. Bottom row three are all from authentic jerseys. Bottom center is a 2016 ChromaFlex emblem from a new-for-2016 Flex Base jersey.

© GameWornGuides.com

Clues: Paper Hang-Tags

Unfortunately, the presence of paper hang-tags on a jersey offered for sale don’t prove it is real. These paper tags are easily reproduced, or even may be the actual tags, stolen by the counterfeiters from the legitimate printers.

There are a few things to look for, though:

The MLB “Players” black fold tag should be on any jersey sold pre-lettered with a player name and should not be on any jersey sold with no name on back.

The diamond-shaped white “Authentic Merchandise” tag should generally NOT be on an Authentic jersey. These tags are meant to be on the lower-graded “replica” jerseys, but counterfeiters insist on including them on jerseys being represented as Authentics.

Majestic generally attaches most or all the paper tags to the jersey sleeve end. The fakers often attach them to the collar.

When you buy Flex Base jerseys, the paper hang-tag should have a rubberized applique glued to the cover. In the fakes we have seen so far, this detail seems to have been overlooked.

The fake jersey at right has the Authentic Collection tag ***and*** the Genuine Merchandise hang-tags. Both don’t belong. They are also attached to the collar; Majestic generally attaches them to the end of the left sleeve.

Below are paper tags from a legitimate jersey. *Those same tags appear on the counterfeit at right -- holograms and all. Why? Because millions of these tags are stolen, acquired through the “back door.”*

The 2016-2019 Flex Base authentic foldout hang- tag (below) features a rubbery 3D-embossed ChromaFlex applique glued to the paperboard. At least so far, the Flex Base fakes we have seen lack this rubbery tag, on the fakes it is simply printed on.

© GameWornGuides.com

Clues: Look for Trim Details

Fake-makers are often careless about the exactness of jersey trim. They generally use what they can find, rather than making their own perfect trim patterns and widths. Here are two examples where the trim gives the fake away. At right, the Tigers fake has placket trim that is twice as wide as normal.

At bottom, a rather well-made but bogus Orioles jersey has mismatched elements from various years' jerseys and is true to none. Double-thick black knit ribbon trim down the front and around the collar, when it does not belong on a jersey with orange script; the style bird patch on sleeve is from an earlier year; Majestic sleeve logo is too high on sleeve, but team logo and patches seem correct; name and number on back are the right colors but completely the wrong font.

Both jerseys feature accurate (and likely pilfered) Majestic jock tags on the tails, size flags, and paper hang-tags.

© GameWornGuides.com

Clues: "Jock Tag" or Locker Tag

At left: *Commonly seen fake jock tag on a rip-off of a 2005-2015 Cool Base jersey . These tags should never be sewn on; real ones are heat-applied, like the example at right. On these real tags (oddly), facsimile stitching is printed on the edges.* ***Below:*** The full-weight game jersey tag on the far left is real, for comparison. The poorly executed size flag tags on the other two give them away as fakes. Sometimes the Majestic tags are identical to those sewn on real Authentics; these are not. Note the different proportions on the Silhouetted Batter logo.

© GameWornGuides.com

Clues: Majestic’s “Secret” Inside Seam Tags

Note to readers: Detail on these tags and their codes are found in the “Manufacturer Tagging” chapter for game jerseys, and in the “Batting Practice Jerseys” chapters.

It’s nothing more than a tiny Mylar tag containing a bunch of cryptic codes, sewn hidden into the side seam at the time of the jersey’s construction. It would be easy to reproduce. But the fact is, only the well informed would even know to look for it. And even fewer experts would know how to decode what is printed on it.

In prior editions, we could suggest with confidence that the presence (or lack) of this tag was your best guarantee. But since then, we have seen some fakes with these tags in place. Not identical ones -- but seam tagging nonetheless!

We are talking only about Majestic jerseys from about 2000 to present, but this is a good start -- they represent a large percentage of the jerseys being bought and sold on-line.

It would be wonderful if I could provide you with a list of all the codes used by Majestic, but I cannot. Even my contacts at Majestic were unable to give me a complete list of codes that vary from the “standard set." But I have gone through some of my collection, and offer some examples you can trust are real, to which you can compare your jerseys.

We can simply say this: if the jersey you want has a tag that looks much like one of these, it is likely authentic -unless the counterfeiters have gotten wise in a hurry that readers of this book are “onto” them, and adjust their fakes accordingly!

Clues: The Devil Is In the Details

Authentic jersey at top in blue box; counterfeit one shown immediately below.

In early 2009, fake Tampa Bay Rays jerseys abounded on eBay. Suddenly popular because of the team’s unexpected ascendancy into the 2008 World Series, their counterfeit merchandise made a quick appearance on the global market. Before, there had been little interest in the team outside of Tampa. In a quick survey of offerings at on-line auction sites at that time, probably 95% of all “Authentics” listed were blatant fakes.

Fake patch above, Authentic one below.

A variety of sins betray the too two jerseys as fakes: trim that is missing or too wide; slightly incorrect team logos; a badly copied sleeve patch; a missing MLB logo on the back of the neck; and incorrect type styles for player name and numbers that are too large or too small. In this age of digital perfection, these fakes are easy to spot. However, some fakes can fool even well-trained eyes.

The only real jersey in this set of three is the one is at the bottom. ***Small points of difference are circled on the above fakes.***

© GameWornGuides.com

This counterfeit Rays jersey is missing the navy knit trim band that is supposed to be around the back of the collar and at the sleeve ends (see inset). The jersey fabric looks cheap and thin; the player name is in the wrong font, is not sewn on a nameplate, and from its pucker and sheen, is probably made from substandard twill.

I wonder who really signed it?

© GameWornGuides.com

Online, it Looked Good. Then it Arrived in the Mail

Mitchell & Ness catalog depiction

The clues are there, but only obvious with the fake laid next to a game worn jersey. Pictures do not do justice to the size of this counterfeit Mitchell & Ness jersey, with its 60-inch chest, and lettering fully 30% larger than is correct. Notice the missing **star** detail in the team script; I did not, until it was too late! Tiny thumbnail borrowed from the M&N website at bottom right sure *looks* like the jersey I thought I was buying.

I hate to admit it, but in 2002 I took the bait when I bought this counterfeit jersey on eBay -- fooled thinking I was getting the real thing. I was guilty of the same wishful thinking that I warn readers against in this chapter. Here is the story:

I had been looking for a Mitchell & Ness 1976 Rangers jersey for some time, and when this one appeared for sale on eBay, listed by a seller with perfect feedback, I hoped beyond reason that I had found one. It looked properly shaped: not too short and wide, like many imports. The logo looked right, and I noticed that the jersey back used the proper Varsity name font -- a detail I never thought would be found on a counterfeit jersey. It was also not under priced; its “Buy it Now” price was around $80, which is reasonable for a pre-worn M&N jersey. The tags looked legit; it was listed as an XL; and I bit. I bought it using “Buy it Now” from my smartphone.

When it arrived a few days later, the first thing I noticed was its enormous size, big enough to fit a giant, with a size 60 chest; nearly long enough to touch my knees. True, it was not mis-proportioned: *everything* on it was 30% too big. The length, width, numbers, name, and front script were all comically bigger than a real M&N jersey. Then I noticed two things that I had missed seeing on my tiny Blackberry screen: it was a V-neck, not a three-button neck as I imagined it was. And the small white star was missing from the “R” in Rangers. I noticed neither of these things in my haste to snap up this bargain. The sleeve patch was completely wrong, though I could not see that fact in the photos I used to make my buying decision.

The Mitchell & Ness tag on the tail looks perfectly authentic, as if it had been swiped from a real jersey, though the “1976” year tag looks a little fishy under close inspection.

This is a high-quality fake, but it is a rip-off nonetheless. I contacted the seller and asked if he knew its history, and he professed that he bought it for himself from eBay, assumed it was real, and sold it -only because it was too big for him to wear. I believe him when he said he had paid nearly twice the price for what he sold it to me.

© GameWornGuides.com

2004: Fooling Well-trained Eyes...

I found this Cubs jersey on a trip to Singapore in 2004, and although the fabric looked slightly shiny and felt a little too lightweight, I could not pass it up for the price (less than $50). Not until I got it home and laid it next to a known authentic Cubs jersey did I see how many details were wrong, and I became sure that this was indeed a fake. It turns out this was the first Majestic fake I ever knowingly saw. Its quality is actually quite good -- far better than the majority of examples pictured in this chapter. But it is a ripoff nonetheless.

(Left) Fake sleeve patch is too small; the "C" is twill and not embroidered like the real one. Notice details that do not match. (Right) Top back collar logo is close but not exactly like the real one pictured just beneath. (Below) Majestic sleeve logo is missing the secret hidden ® inside the mountain

Final proof that the shirt is not made by Majestic is that it is missing the inside seam style code tag that all U.S.-made Majestic Authentics have.

Below: (Left) Majestic jock tag is so close to the real thing that it may actually be a real Majestic tag misappropriated for the purpose. (Center) Notice the detail differences between the two team crests.

Pinstripes on the fake are 1" apart. On the real Cubs jersey they are 1 ¼" apart

© GameWornGuides.com

2009 Phillies Cool Base Counterfeit

Counterfeiters often target high-demand, hot-selling items like star player team jerseys from teams that were in the World Series. Computerized sewing machines make this effort easier than it has ever been.

Some impressive details here that would fool most people. On the plus side, the wordmark is indeed chain-stitched like the authentic one, and though not perfect, it is close. The Majestic sleeve M even appears to have the hidden “®” embroidered into it. The paper hang-tags look good, but they always do. And the World Series “patch” looks perfect, except that it is likely direct embroidered and not sewn on as it is supposed to be. On the ”fake” side are the player name and numbers, both of which are close but not exact. But the two biggest tip-offs that this is not real are the screaming fake sewn-on “Authentic Collection” jock tag on the tail (it is supposed to be heat pressed) and the tight, thick, machine-made embroidery style (satin) stitch used to sew the lettering to the jersey. Actual authentics of this vintage use a small zigzag stitch (compare above).

2012's New Marlins Style Hits the Market

This Internet find was offered with photos that were not the best, but it looked great on a cell phone, and was too good to pass up.

When it arrived, the buyer laid it next to an authentic, and the forgery was apparent: wordmark too small; single-color NOB; sewn-on fake jock tag; direct-embroidered team wordmarks, and Silhouetted Batter instead of sewn on. But notice the high quality of the Cool Base-like cloth. Seller was an individual (not a dealer) who claimed he did not know; eBay refunded buyer's purchase with PayPal after proof was presented.

© GameWornGuides.com

2012: This Orioles Jersey is a Convincing Fake

Whoever is making these Cool Base counterfeits did a booming business. These garments flooded the market in 2012. I see them worn at the ballpark and sold on eBay. They offer clues to their rip-off heritage, but probably 99% of all buyers have no clue that they are not the real thing.

Clues: Front wordmark nearly perfect, and surely lifted from original team art file. Both sleeve adornments are direct embroidered, unlike the real jersey’s sewn patches. Same with the MLB Silhouetted Batter logo on the back collar. Majestic sleeve logo lacks the hidden trademark embossing. Majestic shirttail jock tag is sewn cloth vs. applied rubberized decal, but Cool Base outside side seam logo tag is quite convincing. Inside seam tag exists, but does not show proper Majestic codes. Player name and number lettering is not exact. Jersey body is a tiny bit too short. Underarm Cool Base panel is quite convincing indeed. **Conclusion?** Not a badly made jersey, just a fake one. My idle guess is that fakes outsell authentic merchandise 3 to 1.

© GameWornGuides.com

2016: A Convincing Flex Base Fake

It was only a matter of a few months from the launch of Majestic’s new Flex Base jersey line that the first fakes started to appear for sale on the Internet.

I have not bought any of these; my desire to do research on this topic doesn’t go that far. But I’ll share the photos that were posted for everyone to see, and you be the judge. Would you be fooled? Most would.

The Majestic front tail tag looks real, because it probably is. Stealing manufacturer tagging is among the easiest things to do for a counterfeiter. Authentic Cubs 2016 Stars & Stripes jersey.

Inside blue box has less-bold team wordmark; twill pattern has blue shading inside the stars; American flag has no white space between ends of stripes and the gold border; Majestic sleeve end logo is blue, not red.

© GameWornGuides.com

2016: Less convincing, but still good enough to fool many ...

Both offered on eBay. **Top:** Giants fake has incorrectly proportioned and sized lettering; direct-embroidered sleeve patch (instead of sewn-on patch). Blue sleeve hang-tag lacks the Majestic Flex Base rubber patch glued to its cover. Inside shows signs of white gauze backing residue these guys use to sew on the names. Embroidered “autograph” is the final gilding of the lily. **Left:** Royals special ring ceremony jersey has all of the above font errors, plus the clue that this seller had many listings for similar current-model desirable jerseys. When you see current products that list for more than $300 being sold for $74.99, you don’t have to think very hard to know they are fakes.

© GameWornGuides.com

2016: This Fake Initially Fooled Me

Even monkeys occasionally fall from trees, says the Japanese proverb. I fell for this one, buying it on eBay from a private seller with good feedback, who claimed that it didn’t fit him. Perhaps lulled by the fact that the price wasn’t unduly cheap, I assumed I was getting a good deal, and snapped it up with “Buy It Now” at a fair price. Not until I received it did I question its authenticity, and *even then* I really had to examine it closely. What did I see? The secret “® *was present in the Majestic sleeve logo!* I had to check twice to make sure, but you can see from the photo that it is there. The front jock tag looked authentic, as did the small size flag tag, which is often a giveaway.

But there were a number of things wrong.

As is often strangely the case on fakes, the front jock tag was sewn too high up. The bottom hem of the jersey was rounded, not flat and straight across as it is on the actual jersey (it’s meant to be worn untucked).

The fabric didn’t feel right; it was too thin. The number on back was slightly too large; the arch of the front wordmark was too steep. The Silhouetted Batter patch on the back of the neck was clumsy fake issue, and the inside of the jersey showed that the lettering had been sewn on using the gauzy interfacing often found on Asian-sourced fakes.

Most telling was the lack of an inside seam tag that should be present on every Majestic Authentic (detailed earlier in this chapter). Luckily the seller agreed to take it back and refunded my money, and I was only “out” return shipping. If he hadn’t agreed, *since I had purchased with PayPal*, I have learned eBay would have refunded my money anyway. They are sensitive to people selling suspected counterfeit merchandise on their site.

I don’t like being a monkey, but I fell for this one.

Bottom left: this is an actual Majestic Authentic

2025: Nike-Branded Fakes

In updating this chapter for the latest edition of the book, I spent a few minutes searching eBay for authentic Nike jerseys from several teams. The results shown on this page come from just five minutes of browsing. While I could claim that I selected only the most outrageously bad listings, the truth is that some of these fakes are being offered for over $400—with shocking audacity.

Every jersey pictured is clearly fake: the lettering is wrong, the fabric is incorrect, the fonts don't match, the sizing is off, and even the tagging is in the wrong place. You name it—it's wrong.

These are the obvious fakes. But I'd wager that many of the jerseys that look acceptable at first glance are also suspect. I won't be buying any to confirm it.

My advice today is the same as it has always been: stick with reputable U.S.-based sellers you know and trust. If you catch a seller offering even one blatant fake, be wary of everything else they're selling.

© GameWornGuides.com

A Rouge's Gallery of Really Bad Fakes

These fakes are the worst of the worst -- and probably are more amusing than helpful to show, because these would not fool an average fifth grader. However, all of these found buyers in online auctions.

Note the pin-stripes below that look like they are printed on in Magic Marker. Few dealers of import rip-offs let you see good close-ups of the merchandise, nor will they answer questions about tagging if they know what they are selling is counterfeit. And believe me, they know.

© GameWornGuides.com

Bogus Dodgers jerseys have a team logo incorrectly outlined in white; numbers that are the wrong font; and the jersey is generally misshapen in size. Jock tag is sewn too high. **Above:** Mets and Mariners fakes have direct-embroidered and far-too-large 1997 Jackie Robinson patches. Mets “M” is sewn crooked. White Sox jersey is misshapen and has wrong fonts for player name and numbers.

© GameWornGuides.com

Few counterfeits have this many things wrong.
This one seems to have them all.

Fakes found on eBay, all listed as authentic jerseys.

Left: From eBay, this “authentic” garment features a veritable carnival of clues that it is a fake -- yet someone bought it, and people have left positive feedback for the seller. Most fakes are not this easy to spot. Note inclusion of “MLB Authentic” paper tag as well as the black tag that indicates that a player name is used with permission of MLB Players’ Association.

© GameWornGuides.com

Only the jersey at the bottom left is authentic. Note the poor proportions of the fakes, as well as the twill logo with incorrect white outlining, compared to the CHAIN-STITCHED logo on the real one. The player numbers are also inexact renditions of the originals.

© GameWornGuides.com

More fakes: Some pretty good, some not. **Top left:** Phillies jersey might fool many if the “4” wasn’t so “off.” **Top right:** Orioles camouflage jersey’s name and numbers are wrong; otherwise, might fool anyone. Reds jersey with huge front numbers is a dead giveaway. Phillies Turn Back the Clock jersey with too-large logo and player numbers. **Bottom left:** One of the most ridiculous fakes I’ve ever seen. I wonder if it sold? Close-up of rip-off Majestic tag at right.

© GameWornGuides.com

Fake Mitchell & Ness, but with "Correct" Tagging

I'd bet the Cooperstown Collection tag and the Mitchell & Ness collar/size tags were stolen/ acquired from the original supplier of the tags. This jersey was being sold by an individual, not a dealer. People often buy these online, realize they have been duped, then try to sell them again to the next sucker to recoup their expense. *You don't need to be that sucker.*

© GameWornGuides.com

How to Buy Safely on eBay

(and avoid being taken)

Above: eBay seller offering more than 20 styles of fake Mitchell & Ness and Majestic Cooperstown Collection jerseys. **Below:** There are other clues: no M&N Astros jerseys had an orange wordmark AND shooting star. Depending on the style, one would have been navy.

eBay is one of the best places to find deals on authentic and game worn jerseys. It is also one the places to find tons of jerseys that are misrepresented rip-offs and fakes. *The authenticity of any jersey not sold by a legitimate retailer (like mlb.com) should be suspect to you*. This is where you will pay top price for your garment, but you can be assured you are buying the real thing. But care needs to be taken with retailers, too. I asked stores that were selling fakes where they obtained them, and their answer was “we get all our jerseys directly from Majestic,” so either they are lying or quite misinformed.

Manufacturers would like to see everyone buy jerseys exclusively through their authorized retailers, but the reality is, many of us like to look for bargains and scour the Internet for deals.

eBay’s marketplace has provided a real opportunity for the savvy buyer; but some people are afraid to buy Authentics on eBay because they have been burned, or because they are afraid they *will* get burned. I suspect because of this buyer fear, I have been able to repeatedly find great bargains on eBay to fill holes in my collection.

Throughout this chapter, I have provided clues about things to look for when you shop on-line for Authentic jerseys. The hard part is applying all that knowledge when you are faced what looks like a great deal with a crazy-low “Buy It Now” price attached to it. Let me offer some suggestions of ways to shop safely on eBay:

1) Know who you are buying from. Buy from eBay vendors with extensive positive feedback ratings, and a reasonably long history. “Pop-up” sellers come and go. Dumping the old account and setting up a new account is the fastest way to obliterate inconveniently bad feedback they have accumulated. Look at the other merchandise they sell. If it is from the Far East (China, Korea, Thailand), you should wonder about the source of their MLB jerseys. If that seller has even a few negative comments that claim they are selling fakes, it is safe to assume that they are. I am amazed at the number of eBay sellers with rafts of positive feedback who obviously deal in counterfeits. *Most of their buyers do not know or care like you will.*

© GameWornGuides.com

2) Insist on seeing the item you are buying. You cannot hold it and touch it, so beware that what you receive might not be what you saw in photos. If you are buying on the Web from a site like eBay, be sure you are looking at the item you are buying. Sellers often use stock photos cribbed from the official MLB.com or Majestic Web sites.

3) View it on a full-size screen: Be super careful buying anything after just looking at its photos on a handheld device such as a smartphone! I should know better, and I have been surprised when something I bought arrived not looking like I thought it should. Then I checked and found that, had I viewed the item on my desktop PC's screen, I would have definitely seen things that I missed on my phone's tiny screen.

4) In general, do not count on photos of the any of the tags for clues. The Majestic cloth jock tags on the tail are probably the most accurate thing on the garment. A friend in the garment business told me that an ongoing apparel industry concern is that the people who legitimately make their tags may have unscrupulous employees who might work late at night, making thousands of extra tags that are sold out the back door to counterfeiters. Same with the paper hang- tags that are attached to the retail garment, proclaiming them as "Authentic" or "Players Choice." Paper tags are ridiculously easy to replicate, and you will find them on almost every counterfeit.

There is one exception where examining tags is worthwhile: Check to see if the tiny size flag tags on full-weight (non-Cool Base) jerseys are identical to known authentics. This is a minute detail, and few counterfeiters bother to duplicate these tags. Most people would never, ever notice.

Above: A stock Majestic catalog photo, cribbed from the Web and often used by sellers of fakes. Make sure you are seeing a photo of the garment you are buying! Paper hang-tags are not a good clue, nor (often) are cloth locker tags

Below: What important clues are hiding unseen in that tiny screen image? Avoid buying anything solely from what you *think* you can see on a tiny handheld display.

© GameWornGuides.com

5) Does the deal look too good to be true? Be sensibly critical of the price. Sometimes, private individuals selling parts of their collections will offer jerseys for sale with bargain prices, to move them out. But when a seller is offering quantities of new, current style, famous-player lettered jerseys for prices significantly below list, someone is doing something inappropriate:

a) **The team has recently dropped the style of jersey.** For example, in spring 2009, quite a few white, gray, and red alternate Pittsburgh Pirates authentic vest jerseys were on the market, selling for low prices, and this situation went only for a couple of months. The Pirates had dropped these styles for 2009, moving back to sleeved jerseys. This glut of low-priced items were true *authentics* that were being cleared out of manufacturer and wholesaler stockrooms to make room for new, current merchandise. However, do not assume that suddenly all such items for sale at bargain prices are really authentics and not fakes; one still needs to be careful.

b) **A legitimate dealer has acquired a large quantity of game worn non-famous-name player jerseys (commons), and is clearing out inventory.**

c) **A popular famous-name player has been traded.** Again in spring 2009, Reds jerseys with "Griffey" on the back were being disposed of in the discount bins for the same reason as above. The manufacturer knows they will never sell them all at full price, so they dump them all at once, to just move them out.

d) **A manufacturer has lost its contract to sell authentic merchandise.** These are rare but big events. In the MLB world, this happened in the 2003-2005 time frame, when Majestic took over as the exclusive maker of MLB jerseys, and in 2019 when Nike took over from Majestic. For a time, the market was flooded with thousands of Authentic Collection jerseys that manufacturers and wholesalers dumped from stock.

e) **A manufacturer has unacceptable overstock** and is willing to dump it for reduced prices to help their cash flow. This is never one to count on, and unless you have insider information, you would probably never know it was happening; but this is why select outlets have had real Mitchell & Ness MLB (and other team jerseys) for sale, almost always in sizes XXL and above. M&N misjudged the end of the hip-hop fashion craze for oversized sports throwback jerseys, and ended up with massive overstocks, shortly after they were acquired by Reebok. *Take care.* This means only that a small percentage of the many bazillions of M&N jerseys that were for sale at low prices were real and not fakes. One needs to know where to look, and that is where many buyers are duped.

6) Ask questions. If you are suspicious about authenticity, ask questions and wait for the answers. Ask about the inside seam tag. Get a photo of it, if possible

7) Always buy using PayPal to protect yourself and DO NOT use PayPal Friends and Family! Sensitive to the fact that their site is an easy outlet for the sellers of counterfeit merchandise of all types (not just MLB jerseys), eBay will almost always generate a refund if you open a complaint and tell them that you suspect the item you bought is counterfeit, REGARDLESS of what the seller says. If necessary, use photos and examples from this book to back up your claims.

Web Sites That Shamelessly Sell Fakes

I have intentionally obliterated the URL of this Web page, but as of this writing, it still is operation and appears to be open for business. I am sure you can find it on-line if you look for it, as well as three new ones that have probably appeared during the past six months. Everything they sell here is unlicensed and surely fake, and proudly so. They have football, basketball, baseball, soccer, hockey, college sports, World Cup … it's all here. Credit cards and Western Union money transfer accepted. (Gotta love the "Dear Customers" message.)

© GameWornGuides.com

“Why Doesn’t Somebody Stop It?”

There are two main reasons this counterfeiting continues:

1. ***A large percentage of potential buyers don’t know or care:*** When I have approached people wearing obvious fakes at the ballpark, the response I usually get is a glare, a shrug, and a reply: “The price was right," or “Looks OK to me.” The data seems to bear this out, because when looking at typical feedback ratings for eBay sellers who deal in bogus merchandise, their buyer ratings are usually quite good. And the complaints that are logged generally are related to the unexpected high cost and/or time for shipping – because these often come directly from the Far East, and it seems that some buyers don’t realize they are not buying from a local vendor until after they get the invoice.
2. ***It is frightfully expensive for manufacturers to pursue, and almost impossible to stop:*** One industry executive I know likened this to hunting rats with a BB gun at a garbage dump. You could easily spend every minute of your time, every dollar of resources, and never make a dent in the population -- but you could certainly waste every bit of your ammunition. Sometimes a major bust can be made that is publicized (like the photo of fake shoes being seized and destroyed a few pages back), the fact is, there are too many sweatshops doing this in too many places, and they keep moving and multiplying. As long as there is a market for counterfeit goods (see #1 above), they will continue to proliferate.

Instead, the preferred solution in this game of Guerrilla warfare is a commercial one:

3. ***Make the product harder to copy:*** The simple addition of custom team-by-team jock tags on BP jerseys starting in 2011 was one such move. Using laser-perforated numbers on Authentics in 2024 was another attempt. Not impossible, but perhaps more trouble, cost, and time than some might want to expend.
4. ***Change the product frequently to make it less profitable to copy:*** Changing all team BP jerseys for 2014, and announcing simultaneously that all BP jerseys would be now change on three-year cycles, puts the counterfeiters on notice that their product will have a limited shelf life before it is obsolete. Again, not eliminating the problem, but adding a financial hurdle that may dissuade some from stealing here, and perhaps having them turn their attention to easier money –like handbags, silk scarves, or DVD movies.

Chapter 7

Is it Game Worn?

A Basic Overview to Authenticating Game Worn and Team Issued MLB Jerseys

Game Worn Guide to MLB Jerseys

“Is it Game Worn?”

A Basic Overview to Authenticating Game Worn and Team Issued MLB Jerseys

Introduction: Starting in 2001, MLB began a long-overdue authentication program, designed to cement the provenance of game used items, marking them with hologram stickers, serial numbers, and logging these numbers into a fan-accessible database. Today, if someone claims a recent year regular season or postseason big-name jersey is game used and it lacks a hologram, you would have every right to be suspicious. According to MLB, it has authenticators at every game all season long to authenticate items as soon as they are taken from the field and moved into the realm of sale as a collectible.

However, the progress of MLB Authentication’s introduction in 2001, to the claim of “having authenticators at every game” did not happen quickly. In the early years of the program, authenticators were present only at key events: World Series games, All-Star games and regular season potential record breaking events. It has really only been in the past few years that a significant number of common players’ game worn jerseys have been hologrammed and registered.

Now, according to our team sources, at points during the season and certainly when the season is over, MLB Authenticators sweep through a clubhouse and tag everything that will find its way into the collector hobby. Jerseys that were never issued to a player but remain in team inventory are tagged and listed in the database as, say, “2018 end of season collection,” meaning that they were among the jerseys gathered up when the clubhouse was cleaned out at season’s end. Insiders tell me that it is entirely possible that some jerseys listed as “team issued” are actually “game worn” simply because an authenticator didn’t record what games they were used in, and therefore simply listed them as “team issued.”

I encourage you to visit the MLB Authentication website to read the latest on this program, see examples of hologram stickers, and visit the database for each team. Also, note that there are two kinds of MLB holograms: one style that is simply used to show that an item is “Authorized Merchandise” (i.e. not a fake made in China), and the ones we are talking about here, serialized, that show that an item was team-issued or game used.

So when did authenticators start attending every game and tagging everything destined for sale to the public? I can find no firm information on this topic, and every indication is that it started to happen very gradually starting around 2005. I will also note that I have acquired many jerseys for my personal collection that came from various MLB team “garage sales” and Fan-Fest events, or that I have personally fished out of giant bins of clearly game-worn jerseys in Spring Training, and these are not hologrammed. For me, this matters little. I know where they came from, and I prefer “commons” to the jerseys of star players. I buy them to display and to wear, not for their resale value. So, realistically, it doesn’t matter much to me whether the jersey of a bullpen middle reliever or second-string infielder is authenticated and hologrammed, because I am not treating these as investments. But you can bet that I would think twice before paying big money for a star’s jersey that was not authenticated.

So, in conclusion, while holograms can be faked, and clearly, not every jersey advertised as game-worn or team-issued is hologrammed, the MLB Authentication Program has removed some of the riffraff from the hobby.

Setting the Standard

“The Major League Baseball Authentication Program is the most comprehensive league-wide memorabilia authentication initiative in professional sports. Since its launch in 2001, it has become the industry standard for autographed and game used sports memorabilia authentication. Designed to distinguish officially authenticated MLB memorabilia from other items on the market, the program offers an objective third party authentication system that guarantees genuine memorabilia for all MLB fans.” (From MLB.com)

The most common question I am asked is "How can I tell if a 'game worn' jersey is real?" This is a tough question with a vague answer—because usually, you can't know for sure. However, let me share with you some of the techniques I use to try to verify the authenticity of double knit era baseball jerseys.

While the only way to be absolutely sure if a jersey was game worn by a player is to watch him play in it then have him take it off and give it to you after the game, there are some ways to tell if the jersey is likely not game worn. (Notice I avoid words like "definitely," "always," and "certain," because there are always exceptions.) At the end of this chapter, I will relate one.

While there are some consistencies, through the late 2010s, every team had unique differences in whom they get their jerseys from, how they are sewn, how they are tagged (if at all), how they are used and reused, and how they find their way into the hobby.

The Story of a Phillies Mike Schmidt Jersey

Before we start drilling into the tiny facts and small details, let's start with a story that shows how complex this whole topic can be. I bought the jersey pictured here as a "Phillies Game Worn Jersey" from a reputable seller with whom I enjoy doing business. It is (now) a Mike Schmidt jersey, and it is Phillies team-issued and possibly is Phillies game-worn — but it is not "Mike Schmidt Phillies Game Worn."

I knew this up front and paid an agreeable price for it. The seller knows this, because he told me before I bought it. And if I ever sell it, the new buyer will know—because I will tell him. But the chances are very good that somewhere down the line, this story will become disconnected from the jersey, and it will be represented as "Mike Schmidt Phillies Game Worn" to a future unsuspecting buyer.

There is a difference between:

"Mike Schmidt Game Worn Jersey," "Mike Schmidt, Phillies Game Worn Jersey," and "Mike Schmidt Jersey, Phillies Team Issued." They do not necessarily mean the same thing! What is the difference? In today's market, it could easily be a difference of $10,000, if someone was willing to purchase it as "Schmidt Game Worn."

This particular jersey is year and set tagged (1986 Set 1) in the identical tagging style (and is likely original) as the Phillies used. The seller told me that the jersey was originally number 45. A light table examination shows that this is true.

The team did not issue number 45 during the regular season in 1986, a fact I verified by checking all my Phillies record sources for 1986. At some point, the "45" was removed, and Mike Schmidt's #20 was added to both the front and back. "SCHMIDT" was sewn absolutely correctly and beautifully on a serged nameplate of the same Phillies baby blue fabric in exactly the same shade. It is a size 44, which is reasonable for Schmidt to have worn. The final touch is the name "Schmidt," chain-stitched in embroidery script, was sewn into the inside collar of the jersey, which was the team's method of identifying the jersey as Schmidt's for the equipment manager when pulled from the washing machine inside out, or if it was sitting folded on a table.

The jersey shows reasonable wear, and all the letters and numbers are

© GameWornGuides.com

correct. The Phillies "P" logo on the front and the front numbers exhibit the same amount of wear, which means they both could be original, or they both could have been replaced together to conceal any differences in wear. (Further inspection reveals they were most likely replaced together. Notice the identical thread and stitching used on both the logo and numbers.) However, significantly, the patch on the sleeve shows more fading and wear than would be expected given the bright quality of the rest of the lettering on the garment, another tip-off that other lettering/logos may have been replaced. While there are no visible signs of the old numbers being removed from the jersey and new ones sewn on, nor any marks—such as glue, snags, holes, or pulls—or signs of ghosting or fading around where the old numbers would have been, there is a small frayed line that shows where a nameplate was removed and a replacement re-sewn. While this is a sign for caution, it is not an automatic sign of a fake. Teams, as a matter of practice, nearly always removed nameplates at the end of the season.

Even to an experienced eye, this jersey might appear legitimate. But having seen as many Phillies uniforms as I have over the years, I can recognize that the script "handwriting" on the chain-stitched name tag inside the collar is noticeably incorrect when compared with other Phillies jerseys of this era. See the photos of accurate and authentic Phillies collar name tagging for reference. Someone here went to a lot of trouble to make this look like a game worn Schmidt jersey. Adding a chain-stitched embroidered name tag to the collar was unlikely to be an afterthought. What I have is most likely a Phillies team issued 1986 jersey that may or may not have ever been used by a player in a game. All of this is merely "interesting"—unless you were someone who paid $10,000 for it, believing you were getting something it is not.

For the Authenticator: The Lure of "The Commons"

A "common" is a collector's term for items of lower value, lacking star appeal, or greater availability in the hobby at reasonable prices. For me as a collector of game worn jerseys, commons are a gold mine of information, and I seek them out extensively to use as a point of reference in my research.

Simply put, commons are much more likely to be unaltered, original, and "not messed with" from their original state, serving as a valuable reference point when trying to judge the authenticity of the supposedly game worn jerseys of star players. Unfortunately, many jerseys advertised as having belonged to star players and offered at high prices started life as commons before someone innocently (or not so innocently) altered them.

Transforming a common into something that is more pleasing to its owner is not a crime! The ethical gray area emerges when a transformed item is later represented as something that it is not, in an effort to inflate the value of the item.

Jerseys claimed as belonging to famous-name players are the ones most likely to be counterfeited. After all, counterfeiters rarely bother with $1 or $5 bills, they start with the $20s. A game used Phillies 1986 jersey issued to pitcher Joe Schlobodnik, called up from Triple-A on September 1, who pitched 3 innings in the big leagues probably has a retail value in the hobby less than a clean, blank jersey from the same era. Except, perhaps, to Joe's mom and dad.

The financial incentive to turn the $50 Schlobodnik jersey into a $10,000 Schmidt, with nothing more than some fabric and a sewing machine, is very tempting to certain "entrepreneurs." This is one reason why as a collector, I am more confident buying the Schlobodnik jersey than any jersey with a name you would recognize. The Schlobodnik one is more likely to be the real McCoy, because no one would likely ever bother to try to counterfeit one (except maybe Joe's mom, if she were dishonest and handy with the Singer).

© GameWornGuides.com

If I ever bothered to add up all the “game-worn” Barry Bonds, Mark McGwire, Nolan Ryan, and Cal Ripken jerseys I’ve seen on eBay alone, one would assume that these players must have changed clothes every inning in order to supply the hobby.

Letters of Authenticity

Let’s start with a basic premise: star player jerseys and jerseys claimed to have been worn for a specific historic event are worth far more than others. Assurance that these items are “real” is far more financially important to collectors than jerseys of common players. Let’s assume we are talking about star player jerseys in the text that follows.

Some Letters of Authenticity are valid and enhance the value of the item they represent. But others are useless. The ones that are truly reprehensible are those fabricated by an owner with a laptop, printer and a good imagination. But far more common are letters crafted by auction companies who are also the ones selling the jersey. Beware when a fictitious company—say, “Blue Chip Auctions”—lists a star player’s jersey with their own letter of authenticity, using phrases like “this was presented to us as game-used,” while the document focuses more time describing the player’s career and accomplishments rather than describing the characteristics of the jersey and EXACTLY why they consider it to be authentic. In my opinion, there can be a distinct conflict of interest in creating a letter of authenticity for an item you’re selling yourself.

Unfortunately, even perfectly legitimate seller-created Letters of Authenticity saying “I personally saw Steve Garvey wear and sign this jersey” might have no financial weight to the next buyer. If you are buying the jersey to make yourself happy, don’t worry about this. But if you are using the Letter of Authenticity as a way to ensure the value of your item, be careful. Know who you are buying from, their reputation and the market reputation of their certificate. Do your homework.

I recently saw a jersey—one I strongly doubted was authentic—listed on eBay, complete with an official looking Letter of Authenticity supposedly signed by a named expert (who may well have signed it, believing this jersey was indeed authentic). The jersey was of a famous player, and was claimed to have been worn during a historic event. The jersey had an official looking hologram sticker affixed to it. However, the jersey was shown to be year-tagged by the team, and I know for a fact that this team did not year-tag its jerseys at the time represented in the auction. To me, this is a clear case of gilding the lily, and I do not believe it was authentic. Before you spend (or “invest”) a lot of money in something so intangible, do not allow yourself to be rushed. Consider paying an expert for an appraisal and get an expert second opinion. Insist that the seller sell with the stipulation that you can get an independent authentication done in a reasonable amount of time, say, 30 days.

Another thing to watch out for is the copied letter of authenticity, either on paper or as a computer image, with no direct linkage to the item in hand. That is, a credible letter is presented saying that the jersey is authentic, signed by a reputable independent expert you trust. But the jersey that it is paired with is *not the same one that the authenticator had certified.* Insist on a original, hand signed certificate with matching holograms/serial numbers or at least clear photo evidence that the jersey in hand is the one written about. (Editor’s note: This is exactly why the many Letters of Opinion included in this book are purposely shown as unsigned images.)

What is “Authentic”?

Let’s start with the basics. Ever since baseball team jerseys have been made for retail sale starting generally in 1987, there have been several “grades” of them manufactured. We’ll assume you already know the difference between a replica-grade jersey and an “authentic.” If not, this information is covered in an earlier chapter.

Authentic” jerseys—such as those labeled Diamond Collection, Authentic Collection, or Nike Vapor Premier Elite—are designed to replicate the jerseys worn on the field. They have sewn on or embroidered team graphics. The correct trim on the sleeves, front, and neck identical to team worn jerseys. They include the team sleeve patches, and sometimes have year-specific commemorative patches sewn on them as well. If player numbered, the lettering is sewn on in layers of tackle twill (with very few exceptions, all authentic jerseys have sewn-on layered twill names and numbers). Generally starting with 1992 they are manufacturer brand-tagged as “authentic.” (There are exceptions). During the 1990s, the brand name “Diamond Collection” was used to tag authentic style jerseys. “Authentic Collection” branding followed in the 2000s.

But before that, at the dawn of the double-knit era in 1970, the world of marketing and merchandising was completely different than we live in today. Unless you knew someone on the inside of the team, it was highly unlikely you’d own a jersey identical to what the players wore. During the 1970s, “Authentic” on-field jerseys were simply not manufactured for sale to the public. Starting in the late 70s, some teams’ most avid fans could sometimes get a team spec jersey through the team’s local partner. These jerseys were not originally intended for mass sale to the public. They were not branded in any way as part of an “Authentic Collection,” “Diamond Collection,” or anything overtly commercial. They simply carried the same

© GameWornGuides.com

Wilson or Rawlings sewn-in brand and size tags as the uniforms the players wore. I recall seeing the availability of authentic, new, Wilson Phillies jerseys offered through Phillies sponsor Gold Medal Sporting Goods around 1977. Delivered plain, with no player name or number affixed, one could be special ordered for $49, a considerable sum at the time. Lettering was $25 extra and took an additional month or more. Names on the back were available, but were sewn in non-original looking maroon single-color block lettering, no Vertical Arch available (more on this lettering technique in the "Basics" chapter.) Also, when searching for a Dodgers uniform jersey at the same time, my calls and letters to the team revealed that none were available. Replica t-shirts and jackets were sold, but for a real uniform, you I was told by the Dodgers' Merchandise shop you had to be a player—or know somebody who could pull strings, a concept that escaped me at age 16. I had to settle for a Dodgers t-shirt, which I wore every time it came out of the wash until it finally became a dust rag.

From around 1982–1986, Sand-Knit held a contract to produce jerseys that—while not on-field authentic—closely resembled the real thing. They featured sewn-on team crests and sleeve patches, but the sizing, tailoring, sleeve trim, and colors were usually slightly "off." Yet, these were about the closest you could get to on-field...until 1987.

Rawlings won the MLB contract in 1987 to become the official uniform provider to the league, though not all teams were required to use them. Their contract allowed them for the first time to begin discretely advertising by sewing its name in tiny script on the sleeve ends. ("Advertising on ballplayers' sleeves!" lamented my father. "Where will it stop?") Their contract also allowed Rawlings to market authentically crested MLB game jerseys to the public, *even for teams that did not wear Rawlings uniforms on the field.* For example, in 1987 and later, the Yankees, Braves, White Sox, and several other teams did not use Rawlings jerseys on the field, but Rawlings was allowed to market "authentics" with the Rawlings branding on the sleeve, while genuine on-field jerseys for these teams made by other companies had no visible branding on their sleeves.

While still not widely marketed, specialty catalogs and team shops now made these available to dedicated fans who really wanted a "real one" and were willing to pay the high prices demanded, usually $90 to $140. "Authentic" jerseys became a little more common. Batting practice jerseys first came into use in the late 1970s for many teams, and made a far more affordable entry into buying an "authentic" jersey for a devoted fan. Team-spec BP jerseys were often sold only through team souvenir or merchandising shops for around $50-$75 still a high ticket item back then. These were sold under license by Majestic, Rawlings, and starting in 1992, by Russell.

When Russell won the MLB contract for making and merchandising player uniforms in 1992, things loosened up considerably. These jerseys were now adorned with a fancy "Diamond Collection" logo tag on the shirttail, and were produced for sale in team stores, specialty sporting goods stores, and catalogs. While they were never available in the mainstream, meaning you did not find them on the rack in Kmart or even at Macy's, they were available to people who really wanted them and were willing to seek them out. At twice the price of the lower-quality 'Team Licensed' or 'Authentic Merchandise' jerseys—and nearly indistinguishable to the average observer—these jerseys were never meant for widespread public sale. They were made for people who simply needed to have a "real one like the players wear"; people like me.

While it is implied that these "Authentics" are the same as the team issued jerseys, and often they are identical, I can tell you that this is not always so. Some "authentics" made for retail sale are not the same quality as the team issued jerseys, especially true for batting practice jerseys. There is sometimes a difference in fabric quality or weight, stitching quality, and even logo construction. For example, store-bought "Authentic" 2003–2006 Majestic Phillies batting jerseys featured the team logo on the front in two-layer red and white tackle twill. Nice enough, but the actual team-issued jerseys have the Phillies logo crafted in chain stitched red embroidery over white twill. There is a significant difference in appearance. I have in my collection many examples of both store bought and team issued mesh BPs of the 1980s and 1990s. Especially common with Majestic jerseys, the team issued or game worn ones are often made of a noticeably heavier fabric and have the manufacturer logo embroidered on the sleeve instead of being heat pressed like on store bought ones. The difference in fabric weight is often immediately noticeable just by picking one up.

"Team Issued" is a general term that means that the jersey was manufactured to team specifications, delivered to the team, and intended for game use. Often, these jerseys have a year tag sewn into them from the factory, again to the team's specifications. These jerseys may be sent in bulk to the team, to the local shop the team uses to do their name/number sewing, or may be kept in the sewing room at the manufacturer, if the team uses the manufacturer as the source of their jersey customization (Majestic, and later Nike) with their contracts for sewing most teams' names and numbers on the team issued jerseys. The teams order and receive most jerseys from them overnight, ready to wear on the field. The team may order some extra blank jerseys in a variety of sizes to handle mid-season call-ups, trades or to be used in case of a player's uniform being damaged or lost. These jerseys might already have a year tag sewn in them from the factory, and tagging details might vary slightly.

Not all team issued jerseys are team or year tagged! In my observation, during the 1990s and early 2000s, fewer teams bothered to sew year tags into their jerseys. For example, during the 1990s, The Giants, Dodgers, Phillies, and Expos all stopped year-tagging their jerseys for a time.

© GameWornGuides.com

Probably fewer than 10% of batting practice jerseys are ever year tagged by teams.

At the end of the year, unused year-tagged jerseys may be held and used next year, recycled to the minor leagues, or sold off as dead stock, where they end up in the hands of dealers and collectors.

Team Tagging

Team tagging is often the most important indicator of authenticity. There is no way I can impart all of my knowledge of what to look for in a few paragraphs, but I will give an overview.

Year and set tags are sometimes sewn in on small white tabs and attached to the manufacturer's label, and/or sometimes are sewn on strip-tags in team "code" onto small pieces of uniform cloth, which are then sewn onto the jersey. Starting in the mid 2010s they may be printed on heat-applied permanent vinyl tags with QR codes glued permanently onto the tails. These tags are used both by the manufacturer to ensure correct customization and later by the team for inventory management. Here is how it works for many teams.

1. Before the start of the season, the equipment manager needs to determine how many uniforms he needs to order. Since uniforms must be ready by Opening Day, the equipment manager must make reasonable guesses—usually during spring training—about who will be on the roster. He makes a list of all the possible opening day players, along with their complete measurements and special tailoring requirements (like 2" longer jersey length, or longer sleeves). He makes sure he has an accurate list of who is wearing which numbers, and double checks how names are spelled. (He takes measurements for all the uniform pants and team hats too, but we will skip them here). See the sample orders on the next pages.
2. He then sends the list to the team's contracted uniform provider (Rawlings, Wilson, Majestic, Russell, Nike, etc.) The manufacturer often assigns an ad hoc code to this list of numbers: Size, Player Number, Year, Set Number. There seems to be little consistency to how these codes are assigned, from team to team and even year to year. In fact this inconsistency is helpful to the researcher when doing an authentication. These tags are generally created in a long strip and then cut apart for use. See examples on the pages ahead.
3. Now, from a huge pile of home jerseys the manufacturer's sewing shop selects a size 40 jersey, cuts the first tag off the strip and sews the tag inside the shirt tail, outside the shirt tail, inside the neck or wherever. If the team uses the tiny player name tags, he will sew the player's name in too. Next he finds a size 44, snips off the second tag and sews it in. Two sets are made for each player. This process continues until all home jerseys are complete. Then it is repeated for road jerseys, using a matching set of tags—possibly embroidered on road-jersey-colored fabric.

4. When the jersey lettering is to be done, workers go to the bins of enormous pile of precut tackle twill numbers. If they are two-color numbers, the two colors of the number are usually already sewn together. Now, the worker simply has to look at the tag sewn in the jersey to know what numbers to pick from the bins. The worker applies and heat-presses them to the jersey—front and back. The same is done with names that are direct sewn to the jersey without nameplates. When player nameplates were used, these were sewn as well. Names are sewn on blank nameplates from another list, or by referencing the small name tag already sewn in the jersey as a guide. Eventually, the nameplates will be matched to the jerseys and the final sewing will be done. Then, they go into another big pile and are carted off to the worker with the sewing machine who then stitches all the numbers on.
5. Once stitched and quality-checked, the uniforms are returned to the team and issued to players.

This process works very well because these inventory tags cannot get lost or misplaced since they are sewn permanently into the shirt tail. These small cryptic tags are a "work order" that follows the blank uniform from start to finish in the process. Imagine the nightmare of a paper work order for every shirt that absolutely must stay with it all through the process. For sure, these papers would become separated from the jerseys, would end up in the bottom of a box, or on the floor; becoming misplaced then lost, and there would be major confusion resulting in the wrong numbers and names being sewn on the wrong size jerseys. There would be hell to pay when Willie McCovey finds a tiny size 38 jersey with two inch shorter sleeves hanging in his locker on opening day.

From my files: Copies of the actual orders from the White Sox to uniform maker Russell Athletic for their home uniforms, dated 1994. Just a couple things to notice:

- Looking at the "ship before" date, it is clear that the White Sox did not have their 1994 uniforms in Spring Training. And, with the Sox' home opener on April 4 in Chicago, the timing is pretty tight.
- Notice that the uniforms are to be shipped to the Sox at their Spring Training address.
- Notice the order specifies that the Russell logo be sewn on the sleeve, the Comiskey Park Patch to be sewn on the left sleeve, and the penciled in addition to sew the MLB 125th patch on the right sleeve
- Check out the team price per jersey -- $42.75!

When the initial uniform order is processed—depending on the team's equipment manager's instructions—the manufacturer might make a number of extra jerseys in assorted sizes to supply to mid-season call-ups, trade acquisitions, or to have spares on hand in the event of a jersey being lost or damaged. Sometimes the jerseys are supplied numbered with un-issued roster numbers. Sometimes they are blank. And recently we have seen surplus jerseys pre-lettered with potential call-up player names, but no numbers (i.e., they were in Spring Training and went to the minors but were expected to be called up in September). The teams often get a box of extra, loose numbers and player name alphabet letters to use if needed.

Prior to the 2010s, all teams depended heavily on local sewing shops to help them with mid-season changes and season-end jersey stripping and re-lettering for use in the next year's Spring Training. Every team had a local shop they relied on. Their shop also assisted visiting teams with emergency requests when needed. But more recently, rapid automation, overnight delivery, and "just in time" ordering has decreased the dependence on the local stitcher as former vendor Majestic and current supplier Nike typically turn around an order in fewer than two days.

In a pinch, the equipment manager often keeps an old sewing machine in the back room to make emergency repairs or sew on a number or a patch if needed.

Without question, the most time-consuming—and therefore most expensive—part of producing a player jersey is stitching the name and number. It has always been done by hand, by real people at a sewing machine. And at least for now, Nike still sews numbers and names by hand on its on-field, player-issued authentic uniforms, with people using manual sewing machines. Retail jerseys have switched to mostly automatic

Left to right from top: 1988 Brewers Doug Mirabella with "T" for tapered tailoring, Phillies hand embroidered size 46 1977 set 1, Twins computer generated tag, #47, 1986, set 2; Mets size 40, #28 1980 set 1; Blue Jays computer-embroidered tag #4 1988 Set #2, Twins Navy alternate #16 2003 Set 1; Baby Blue Rangers hand embroidered #24 1979; White Sox computer embroidered #41 size 48, 2000; White Sox Black 1999 Set 1 Bradford, note size 46 and 2" extra length tagging Mets Alternate Black jersey tagging applied by Rawlings at the Factory, White Sox 1985 size 46 for coach Art Kusnyer

machine-sewn lettering, or worse, hard, glued-on lettering with imitation stitching on the edges that's merely decorative (I call this "*stadium lettering*" as it is usually what you get when you go the authentic team shop at the stadium, and they customize a jersey on the spot for you. No one is going to sit there and spend 30 minutes stitching a jersey; rather they use lettering that has stitching around its edges to make it look real. This lettering is quite simply impossible to remove, if you were wondering). If you have ever seen a jersey with paper shards or cheesecloth on the inside backing up the numbers, you've likely seen a jersey sewn by machine automation. Machines usually simultaneously sew both colors of the two color letters directly to the jersey (look inside and you see two colors of thread showing through). The ones with the stadium lettering appear stitched, but when you look inside you will see no stitching at all. Conversely, "hand sewn" team issued authentic jerseys usually have the numbers layers sewn together first and then sewn to the jersey only by the outside layer.

Even when the old-fashioned work method described above is used, in the mid 1990s to the early 2000s, a computer in the sewing shop's back office spits out the embroidered team tags from a small embroidery machine connected to the computer, all neat and clean. Starting in the 1990s, teams began to skip the embroidery all together and used flimsy (and frankly ugly) Mylar-paper tags printed on consumer-grade printers with writing that faded out after dozens of washings; and finally by the mid 2010s, computer printer tags with QR codes replaced them all.

Murky Waters: The emergence of Team Authentic Shop jerseys. It took an awfully long time, but MLB finally realized in the early 2000s that fans would pay good money for jerseys that were team issued with team tagging. By 2025, every MLB stadium has one of these shops where fans can visit, online and in person, and purchase jerseys made for the players. What you will find there are jerseys for players both famous and not; jerseys for bench players and coaches, jerseys from last year's September minor league call-ups to the big league squad, and jerseys made for minor leaguers who never even made the 40-man roster. Each jersey has a QR code and (usually) a hologram that references it back to the MLB Authentics database. That code may confirm that the jersey was game worn, or its may simply say that the jersey was ordered by the team for the player with no mention of use (the typical and accepted definition of the term "Team Issued"). In my experience, the vast majority of the jerseys on the racks at stadiums fall into the category of surplus jerseys made for well-known players but not worn, and jerseys made for lesser known players that are possibly worn. A random sampling of data from the MLB database shows them listed as team issued without any reference to dates worn. These jerseys typically sell in the $150–$450 range, depending on the player.

The Authentics Concession Shop at Phillies' Citizens Bank Park, May 2025

MLB's official online auction site (https://auctions.mlb.com/) is designed to reach a broader audience than those who might visit a stadium store, and here you will find a wide variety of products, ranging from non–game-worn autographed replicas to tagged "game-used" jerseys with usage dates—some still visibly dirty. These are offered with starting prices that can be staggeringly high, and sometimes go unsold at their initial asking starting bids. While they are expensive, these come with database-backed authentication that helps establish their authenticity and value.

Finally, MLB has a few select third-party vendors to whom they dump overstock at the end of a season, almost always lettered for little-known players and minor leaguers who never made the big league squad; and these show up on eBay at crazy low prices. I'll avoid listing these here because the information can go stale quickly, but if you follow my Facebook blog I frequently mention and link to these dealers.

Things to Look for When Evaluating a Team-Issued Jersey's Authenticity

Let's start with some very simple basics.

Lining inside collar/placket: 1970s and 1980s team issued jerseys sometimes have additional satin or cotton lining sewn inside the collar or placket of the garment. The natural fabric makes the jersey more comfortable to wear for the player. This is sometimes excluded on jerseys not issued to the team.

Type of buttons: If you look really closely, you might find that a game worn jersey uses different buttons than the store bought one. Some later model Majestic BP jerseys feature four-hole buttons on team-issued equipment, while two-hole buttons are often used on store-bought versions. Team jerseys may use special fancy buttons (the ones on this White Sox jersey are a purplish mother of pearl compared my store-bought one which uses plain white buttons).

Velcro closures: In years past, some teams used a Velcro strip between the second and third buttons from the top of the jersey (an element that is now standard on Nike VPE jerseys). There is an extra wide gap between these buttons because this is where the logo is sewn on the front. The Velcro helps hold the jersey closed to give it a neater appearance. While the teams on the field sometimes use Velcro, it is rarely included on jerseys made for retail sale. Why? Few if any people would notice and leaving it off the store bought jersey saves money for the manufacturer. (I have a Twins game worn home jersey from the mid 90s that has Velcro in the space between EVERY button. All I can figure is that this player had a phobia about his underwear being seen—and took every possible precaution.

Is there a manufacturer logo on the sleeve?

At left: Game-worn 1995 Cardinals jersey made by Rawlings, with no manufacturer logo on the sleeve. Just below: Retail "Authentic" Cardinals jersey from the same period, made by Russell, with its logo sewn onto the sleeve.

Bottom left and right: Braves game-worn jersey by Wilson with no sleeve logo. That year, all retail-sold versions had the Russell "R" on the sleeve. Yankees store-bought "Authentic" shown with Russell sleeve logo—while actual game-worn Yankees jerseys (through 2019) never displayed a manufacturer's logo.

This is all legal stuff and deals with the wonderful world of business contracts and advertising. While Russell may have been the "Official Supplier of Major League Authentic Jerseys" for several years, individual teams often had their own contracts with different manufacturers that apparently superseded the MLB one. For example, the Cardinals had long used Rawlings jerseys. During the 1990s while Russell made the ones in the store, the team wore Rawlings jerseys on the field. To "compromise" (I am sure that the lawyers argued about this for months) the Cardinals' on-field jerseys in those years had ***no*** manufacturer designation sewn on the sleeves. Likewise, the Braves had a contract with Wilson during this period, and had no logos on the sleeves of their gamers (example shown bottom left). The Yankees' on-field jerseys never showed uniform manufacturer logos of any kind on their sleeves until 2020, but store bought jerseys (example shown below) had manufacturer logos on them. This information may help you determine if what you are buying could possibly have been game worn or not. First step: using the rest of this reference manual, identify approximately which year your jersey is from. This will help you determine how likely it is that your item came from the team and not from a retail store. When evaluating game jerseys, it helps to divide the double-knit era into four general time periods:

1) **1970–1977 (or so):** Authentics are ***not*** marketed. If you find a team-spec jersey from this period it likely came from the team's overstock, was game-worn, a salesman's sample, a minor league or Spring Training issue, or was one of very, very few that was made by the team's official supplier that found its way into the public market. This often happened through team channels (a.k.a. knowing somebody who knows somebody who can get a jersey for someone's kid as a special gift).

2) **1978 (or so)–1986**: Authentic model team jerseys were sold through very limited channels, such as a team store or a local retailer with a special sponsorship connection to the team.

3) **1987–1996 (or so):** "Authentics" were sporadically marketed through specialty outlets. You would not typically find a store selling them in many shopping malls, but with diligent searching, you could likely fine an outlet in your area.

4) **1997 (or so) through present:** Authentics are ***aggressively*** marketed. Garments tagged "Authentic" are available from many web-based retailers, mail-order catalogs, and specialty stores. However, cheaper "Replicas" are far more abundant and still cost about half the price of an authentic.

What does this mean? It means that while hardly common, there are far more 1987 Rawlings Dodgers jerseys floating

© GameWornGuides.com

around, ones that could have been originally purchased at the specialty sports store, than there are Goodman Dodgers jerseys floating around from the pre-1987 era. Meanwhile, thousands and thousands of team-spec 2005 Dodgers jerseys were sold to the public during the year. Hundreds of Goodman jerseys at best were made each year prior to 1987, none for retail sale.

The tables that follow highlight in fine detail the facts surrounding sleeve logo use for game and batting jerseys. Using this tool you can spot a store-bought jersey modified to appear game worn, or a minor league jersey "upgraded" to major league status by its owner. Zoom in on your screen for a closer look.

Overview of MLB Game Jersey Manufacturers and Visible Sleeve Brand Logos

The chart on this page shows the rather specific and complex contractual rules that dictate the display of manufacturer sleeve logos on MLB game jerseys, 1970–2025. No logos are displayed prior to 1986.

The rules are different between 1987 and 2002 for game jerseys and batting practice jerseys, and then team issued/ retail versions of each.

Starting 2004, the contracts for all types are awarded to Majestic and things become more consistent. Nike takes over from Majestic for 2020.

Years	Team-Issued Game Jerseys	Retail Sale "Authentic" Game Jerseys
1986 and Prior NO MLB-wide official supplier	Each team is permitted to make its own individual contracts with jersey manufacturers. Some use multiple vendors at once. No manufacturer logos are allowed on sleeves or in public view.	Sand-Knit has an agreement to sell very nice licensed replica jerseys, nearly identical to team specs. No manufacturer logos are present on sleeve. Each team may also have an arrangement to sell a few team-spec jerseys through specialty retailers. Distribution is very limited, and few are sold.
1987-1991 Rawlings Official Supplier	Rawlings becomes the official supplier of game jerseys to MLB. However, if a team has a current contract with another vendor, it is not required to switch to Rawlings. Those teams that do use Rawlings jerseys display the Rawlings script on the sleeve end. Teams that use non-Rawlings jerseys display plain sleeves. Early issue jerseys from 1986 sometimes feature small sewn-on jersey -colored cloth patches with the Rawlings logo embroidered on them. Later jerseys have direct embroidery. Exception: Yankees jerseys always have plain sleeves with no logos showing.	For those teams that use Rawlings jerseys on the field, Rawlings makes the sleeve-logoed Authentics for retail sale. Other teams may opt for Rawlings-logoed jerseys to be made for retail sale, or may refuse and continue the limited distribution of jerseys made by their own contracted manufacturer, but without any sleeve logos showing at all.
1992-1999 Russell Official Supplier	Russell takes over as official supplier of game jerseys to MLB, and Russell-made jerseys feature the Russell "R" embroidered on the sleeve end. While most teams switch to Russell for 1992, some do not. Teams that use other manufacturers' jerseys must have plain sleeves, with no logo. Exception: Yankees jerseys always have plain sleeves with no logos showing.	Russell's contract as the official supplier to MLB gives them exclusivity to all retail game jersey sold in stores, whether the team uses Russell jerseys on the field or not. All retail jerseys (including the Yankees) have the Russell "R" embroidered on the sleeve end.
2000-2002 Co-Official Suppliers, Russell and Rawlings **2003-2004** Co-official suppli-ers, Russell and Majestic	Russell remains the supplier to most, but not all teams, and those jerseys supplied by Russell to teams on the field still feature the Russell "R" embroidered on the sleeve end. However, between 2000 and 2002, a few teams jump ship to Rawlings, and these teams can display the new oval Rawlings logo on their game jersey sleeves, an R surrounded by an ellipse. In 2003-2004, a few teams switch to Majestic, and these teams can display the Majestic "M" on the sleeve. Exception: Yankees jerseys always have plain sleeves with no logos showing.	Russell remains the supplier to most but not all teams, and those teams sell retail jerseys featuring the Russell "R" embroidered on the sleeve end. However, from 2000-2002, a few teams jumped ship to Rawlings, and these teams can display the new oval Rawlings logo on their retail authentic jersey sleeves, an R surrounded by an ellipse. In 2003-2004, the teams that have switched to Majestic can display the Majestic "M" on the sleeve of retail authentics. All retail-sale jerseys display sleeve logos from their respective manufacturers—Russell, Rawlings, or Majestic—including the Yankees.
2005-2019 Majestic Official Supplier	Majestic takes over as official supplier of game jerseys to MLB. All teams without exception use Majestic jerseys on the field. All teams except the Yankees display the Majestic "M" on the sleeve end. Yankees' sleeve ends remain plain. Team-spec full-weight knit jerseys feature an inside seam tag printed with "0062"; 2005-2015 Cool Base Jerseys "0063"; and 2016-2019 Flex Base "0730".	Majestic takes over as official supplier of retail authentic game jerseys to MLB. All teams without exception have their retail authentics made by Majestic. All teams including the Yankees display the Majestic "M" on the sleeve end. Team -spec full-weight knit jerseys feature an inside seam tag printed with "6200"; 2005-2015 Cool Base Jerseys "6300"; and 2016-2019 Flex Base "7300"
2020-2025 Nike Official Supplier	Nike becomes the official supplier of game jerseys to MLB. All teams, without exception, use Nike jerseys on the field. All teams, ***including*** the Yankees, display the Nike "Swoosh" logo on the right upper chest.	Nike is now the official supplier of retail authentic game jerseys to MLB. All teams, without exception, have their on-field retail authentics made by Nike. All teams, without exception, display the Nike "Swoosh" logo on the right upper chest.

Overview of MLB Batting Practice Jersey Manufacturers and Visible Sleeve Brand Logos

Years	Team Issued Batting Practice Jerseys	Retail Sale Authentic Batting Practice Jerseys
1986 and Prior	Every team is permitted to make their own individual contracts with jersey manufacturers, and some do with several at once. No manufacturer logos are visible on sleeves.	No blanket MLB contract governing retail sale is apparent. Few such jerseys are sold. Each team may make some of the official vendor's jerseys available through specialty retailers, Sand-Knit makes some in reproduction for retail, but distribution is strictly limited. No logos are visible on sleeves.
1987-1991	Rawlings supplies BP jerseys to some teams, and those have the Rawlings script embroidered at the sleeve end. (Some jerseys have the Rawlings logo embroidered on a jersey-cloth colored tag that is then sewn to the sleeve.) Majestic is named a co-official supplier of MLB warm-up gear (only) and teams who use Majestic BP jerseys may have the Majestic logo embroidered on the sleeve end. All other brands of BP jerseys (Sand-Knit, Wilson, Goodman and Sons) have no visible logos. Exception: Yankees jerseys consistently have plain sleeves with no logos showing.	Same rules as team-issued BP jerseys. However, Majestic BP jerseys made for retail sale usually have a rubbery heat-pressed logo on the sleeve instead of an embroidered one like the team-issued version.
1992-2002	Russell and Majestic share as co-on-field official suppliers of Batting Practice Jerseys on a team-by-team basis. Both makers are entitled to embroider their logo on the sleeve end of jerseys they supply. Exception: Yankees jerseys always have plain sleeves with no logos showing.	Russell and Majestic share as co-retail official suppliers of Batting Practice Jerseys on a team-by-team basis. Both makers are entitled to put their logo on the sleeve end of jerseys they make. Russell embroiders theirs just like the on-field ones, but Majestic uses a heat transfer logo on theirs. All teams, including Yankees, display sleeve logos. From experience, retail-spec jerseys may use a lighter-weight and slightly cheaper grade of mesh fabric than the team-issued BP jerseys, though this is not called out anywhere.
2003-2004	Majestic becomes exclusive supplier to MLB and makes all BP Jerseys for on field use. All teams, including the Yankees, display sleeve logos. Team-issued BP jerseys have embroidered Majestic sleeve logo, and jerseys are numerically sized (e.g., 44, 42, 48, 52).	Majestic is the exclusive maker of all BP Jerseys for on-field use and for retail sale, and all teams, including the Yankees, display sleeve logos. Team issued BP jerseys have heat-pressed Majestic sleeve logo and jerseys are sized as SM, MED, LG, etc.
2005-2019	Majestic continues as exclusive official supplier of on-field BP jerseys to MLB. All teams display the Majestic "M" on sleeve ends. Team-spec jerseys include an inside seam tag with a numeric code starting with zero (e.g., 0006, 0068, 0065, 0380) printed on it. The Majestic sleeve logo is identical on both team-issued and retail garments.	Majestic continues as official exclusive supplier of on-field BP jerseys to MLB. All teams display the Majestic "M" on sleeve ends. Retail-spec jerseys feature an inside seam tag with a numeric code starting with a number other than zero (e.g., 6000, 6800, 6500, 3800). The Majestic sleeve logo is the same style for both team-issued and retail garments.
2020 and after	Nike is the exclusive provider of BP jerseys; their logo is visibly displayed on them	Nike is the exclusive provider of BP jerseys; their logo is visibly displayed on them

© GameWornGuides.com

Left: *The Phillies BP jersey on the left is team issued. Notice the embroidered Majestic logo, 4-hole buttons and the chain stitched embroidered team logos. The Royals Authentic BP jersey on the right was made for retail sale. It is a thinner cloth, has a heat pressed Majestic logo and 2-hole buttons.*

Type of sleeve logo used: On BP Jerseys of the 1990s and pre-2007, the retail version often used a heat-pressed logo, while the game worn versions used sewn on, embroidered logos. 2007 and later BPs all used heat-pressed sleeve logos. The Phillies BP jersey (top left) is team-issued. Notice the embroidered Majestic logo, four-hole buttons and the chain stitched embroidered team logos. The Royals BP on the right is an authentic made for retail sale. It is a thinner cloth, has a heat pressed Majestic logo, and two-hole buttons

Thickness of fabric: Batting practice jerseys often vary significantly in fabric weight and feel. Team issue models can be noticeably heavier.

In-between sizes: While authentic jerseys made for retail sale were usually in sizes 36, 40, 44, 48 and 52 only, jerseys made for the teams were also available in "in-between sizes" of 38, 42, 46, 50, 54 and 56. I have even seen a size 41, 43, and a 45! These sizes refer to the size of the wearer's chest, in inches, when a tape measure is wrapped around the torso directly under the arms. Therefore, when laid flat, a size 44 jersey is typically 22 inches across the front, from underarm to underarm.

Presence and location of the size (and other) tags: Game worn jerseys sometimes place the size tag differently than retail versions. Most commonly, the size tag is deleted from the collar where it is found in the retail sale jersey, and moved to the shirt tail. These jerseys typically have different laundry tags inside too, with different stock numbers. For example, Majestic jerseys of the 2000–2007 era that are made to team spec may have a cloth tag sewn inside one of the side seams with the tiny number "0062" printed on it (likewise, BP jerseys made to team specs may have a small "0006" tag sewn in). Majestic game jerseys that are made for retail sale often have a similar tag, instead with the tiny code "6200" printed on it. The presence of a "0062" tag does not promise a game worn or even "team issued" jersey, though many sellers would like you to believe it as so. It is simply a style spec number used by Majestic to specify that this jersey is exactly the same in detail as one that would be made for use by the team. From the quantities of these I have seen for sale on the market, quite a few "0062" style jerseys that were manufactured specifically for the retail channel. On the other hand, I cannot say that I have ever seen a "6200" jersey that I could validate as game worn. Perhaps it is safe to say that if a jersey has a "6200" tag inside it is probably not game worn. However anything can happen, and often does. I never say never.

Above: *These two "Authentic Collection" Milwaukee Brewers jerseys appear identical, however, the one on the top is team Issued and has an "0062" tag inside. The one on the bottom came from a retail store and has a "6200" tag inside.*

© GameWornGuides.com

"Game worn" jerseys: A game worn jersey is a team issued jersey that was issued to a player and presumably worn during a game. I would include as "game worn" uniforms used by coaches, although arguably the coaches never picked up a bat or threw a pitch. Sometimes, game worn jerseys are manufacturer tailored. This may mean that they are constructed with custom specifications at the factory (extra length, shorter length, longer or shorter sleeves). Jerseys that are manufactured to player specifications are usually tagged as such from the factory. Most common are jerseys that are tapered to make them extra narrow in the waist so that the player does not have extra material bunched up at the waist. Some tapered jerseys are marked with a "T" sewn alongside the other standard team tagging.

Specific player worn: Jerseys that are claimed to have been worn by a specific player. These are the hardest to verify as authentic. Occasionally, additional local custom tailoring is added if the factory-issued jersey still doesn't fit to the player's satisfaction. It might be sent to the local tailor for additional alterations. Generally, uniforms that are altered like this are not marked as such by the tailor or seamstress. They are simply altered "on the fly."

As the owner of many game-worn jerseys, and attempting to wear each of them at one time or another, I have experienced all sorts of player-specific tailoring. This 1985 Rangers jersey is a size 48 with +2" extra length. You can see how it is tapered radically in at the waist. Unfortunately, more of us collectors are tapered radically OUT at the waist.

This #28 Bryn Smith Expos jersey is tailored very tightly at the neck, and was likely altered that way to meet the player's preferences, though I cannot imagine why.

There are other signs to look for to determine if a jersey could possibly be "player worn." First, consult the team's roster for that season to verify the player's presence. You can get the information going back far in time at www.baseball-almanac.com. This may not help you in the following instances:

- Your player was released or traded after Spring Training, or was kept as a "non-roster" player. This is very, very common and is the reason why you will find team-spec jerseys (often with high numbers!) lettered for players with names you have never heard of, who never appear on any major league roster.

The equipment manager has to make sure that everyone who might be on the team's opening day roster has a uniform ready for his use, and that means ordering a lot of uniforms that never get used by anybody, finding their way into the hobby at very reasonable prices.

- Your player changed numbers at some point during the season.
- Your player was on the roster but never appeared in a game.
- Your player was a coach and therefore not listed on the active roster.

There are an incredible number of pitchers called up by some teams in many years. Looking at a full year roster for your team may show that there were 30 or more pitchers used at one time or another during the year. (A personal note: I like to look for the jerseys of pitchers. They usually are in far better condition, since pitchers spend more time on the bench, do not spend much time sliding on their bellies, they are often bigger people, and many prefer looser fitting jerseys. Few pitchers ask for tapered waist jerseys.)

Other Sources to look for information on your player are:

- Wikipedia, which is the only site that reliably provides the numbers for coaches' jerseys as well. Enter, for example "Wiki 1976 Baltimore Orioles" to see a table that includes all players and coaches.
- Official team websites (some include all-time rosters).
- Fan websites (some fans keep better records than the teams—check out www.ultimatemets.com).
- Vintage team programs, yearbooks, and news photos.
- Baseball cards (including searches on eBay (or other online retail sites).
- SABR Society of American Baseball Research (www.SABR.org)
- Baseball Hall of Fame website (www.baseballhalloffame.org)
- Search on Google on your player's name, both on text and for photos. You might be surprised and find something!

© GameWornGuides.com

Once you have found your player on the Major League roster, take this simple reality check:

Check Player's Listed Size and Weight: (baseball-almanac.com) Is it reasonable to assume that the player wore the specific size jersey you have? Can you find other game-worn jerseys for this player that are the same or different sizes? (As an aside for me, it is oddly comforting to see a player's jersey size grow as he ages. A size 40 rookie becomes a size 44 veteran, and then a size 48 coach, just like the rest of us!)

Locate a Comparable Example: If you have a 1978 Reds jersey, conduct a Google search for "Reds 1978 jersey auction" to find comparisons.. You might find another jersey issued to a player from the same year and you can compare the details.

Other Terms, Facts, and Finding Secret Clues

Name on Back ("NOB"): Should there be one? Was there one there at one time that has been removed? If not, was there room for one? The Reds jersey (top right) is claimed to be Johnny Bench game worn. However, the Reds used names on the back of all jerseys in this era, and this one not only has none, and further, there is no room for one! Because I do not believe any of their minor league clubs used a road jersey with "Cincinnati" sewn on the front, it is most likely a surplus or sample jersey being sold as "authentic game worn."

Nameplates: Teams use nameplates mostly because it makes it easier to alter a jersey for later use. Removing a nameplate is much easier than removing a player name, letter by letter, if the jersey is to be reused. Some teams, like the Athletics, used nameplates exclusively for many years. Others, like the Dodgers and Cubs, never used them. During the 1990s, the Phillies used nameplates on their road jerseys, but not their home ones. I suspect white nameplates on pinstriped jerseys were avoided for aesthetic reasons. The solid gray of the road jerseys makes them a more acceptable candidate for nameplates.

Set Tagging: Most times, team issued jerseys have a set tag of some sort of "Set" number in them. This practice dates back to when teams typically had only one home and one road uniform style (today that is the exception rather than the rule). Often, each roster player was issued two sets of home and two sets of road uniforms for a season. "Set 2" uniforms might have been used in the second game of double headers, in day games after night games, or if the Set 1 uniform was in need of repair.

Spring Training and "Next Year" Reissuing: At least through the early 2000s, the set of prior year uniforms were kept for use in the following year's spring training. In some cases jerseys were kept and reissued or used as spares by the big league club the following year if they had gone unused or remained in good condition. The Angels jersey (at right) is tagged

1989, but the ghost of the removed NOB shows the name of a player who did not appear for the Angels in 1990. (Note: The "Desert Storm" American Flag patch was not worn this way by the MLB club. I suspect this was later reissued in the minor leagues where the flag was added.) When researching a jersey, I will also look at the team's roster for the next year (or two) to see if it's possible that a player was reissued an older jersey that had been sitting in the team"s supply closet.

© GameWornGuides.com

"Number Change" vs. "Team Number Change": Team number change means that, while in the possession of the team, the number was changed on a jersey for some particular reason. Maybe your team just traded for Rickey Henderson, and he demands to wear number 24. If Joe Schlobodnik happens to be the current #24, he is likely to have his uniform number suddenly changed to accommodate Rickey. In another case, the jersey is renumbered by the team for the use of another player, or when the jersey is reassigned to the minors. It may or may not be important to you if your jersey had its number changed by the team or by a later owner. Just be aware that numbers can be easily changed, and often the changes cannot be detected, even by experienced authenticators. Ways to detect a number change: Numbers are sewn on, but usually they are glued as well. A spray adhesive is often applied by the tailor to temporarily affix the numbers to the jersey prior to sewing. Over the years this adhesive may lose its grip, or may become tighter and brittle. I suspect the type of adhesive, the amount used, and the age of the glue all have a part to play in determining whether or not the glue leaves marks.

- Signs of ghosting: Discoloration, fading, glue, pulls, holes, blurred pinstripes.
- Inspect the jersey at an angle for signs of 'piling,' where threads bunch or pull away from the surface.

- Examine it on a light table: A very effective method. With light coming from below, sometimes it is possible to see small pinholes or thin spots where apart of a layer of the fabric ripped away, stuck to the old number when it was removed.
- If a single-digit number replaced a double-digit one, or vice versa, it is often easier to see the ghosts of what had been there before.

It is difficult to see in photos, but in the "20" (bottom left), there is a slight fraying in a diagonal line between the two numerals. This jersey was previously #4, a single digit that would have been between the two numbers now on the jersey; a numeral with a diagonal stroke. When you think about it, there are only 10 numerals that could be used, so use your detective skills to to deduce which of the 10 digits it might have been!

Look at it under different types of light: Try natural sunlight, standard fluorescent bulbs, grow lights, black light, or mercury vapor light. (Mercury vapor lights are yellowish and are sometimes used in streetlights or exterior security lighting outside your neighborhood convenience store.) All of these types of lights have different color wavelength characteristics. Slight fading or discoloration of the fabric around the old numbers may be visible under one type of light more than another.

Font details: Are the numbers the correct style and size? Are all numbers made of the same fabric? Are the outlines correct on two-color numbers? Is the stitching the same style? The same relative age/wear as the stitching on the logo? Is the stitching the same?

One tricky detail to watch out for is if team crests and names/numbers made of exactly the same fabric and stitched using the same thread and stitching style. Why? Because if they are identical it *could mean* that they were replaced together (as in the Mike Schmidt jersey example at the start of this section). The jersey logos are typically sewn at the factory, while names and numbers are often added elsewhere and not by the same machine. Why would anyone do this? Because, if the team logo is tackle twill and is faded, the goal of creating a convincing fake might be easier if both logo and name are replaced at the same time, with the exact same type and color of fabric. I always admire the integrity of sellers who tell potential buyers about number changes. It's a detail easily overlooked or deliberately ignored — but one that can significantly affect a jersey's value.

Missing patches: If you know what year your jersey is supposed to be from, look for evidence that the correct patches for that year were sewn onto the sleeves. Removed patches typically leave a faint outline or "ghost."

Incorrect patches: While patches are often removed from jerseys before they are sold off, and the jersey may be "restored" before being offered for sale again, be alert for patches that do not belong. While there could be some legitimate reason the wrong patch is sewn on a sleeve, it could be a sign of a problem. Here are two examples along with supporting evidence

© GameWornGuides.com

of number changes: The Reds road jersey at right used to be number 5. The old number left behind a large glue residue when removed. This was claimed to be a team number change, but this is doubtful, as #5 in 1972 belonged to Johnny Bench! At right, the team tagging on this 1979 Mariners jersey reveals that it was originally #37, belonging to pitcher Rich Hinton. It was changed to #60 and used in spring training or sent to the minors. Careful examination of the back shows ghosting where the original #3 was removed as well as evidence of the vertical stroke from the 'H' in Hinton, still faintly visible below the nameplate added to cover damage from prior lettering removal.

I have seen Diamondbacks jerseys advertised as "game worn" with the patch shown on the near right sewn onto the sleeve. This patch was used only on jerseys made for retail sale. The patch the right of it is the actual team-worn 1998 Inaugural Season patch that should be on all game worn jerseys.

The claimed game worn Astros jersey to the right has the 1996 35th Anniversary patch on the sleeve. However, the team didn't introduce that style of road jersey until 1997.

Team Tagging: Removed or "Restored"?

This is one that we unfortunately see a lot. There are few legitimate reasons to justify the removal of team tagging. As we have established already, team tagging's main purpose was to serve as a work order when the uniform was created at the factory. Some teams use it as an inventory control mechanism once the uniform enters regular use. When a uniform is reissued to another player, even having its name or number changed, the team tagging that was sewn on the uniform when it was originally created is almost never touched. When uniforms are decommissioned and sent to the minor leagues, there is *no legitimate reason* for a minor league team to alter or remove the major league tagging. After all, it is unseen when worn, and with the amount of legitimate sewing and repairs that the team needs to do on its uniforms, no one is likely to take the time to remove hidden tags from collars and shirt tails! Even when equipment is disposed of and sold to the hobby, these cryptic tags are largely ignored and left in place.

Is this to say that every jersey with missing or "restored" team tagging is a fake? Well, no. There is really only one potentially believable reason that original team tagging may have been removed at some point: The jersey has received so much wear that the thread failed on the tagging, even partially, causing a future wearer to tear it off completely. This was especially common when the tag was located in the neck and became irritating.

What I am saying is that, if you are buying a jersey that has altered or removed team tagging, beware. *In most cases, tagging is altered to*

© GameWornGuides.com

represent the jersey as something it is not. The current seller may be innocent, as the alterations may have been made before he acquired the piece. Scars from removed tagging should be seen as a red flag — not as exciting evidence of a rarity.

The Technique of Photo Matching

While an entire book could be written on the topic, I'll briefly address the essentials here. Photo matching is an authentication technique that is best employed when the jersey has a pattern on it, such as pinstripes. In this method, the garment is compared to period news photographs, team photos, or baseball cards picturing the player. The placement of buttons, buttonholes, team logos, player numbers, and names are compared carefully. Because no two pinstriped garments are likely to have identical stripe placement, these comparisons can provide strong evidence that a jersey was worn by the player. To be convincingly conclusive, there should be multiple points of match in a single photo, or by using multiple photos from the same event.

This common 1991 Padres jersey, borrowed from eBay, is an excellent example of a likely photo match. The seller had acquired the jersey from the Padres at an annual "Garage Sale" run by the team, and took the trouble to match the jersey to a 1991 baseball card showing the player wearing the same jersey. Note the position of the logo, and where it intersects the pinstripes at each letter. It would be difficult to deny that this is the very same uniform!

In a much higher stakes auction by Sotheby's, this 1927 Yankees jersey belonging to Lou Gehrig has been carefully photo-matched to a period news photo showing Gehrig wearing it. Notice the alignment of the stripes at the double collar, and the exact position of the top button. Such evidence can affect a rare jersey's value by tens (or even hundreds) of thousands of dollars.

Only a very few companies have the skills and proper media licenses to access multitudes of available media sources (news photos, video) to do this work properly. Photo matching is incredibly time consuming to do and the time investment is the same regardless of whether a match is ultimately found. Therefore, it generally makes financial sense to first employ all of the other methods of authentication described in this chapter before attempting to do a photo match.

Finally, "faking" a photo match is unfortunately possible, and with the emergence of AI photo manipulation techniques, has become easier to do than ever before.

Major League Jerseys Recycled to the Minors

Through at least the 1990s, nearly every MLB team recycled its uniforms through the minor leagues after being used for one or two seasons in the majors. Used uniforms were seen as no more than dirty laundry, and since very few people were interested in these items as collectibles at the time, most were recycled mercilessly. Just try to find a nice, game worn mid-80s Twins powder blue road jersey that is not bleached several shades lighter by the sun, and permanently stained with ground-in dirt across the front, with numbers and letters held on by the thinnest whisper of brittle red thread bleached nearly white. The Twins, for one, certainly got their money's worth out of their equipment. Often the names of the original owner on the back would be simply covered over by a blank nameplate while the jersey was in minor league use.

© GameWornGuides.com

These jerseys show clear evidence of a hard second life in the minors. The Pirates jersey at top was originally #44, and with the original player name removed (leaving visible stitch holes), and the number changed. The jersey at the bottom started life as a 1979 Mariners road jersey, and when it was sent to the minors, the player name was removed and the "Seattle" crest was ignobly stripped and replaced and replaced with the minor league club's city name. Which may help explain why so few original 1979 Mariners jerseys are found in the hobby today.

Uniforms Made for, and Used by, the Minor Leagues

It is common for major league teams to have at least one minor league team with the same name as the parent club. The Bluefield Orioles, Richmond Braves, Clearwater and Reading Phillies, Midland Angels, and Charlotte Rangers are all examples. While some of these clubs have used "hand me downs" from the big league club, many receive equipment made specifically for them. Sometimes their equipment looks exactly like the big league club's, other times there are subtle differences in trim, manufacturer, number placement or the use of names on back.

I would never even attempt to try to document all the minor league clubs here and how their jerseys differ from the major league affiliate, but here are some things to watch out for.

1. No names on back: Still today, few minor league clubs use names on back, while most major league clubs do. Major league uniforms passed down to the minors may have names removed or covered up. Jerseys made without names on back usually have the numbers sewn higher on the back as no room is left for the player name.
2. Different design of the road jersey: Many major league clubs use their city name on their road jerseys, making them unfit for use by the minor league club. These differences are especially noticeable on road jerseys. The Indians' and Braves' minor league jerseys shown later provide good examples. The big club's road jerseys in this era had the script of the team's city on the front. The minor league jersey has the team name.
3. Differences in manufacturer: The minor league club may have their equipment sewn by a different supplier. Knowing which manufacturer supplied jerseys to the major league club that year will help with identification.
4. Differences in trim and details: Details such as sleeve ends, collar trim, or placket styling may differ from the major league version. It is tough to notice, unless you have a MLB jersey to compare it to.
5. Lack of team tagging, Minor league jerseys are rarely tagged with set numbers or year indicators, and they are never (yes, never) tagged with player names. The personnel rotation there is far too fluid, and uniforms are used and reissued with great regularity. Trying to determine if a MLB player wore a certain minor league jersey is one of the toughest things to do successfully.

Bowen Field in Bluefield, West Virginia, Home of the Bluefield Orioles of the Appalachian League.

Left: *Rawlings Orioles major league road jersey from the mid-1990s.*

Below: *Minor league Bluefield Orioles road jersey from the same era, also made by Rawlings. Note the differences in sleeve ends and the use of black knit trim on the minor league jersey. The minor league jersey also lacks a name on back, with numbers sewn so high that no space remains for one.*

"Salesman's Samples"

Salesman's samples are jerseys that appear completely authentic, usually with year and set tags sewn in. They typically have player names and numbers sewn on, appearing ready for on-field use.

In the early 2000s I lived in Tokyo, Japan. Once while traveling, I visited a small neighborhood sporting goods shop in a small town. When the owner learned that I collected baseball jerseys, he went into his back room and proudly returned with about six Rawlings team-sewn uniforms, Dodgers (Koufax), Cardinals (McGwire), Diamondbacks (Randy Johnson), and a few more. All were completely and accurately lettered, numbered, year and set tagged. He explained to me that because he was such a big Rawlings dealer in Japan, Rawlings sent these to him as gifts.

Thus, the origin of the "Salesman's Samples" you often see mentioned. They are extras sewn at the factory just for this purpose to give something for display or of value to a loyal dealer or customer. Manufacturers may also create samples when trying to win a contract back from a competitor. Majestic may have the current team contract, but Rawlings may make up a bunch of current-year-tagged samples with players' names and numbers on them to show a team their quality when they are trying to win the team's business. This explains why you may encounter year-tagged jerseys made by a manufacturer other than the one who produced the game-used versions.

Quality Control: "People Make Mistakes" This example is a classic, and I have borrowed it unaltered from Paul Lukas' Uni-Watch column, August 20, 2007. In this column he was quoting our editor, Rick Subrizio, a former Red Sox employee:

"Longtime Red Sox switchboard operator Helen Robinson used to do a lot of last-minute sewing work for the team. She was an expert seamstress, and she'd do emergency repairs, numbering, and patches, all by hand, while sitting behind the switchboard and answering calls.

Anyhow, one day in 2001, I walked by her desk, where she was sewing the American League 100th anniversary patch on to Sun-woo Kim's jersey (I don't remember if he had been recalled from Pawtucket or just acquired), and I noticed that she had put the patch on the wrong

More Examples of Minor League Jerseys

Minor League Jerseys: *(Top Row)* Texas Wilson-made Rangers minor league jersey. Note lining inside collar, team markings inside shirt tail. But, compare to Major League version at top right. Notice it is made by Russell, has red trim on the sleeve ends. On the back of the Minor League jersey there is no room for a number. *(Middle Row)* Braves and Indians minor league jerseys. Notice road colors.. But home team graphics (compared to the major league issue). Phillies minor league road jersey is made by a different manufacture than the big club, has slightly different sleeve end trim, and has no room on the back for a player name, always on Phillies major league uniforms. *(Bottom)* Pirates Minor League jersey features major-league style team tagging with set numbers, but slightly wrong number font and no room on back for a name, which all Pirates jerseys had in this year.

sleeve - it was on the left instead of the right.

When I mentioned it to her, she said "It isn't wrong - it is on the sleeve opposite the [Russell] sleeve logo." It seems that Kim was issued an older jersey from a year or two earlier, when the Russell logo was on the right sleeve rather than the left, so Helen was thrown off by the logo and had placed the patch on the wrong sleeve. She wasn't too happy about it (she was a stickler for detail too and very proud of her work), but it was getting close to game time, and she didn't have time to fix it before the first pitch, so she sent it down to the clubhouse as it was.

I don't know how long Kim wore the jersey with the patch on the wrong side, but I found this photo of him from August 15th of that year, so he appeared in at least one game with the patch error."

Strong Potential for Mischief

Presented here for your inspection (next page) is a 1991 Yankees team-issued jersey. It looks authentic — because it is. It even comes with a Steiner letter of authenticity, duly serialized and with a Steiner hologram affixed to the jock tag. This very nice, legitimate jersey sold at online auction for a bargain price — under $125. No problem so far.

The problem arises only if someone decides to enhance the jersey by adding Don Mattingly's or Bernie Williams' number to the back. The letter might be altered or conveniently 'lost,' and the hologram either ignored (who checks?) or removed altogether. Like the Mike Schmidt jersey on the first page of this chapter, it changes hands once, twice, and along the way it somehow becomes represented as a game-worn Don Mattingly 1991 Yankees jersey. At that point, it becomes a potential crime scene. For every 10 bargain hunters out there, perhaps nine are honest collectors while one might have a serious and illegitimate profit motive on his mind. Only so much can be done to avoid being misled. Before paying investment-grade money for anything, do all the research you can. Check the hologram number, verify the letter with Steiner

© GameWornGuides.com

and have it verified as real and untampered with. This is easy for me to say, but hard for many collectors to do; bargains are hard to pass up.

But... Is It Game-Worn?

We return to the question we started with. If one goes back to the years prior to 1987, when the only pro-model team jerseys produced were made for the team, and each player was issued just two sets each season; the jersey is the right size for the player it was numbered for, and it either still wears its team tagging and original numbers or at least the light table shows the ghosts of its original ones, and it shows a season's worth of wear, one might be reasonably certain that it was game-worn.

But starting with 1987 when pro-model jerseys were first offered to the public, certainty begins to diminish. We still look for all the same characteristics as before, but the possibility exists more strongly that something of potentially great value has been created from thin air.

Case in point: Score Board was a company founded by Ken Goldin, who contracted with star MLB players to sign properly prepared "team-issued" style jerseys complete with team tagging. During 1989 and 1990 especially, lucrative deals were signed with many players, including Nolan Ryan, Mike Schmidt and Roger Clemens. While in some cases the tagging on the Score Board jerseys was not in the exact location compared to team-issued jerseys (on the tail instead of the neck, for example, player-specific tailoring was omitted that would have been on an actual game jersey; otherwise they appeared identical. Let's be clear: the world of collecting game-used memorabilia in 1989 was far different than it became 20 years later… then it was a quaint curiosity, practiced for fun by a relatively small number of people. There was no intent to commit fraud, or even to deceive. It was lucrative fun, no more, no less.

My work as an authenticator has introduced me to people who've been around the game decades longer than I have; insiders who were associates and business managers to the stars of the game. They have told me how certain players, many before the advent of authentication programs, were eager to capitalize on their stardom by ordering dozens of extra jerseys and then autographed them, labeling them "game-worn" in the inscription — even if they were worn once, or not at all. Common too, were players who signed dozens of loose numbers that were then afterwards applied to team-issue extras and represented as game-worn merchandise. It made them some extra money… and it made people happy. What harm was being done?

Today, when I am authenticating jerseys from this period of time that lack provenance, I have a long list of additional criteria that I use to try to determine if a jersey is reasonably "game worn." But in many cases, especially with star players who may have purposely worn a jersey for a game or two before selling it as memorabilia, the best we can say is that a jersey is properly team-prepared and shows "appropriate wear" consistent with the player and the era.

© GameWornGuides.com

Finally: Anything is Possible

Remember that I try to avoid the words "never" and "always" as much as I can? Here's a little story that explains why. For several years, I visited a small shop in West Chester, Pennsylvania to get my jerseys lettered. The shop was located at the dead end of a street behind a McDonald's. This was the local shop where the Phillies went to have their emergency mid-season call-up players team jerseys lettered for many years. Someone tipped me off that they were there, and I dropped in to see if they would letter a few jerseys for me. This place looked like it had not been straightened up in 15 years. A very small, square woman peered at me from behind a desk piled high with papers. She didn't seem particularly pleased to see me but agreed to letter my jerseys. I had to pay in advance, though she agreed to take a check.

They did nice work, but dropping in unexpectedly might provide the bonus of seeing her chewing out the sewing ladies for coming back late from lunch or making personal phone calls. Her name was Anna, and she was obviously not starstruck about the fact that the Major League players wore her handiwork. I tried to make small talk, but she seemed suspicious of me and rarely answered my questions with more than a word or two. She complained that the Phillies were cheap and never gave her enough time to get work done. Her real love was for the Philadelphia Flyers, whose team jerseys she sewed as well.

One day, though, she told me a story that was priceless. I will share it with you.

Mark McGwire was traded from the Oakland Athletics to the St. Louis Cardinals late on July 31, 1997. It was a surprise trade that made headlines all over the country. McGwire joined the Cardinals, as they were playing the Phillies in Philadelphia. The local TV news showed McGwire walking through the Philadelphia airport on Friday, August 1, still wearing an A's warm up jacket and carrying an Athletics equipment bag. Apparently, he went right from the airport to Veterans Stadium to join the Cardinals in batting practice.

I remember because I was at the Vet that night, awed by watching McGwire take batting practice. He is shown here wearing a red Cardinals windbreaker over his undershirt early that night. It was a good game for me; the Phillies won 4-1, and an unspectacular game for McGwire who went 0-for-3. I did not think much about it after that until the following Monday when I went to pick up a jersey I had left to be lettered from Anna. I apologized because I had planned to come Friday, but could not get there in time because I left to go to the ballgame.

"Just as well," she grumped. "I wouldn't have been done anyway. The Phillies called with another one of their rush orders and we were crazy over here." It seems that with McGwire coming in to join the Cardinals that afternoon, somebody had to find a uniform for him to wear. And, since the Cards were in Philadelphia and not at home, it was Anna who got the call from the Phillies. "Where the heck was I supposed to find a Cardinals road jersey around here?" she gestured at the piles of junk. Apparently late in the day someone found one, possibly from the Cardinals' locker room, but possibly at the local shopping mall. It was rushed by the Phillies to Anna, and she lettered it with McGwire's name and number 25 as the courier waited impatiently, motor running. As soon as she finished, it was rushed back to McGwire at the ballpark, about an hour from Anna's shop. It probably got to him just before the first pitch. The photo below is surely McGwire on that very night in Philadelphia, or on one of the two nights after. That's clearly the Vet he's hitting in. Notice the Jackie Robinson "Breaking Barriers" patch on his sleeve, worn only in 1997. And after this final road trip in August, the Cardinals never returned to Philadelphia in 1997. Remember, Rawlings made the Cardinals game jerseys so the contract said that the Rawlings logos could not be shown on their uniforms, and Russell had the contract for all the ones sold at the shopping mall. Looking as closely as I can, I wonder if that Jackie Robinson patch is sewn slightly lower than usual — possibly covering the Russell 'R' that would have been on the sleeve of a store bought shirt. Of course, this is just speculation — and who else would care besides me?

Oh yes, someone else might care, that guy in 30 years selling a gray Cardinals jersey he swears on the bible was the one Mark McGwire wore his first week with the Cardinals. The experts will laugh, convinced he's a fraud. After all, this jersey is obviously store bought. And the Jackie Robinson patch is sewn over the manufacturer's logo on the sleeve and certainly every expert knows that Rawlings made the Cardinals jerseys in 1997, not Russell!

Only you and I might know better. Like I said, anything is possible. That is why I never say "never."

© GameWornGuides.com

Addendum: An Even Deeper Dive into My Authentication Methodology

Whether you are new to collecting, or a seasoned expert, the discipline surrounding MLB jersey authentication can seem like a confusing, arbitrary process. I want to pull back the curtain a bit on how I perform my evaluations, so that we can have a shared understanding of what you can expect from me.

Mine is a professional service, a skill not unlike that of a doctor, lawyer or a CPA. I've been studying facts and evidence for decades on this topic, and I purposely limit myself to a very narrow discipline: I evaluate the authenticity of MLB jerseys. I don't evaluate bats or helmets. I don't do basketball or football, Player jerseys is what I have written books about, and I have amassed hundreds of thousands of exemplar photos, including news photos and pictures I have taken here myself, as part of the many hundreds of authentications I have performed in the past ten years.

My reputation is the most important thing to me; it is quite likely why you might reach out to me for assistance; Because of my reputation, people purchasing items I have authenticated value my word. I am keenly aware that any opinion I render is for all intents and purposes "forever", once I have rendered it in writing.

The Process

When evaluating any jersey, I look first at all the basics: Did the player play for the team in the year that the jersey was issued? Is it a professional model and the right style and a reasonable size for the player? Is it made by the on-field supplier of record for that team and that year? Does it have the proper numbers/name/nameplate and patches for the year it was claimed to have been used?

Passing these tests I dig deeper: Is team tagging present, and does it match exemplars from my library? Are the fonts used to letter the jersey exactly to team specifications? Are the elements properly placed on the jersey to match team spec? I next do a light table examination of every jersey to look for any signs of name or number changes or to look for repairs or alterations. I measure the jersey to see if it is actually sized the way the tags and tailoring say it should be. (It is not unheard of for the tags and the jersey to not match on star player jerseys)

Passing these tests, we go deeper still. I will research my library of other jerseys for this player that I have authenticated myself. I will do a thorough search of other jerseys for this player that have been auctioned previously, and review the specifications of these, noting if they are accompanied by independent authentications and who did them. I look for special tailoring that the player commonly requests, and check to see if it is present on the jersey I am evaluating. I look to see if that particular item has been auctioned before; for star/HOF player jerseys that answer is often "yes"; they have a documented auction history.

Finally, while I do not myself offer photo matching as a service, as part of an authentication I carefully examine every published media image I can find of that player in the year of issue to see what I can learn. Sometimes I find what might be a photo match in the making—and if I do, I am glad to inform the consigner so he/she can consider having this additional service performed by a qualified and licensed provider.

"Game Worn" vs "Team Issue"

Starting in 1987, on-field specification MLB jerseys were first offered to the public to purchase through retail channels. Prior to then, any pro-jersey blank made to on-field specifications had to come somehow through the "back door" of the makers; while some teams sold a few jerseys through specialty outlets prior to then, there was no overarching contract to sell or pro-letter these jerseys for sale to the public. Rawlings' deal with MLB starting with the 1987 season changed all that, along with their script logo being embroidered on the sleeve ends of all the MLB jersey they provided to for on-field use, anyone with a real desire to own a MLB-on-field-spec jersey could buy one. This is why the industry makes a distinction noting pre and post 1987 jerseys.

Even still, there are still secrets that help me identify pro jerseys that were sold at retail vs. those issued to the teams, and I look for these clues in my evaluations to try to determine a jersey's origin. But as the years went on, and the collector market boomed, things became even more complex. By the late 1990s Many teams (and star players!), recognizing the revenue potential of team-issued and game-worn gear began aggressively manufacturing and marketing on-field spec, player customized and team tagged jerseys to fans. Notably, the

© GameWornGuides.com

Mariners, Cubs, Rangers, Mets, Athletics and others began making multiple extra sets of jerseys for star players, and even everyday players destined to be sold as collectibles. Some teams rotated jerseys through the locker room, with players actually wearing them once or twice before they went to the "team shop", while other jerseys went straight to the racks as was the plan. Some teams lettered surplus jerseys as "Set 3, Set 4, Set E, Set F" but most simply tagged them as set 1 or 2, making them indistinguishable from other jerseys that were made for use that year.

The MLB authentication program began in 2001, hologramming specific collectible items, but it took nearly a decade for them to start to tag all jerseys sent to the clubhouse. The process is not perfect; I have examined some jerseys that are listed in the MLB authentication database system as only "team issued" that have then been photo matched to game use!

To net this out: For jerseys issued 1987 and after, there is a much higher bar to clear before I can declare them as "game used" after my evaluation. A jersey issued by the team and made for collector purchase, yet never worn by the player, can be run through the washing machine 50 times to make it look aged and feel softer, fraying the edges of the lettering a bid and fading the bright colors. Likewise, one issued by the team and worn twice by the player will still look crisp and new. This is why, without some further provenance for me to evaluate, my conclusion on many star player jerseys, 1987 and later are "pro model jersey, appropriate lettered and tagged and showing use".

Game Worn/Team Issued Case in Point:

Ichiro Suzuki joined the Seattle Mariners in 2001 as one of the most celebrated rookies in MLB history (taking nothing away from Jackie Robinson or Ken Griffey, Jr.) Already a superstar in Japan, he earned Rookie of the Year and American League MVP honors in his first MLB season, helping the Mariners to an amazing 116 wins and a trip into the postseason.

There are a great number of rookie-year Ichiro Mariners jerseys that have been offered for sale and sold at auction over the years. By 2001 the Mariners had become quite good at marketing their team issued/game worn gear. Additionally, Ichiro had his own agreement with his own marketing company to offer his certified and autographed jerseys for sale. An auction survey of a dozen 2001 Ichiro jerseys with team tagging that appear identical show that these have sold from over $50,000 (autographed and with player provenance, and accompanied by a MEARS A10 authentication, their highest grade), to less than $1500, appearing the same but without the autograph or the provenance. A spread of $48,500 for an identical appearing item? It's all about proof. That's what the collector hobby is all about, I am afraid. Items are worth what people are willing to pay for them.

Ichiro-obsessed collectors likely know more about the player's habits than any single professional authenticator does. Deeply superstitious, Ichiro did not like to change uniforms, and in many seasons wore the same home/road/alternate jersey for the entire season (backed up by photo matching). One source claims a complete "Ichiro jersey audit" documenting a finite number of known jerseys worn by the player in some seasons he played.

This is why provenance is so important to any authentication, but especially for star player items. As an authenticator, imagine if I casually agreed that the Ichiro jersey I held in hand was "game worn" when the people who have inventoried everything he wore that year know more than any normal human being does, and have already accounted for every jersey he wore in every game.

Conclusion

I have a great deal of experience, and that experience has taught me not to overstep my knowledge. My reputation is vitally important to both of us: you want any item for which I offer my opinion to hold its value through the years, regardless of changes in the weather. My commitment to you is to be always thorough, careful and professional, looking for the truth and offering facts that back up my conclusions. And as a professional, I am aware that unfortunately not every item I evaluate can be certified as bona-fide game worn, but just as a good lawyer still will not win every case, or a doctor be able to cure every patient. I promise to always do my best for you.

© GameWornGuides.com

Addendum: Examples from the MLB Authentication Program

The MLB Authentication Program was in its very early years when I wrote the first version of the text in this chapter back in 2004. On the introductory page of this section, I discussed the basics of the program and noted that not all authentic MLB items are tagged, despite what the website would lead you to believe. Many common player items from "Fan Fests," especially jerseys of non-roster players and certainly most items from Spring Training often lack holograms or database registration. However, when you are considering a tagged item, here are some basic examples of the MLB Authentication system and how it works.

Here is the Majestic Authentic Collection patch on a random MLB hologram authenticated Orioles jersey I found on a web auction site, listed by a private seller. I visited the MLB Authentication website, entering the complete code from the tamper-resistant hologram affixed to the orange tag, into the web site which produced the certificate shown at bottom right. The beauty of this simple system is that the registration certificate is retained by MLB as a digital record and never physically accompanies the jersey with the hologram. This prevents both unintentional loss of the form, as well as intentional fraud committed by changing the certificate.

MAJOR LEAGUE BASEBALL

Hologram number FJ711022 was located in the MLB Authentication Database under GAME-USED JERSEY.

Session Product Description:

Session Name: STL AT BAL
Session Date: August 09, 2014
Autographer:
Authenticator: AUTHENTICATORS, INC.
Additional Information: BALTIMORE ORIOLES - MANNY MACHADO #13, MAJESTC JERSEY, ORANGE

Print »

The MLB Authentication Program was created to protect our fans by eliminating Certificates of Authenticity that can be easily forged and/or copied. This print out is only for display purposes and not considered authentication for your item. To fully verify the authenticity of your item, please visit http://www.mlb.com/mlb/authentication/index.jsp. When you enter the uniquely numbered hologram into the system, you can view the details of the independent authentication of your autographed or game-used memorabilia.

INTRODUCTION

The Major League Baseball Authentication Program is the most comprehensive league-wide memorabilia authentication initiative in professional sports. Since its launch in 2001, it has become the industry standard for autographed and game-used sports memorabilia authentication.

Designed to distinguish officially authenticated MLB memorabilia from other items on the market, the program offers an objective third-party authentication system that guarantees genuine memorabilia for all MLB fans.

MLB Authenticated Product

AUTHENTICATION

Major League Baseball Properties schedules third party authenticators from Authenticators, Inc. for every MLB game. Only those items that an authenticator actually witnesses being signed and/or used in a game may be eligible for authentication under the MLB Authentication Program.

Once witnessed, items receive a tamper-proof hologram created by OpSec, U.S. with a unique alpha-numeric combination to easily identify its authenticity.

TRACKING THE ITEM

Authenticated items are offered to key retail partners of Major League Baseball Properties or on MLB.com. Fans can easily distinguish officially authenticated MLB memorabilia from other items by locating the official, authentication hologram.

AUTHENTICATION HOLOGRAM UP CLOSE

POSTING ON MLB.com

Once fans receive their authenticated piece of memorabilia, they can trace the unique serial number on MLB.com/authentication.

This convenient reference database enables fans to easily identify all of the details surrounding their new item. Since its inception in 2001, the Major League Baseball Authentication Program is responsible for authenticating over 8 million items, allowing fans to ensure their memorabilia is a 100% genuine piece of their favorite pastime. It's easy to get the real goods – just check for the official seal of authentication.

Chapter 8

Batting Practice and Spring Training Jerseys

Game Worn Guide to MLB Jerseys

1970-2025, Tenth Edition

William F. Henderson

Summary: This table details the basic characteristics of both Team Issued and Retail Authentic Batting Practice Jerseys through 2020, and provides quick differentiation of the two types. Much more detail is found on the pages that follow.

Years	Team Issued Batting Practice Jerseys	Retail Sale Authentic Batting Practice Jerseys
1986 and Prior	Every team is permitted to make their own individual contracts with jersey manufacturers, and some do with several at once. No manufacturer logos are visible on sleeves.	No blanket MLB contract governing retail sale is apparent. Few such jerseys are sold. Each team may make some of the official vendor's jerseys available through specialty retailers, Sand Knit makes some in reproduction for retail, but distribution is strictly limited. No logos are visible on sleeves.
1987-1991	Rawlings supplies BP jerseys to some teams, and those have the Rawlings script embroidered at the sleeve end. (some jerseys have the Rawlings logo embroidered on a jersey-cloth tag that is then sewn to the sleeve.) Majestic is named a co-official supplier of MLB warm-up gear (only) and teams who use Majestic BP jerseys may have the Majestic logo embroidered on the sleeve end. All other brands of BP jerseys (Sand- Knit, Wilson, Goodman) have no visible logos. Exception: Yankees jerseys always have plain sleeves with no logos showing.	Same rules as team-issued BP jerseys. However, Majestic BP jerseys made for retail sale usually have a rubbery heat-pressed logo on the sleeve instead of an embroidered one like the team-issued ones do.
1992-2002	Russell and Majestic share as co-on-field official suppliers of Batting Practice Jerseys on a team-by-team basis. Both makers are entitled to embroider their logo on the sleeve end of jerseys they supply. Exception: Yankees jerseys always have plain sleeves with no logos showing.	Russell and Majestic share as co-retail official suppliers of Batting Practice Jerseys on a team-by-team basis. Both makers are entitled to put their logo on the sleeve end of jerseys they make. Russell embroiders theirs just like the on-field ones; but Majestic uses a heat transfer logo on theirs. All teams, including Yankees, have sleeve logo. From experience, retail spec jerseys may use a lighter-weight and slightly cheaper grade of mesh fabric than the team-issued BP jerseys, though this is not called out anywhere
2003-2004	Majestic becomes exclusive supplier to MLB and makes all BP Jerseys for on field use. All teams, including the Yankees, display sleeve logos. Team-issued BP jerseys have embroidered Majestic sleeve logo, and jerseys are numerically sized (44,48,52)	Majestic is the exclusive maker of all BP Jerseys for on field use and for retail sale, and all teams, including the Yankees, display sleeve logos. Team issued BP jerseys have heat-pressed Majestic sleeve logo and jerseys are sized as SM, MED, LG, etc.
2005-2019	Majestic continues as exclusive official supplier of on- field BP jerseys to MLB. All teams display the Majestic "M" on the sleeve end. Team spec jerseys feature an inside seam tag with a code that starts with a zero. (example: "0006," "0068", "0065", "0380") printed on it. Majestic sleeve logo is the same style for both team issued and retail sale garments.	Majestic continues as official exclusive supplier of on- field BP jerseys to MLB. All teams display the Majestic "M" on the sleeve end. Retail spec jerseys feature an inside seam tag with a code that starts with a number other than zero. (example: "6000", "6800", "6500" or "3800") printed on it. Majestic sleeve logo is the same style for both team issued and retail sale garments.
2020 and after	Nike is the exclusive provider of BP jerseys; their logo is visibly displayed on them	Nike is the exclusive provider of BP jerseys; their logo is visibly displayed on them

Batting Practice Jerseys

Baseball always had been a frugal, grass-roots sport, heavy on tradition and administered mostly by crusty former players. Management was charged with putting a good team on the field and winning, not with looking pretty while practicing, and was certainly not interested in wasting money on silly things. The very idea of teams needing special fancy outfits to wear during Spring Training workouts would have been at the very bottom of the list of anyone in charge, when the task at hand was evaluating new talent, honing rusty skills and preparing for the new season. Going further, the idea of marketing special team-sponsored warm-up gear for adults to wear would have been positively laughable to anyone in Major League Baseball in the 1970s and earlier, had anyone even dared to suggest it. Even things we take for granted today, T-shirts with team logos on them were made only for small children to wear. Teenage boys or men (or, just imagine, women) wearing team gear? Why, *people just didn't do that in those days.*

In the 1960s and 1970s, teams wore their regular-issue uniforms during practice. In Spring Training, they usually wore the prior year's uniforms, patched and repaired. Teams often kept separate sets of Spring Training uniforms that were used for several years. This became very apparent during the 1972-1975 period, when baseball cards showing players at Spring Training had them dressed in old-fashioned flannels, even though the team had moved to wearing flashy double knits on the field once the season had begun. Or they showed the Spring Training players wearing jerseys with no names on back even though the club wore player names during the season—clearly a separate set of uniforms.

The first use of look-alike MLB uniform designs on consumer sportswear actually started with Majestic of Easton, PA, in the 1960s. At this time, Majestic was a tiny, local, family owned company whose main business was making uniforms for Little League teams. Kids' teams began to ask for Majestic to make them uniforms with the names and logos of MLB franchises on them, and so Majestic did, gaining permission from MLB for the practice. MLB figured that there was no harm in the practice and that this might help turn more kids into fans, but figured that the interest in licensing big-league club uniform logos stopped with preteen children and always would.

Top: The 1971 Chicago White Sox are credited with having the first Batting Practice jerseys issued to players for pregame warm-ups. They were white mesh and featured screened-on logos and numbers. They were not marketed to fans. Who would have wanted one? Left and Below: Photos from Spring Training workouts and games are indistinguishable from any other during the season, unless one sees palm trees in the background. And baseball cards generally had photos taken in Spring Training, and unless the background betrayed the location, no one was the wiser.

© GameWornGuides.com

By the mid 70s, teams started hosting stadium t-shirt give away days for preteen fans. A lookalike replica of the team uniform printed on a cheap t-shirt was often supplied with a packet of iron-on letters so that Mom could put a name on the back when the family got home. But still, the thought of adults wanting to wear MLB gear of any kind seemed unthinkably childish in the 1970s.

But by the very late 1970s, MLB team T-shirts in kids and adult sizes did start to become available, though you'd be hard pressed to find anything but those for the home team in any city.

Mid-1970s through about 1982: The Early Years

In a prior chapter I showed photos of crowds at the ballpark in decades before the 1990s, and notable is the complete absence of team-logoed apparel. As a high school kid in the late 1970s, I longed for T-shirts for some far away MLB teams like the Dodgers and the A's, but not even these were not available—unless one had the good fortune to go to Los Angeles and Oakland and visit the stadium gift shops.

But this started changing during the mid-1970s. Some teams began wearing brightly colored warm-up jerseys as a part of their pregame warm-ups. The White Sox were surely the first in 1972, and the Padres had bright yellow BP jerseys by 1975. While team uniforms were usually white or gray, the "Batting Practice" tops (as they came to be called) were usually made of colorful fabric in the team's primary hue and lettered with white or other team colors outlined in white.

Avid young fans (like me) began asking where these jerseys could be purchased, and so teams began making them available in limited quantities though specialty retailers so that crazies (like your author) could buy one to wear it to the game. They were not cheap—at $29.99 unlettered on the back in 1978 is $113 in 2015 money! But I bought one, and proudly wore it. Again, it was a conversation topic among my friends… everyone wanted to know how I got it, and when they asked how much it was, eyebrows were raised. There were not going to be many casual buyers at that price!

Top: Pictured here is the first style BP Jersey worn by the Phillies in 1978. Notice the quaintness of the front team wordmark, looking like it was drawn freehand from someone's memory. The numbers on the back are "stock" Varsity style ones, not in the Phillies attractive special uniform font. These were purely utilitarian—designed to keep the players cool in warm-ups and allow them to put on clean, dry game jerseys for the start of the actual game. Middle: Pete Rose was an early advocate of BP jerseys and wore his any chance he got. Here are photos from the 1979 AllStar game in Seattle, showing Rose in his "BP," joking with the traditionally dressed Lou Brock and Carl Yastrzemski. Bottom: The 1979 National League All-Star squad. Notice only the Phillies players...and Dave Winfield of the Padres... wearing their brightly colored BP jerseys.

© GameWornGuides.com

The earliest BP jerseys up through the early 1980s were an odd lot; some were a sheer lightweight, solid knit fabric with twill lettering sewn on like the Phillies. Others, like the Minnesota Twins, Oakland A's, San Francisco Giants and Atlanta Braves, used mesh jerseys, some with silk-screened/ printed logos, lettering and numbers instead of sewn-on designs. At the other end of the spectrum, the Dodgers were among those who avoided BP jerseys, preferring always to be seen in game uniforms, a custom they followed until 1995 when they became the last team in MLB to adopt a team batting jersey.

This page: A collection of the earliest MLB Batting Practice jerseys, all from 1982 and before. Note that many have screened-on lettering

© GameWornGuides.com

1983-1985 : Spreading to all teams, and used for the first time by some in Spring Training

By the mid-1980s, most teams had adopted wearing pregame Batting Practice warm-up jerseys, and some clubs began to use the team BP jersey as a Spring Training game uniform. However most still continued to wear the prior year's game uniforms during Spring Training games.

Batting jerseys of the 1980s are usually made of a mesh, polyester fabric. However, some teams (the A's, Braves, and Phillies among them) wore BP jerseys made of a thinner-than-usual solid fabric. But now, all ornamentation (lettering front and back) was sewn-on tackle twill and not screen-printed.

Even if the team's game jerseys featured player names on back, or had a special type font for numbers, batting jerseys often used different, plain (Varsity or Block) numbers (80s Phillies and Mariners for instance). 1980s BP jerseys rarely had player names on back or displayed any patches on the sleeves. Frankly, all of this made it much easier to re-use these jerseys from year to year without needing to alter them. During this time, the teams' *official batting practice jersey* remained a limited edition and rather expensive fan souvenir. They were definitely not widely available and only die-hards bought them.

Teams were free to order from the vendor of their choice, but no manufacturer brands could be visible on the garments, prior to a rule change in 1986.

An array of Batting Practice jerseys from about 1983-1985. Many fans (including your author) were introduced to these through photos on baseball cards, since many teams had taken to wearing these exclusively in Spring Training where most card photos are taken. I recall wondering if some teams had new uniforms that I hadn't heard about!

© GameWornGuides.com

Alternate "Zip-Neck" Warmup jerseys

Beginning around 1983 some teams also used an alternate style of batting jersey they sometimes issued to players. It is of a pullover design with a short zipper at the neck. They were somewhat of a cross between a jacket and a jersey. Early examples were made by Roman Sport, Majestic, Starter and Sand Knit.

They are made with a jacket-type ribbed and striped knit collar and sleeves, with either a plain or ribbed elastic banded bottom The first generation was a sort of nylon twill material, then in the late 80s or early 90s they were generally made of mesh fabric. A few teams, like the White Sox and Padres, seemed to prefer this style and used it as a stand-issue warm-up. Teams could letter the backs with player names and numbers, or leave them blank like jackets.

A few teams kept using this style into the mid 1990s, but they always seemed impractical to me. Short-waisted with stretch knit trim at the waist, they would ride up and stay up whenever the wearer raised his arms, like, well—baseball players do.

Majestic branded theirs *The Gamewarmer* and briefly offered them available for retail sale. They retailed for about $70 and were almost impossible to find in stores. Never popular, they scream "1980s" and today they can be found occasionally on auction sites for fairly low prices.

While nearly every team used this style at one point or another, very few used it as their main BP jersey; the White Sox being a notable exception as they preferred these. Teams could number/letter them on back, or not, as they wished. Many found these uncomfortable to wear. I suspect they were designed more to "look good" than to be comfortable, a bad combination for active sportswear.

© GameWornGuides.com

1986-1991 - Visible Branding, and BP Jerseys become the de facto Spring Training Uniform

By around 1986, things started to change, and this became immediately apparent to anyone who collected baseball cards! Now, nearly all teams were wearing these warm-ups exclusively in Spring Training, and so all the baseball cards, with photos which were usually taken in the spring, began to picture all players wearing these instead brightly colored jerseys instead of regular team uniforms.

By the late 80s, some teams had gotten fancier with their batting practice jerseys, including creating different home and road versions, adding names on the backs and sewing the regular uniform's special patches on the sleeves if they had one. Most of these BP jerseys were tight-fitting nylon mesh jerseys with elasticized knit sleeve ends and knit V-Necks.

Not surprisingly, it was around this time that teams increased marketing their BP jerseys to the public to wear as trendy sportswear. Visible manufacturer branding was allowed on MLB jerseys for the first time in 1986, and Rawlings and Majestic had the contract 1986 through 1991, but BPs were also made by other companies (like Sand Knit) who contractually could not display their brand marks.

The fact that these shirts were colorful, lightweight, less costly, sported fancy logos and could be worn minus the numbers and names made them attractive sellers. But they were really still "specialty" items, meaning they were comparatively expensive and intended for a more elite audience of fans than would-be buyers of team t-shirts. They started to become available at more stores, but were still limited to high-end sporting goods shops or team shops in big cities. And while game jerseys were usually numerical-measurement sized (size 42,44, etc.) BP Jerseys were usually sized as Small, Medium, Large and X-Large like t-shirts were.

© GameWornGuides.com

There are many ways that teams' batting practice jerseys are different from one another: some have numbers on front, some on back only. Some have team patches on the sleeves while others do not. Some use player names on back, while most do not. Manufacturers' "Jock Tags" are sometimes sewn on the outside and sometimes are hidden inside the shirt tail. Some are team tagged with player names, numbers or with the year of issue, but most are not.

But let's look some of the similar elements of this class of BP Jerseys: 99% are of mesh construction, and sewn on twill lettering has become the norm. If made by Majestic or Rawlings (only), they have the maker's brand name embroidered on the sleeve for all to see—a first. They are all colorful, with the jersey body being one of the team's main colors; there are very few whites or grays to be found (though there are a few). The design of the jersey is very much "up to the team"—there is no dictated method of construction or trim. They are sold as Small, Medium, Large or Extra Large, they are not numerically sized, and to our knowledge, they were not individually tailored for players (of, if they were, tailoring is not noted on any special tagging).

© GameWornGuides.com

1992-2002 The Diamond Collection / Authentic Collection (Majestic and Russell, shared)

This is when the real marketing began, as full lines of brightly colored BP jerseys were released and tagged on the tail as “Official Diamond Collection” and then “Authentic Collection” by Russell and Majestic. They began to appear in sporting goods stores and through MLB team catalogs everywhere as affordable on-field authentic fan gear. They were less expensive, more readily available, more widely distributed and much more wearable as sportswear by fans than heavy game jerseys in their plain whites and grays. While most BP jerseys were still made of a standard mesh, some were Micro mesh (also known as pinpoint mesh), and very few others were made of a sort of shiny, sheer, solid fabric.

Teams again had much latitude in design, though all were pullover V-Necks. Some have sleeve end and collar trim, some do not. More BP jerseys with player name on back appear, and some of these used mesh nameplates. Russell embroiders its capital “R” on the right sleeve; usually in white; while Majestic embroiders its triple-peaks logo, usually with one of the peaks color-keyed to one of the team’s colors. Some teams team-tag, but most do not.

For 2000, all jerseys in the Diamond Collection, including the BP jerseys, get a new MLB Silhouetted Batter patch embroidered in team-select colors sewn to the back of the neck.

Now, when attending games, it was starting to become obvious that fans were eagerly buying and wearing these team-authentic garments. Surveying the seats at a MLB game began to reveal a sea of team colors.

© GameWornGuides.com

Here are more examples of 1992-2002 Diamond Collection/ Authentic Collection BPs. On this page, *(Top Left)* 1998 Pirates BP displays the team patch on the left sleeve. Some teams use them, some do not. (*Top Right*) 2000 Toronto Blue Jays jersey exhibits the first appearance of the MLB "Silhouetted Batter" logo, which was added to all teams' Authentic Collection jerseys, including the BP jerseys, that year. (*Middle Row*) Rangers jersey style is button-front. During this period, teams had the freedom to decide what style of jersey they wanted to wear.

(Bottom row) Notice the special tailoring tag under the neck tag on Derek Bell's jersey, one that I picked up from the Astros at a team sale. Heavyweight mesh jersey has name on a nameplate. I can guess why this one went into the "reject bin": Bell specified a jersey with a 3" longer body, and this one was made instead with 3" longer sleeves!

Even when not team year tagged, the style of the maker's jock tag and other characteristics, like whether player name on back is used, can help pinpoint the year each one was made. See the sections on team tagging and the individual teams' detail pages for more information.

© GameWornGuides.com

Reading the Style: Majestic 1990s-2002 Batting Practice Jersey, Mesh Fabric

- Tough, heavyweight, fade resistant nylon mesh fabric.
- All teams have their own style of button front or pullover, no standardization among teams.
- All one-color design, no side panels or different fabric inserts
- Trim as defined by each team, including style of sleeve ends and neck opening.
- All lettering sewn on
- Team issue style are numerically sized, (44, 48) with tiny size flag under jock tag. Buttons have 4 holes. Retail jerseys are often sized as SM, MED, LG, etc. Buttons may have 2 holes.
- MLB Silhouetted batter neck patch (starting 2000) is a separately embroidered patch and sewn on.
- Embroidered Majestic logo on sleeve. (Retail models may have decal instead.)
- Majestic tail tag is a sewn, embroidered cloth patch.
  In the case of the Phillies, wordmark on retail sale jerseys is often layered twill and not chain stitched. Buttons may have two holes instead of four. The

Majestic sleeve logo may be iron-on instead of embroidered.

Majestic Batting Practice Jersey Tagging, Mid-1970s-2002*

We are devoting some space here to show Majestic Batting Practice jersey tagging from the beginning of their appearance in MLB through 2002. During this period, Majestic did not make game jerseys, only the warm-ups. So while the BP tagging used by Russell, Rawlings, Wilson and Sand Knit on their BP Jerseys is covered in detail in the "Game Jersey Tagging" chapter, we will cover the Majestic tagging here.

Late 1970s through 1985

This tag on top is used on the shirt tail outside front from 1978 or so through about 1985. It has the text "Bangor PA" on it.

The tag below is generally sewn in the garment's neck.

On game worn jerseys during this period there is no visible Majestic logo tag on the sleeve as it was not permitted by MLB rules.

1986 through 1992

This is the second Majestic style shirt tail tag, used from about 1986 through 1993. "Bangor PA" disappears from the tag and for the first time, the mountain logo appears.

Majestic Retail Sale BP Jerseys, Late 1980s through 1992

This heat-applied logo is found on many store-bought Majestic warm up jerseys. This one is typical, where the rubberized letters start falling off after repeated washings.

1986-1992 continued

(Top) This is the accompanying tag found sewn in the jersey neck.

(Middle 3 photos) For game worn jerseys during this period, Majestic displays its small embroidered script logo on the sleeve end for some teams; others have blank sleeves. I am certain that this was dictated by team endorsement contracts and was no accident.

(Bottom) Retail Majestic BP jerseys during this period have a similar logo on the sleeve, and it is often a heat transferred appliqué instead of embroidery. This decal is also on the front slash pockets of the mid-80s alternate BP jerseys featured throughout this Guide.

* Russell, Rawlings and Sand Knit all tag their BP jerseys similarly to the game jerseys made in the same year, therefore, see the section of this book on Game Jersey tagging for that information; it will not be repeated here.

© GameWornGuides.com

1992-1999: “Diamond Collection”

2000-2002: “Authentic Collection”

In 1992, the “Diamond Collection” tag appears for the very first time, distinctly branding team on-field gear differently from fan sportswear Majestic has the on-field contract for some, but not all, MLB teams. Russell has the contract to make all retail versions of BPs to be sold in specialty stores from about 1992-1996.

After 1996, if Majestic makes the team’s on field BP jerseys, they probably also make the retail-sale ones as well.

By 1996, regardless if the BP jersey is made by Majestic or Russell, the Diamond Collection logo on the left side of the 2-part tag is always the same, and the garment’s manufacturer puts its logo at the right. Majestic makes relatively few teams’ BP jerseys during this time, the majority are made by Russell. But Majestic team spec apparel is nearly always “sized” (like 48, 52), while retail sale items are sold as SM/MED/LG/XL. Russell “sizes” all of it merchandise with numeric sizes.

Majestic-made team issued jerseys of this period are often noticeably heavier in cloth construction and seem better made, with embroidered Majestic triple-peaks sleeve logos. Majestic retail sale spec BP jerseys versions are often noticeably thinner and cheaper and have heat-pressed decal logos on the sleeves.

By comparison, Russell retail-sale BPs feel like they are made of the same weight fabric as game used versions, and the Russell sleeve R is always embroidered, regardless if made for the pros or the store.

1992 through 1995

This style tag is sewn in the collar of some BP jerseys in1992

This tag is sewn on either the outside tail of BP jerseys or inside the collar starting in 1993 and into 1994

This slightly wider collar tag is used 1994-1995.

This shirt tail tag is from a 1992 – 1994 style game worn Orioles jersey

Around 1992 the embroidered Majestic “mountain” logo make its appearance on the end of the left sleeve. The logo is custom colored to compliment the team colors of the jersey it adorns. Above, from left to right these logos are from the sleeves of mid-1990s game worn Brewers, Mets, Orioles and Pirates BP jerseys

1996 through 1999

(Below) Team issued style embroidered sleeve logo at left, store bought heat pressed decal at right.

2000 through 2002

(Below) Team issued style embroidered sleeve logo at left, store bought heat pressed decal at right.

© GameWornGuides.com

2003-2006 Majestic standardizes all BP jerseys and introduces the first "Tech Fabric"

For 2003, Majestic wins the entire BP jersey contract and becomes the sole maker for both on-field and in store. And, for the first time, MLB releases a standard line of similarly constructed and redesigned/standardized batting jerseys for all MLB teams at once. These new BP jerseys were made of an early moisture wicking fabric that we have discussed previously in the section on fabrics, one that is claimed to help draw moisture away from the body. It is the first iteration of Majestic's Cool-Base fabric design.

The construction of these jerseys is all the same, team to team. They incorporate underarm/sleeve gussets that are a different type of fabric and generally (though not always) a different color than the rest of the jersey. All team wordmarks and player name and number lettering are sewn on, layered tackle twill, just like game jerseys.

However, the new fabric is extremely susceptible to pulls, piling and fading in the sun. Just brushing one's fingernails across the jersey can cause significant and noticeable damage. With sun-faded sleeves often further discolored from washing, many game worn jerseys of this style look very ratty as a result. Dealers who specialized in game worn merchandise reported that buyers were often unhappy with their purchases of this game worn gear, and it was not uncommon to see dealers advertising the rough condition of the garments, albeit in often glowing terms of "jersey displays well with outstanding heavy game use," when they might have better said, "jersey has excessive fabric pulls, piling and fading, and you really wouldn't want to wear it anyplace."

Top row: Braves jersey is an example that shows the contrasting color sleeve bands. All jerseys in this style are constructed the same way, but some, like the Reds' black road and red home red on the bottom row, do not use a contrasting color. (Middle row, left) A close-up of a game-worn green A's jersey shows the fabric damage that is typical on these after even moderate use. All lettering is sewn tackle twill, and nameplates are used at team option.

© GameWornGuides.com

Reading the Style: Majestic 2003-2006 Batting Practice Jersey, First Generation Tech Fabric

- Moisture wicking tech fabric, soft and comfortable but is easily damaged by fabric pulls and fades in use.
- Button-up front.
- Underarm banding panels are a different, more breathable fabric and may be a contrasting color (here, they are simply red).
- Sewn-in piping, usually in a contrasting color across sleeve tops from end of sleeve to neck opening.
- All lettering sewn on.
- Team issued jerseys are numerically sized, (44, 48) with tiny size flag tag on lower left side seam. Buttons have 4 holes. Retail jerseys are sized as SM, MED, LG, etc. Buttons may have 2 holes.
- MLB Silhouetted batter neck patch is a separately embroidered patch and sewn on.
- Embroidered Majestic logo on sleeve.
- Majestic tail tag is rubberized decal.

In the case of the Phillies, the wordmark on retail jerseys is often layered twill and not chain stitched. Buttons may have two holes instead of four. Majestic sleeve logo may be iron-on instead of embroidered.

© GameWornGuides.com

2007-2010 - Majestic Cool Base Pullovers

2007 brings another complete and simultaneous redesign of the batting practice jerseys for every team. They are all pullovers with one button at the neck. The new jerseys are made of a silky knit fabric Majestic also dubs Cool Base, though they are lighter weight than the game jerseys introduced for 2006 that also carry that fabric name. The new jerseys look good on TV, and are very lightweight so as to be comfortable to wear in very hot weather.

A common feature of all the new jerseys is the stretchy side panels. The panels can be solid color contrasting with the rest of the jersey, or a two-tone contrasting panel with the two colors joining in a sort of a V a few inches underneath the armpits. As seen in the photos on this page, the configuration of the side panels allows them to be completely body colored (like the Angels), only slightly highlighted with a second, lighter color that goes halfway up the side (like the Yankees), fully highlighted with a second color from top to bottom (like the Phillies and Royals), or highlighted with two additional different colors (like the Pirates and Reds). Some teams specify different home and road versions of the jerseys. The Phillies opt for a road blue BP for the first time in their history, while teams like the Yankees, Blue Jays and Padres have road versions that have the side panel color keyed to their road pants.

These are far more durable and far less susceptible to pulls and fabric damage, but they still have problems. Early jerseys of this style suffer from extreme sun fading, especially red-colored ones. Changes are made to the fabric, and this issue is improved upon somewhat in 2008 and later. The MLB silhouetted batter is embroidered on a small patch that is then sewn back of the neck.

Also new, all team logos and many player names/numbers are newly applied by a method called Electrotransfer in a material called Lextra, which is a type of heat-transfered, dimensional flocked graphics. The appliqués appear to have depth through a mix of textures and metallic finishes. Some fans gripe about “cheap iron on lettering,” and teams in spring training find that they can’t use their normal outlets and methods to have jerseys lettered on the spot, needing to depend on Majestic to ship them already lettered.

The jock tag for 2007-2010 is a rubberized appliqué designating the jersey as a part of the Authentic Collection. When the fakes from the far east began to appear, most could be instantly identified because they lacked this high-tech tag, usually featuring a sewn on tag that looked similar but was immediately recognizable as fake.

Side panels had two individual segments that could be varied by team to change the look of the jersey. The Angels chose solid red for no contrast; Yankees display one panel jersey color, one panel contrasting; Phillies have full-side contrasting color, and Pirates, Mets and Reds are among a small group who display side panels in two contrasting colors for a tri-color jersey look.

Reading the Style: Majestic 2007-2010 Batting Practice Jersey, Second Generation Tech Fabric

- Moisture wicking tech fabric, very smooth and sheer, does not damage easily with fabric pulls, but very susceptible to fabric fading from the sun in early versions.
- One-button, pull-over design for all teams.
- Side panels are mesh/spandex and may be the same color as the jersey body, but can also have as many as two different contrasting colors.
- No sewn-on trim or piping.
- All lettering, front and back, is heat-pressed appliqués.
- Team issued style are numerically sized, (44, 48) with tiny size flag tag on lower left side seam. Retail jerseys are sized as SM, MED, LG, etc.
- MLB Silhouetted batter neck patch is a separately embroidered patch and sewn on.
- Heat-applied Majestic logo on sleeve for all styles, team issued and retail.
- Majestic tail tag is rubberized decal

© GameWornGuides.com

2011-2013 Cool Base Button Front Jerseys

All teams change simultaneously to new button-front Cool Base jerseys; and the side stripe shape configurations and color combinations change as well. The Lextra/heat transfer front wordmarks and flocked “iron on” player names and numbers are abandoned as teams return to twill lettering once again. Side panels can be either body-colored or one contrasting color; two-toned side panels with different colors from the jersey body are no longer used (with the exception of the Astros, who have a special, multi-striped “Tequila Sunrise” rainbow side panel, reminiscent of their uniforms of the late 1970s and 1980s).

New for 2011 is a top yoke (the panel across the shoulders above the back numbers and player name) that can be a contrasting color like the side panels. Some teams like the Orioles, Indians and Mariners embrace this flashy new feature.

The MLB silhouetted batter is sewn to the back of the neck (not direct embroidered) in the team’s colors. Most knock-off fakes we have seen have the Silhouetted Batter direct embroidered onto the garment. The “jock tag” on the bottom of the front left shirt tail is a new style for

2011. It is cloth and sewn on, with a different tag for every team, displaying the “Authentic Collection” logo, incorporating the team logo, team colors, and including a “washable security hologram” as Majestic calls it in their catalogs and advertising.

It seems very likely that rather than trying to chase the Asian counterfeiters, Majestic has decided that changing the jerseys every few years and creating harder-to-duplicate tagging will challenge them to hit a moving target.

Majestic begins a cycle of threeyear refreshes of the all MLB BP jerseys. All are button fronts.

Note examples of all three styles available to the teams. Mets shows an example of same-color side panels. Brewers shows single-color contrasting side panels, and Tigers shows contrasting color back yoke and side panels as well. The two-tone side panel option disappears. All teams have custom logos and color-keyed jock tags, certainly to help thwart the counterfeiters.

© GameWornGuides.com

Reading the Style: Majestic 2011-2013 Batting Practice Jersey, Third Generation Tech Fabric

- Moisture wicking tech fabric, soft and comfortable, seems less affected by fading or pulls.
- Full button-up front.
- Underarm panels are a mesh Spandex that run the length of the side of the jersey, including under the sleeves. They may be the same color as the jersey body or a single contrasting color.
- Ends of sleeves are usually trimmed in the same color as the side panels.
- All back lettering is sewn on, teams switch back to twill front wordmarks.
- Team issued style is numerically sized, (44, 48) with tiny size flag tag on lower left side seam under “Cool Base” flag tag. Retail jerseys are sized as SM, MED, LG, etc.
- MLB Silhouetted batter neck patch is a separately embroidered patch and sewn on.
- Heat applied Majestic logo on sleeve.
- Majestic tail tag is embroidered specially for each team, and has a small hologram.

© GameWornGuides.com

2014-2016 Cool Base Button Fronts

Majestic does a complete refresh of all teams' BP jerseys and says that they will continue to change team BP jerseys in three-year cycles, promising that the newfor-2014 styles will exist unchanged through the 2016 season.

The jerseys remain a button-front design, but the side panels change shape again. Now, instead of going all the way to the jersey's bottom hem, the contrasting color side panels still cover the under-sleeve but now stop mid-waist, with the jersey body color picking up and continuing to the bottom hem (again, with the exception of the Houston Astros, whose jersey retains its rainbow side panel from under the sleeve all the way to the bottom hem).

Every team has the opportunity to change their jersey front design, and some do, while some teams jerseys hardly change design at all from the prior version. A few teams change from a full front wordmark to a smaller left chest one (Brewers, Royals, Marlins, Rockies and Indians), and the Pirates switch in the other direction—from a left-chest design to a full team name across the front

Neck opening and sleeve ends are newly capped with stretchy knit trim, in the same color as the jersey, but with a single, narrow contrasting color band running through the middle. Only the Blue Jays omit a contrasting color band, as their knit trim is solid blue.

The option of having the back yoke panel a contrasting color goes away, but an even more flashy option emerges. Now the back of the jersey and the front of the jersey can be contrasting colors! The Indians, Braves, Nationals, Rays and Rockies all opt for this dual-color design. Some teams opt for home and away versions; others who previously used this option switch back to a single jersey. The Brewers and White Sox both have alternate "nostalgia" themed BP jerseys.

The front jock tag changes in 2014, again with a different one tag for each team, incorporating team logos and colors, both to look attractive on the store rack and again certainly to make counterfeiting more difficult. The MLB silhouetted batter is on a gel-coated vinyl tag adhered to the back of the neck (not direct embroidered) in the team's colors. Jerseys are lettered in "new lightweight stretch tackle twill," as defined in Majestic's catalog. The Majestic sleeve "M" changes to a new style that is reflected on the neck and jock tag as well.

The 2014 all-team refresh allowed for a unique new feature, in that the front and back of the garment could be different colors. Several teams used the redesign cycle to change the style and placement of the wordmark on their jerseys. Again, every team receives their own custom jock tag on the front tail, probably done more to foil the counterfeiters than any other reason. Tigers, Astros team-tag their BP jerseys, but many teams do not.

© GameWornGuides.com

Reading the Style: Majestic 2014-2016 Batting Practice Jersey, Ribbed Mesh Tech Fabric

- Moisture wicking tech fabric that has a vertical ribbed pattern, while back of jersey is a mesh pattern.
- Full button-up front.
- Full side panels are a mesh Spandex that are usually in a contrasting color on upper part of the side, including under the sleeves.
- Ends of sleeves and neck opening have stretchy knit trim usually with a contrasting color strip in the middle. All lettering is sewn on.
- All models are numerically sized, (44, 48) with a heat pressed tag inside the jersey neck.
- MLB Silhouetted batter neck patch is thick plastic emblem, same as on team jackets.
- Heat applied “new-look” Majestic logo on sleeve. Majestic neck tag as well.
- Majestic tail tag is an embroidered patch, custom for each team, with no hologram.

2017-2019 Batting Practice Jerseys

2017 represents a major rethinking in the form and function of MLB Batting Practice jerseys. As we have covered in this space, the team BP had become the game jersey of choice for most teams in Spring Training. That all changed in 2016 when Majestic and MLB introduced a line of Spring Training game jerseys that were based on the new-for-2016 Flex Base template.

The 2017 Batting Practice jerseys are somewhat of a departure for this style of garment, dating back some 40 years from its original purpose. Introduced in the mid-1970s and adopted by most teams in the very early 1980s, these (mostly) mesh jerseys were designed to be lightweight and colorful, worn by players in pregame warmups. This kept players cool, and their uniforms clean and presentable for the start of the actual game.

Batting Practice jerseys became a favorite fan item because of their bright colors and lower price to purchase. General fan availability of BP jerseys preceded the ability of actual game-style jerseys for most teams by several years.

But things began to change on the field. More and more often, players would take batting practice in sweatshirts or the garment known as a “Cage Jacket”—a loose fitting, team-logoed nylon garment with ¾ sleeves and no player name or number on them. Perhaps the players preferred them, but they never caught on with fans as a desirable item to own. Fans also complained that they could not tell the players apart on the field when they were wearing these jackets, which had no names or numbers.

The images on this page show several examples of sleeve numbers done in the team style.

The Nationals BP jersey uses a very attractive alternate logo that has been floating around on prototypes for years. Most teams use their secondary logo/cap logo sewn to the left chest. Bottom left: notice how the jerseys are meant to be worn untucked, satisfying the players.

© GameWornGuides.com

So, for 2017, ready for the next three-year cycle of BP jersey design, Majestic introduced a new line of Cool Base batting practice jerseys for every team that featured the following characteristics:

- Most noticeably, they are a ¾ sleeve design that some players seem to like, yet others hate, extending to just below the elbow.
- They are colorful, all with underarm inserts in a contrasting color, some teams with the jersey back in that same contrasting color as well.
- They are meant to be worn loose and untucked, perhaps one of the greatest player criticisms of the earlier BP style, that were tucked in like game jerseys.
- All have a very short zipper at the neck
- Many teams use a left chest logo on these jerseys instead of a full chest wordmark, commonly the same logo that you'd find on the team cap.
- Player numbers are sewn to the left sleeve only for most teams, in the same general font and colors style as you'd find on team game jersey. The Majestic logo is applied to the sleeve, just below the numbers, midway up the sleeve.
- The backs are blank for most teams: no numbers, no player names. The Silhouetted Batter logo is sewn to the back of the collar, in team-specific colors.
- They have a new style Cool Base locker tag on the left front tail, always visible since these are meant to be worn untucked.
- Most teams have only one style, but a few (Red Sox, Tigers, Yankees, White Sox, Brewers) have a second alternate or road version as well.
- These jerseys have not been popular across the board. Some teams used them only briefly, and teams that have used them every year have seen players hack the sleeves off or choose to wear something else.

Notable: Altered, custom shortened sleeves on Mets

#53 above. Royals are wearing memorial patch on the BP sleeve. Bottom row: interesting to see that the team wordmark on

the BP jersey front is in regular, layered twill (vs. the new for 2016 "lightweight twill" explained in "The basics" chapter). Player sleeve number is new lightweight, kiss-cut twill.

© GameWornGuides.com

2019 Batting Practice Hooded Pullover

Starting in 2019, many teams and players transition away from the 3/4 sleeve, pullover BP jerseys introduced in 2017. Team insiders report that many players despised the style - specifically the longer sleeves - and opted to cut their sleeves shorter or have them tailored to be shorter. Over time, it seems many teams just abandoned the style entirely.

The 2019 entry is less a jersey and more of a sweatshirt. Officially called the "Batting Practice Waffle Quarter-Zip Pullover Jacket" by Majestic, it is intended as a cooler weather warmup shirt, though it features a "tear-away, mid-sleeve seam...for optimal customization." The seam allows the sleeves to be removed - permanently - but easily and cleanly vs. the rough hack jobs some players used on the 3/4 sleeve tops. Photos show many players exercising that option, as well as removing the hood somewhat less cleanly.

The right sleeve features the MLB logo with the Majestic logo on the left, while the front left chest has an embroidered team logo patch, balanced by the player number (in team fonts and colors) on the right chest in kiss-cut twill. These are intended to be worn untucked, like the 3/4 sleeve jerseys, but do not have any exterior tagging. Instead, the Majestic tag is inside the neck.

Despite the hood being a "selling feature" of these pullovers, some players still took the scissors to them and removed them, as seen at left. One presumes the hood isn't often desirable during summertime athletic pursuits.

2020 Batting Practice One-Button Pullover

For Nike's first year as MLB uniform supplier, the company introduces a new pregame top they call the "Short Sleeve Hot Pullover Jacket." Normally, we do not include jackets or other similar items here, but because some teams offer this to their players with uniform numbers on the sleeves, we are documenting it as a BP variant this edition.

Similar to a traditional cage jacket, this pullover is in a lightweight fabric, with a one-snap placket at the neck, and features a drawstring at the elastic waist to tighten the bottom (it seems unlikely any players would use this feature), and a full-width pocket on front that has zippers at either side. In terms of styling, so far, it seems that most teams have only one color, though at least the Yankees and Red Sox have two colors available, though it is unclear if both will be used in season. The team logo is called a "woven fabric applique." It is difficult to tell if the sleeve numbers are sewn-on or a similar application to the logos. For most teams, each sleeve-end is ringed with a contrasting color, as is the back half of the collar. The Angels seem to be the exception, using red throughout, a tradition they have maintained when adopting other BP templates.

While most teams have contrasting colors on sleeves and neck panels, the Angels' pullover (far left) is all red. Teams varied on if they added sleeve numbers or had players wear them blank.

2020 Batting Practice One-Button Pullover continued

Here are some early looks at what passes for a BP “jersey” in 2020 - the Nike Short Sleeve Hot Pullover Jacket. This is a retail version of the item, and there is no player number on the sleeve, though it appears that the Red Sox did not opt for this customization for onfield use in 2020.

© GameWornGuides.com

Phasing Out: Batting Practice Jerseys after 2020

As noted earlier, BP jerseys have been moving away from the typical concept of "jerseys" since 2017. Since pro players were more likely to use other items of clothing in BP, such as t-shirts and sweatshirts, the use of traditionally styled jerseys in BP waned over the years. Further, with the vast number of team-issued clothing choices each player had for pregame warmups, the idea of a "uniform" for BP fell by the wayside.

Though Majestic and Nike had created items similar to t-shirts and sweatshirts meant for BP (and retail sales) over the late 2010s, and even included player numbers on some of them, these items were not widely accepted by players, and likely, not terribly successful at retail. Put simply, there's no uniformity to BP clothing anymore, and what's available has strayed further from being defined as a jersey for many years.

As of the 10th edition in 2025, we will no longer track the different items that pass for "BP jerseys" in these pages.

Unless MLB and teams come back to a more traditional approach, using some form of jersey for pregame warmups, the lack of uniformity and new approach to materials and cut for pregame clothing means that BP jerseys are effectively a thing of the past.

2016 Spring Training Jerseys

For the first time in 2016, MLB announces special Spring Training jerseys for all teams. These colorful Majestic Flex Base jerseys represented a new exclusive marketing opportunity for MLB (which is the nice way of saying new merchandise to sell to an avid fan base).

These jerseys come in four basic "flavors," all with special touches:

1. Use of one of the team's existing alternate jerseys. (Mets)
2. Creating a new alternate jersey that was introduced for that season. (Phillies)
3. Creating a jersey with a look similar to the team's existing 2016 Batting Practice jersey(s), but using the new Flex Base template. (Yankees)
4. A new jersey, created especially for Spring Training use and not worn during the regular season (Rays)

The Spring Training jerseys are all made with new, 2016 Flex Base construction and with the Flex Base heat-pressed logo tagging on the left front tail, a thick rubberized and color coded Silhouetted Batter logo applied the back of the neck; special "Air Belt" shirttail and ventilated side panels, as well as mesh ventilation panels inside the collar and placket.

© GameWornGuides.com

They also have two other features that make them unique:

- A large, rubber-like right sleeve patch shaped like an Interstate Highway sign incorporating the silhouetted batter, the year 2016 and with the bold letters "FL" or "AZ" in white, depending on which location that team has its Spring Training camp. These style appliqués had been referred to as ChromaFlex through 2015, and for 2016 are called EmbossTech.
- The main color of player numbers and player NOB in special, color-keyed patterned twill with Spring Training symbols and "AZ – FL Spring Training 2016" sublimated into the fabric. This twill is licensed only to MLB/Majestic and has not been made available for purchase to any jersey customizers not affiliated with the club's official outfitters. In short, if you have a blank one and want it customized after the fact, you are out of luck.

Most of these player jerseys were sold through team stores and the MLB Auctions website at the conclusion of Spring Training. New, unworn ones were available during 2016 for purchase through MLB.com and team stores, both customized with star player names/ numbers (using the proper patterned twill) or as blank jerseys without name/ number.

© GameWornGuides.com

2017 Spring Training Jerseys

Spring Training jerseys in 2017 were nearly the same for all teams as they were in 2016, except for a few details. For 2017, a new twill pattern is used (shown here as the page background) with "2017" sublimated into the design.

- All teams use much simpler, one-color, white patterned twill for player numbers (and player names, if used).
- Slightly revised sleeve patches are used, and while still the Interstate Highway shield sign, the Florida patch background is changed to light blue, the Arizona patch's is changed to copper.

I can only guess that the change to the back lettering was made for the sake of simplicity and reducing cost. As colorful as the 2016 version of the jerseys were, they had to have been more complicated to produce in volume for Majestic. Consider:

1. The need to create and stock the special patterned twill in many colors to match the top color of all the different MLB clubs. They needed to make it in red, blue, white, yellow and black and keep sufficient quantities of all of this on hand.
2. Most teams have at least two-color names and numbers, many have three-color or more. Simplifying to one-color white lettering must make life much easier.

Notable; the Mets are one of a small handful of teams with two-color front numbers and one color back numbers, which some think looks odd. The Tigers' Spring Training jersey uses a different "D" on the front than game jerseys, using the style as worn on the team's caps. The Cardinals are one of the few teams that uses the patterned Spring Training twill on its front numbers as well.

© GameWornGuides.com

3. The very large number of players and coaches there are in Spring Training. We are not talking 40-man roster here; every person invited to Spring Training needs a jersey. That means needing literally hundreds of jerseys per team. Last-minute invitees need jerseys that Majestic likely must turn around overnight (at worst). Sewing up the new style is many times easier than the old ones.

Some readers have commented that they think the new style looks cheap, especially in the cases of teams that have multi-colored front numbers but now must use plain white back numbers/ names. But I am sure the decision on the part of Majestic/MLB was well thought-out and was strictly a financial one. Player-lettered Spring Training jerseys are not a popular retail sale item, and all the team issued and game worn Spring Training jerseys are sold off at the end of the spring; I suspect they will all find homes regardless of the compromised style of the back lettering.

Game action photos show the new 2017 sleeve shield patches and single-color white patterned numbers on back. On this page, items to note include the Red Sox (center row right) who utilize their regular season red home alternate jersey but with player names on back for Spring Training. NOB is not used during the regular season. The Marlins (center row left) have greatly simplified back numbers compared to their 3D, three-color regular season lettering. The Rays, (top row right) continue to use nameplates, one of only two teams in MLB to do so (the other is the Indians). (Bottom row left) The Blue Jays' attractive split number font is a casualty of the design standard, as the splits are eliminated for Spring Training.

© GameWornGuides.com

2018 Spring Training Jerseys

The 2018 version of Spring Training jerseys continues largely unchanged.

- The one-color player name and number twill returns for 2018 with “2018” and other designs printed on. All teams wear white twill again, except for the Giants (orange printed twill) and the Cubs (red printed twill).
- The Spring Training sleeve patches are updated to a home plate shaped design. The Florida patch’s background is blue, while the Arizona patch background is red.

The majority of teams again use their regular-season alternate jerseys as a base for Spring Training, while others have special jerseys for the spring, which are occasionally used as batting practice jerseys as well. The Royals also introduce new jerseys for Spring Training in 2018.

In 2018, the Royals (top left) with a new jersey in 2018, and the Rays (top right) are two of the teams that wear jerseys in Spring Training that are not one of their regular season alternates. The Giants (bottom left) and Cubs (bottom right) break 2017’s trend of all-white back lettering to adopt team colors - still with printed patterns - in 2018.

© GameWornGuides.com

2019 Spring Training Jerseys

Spring Training jerseys in 2019 change in small doses yet again. Gone, now, is the single-color printed twill for back lettering, replaced by the typical style and colors that teams wear on their alternate uniforms with no printed patterns at all. This means the return of multi-layer twill for most teams, all rendered here in lightweight, kiss-cut twill.

Once again, the majority of teams wear one (or in the Twins' case, two) of their regular season alternates, with the addition of the Spring Training patch. The patches are again updated, remaining in the shape of home plate, but reducing in complexity. The Florida teams wear a light blue and white "FLA" patch while Arizona teams get a deep red and white "ARZ."

The Marlins (top left), Angels (top center), Reds (top right), and Nationals (bottom right) all introduce new Spring Training jerseys for 2019, which they do not wear in-game during the regular season. The Marlins do wear theirs in batting practice without the Spring Training patch. The Phillies (bottom left) wear their red alternate for the spring, even though it was deleted from their regular season uniform rotation at the end of 2018. The return of team-colored back lettering looks much more elegant for some teams, like the Blue Jays and much less so for others, like the Diamondbacks (bottom center). Note, also, that the Blue Jays are one of a few teams that remove player names from the back of their regular season alternates for the spring, while others, like the Red Sox and Giants, add them.

© GameWornGuides.com

2020 Spring Training Jerseys

For the pandemic-shortened Spring Training in 2020, standard team back lettering remains while special Spring Training patches disappear, leaving many teams wearing the exact same alternate jersey in the spring as they wear in the regular season. The new year also brings the first look at Nike's version of MLB jerseys, which for now at least, are just the Majestic Flex Base template with Nike branding and tags.

Though a few teams have long worn their home jerseys for certain Spring Training games (Tigers and Yankees, for instance) the Brewers wear both their new home and alternate jerseys Spring Training workouts, giving fans a chance to enjoy the new styles.

For 2020, the Rangers (top left), Padres (top center), and Reds (top right) all have new Spring Training jerseys that are not intended for regular season use. The Reds jersey is their third Spring Training design in as many years. The Diamondbacks (bottom left) debut their new regular season red alternate in spring 2020, while the Brewers (bottom center and right) feature their new home and alternate jerseys during the spring.

© GameWornGuides.com

Phasing Out: Spring Training Jerseys after 2020

After their first season of manufacturing MLB jerseys in 2020, Nike begins to make its own mark across the league, as it has with other pro sports leagues in the past. One element that impacted Spring Training jerseys was Nike's drive to simplify the number of jerseys each team had to choose from. The so-called "4+1 rule" indicated that teams could have four jerseys in regular rotation plus their Nike City Connect style. This meant that unique jerseys that were used only for Spring Training began to be phased out in favor of using one or more standard team jerseys in the spring.

Some modifications were allowed, like the Red Sox using names on back in the spring but not in-season for their Red jerseys, or the opposite for the Blue Jays, who do not use NOBs in the spring. And some teams with fewer than four standard jerseys, like the Yankees and Tigers, started to count their previous Spring Training blue jerseys as alternates in the MLB Style Guide, even though they were only used in spring. As a result of Nike's involvement with MLB jerseys, Spring Training and BP jerseys were all but eliminated by the 2024 season. As such, we will no longer catalog them as separate jerseys after this edition of the guide.

Above: The Red Sox (left) use their regular home alternate in Spring Training, but add a name on back. The Tigers (center) and Yankees (right) each have only two regular season jerseys, so they are permitted to keep their blue Spring Training jerseys as "alternates," even though they are only used in spring.

Below: The Rangers eliminated their Spring Training-only jersey (left) after 2022, replacing it with their normal blue alternate (second from left) in spring 2023. The Mariners did the same with their light blue Spring Training jersey (second from right), which was replaced with their usual teal alternate (right) for spring 2023.

Oddball: 2012 (2014) BP Jersey Prototype

In the competitive world of on-field and retail athletic wear, manufacturers must always look ahead. As we have seen across the industry, teams and suppliers often work years in advance to design, prototype, and test new materials, construction, and branding. Here is one such example. It is a prototype, made in 2012 (one season after the last new design was unveiled), of a BP jersey style that was ultimately released in 2014. It carries typical prototype tagging reading "0380-MAJ-D1-1-2012" where "0380" is the style code for the jersey, "MAJ" is Majestic, "D1-1" indicates the first prototype, and "2012" the year. This style jersey was eventually used across MLB from 2014-2016, so there are some changes from the final here. Foremost among them is the jock tag, that includes the "Authentic Collection" branding, showing this was intended for on-field use, as does the 0380 team-spec code. The jock tag itself, however, is a completely different design than what the 2014-2016 jerseys had. It is likely that the "MAJ" on the prototype tag indicates that this was an internal sample made just for Majestic, and possibly MLB brass, before any teams got to see it. Usually this space would have a team code rather than the manufacturer name. Ultimately, all teams adopted this manufacturing template, and three teams' BP jerseys used this same color scheme, the Cardinals, the Twins road BP, and the Red Sox home BP.

Above, though all teams used this manufacturing template for 2014-2016 BP jerseys, the Cardinals, Twins, and Red Sox all used this exact same color scheme as well, including the red jersey back (using a back panel that matched the contrast color rather than the front of the jersey was also an option with this generation of BP jerseys.)

Chapter 9

Los Angeles Angels

Game Worn Guide to MLB Jerseys

1970-2025, Tenth Edition

William F. Henderson

Angels Uniform History Notes

- The Angels joined the American League as an expansion team in 1961, taking their name from the earlier Pacific Coast League team of the same name. Sharing the Los Angeles market with the Dodgers, the team has always had an uneasy peace with naming its home location. They were briefly known as the Los Angeles Angels, and even shared Dodger Stadium from 1962 to 1965.
- In 1966, the team moves out of Dodger Stadium and takes up residence in the L.A. suburb of Anaheim, and adopts the name “California Angels.” The State of California logo patch first appears on uniform sleeves in 1970.
- In the years between 1970 and 1988, the Angels used several uniform manufacturers (and probably several different shops) to do their lettering. Clues in dated photos show that uniforms were probably recycled from year to year, and little emphasis was placed on consistency.
- Even though the basic jersey design remains the same for 20 years (1973–1992), there are small year-to-year changes in such things as sleeve patches, fonts, and inclusion of player names on the back. I have highlighted them all on the pages that follow.
- The 1973–1981 period represents a seemingly arbitrary year-to-year application of putting player names on the back of jerseys. In 1973–1975, the team uses player NOBs only at home, eschews them entirely in 1976–1977 and 1979–1980, and uses them for both home and road in 1978—but oddly sewn in a straight line similar to the A’s of the era. In 1981, NOBs are finally made a permanent fixture, applied in vertically arch style until 1987, when they become radially arched.
- Some non-1978 jerseys feature names sewn straight across the back. This *can* be a sign of a name being added to a jersey that originally had none, and therefore had the numbers originally sewn too far up on the back to allow for a normal curve of the name.
- From the 1970s through the mid-1980s, the Angels frequently reused game jerseys across multiple seasons and player assignments, often stripping names and altering numbers. These practices, along with multiple uniform vendors lacking consistent tagging, created many year-to-year inconsistencies in lettering, fonts, and stitching patterns that make precise dating of surviving jerseys a challenge.
- By 1989, everything seems to smooth out. The Angels still switch vendors more frequently than some, but variations seen on the field are far fewer.
- 1993 ushers in a corporate atmosphere of professionalism. Uniforms are lettered consistently, and old uniforms seem to seldom be reissued to new players.
- In 1995, the team introduces its first ever alternate jersey, a solid navy blue button down that would undergo multiple iterations (four different unique styles) before being phased out after 2001.
- 1997 brings us the “Disney Era,” as the Walt Disney Company buys the Angels and remakes their image from top to bottom. Uniforms are colorful and nontraditional, to the chagrin of many in the baseball organization.
- 2002 brings a traditional redesign, including the use of “Anaheim” as a front wordmark (road jerseys) for the first time, and 2003 sees Disney’s sale of the team.
- The 2002–2025 period represents an incredibly stable and consistent period for the team’s overall look, augmented during the period by an alternate home vest and an alternate red jersey.
- In 2004, “Anaheim” is removed from road jerseys and replaced with “Angels." In 2005, the team changes names again, to become “The Los Angeles Angels of Anaheim” as part of a general rebranding strategy by new ownership to expand the team’s fan base.
- In 2011, their 50th Anniversary is recognized by making the halo gold on the “A” of all uniforms and BP jerseys for that year only.
- The Angels debuted their City Connect uniform in 2022 — a design inspired by Southern California beach culture. The jersey features a cream body with red and navy surf-style graphics, including a stylized “Angels” chest script and wave-themed sleeve stripes.
- In 2024, an alternate home nostalgia jersey is introduced based on the popular 1970s pullover style used frequently for Turn Back the Clock games, complete with McAuliffe-style number font. It is one of the first pullovers to use the new Nike VPE jersey template.
- The Angels’ uniform history reflects frequent transitions—whether in name, style, color palette, or ownership influence—yet across six decades, they have maintained certain signature elements like the haloed “A” and red as a primary color. Their wardrobe shifts often mirrored broader trends in MLB aesthetics, with more stability from 2002 onward under a consistent red-themed identity.

	Road Gray	Red Sox 2 color	McAuliffe 2 color	1 color block straight line	No	State of CA Logo/Black Armband***	-	Rawlings

* Because Angels jerseys in this period were so often recycled, some have evidence of NOB yet are year-tagged for years when no NOB was used. Prior to 1987, no manufacturer's logo appeared in public view when the jersey was worn, so many instances occur where the Angels reuse old uniforms—sometimes they are several years old. Starting in 1987, when Rawlings logos were embroidered on the sleeves for all to see, it became obvious when jerseys had been reissued, because they lacked sleeve logos. By 1989, all the game photos of uniforms seem to have Rawlings logos visible, indicating that the older uniforms had been finally retired.
** Black stripe for Bruce Heinbechner worn only in Spring Training./***Black armband for Lyman Bostock worn after Sept. 23.

Angels insider baseball purists reacted negatively to the team's 1997 overhaul of the Angels' uniforms, and after five years wearing the "Periwinkle Blue Costumes," management conceded a change. One of the architects of the new uniform style for 2002 recalls the impact that attending a mid-1970s Cincinnati Reds game had made on him, where looking across the fans in the stands one could see only a sea of red, uninterrupted by any other color. The new look for the Angels, therefore, was to be *red*. Except for some lettering highlights in navy and gray, caps, lettering and undershirts were all to be red. Disney sold the team a year later, and it is notable that when the team celebrated its 50th anniversary in 2011 with many throwback games, the "Periwinkle costume" era was ignored.

* #50 Jimmy Reese memorial worn after 7/13/94 and in spring 1995.

Home, Road, and Alternate Jerseys

The Angels in Flannel

The Los Angeles Angels were established as an American League expansion franchise in 1961. The final two years of Angels flannels were 1970–1971. 1970's jerseys, both home and road, remained in the team's original style used since their first year in the league in 1961. For 1971, a new, more modern style was unveiled, using trendy lower case letters, and floating a halo above the "A". Not all the 1971 jerseys were new-issue, however; some were 1970 year tagged jerseys stripped of their lettering front and back, and re-stitched in the new style. This practice reflected the era: with inexpensive labor and jerseys valued by teams as reusable assets, it made economic sense to remove old lettering and apply new. Collectability was not even a consideration; after all, who outside of the team wanted these old baseball jerseys? Don't be surprised to see 1971-style jerseys with 1970 team tagging. These recycled jerseys lived on at least another year, to be used in spring training of 1972 before they were retired, the team switching to the new double knits.

Above: *1970 tagging on a 1971-lettered jersey indicates it was stripped and re-done by the team, a common practice back in the day.*

Author's Note: We have extensively revised the 1970–1986 data and detail pages for the Angels for this 10th edition. After collecting hundreds of additional photos and re-reviewing published news photos, we have been able to come to better conclusions about what manufacturers made team uniforms in each year, and when names on back were worn…or not. This is a nice way of saying that some of the information presented previously was incorrect. The confusion had come from several distinct places: 1) Inaccurate dates attributed to published news photos. While we expect some dates to be inaccurate in our media sources, the great majority of the dates that accompanied published Angels photos were not right. 2) The lack of team tagging on jerseys made by Goodman, and then taking at face value the claim to the years the jerseys were worn as described in their auction listings. 3) The fact that the team re-used uniforms from year to year, making it a common occurrence for prior years' jerseys to be reissued and re-worn in later years. These circumstances had caused us to conclude incorrectly that names were worn in years they were not (and vice versa) and that multiple manufacturers made the team's home or road jerseys in any given year when in fact they had been supplied by a single vendor.

1970 Home

Stephen Kraljic Collection

The 1970 home jerseys were practically indistinguishable from the first-year flannels from nine years prior in 1961. “ANGELS” in the ornate baseball-traditional Tuscan font was mildly arched across the font in hybrid-style red felt over navy blue tackle twill. Red/blue back numbers in the McAuliffe/“Red Sox” font with player names in red/blue in Rawlings name alphabet (also felt over twill). Navy/red/navy 3/8” uniform braid trimmed the collar and sleeve openings. The new team secondary logo, the State of California patch with the gold halo ringing the top of the state, made its first appearance in 1970, sewn to the left sleeve.

The usual two sets of home uniforms for 1970 were made for the team, but labeled by two different manufacturers. One set was made by long-time provider Spalding and the other was made by Rawlings. My belief is that regardless of the tagging, both the uniform sets were manufactured by Rawlings as they are identical down to the player name and jersey size chain stitch embroidery on the tail, and the wash instruction tagging. A long-time provider of uniforms to Major League baseball, Spalding was only two years away from exiting this business entirely. I have observed a fair number of 1970 and earlier jerseys that have been converted into 1971 jerseys by stripping and replacing the front team wordmark. While unthinkable by today’s standards, such practices were routine in 1970.

1970 Home, continued

Examples tagged 1970 BUT missing player names on back, typical as these were sent to the minor leagues for re-use after their MLB service was through.

1970 Road

Stephen Kraljic Collection

The word "Angels" has appeared on the team's road uniforms since 1965, when they moved to Anaheim and dropped the "Los Angeles" affiliation, becoming the "California Angels." 1970 was the sixth year of this style of road jersey. The gray road flannels were made exclusively by McAuliffe, using their own very slightly different patterns for the team front crest, notably using letters that were slightly taller and narrower than those used on the home jerseys. Trim on these was the reverse of the home jerseys, red/navy/red. Lettering colors were also reversed, with navy felt sewn over red tackle twill, a hybrid combination that was used by several teams at the end of the flannel era. Similar colored and layered McAuliffe/Red Sox font numbers were used on the back with player names.

© GameWornGuides.com

1971 Home

For 1971, the team changed its logo and wordmark script to a new, “mod” design featuring a lower case team name arched on front in red/navy. While the jerseys were still the old-fashioned flannels, trimmed with the same with navy/red/navy braid around the collar and sleeve openings, the red/navy lettering was now all in tackle twill. A red/navy halo floated above the letter “A.” Front numbers in the McAuliffe font were added, though they were a taller and narrower variant to the numbers used on back. The haloed State of California patch remained on the left sleeve, with player names on back in the same color as the numbers.

1971 home jerseys were made exclusively by Rawlings. Some 1971 jerseys carry 1970 team tagging, as they were stripped and repurposed for the new season.

© GameWornGuides.com

1971 Road

Stephen Krajjic Collection

The 1971 road gray flannel mirrored the new look of the home jersey, incorporating the new team script with halo, yet with the lettering colors reversed to navy/red, also changed to all tackle twill, abandoning felt. Trim around the sleeve ends and neck opening is the same as in 1970—red/navy/red. The haloed State of California patch remained on the left sleeve, with player names on back in the same color as the numbers.

1971 road jerseys were made exclusively by McAuliffe. Some 1971 jerseys carry 1970 team tagging, as these were stripped and repurposed for the new season.

Nearly all examples in the hobby have names on back missing or restored, as these were all stripped and sent to the minors.

Right: *Note two different sized back numbers typical of a jersey reissued to another player and a number swap done in the clubhouse.*

© GameWornGuides.com

1972 Home

Joining 80% of the teams in MLB, the Angels switched to double-knit uniforms for the 1972 season. While a handful of teams had switched in 1971, and several more held on for another year until 1973, the conversion away from old flannels was well underway.

The Angels' button-front 1972 home jerseys were made exclusively by Rawlings, and appear almost identical to their 1971 home suits. The trim has changed though, with sewn-in, 1" wide knit trim in navy/red/navy at the neck and the sleeve ends, replacing the older 3/8" sewn-on braid. Names on back continued, arched above the back numbers in the same colors: red/navy. 1972 jerseys have flat bottom hems, a design used only that year.

© GameWornGuides.com

1972 Road

Road gray jerseys also changed to knits, and the new sewn-in wider knit sleeve and neck trim is the same navy/red/navy as the home jerseys. The team crest on front is the same design as 1971 (though not the identical pattern: the lettering is slightly taller and narrower) and is now red/white. Front and back numbers and names are in the same colors. 1972 jerseys have flat bottom hems, a design used only that year.

Bottom left: *The great majority of these jerseys that exist in the hobby have had their player names on back removed, like the example shown.*

Typical of jerseys from 1972 — missing player name on back after reissue in the minor leagues.

1973-1986 Angels Knit Pullovers

For the 1973 season, the Angels changed to a classic pullover jersey design that they would use for the next 16 years. While to the casual observer they might all appear identical, there are actually year-to-year detail changes that we will note. Tracking the Angels' jersey variations during this period is a real challenge, for several reasons:

- The team used four vendors during this period, McAuliffe, Rawlings, Goodman and Sons (a local Los Angeles area provider who also supplied the cross-town Dodgers), and Wilson.
- Not all suppliers year-tagged the team's jerseys, making it very difficult to tell the original year of issue of jerseys in our exemplar library, now decades later.
- The team repeatedly wavered on whether to include player names on jerseys, resulting in multiple year-to-year flip-flops, and years when names were on home jerseys but not road ones.
- Frugally, jerseys were re-issued frequently, and it was not unusual to see uniforms from different makers and years on the field at the same time.

On the pages that follow, we will detail the changes by year from 1973–1986. It is important to remember when looking at jerseys that are being offered today and are claimed to have been from a specific year, their observed details may not match this reference. This is because many jersey were stripped of names and numbers and re-used in a second or even third season. Goodman jerseys especially are hard to date because they have no year or set tagging.

Above left: *Player #48 at right, wearing a jersey with different number fonts on the front from the other players; as this photo was from 1973 all should be Goodman jerseys. Things like that were common in the 1970s and didn't seem to matter to teams.* ***Above right****: Bobby Valentine wearing #11 but if you look closely, you can see that his jersey was a reissue, with the clear glue outlines of the former numbers visible underneath.* ***Below****, the Angels seemingly could not decide if they wanted player names on back or not and what fonts to use... in sequence, these represent 1977, 1978, 1979, and 1981, Details are on the pages that follow.*

1973 Home

1973

Jason Gudvi Collection

The front team crest evolves to add a bold capital A with a gold/navy halo encircling its top, a brilliant design. All lettering is otherwise red/navy. Sewn-on navy/red/navy sleeve trim rings the end of the sleeves, stitched on top of the sleeve ends. V-neck trim appears in the same color pattern. McAuliffe/Red Sox-style front numbers continue on the left side. The team's secondary logo, the haloed State of California patch, is sewn to the left sleeve. Names on back are used, though today it is extremely uncommon to find any with the original name on back still in place; all were removed subsequent to sending them to the minor leagues.

We strongly believe all home jerseys in 1973 were supplied by exclusively by McAuliffe.

1973

Stephen Kraljic Collection

© GameWornGuides.com

1973-1977 Road

1973

Nearly Identical to the same-era home jerseys, except for the gray body color and the fact that there are no player names on back. Rawlings is the exclusive provider of road jerseys in these years. McAuliffe/Red Sox-style numbers on front and back. On front, the Rawlings version of the player numbers are shorter and more square than the home Goodman jerseys. These jerseys were used and reused in spring training and surely the minor leagues. In many cases the gray nylon fabric has been bleached almost pinkish-white and may easily be mistaken for home white jerseys.

1976

1975

Below: *The #58 jersey is Rawlings year tagged 1973, but it has clearly been re-numbered with discarded take-off numbers from a Goodman jersey. Notice the unequal sizes and uneven placement, and the taller narrow front font vs. the square Rawlings front number style.*

© GameWornGuides.com

1974-1975 Home

1975

Stephen Kraljic Collection

Goodman and Sons takes over home uniforms for 1974. All lettering is otherwise red/navy. Team crest is the same as McAuliffe's 1973 version, but number and name fonts change slightly to Goodman's variants. Player names are slightly larger and bolder. Sewn-on navy/red/navy sleeve trim rings the end of the sleeves, stitched on top of the sleeve ends. V-neck trim appears in the same color pattern. The team's secondary logo, the haloed State of California patch, is sewn to the left sleeve. Today it is extremely uncommon to find any with the original name on back still in place; all were removed subsequent to sending them to the minor leagues. In fact, as of this writing I have still not found one with its original player name intact.

We believe new-issue home jerseys 1974–1975 are supplied exclusively by Goodman.

Top left: *Typical, this 1975 Angels jersey had been sent to the minor leagues and had its name on back stripped and the player number changed. I had the opportunity to restore it, and the document showing the transformation is linked here.*

© GameWornGuides.com

1976 Home

Continuing the ping-pong game, Rawlings takes over making home jerseys for 1976, and for that year makes both home and road uniforms for the team. Player names on back disappear again. Higher-up back number placement since there are no names on back. Rawlings jerseys are year/set tagged. Note the “square” shaped front numbers compared to the taller, narrower Goodman ones.

© GameWornGuides.com

1977 Home

Goodman took over and supplied the Angels' 1977 home uniforms; they were essentially identical to the Goodman home jerseys of 1974 and 1975 EXCEPT they were again without player name on back for 1977. Since Goodman does not year or set tag their jerseys, identify original 1977 issues by no NOB and the higher number placement on back, 6" from the collar. Goodman's front numbers continue to be taller and narrower than the Rawlings version of the same font. Nolan Ryan played for the Angels 1972–1979, and by 1974 developed a preference for Goodman jerseys, and for the rest of his career with two other teams (Astros, Rangers) would reportedly only wear Goodman jerseys, though that claim has since been rendered false in recent years.

© GameWornGuides.com

1978 Home/Road

All of 1978's jerseys, home and road, are provided by Rawlings. Except for the color of the jersey fabric, the styles are identical. The only change from prior years is the addition of one-color red names on back, sewn in a straight line without any arch. Back numbers are sewn two inches lower to accommodate the names.

1978: (not shown) Black armband for teammate Lyman Bostock worn after 9/23/78 for final week of the season.

© GameWornGuides.com

1979-1980 Home

1979

1980

Angels' home and road jerseys retain an identical appearance to each other, save for the color of the jersey body fabric. 1979–1980 home jerseys are now made exclusively by Wilson, and are year tagged.

There are two notable changes for 1979: with the change to Wilson as the vendor, the sleeve trim, previously "sewn on", wrapped around the fabric end of the sleeve, is now "sewn in"- it becomes an integral part of the sleeve end as an added-on stretchy band sewn onto the end of the shirt sleeve. Secondly, the player number font changes to a variant of Wilson Varsity, similar to that used by the Braves, Tigers, and Yankees, but the Angels' version is slightly bolder than those. In 1979–1980, there are no player names used. The State of California patch remains on the left sleeve, but it is a slightly different version than that used earlier, now with a larger, bolder yellow star and a less-detailed "coastline" of the state edge.

© GameWornGuides.com

1979 Road

All trim and lettering changes described on the prior page for the 1979 home jerseys also apply to the 1979 road jerseys. The road jerseys in this year are made exclusively by Rawlings and are year and set tagged. No names on back are used. The State of California patch remains on the left sleeve, but the new version of this patch is slightly different than that used earlier, with a larger, bolder yellow star and a less-detailed "coastline" of the state edge. Back numbers use the Wilson Varsity font, numbers are placed high up on the back, leaving no room for player names.

© GameWornGuides.com

1980 Road

Practically indistinguishable from the 1979 Rawlings road jerseys, the 1980 road issues fall back to Goodman. One notable quirk observable in multiple period news photos, the back numbers on the 1980 road jerseys (only) are noticeably lower than normal on jerseys without names. I don't know if this was a purposeful change, or simply a stitcher's arbitrary choice, nor do I know if all jerseys have this characteristic. It almost seems as if the numbers were sewn lower to allow names, and the plans changed.

As before, Goodman jerseys lack year or set tagging. No names on back are used. The State of California patch remains on the left sleeve, but the new 1979 and later version of this patch is slightly different than that used earlier, with a larger, bolder yellow star and a less-detailed "coastline" of the state edge. While Goodman uses the Wilson-Varsity font, their version is almost cartoonishly exaggerated; especially on the front numbers, pumped-up fatter and bolder. Such was the pre-digital era of pattern sharing between manufacturers.

© GameWornGuides.com

1981-1985 Home

Made exclusively by Wilson in these years, they are the same as the 1980 Wilson home jerseys, but a distinctive vertically-arched name on back is added. Each player name was beautifully hand-rendered by an artist at the Wilson factory, resulting in subtle variations that made every jersey unique. Artistically, the letters at the ends of longer names—especially—are slightly taller than those in the middle. And notably, players acquired mid-season or late season call-ups might have jerseys with non-vertically arched names on back, as these were probably sourced from the team's local stitcher and not the Rawlings factory.

1985 jerseys have a small but colorful 25th season commemorative disk patch sewn to the right sleeve.

1981-1985 Road

1985

1983–
1984

1985

Bill Henderson Collection

Angels road gray jerseys 1981–1985 were made exclusively by Goodman. These jerseys share all the characteristics of the Wilson home jerseys shown on the prior page. As before, the Goodman variant of the player numbers, especially on the front, remains a fatter almost cartoonish variant on the Wilson version. Player names on back are vertically arched, very similar to the Wilson version on the home jerseys of the same period.

1985 jerseys have a small but colorful 25th season commemorative disk patch sewn to the right sleeve.

© GameWornGuides.com

1986 Home

Wilson was the exclusive provider of 1986 home jerseys. All lettering remains the same as 1985, including the vertically arched player name on back. The only change is to the team sleeve patch, reflecting the team's new secondary logo: a round white patch bordered with blue that incorporates the A with halo, the State of California and the stitches of a baseball.

© GameWornGuides.com

1986 Road

1986 road gray jerseys were identical to those worn in 1985, with the sole exception of a new team sleeve disk patch replacing the State of California patch that had been used since 1970. It appears that both Rawlings and Goodman each made a set of 1986 road gray jerseys. I have multiple examples in my photo library made by Goodman, lacking any year/set identification, but featuring the new-style sleeve disk and a vertically arched name on back. 1986 was the only year for this specific combination.

Oddly, the Rawlings examples—year-tagged for 1986 and properly lacking the embroidered Rawlings sleeve logo introduced in 1987—appear crisp and new, and are notably lettered for common players (making it unlikely they were produced as counterfeits). They have radially arched (non-vertical) names on back—a change that did not occur on-field for the Angels until the following year. Searchable period news photos of the Angels are notoriously misdated, but I doubt that the team wore a mix of name-on-back styles on the field at the same time all year. It's possible the Rawlings set was created and then rejected by the team in favor of a Goodman contract—after which they were disposed of and entered the hobby as game-used jerseys. I would welcome any assistance with this question. More research is required.

© GameWornGuides.com

1987 Home/Road

Beginning in 1987, Rawlings was awarded the MLB contract to be the official uniform supplier for all teams. While not all clubs participated, the Angels did. That season, the Angels switched to Rawlings as their supplier for all uniforms—home and road. For the first time, the Rawlings script logo appeared on all on-field jerseys, positioned at the end of the right sleeve. For 1987 only, the script was directly embroidered onto the jersey sleeve, approximately one inch above the knit sleeve-end trim.

Our archives contain several documented examples of call-up players and coaches wearing likely unissued or reissued Goodman jerseys after 1986—noticeable for lacking the Rawlings sleeve logo.

The only notable change to the 1987 jerseys is that names on back switch from a vertical arch to a radial arch—still in red/navy. Rawlings jerseys are flag tagged with year and set.

© GameWornGuides.com

1988 Home/Road

Only minor changes are made to the home and road jerseys in 1988. The styles remain identical to each other, except for the color of the fabric.. Rawlings is the sole supplier.

For 1988 there are two subtle changes:

First, the Rawlings logo is moved a couple of inches lower and is now embroidered into the red center stripe of the sleeve-end trim, rather than positioned above it as in 1987.

Also, player nameplates are introduced, making it easier to strip the jerseys for reassignment to the minor leagues.

1992 Home/Road

In 1992, Russell became the official uniform supplier for MLB. While teams were not required to use them, the Angels did—for both home and road jerseys. The Russell "R" logo, embroidered into the red stripe of the right sleeve trim, is the only visible change. The Angels also wore a "DJ" memorial patch on the right sleeve of both home and road jerseys in honor of deceased teammate Deron Johnson. Nameplates continue to be used.

Since 1992 was the final year of this jersey style, all Russell-tagged examples can confidently be attributed to that season. As before, the only difference between home and road suits is the color of the body fabric.

2004-2010, 2012-2023 Road (not 2011)

- Road jersey changes to the Angels wordmark, replacing the earlier Anaheim wordmark. This reflected the owners' goal of rebranding the team as the 'Los Angeles Angels'—a move that generated protests from the Anaheim City Council.
- Everything else remains the same as 2002–2003. Names and numbers are two-color red/navy and do not follow the three-color design of the 'Angels' wordmark!
- Names on the back are regular Block or Block Condensed; no nameplates used.

2007-2010, 2012-2023 Alternate (not 2011)

The Angels add an alternate red jersey for 2007. The team name lettering is four-color red/navy/white/gray drop shadow from 2002–2015. In 2016, the drop shadow is modified to become a 3D drop shadow (see later page for details).

Player names are a simpler three-color red/navy/white, lacking the drop shadow. No nameplates are used. Sleeve-ends and collars are adorned with a thin white/gray/white knit trim braid.

2011 Angels 50th Anniversary Jerseys: Home, Road, and Alternate

Left: **The special 2011 gold-trimmed emblems and the standard ones are shown side by side.**

To mark the team's 50th anniversary, the Angels made a very subtle change to their game (and batting practice) jerseys that most fans would never notice unless it was pointed out: The halo on the "A" in "Angels" was changed to gold for the year. Honestly, if someone had asked me, I would've said the halo was always gold. I remember it being gold for many years – it was from 1973 through 1992. t was changed to silver in 1993, dropped entirely as a uniform element from 1997 to 2001, then returned in silver from 2002 through 2010. It again returns to silver for 2012 and after. The sleeve patch was also changed for 2011 to feature the gold halo.

2016 Team Change: Flex Base Jersey Construction/Branding

Read the full story on MLB's adoption of Flex Base jerseys for 2016 in Chapter 2.

In 2016, all teams adopt Majestic's new "Flex Base" on-field game jerseys, which are made from Cool Base fabric, but with several new elements designed to make them lighter and more breathable. The new jerseys have mesh side panels that run the length of the jersey, and one on the back tail called the "Air Belt." They also use "Kiss Cut" layering for front decorations, names, and numbers, which Majestic says is 10-20% lighter than traditional layered twill. The MLB logo on the back neck is now a rubberized patch, called CFX by Majestic, and the heat-pressed tag on the front tail differs from Cool Base jerseys of old.

© GameWornGuides.com

2016: Subtle Shadow Change

With the league-wide switch to Flex Base and its component kiss-cut lettering in 2016, the Angels subtly changed the drop shadows on both their home and alternate jerseys.

From the inception of this uniform set, the gray drop shadow on the team's wordmark had been a standard drop shadow. However, starting in 2016, the shadow became less pronounced and morphed into a 3D drop shadow.

On both jerseys, the shadow was a very subtle element to begin with, and it became even more subdued with this change. It is possible that the switch to kiss-cut lettering prompted this modification, as the artwork in the team's official style guide—unchanged since its creation in 2002—oddly depicted a 3D shadow all along.

Aside from the wordmark, the red jersey's front and back numbers—which also feature a drop shadow—have used the 3D style consistently throughout the run, including the 2020 switch to Nike

2022-2023 City Connect

Patch is printed on cloth, not embroidered as was traditional.

The Angels dive into the City Connect program in 2022 with a Southern California/surf-inspired set with lots of "storytelling" elements to wade through. The cream Flex Base jersey has red team script on front (inspired by vintage surfboard lettering), with a sweeping underscore capped off with a surfboard "fish tail" and two, left-sleeve-only fabric-sublimated red stripes (based on vintage surfboard striping). The blue/gray front and back uniform numbers are styled after numbers seen on California lifeguard towers, and the diamond around the front number is "inspired by various local vintage surfboard brands." Cresting the Nike tag on the hem is a surfboard graphic with the Angels halo. And to sink the whole surfing metaphor, the right sleeve patch is an homage to vintage California railroad signs...for some reason. Nevertheless, the patch marks the first time the Angels have used "Los Angeles" on a uniform since adopting the city name in 2005. In 2023, the team adds their advertising patch to the left sleeve.

2024 Nike “Vapor Premiere Elite” Jersey Template

Nike Flex Base 2020–2023

Nike Vapor Premier Elite 2024

Following league-wide sweeping changes to MLB jerseys with all teams switching from Nike’s 2020–2023 continuation of the Majestic Flex Base jersey shell to its new Vapor Premier Elite (VPE) template, the jerseys of the 2024 season become an anomaly – a “one and done” season of changes that brought intense scrutiny from players and fans alike. Based on the negative feedback, especially from MLB players, Nike rolled back some but not all of the 2024 changes in time for the 2025 season.

The full rundown of the changes is outlined earlier in “The Basics” chapter, but generally speaking, 2024’s crop of jerseys had changed from earlier versions in several key ways.

- VPE home jerseys are off-white, or light cream color. The earlier Flex Base white jerseys are a bright, purer white. Grays are standardized.
- The front placket is narrower on VPE, which often causes team wordmark lettering that crosses the placket to break differently.
- Neck and sleeve trim elements (when used) are no longer sewn on top of the jersey material, but are now “sewn-in” to the jersey at the seams. Placket trim adornment remains the same, though the trim is now spaced closer together with the narrowing in placket size.
- For improved visibility, the MLB logo on the back of the jersey is moved several inches lower onto the back, down from the collar placket area where it had been since 2000.
- VPE loses the integrated mesh side and back tail panels that had been part of the Flex Base jersey template.
- Player names on VPE are much smaller, and for many teams are done in a standardized block font, all using a much steeper, nearly semi-circular arch.
- For teams with front numbers, the new 2024 font is simply always a reduced size of the back numbers. This was not the way it had been in the past for most teams, with front numbers being a font variant (smaller but usually wider and bolder) than the back font.
- Team logo sleeve patches, and in some cases sponsor sleeve patches change from traditional raised embroidery to flat printed plastic or to sublimated cloth/twill
- All lettering is done using a new more lightweight (thinner) kind of matte-finished twill (commonly called “Nike Twill”). Most, but not all jerseys incorporate barely visible micro-perforation on the numbers, front and back.
- Universally, nameplates are no longer used.

© GameWornGuides.com

2024 Home

The 2024 version of the Angels home jersey introuces several subtle updates, some brought on by the switch to Nike's Vapor Premier Elite (VPE) template, and some to address consistency issues, which may or may not have come from Nike's general desire for simplification. The most obvious change is the neck and sleeve-end trim changing from knit trim that was sewn on to the jersey to trim sewn into the seams at the end of the sleeves and neck opening. This modification results in a much wider red section than the previous knit red braiding. As with all other teams, the Angels' numbering and lettering were scaled down to accommodate the new template. In addition, the team added a 3D drop shadow to the front number, aligning it stylistically with the team name lettering. Additionally, the MLB logo at the back of the collar changes from blue/white/red to red/white/blue for 2024. It is unclear if the Angels opted for perforated numbering, so further research is required.

© GameWornGuides.com

2024 Road

The 2024 version of the Angels road jersey mirrors the home jersey, featuring a number of small updates, some brought on by the switch to Nike's Vapor Premier Elite (VPE) template, and some to address consistency issues, which may or may not have come from Nike's general desire for simplification. Like the home, the most obvious change is the neck and sleeve-end trim changing from knit trim that was sewn on to the jersey to trim sewn into the seams at the end of the sleeves and neck opening. This change results in a much wider red section than before. As with all other teams, the Angels' numbering and lettering were scaled down to accommodate the new template. In addition, a white outline was added to the front number, along with a gray 3D drop shadow applied to both the "Angels" wordmark and the front number for consistency. However, the shadow is nearly invisible against the gray jersey body. Further, the MLB logo on the back of the collar changes from blue/white/red to red/white/blue for 2024. The team does not use perforated numbers on this jersey.

Above: *The new gray 3D drop shadow on the front lettering and numbers is barely visible even up close, and disappears entirely from a distance. It's hard to understand the rationale for this addition—particularly in an era when Nike emphasizes simplification and uniformity.*

© GameWornGuides.com

2024 Alternate Red

Continuing the trend of the team's other jerseys, the 2024 version of the Angels alternate jersey has lots of little changes, some brought on by the switch to Nike's Vapor Premier Elite (VPE) template, and some to address consistency issues, which may or may not have come from Nike's general desire for simplification. The most obvious change is the neck and sleeve-end trim changing from knit trim that was sewn on to the jersey to trim sewn into the seams at the end of the sleeves and neck opening. This update made the trim much wider than the previous knit braiding. As with all other teams, the Angels' numbering and lettering was scaled down to accommodate the new template. The team also removed the gray 3D drop shadow from the back number. Further, the MLB logo on the back of the collar changes from blue/white/red to red/white/blue for 2024. The Angels opted for perforated numbering on this style in 2024.

© GameWornGuides.com

2024 Alternate Home Nostalgia

The Angels continue to embrace their uniform history, as reflected in the many throwbacks they've used over the years. For 2024, they've added a historically inspired alternate jersey to their repertoire—one of the first Nike Vapor Premier Elite (VPE) pullover styles to appear in MLB. Worn at home during "Throwback Week" (July 25–August 1), the jersey aligns with the team's 1973–1978 home design. Of those, only the 1973–1975 and 1978 versions featured player names on the back, so this 2024 edition most closely recalls those specific years. The jersey is a white pullover with blue/red/blue trim around the sleeves and neck. As with all jerseys using the VPE template, the trim is sewn into the seams rather than applied on top of the fabric. One unique detail is the V-neck notch—an unusual shape (perhaps better called a "Y-neck"?)—which is accentuated by the trim. Like the originals, the front and back numbering are in a McAuliffe-style font, however, the front numbers here are simply scaled-down back numbers, where the originals were a slightly different iteration of the font. A State of California patch appears on the sleeve. While the original jersey had the patch on the left sleeve, the 2024 version varies in placement, appearing opposite the side where the advertising patch is located. Numbers on this style are perforated.

Below: *An original version of this style from 1975, shown for comparison with the 2024 updated version. Note the "notch" in the V-neck—part of Nike's VPE pullover template—which the original lacks. In addition to modern updates like the ad patch and MLB logo, another key difference is the use of a smaller version of the McAuliffe back-number font for front numbers in 2024, instead of the distinct front-number font used in 1975—most noticeable on the number 3.*

Original 1975

© GameWornGuides.com

2024-2025 City Connect

The 2024 version of the Angels City Connect jersey transfers the 2022–2023 elements over to Nike's new Vapor Premier Elite (VPE) template. With the change comes the standard updates made to all other jerseys to fit into the new jersey base. Here, that includes the small sewn-in collar material around the neck opening, smaller player name lettering, perforated numbers on back, and the MLB logo appearing lower than before. The team uses perforated numbers on this style. Otherwise, the look is comparable to the two prior seasons. Carryover City Connect jerseys are not updated in 2025, so this version remains the same for that season.

© GameWornGuides.com

2025 Home

The 2025 season brings minor modifications to elements of the VPE template across all teams' non-gray jerseys, a step toward more comprehensive changes to come for the 2026 season. Among them, back name and numbers are enlarged, in most cases, back to 2023 sizes and font styles, and perforated numbers are gone. Sleeve-end trim remains sewn in, carried over from 2024. Overall, except for the lower MLB logo on the back of the jersey, these look very close to the 2023 version, minus the Flex Base side panels. Note also the use of the white Nike jock tag on front, one of a handful of uses of this new tag, which was typically black, and showed through white pants easily.

© GameWornGuides.com

2025 Road

The 2025 season brings many changes to road gray jerseys across MLB. The 2024 VPE gray jerseys suffered from significant sweat-staining issues during games, so 2025 gray jerseys revert back to the same fabric used for Flex Base, but applied to the VPE template (no mesh side panels or "Air Belt" back panel). Also, unless a team has contrasting trim that encircles the collar opening, the superfluous, jersey-colored set-in band of trim (which was largely invisible) is also deleted. Other pre-2024 elements return, including neck and sleeve trim being sewn on to jerseys again rather than sewn in. Sleeve patches also revert to full embroidery, back from printed or lightweight embroidered patches.

© GameWornGuides.com

2025 Alternate Red

The 2025 season brings minor modifications to elements of the VPE template across all teams' non-gray jerseys, a step toward more comprehensive changes to come for the 2026 season. Among them, back name and numbers are enlarged, in most cases, back to 2023 sizes and font styles, and perforated numbers are gone. Sleeve-end trim is still sewn in, carried over from 2024. Overall, except for the lower MLB logo on the back of the jersey, these look very close to the 2023 version, minus the Flex Base side panels.

© GameWornGuides.com

2025 Alternate Home Nostalgia

The 2025 season brings minor modifications to elements of the VPE template across all teams' non-gray jerseys, a step toward more comprehensive changes to come for the 2026 season. Among them, back name and numbers are enlarged, in most cases, back to 2023 sizes and font styles, and perforated numbers are gone. Sleeve-end trim is still sewn in, carried over from 2024. The Angels do move away from one of the trademark elements of a VPE pullover in 2025, deleting the odd notch in the collar in favor of a more traditional V-neck. Note also the use of the white Nike jocktag on front, one of a handful of uses of this new tag, which was typically black, and showed through white pants easily.

Spring Training and Batting Practice Jerseys

1979-1982 Batting Practice

1983

Steve Kraljic Collection

1981

1979

Blue mesh jersey with blue/white/red neck and sleeve-end trim. A simple “A” with halo appears on the left chest. Wilson and Roman Sport are makers of record.

Varsity-style numbers appear on the left sleeve only; the back of this jersey style is blank.

© GameWornGuides.com

1979-1983 Alternate Batting Practice

Blue mesh with blue/red/white collar, sleeve end, and waist trim, made by Goodman, Sand-Knit, and Wilson. Goodman example ***(above)*** has the State of California logo on sleeve; Wilson ***(top left)*** and Sand-Knit ***(top right)*** versions do not. Simple "A" with halo sewn on the left chest, except on Sand-Knit models, where it is screened on.

The back of this jersey style is blank. Numbers appear on the left sleeve only. Varsity-style numbers are used on the Wilson and Sand-Knit jerseys, while the Goodman version features McAuliffe (Red Sox–style) numerals.

© GameWornGuides.com

Early–Mid 1980s Alternate Batting Practice Zip-Neck

Roman Sport made these zip–neck batting practice jerseys for several teams in the early–to–mid 1980s. These feature wide, elasticized trim at the waist, neck, and sleeve ends. The “Angels” wordmark is straight across, without an arc. These are made of solid fabric and are not player-numbered—arguably closer to a jacket than a traditional batting practice jersey.

1993-1996 Batting Practice

1994

1995

1996

1996

1993

These button-front BP jerseys were issued from 1993 to 1996 by both Majestic and Russell. Sleeve patch applications vary by year. For back numbers, Russell used a Varsity font, while Majestic used its own version, sometimes referred to as Majestic-Varsity. Note the larger numbers on the 1994 Russell jersey..

© GameWornGuides.com

1993-1995 Home Batting Practice/Spring Training

Steve Kraljic Collection

We believe this style of mesh jersey, along with the companion gray version shown on the next page, was used exclusively in Spring Training as a game jersey. We are still searching for photographic evidence of them in use. These Russell jerseys are nearly identical to standard game jerseys, except they are made of mesh fabric and lack player names on the back. Varsity-style numbers on back only, red/navy, with front lettering red/navy/white.

Some have year tags; others do not. They may have been used in 1993 or 1994 as well, but all year-tagged examples we've seen are from 1995. The top jersey is made by Russell; the bottom one is by Rawlings and features a 1992–1994–style Rawlings red tag that includes the size.

© GameWornGuides.com

1993-1995 Road Batting Practice/Spring Training

Bill Henderson Collection

We believe these were used in only Spring Training as game jerseys, and we are still searching for photographic evidence of them in use. These jerseys are nearly identical to game jerseys, except they are made of mesh fabric, and have no names on back. Varsity-style numbers on back only in navy/red/white, —the same color scheme as the front lettering. The jerseys were made by Russell and possibly Rawlings. Some have year tags; others do not. While they may have been used in 1993 or 1994, the only year-tagged examples we have seen—all made by Russell—are from 1995. Note the original “6” and the less-faded “4,” which appears to have been applied over the ghost of an earlier “7.” This suggests that the jersey was likely used in more than one season.

© GameWornGuides.com

1995-1996 Alternate Batting Practice Zip-Neck

Majestic produced this zip–neck *Gamewarmer* pullover for the Angels, as they did for most other MLB teams in the mid-1990s. It saw only occasional use. Note the complex, multi-colored sleeve-end and neck trim, as well as the embroidered, three–color Majestic “Twin Peaks” logo on the sleeve. These appear to have been worn without player numbers.

© GameWornGuides.com

1997-1999 Batting Practice

The Angels' switch to Disney-designed uniforms in 1997 also brought a change to their batting practice jerseys.

These were two-button, navy mesh pullovers made by Majestic. The first version featured the new Angels custom number font, but without the new stylized "A-with-wings" logo on the left chest.. Player numbers were rendered in the drop shadow used on game uniforms. The numbers were two–color: white with a "Periwinkle Blue" outline—a shade that became derisively synonymous with these uniforms and a source of disdain among long-time Angels purists. The 1997 Jackie Robinson patch was not worn on BP tops. However, the 1999 Gene Autry memorial patch was worn during both Spring Training and the regular season.

© GameWornGuides.com

2000-2001 Batting Practice

"Disney style" front wordmark; button-front navy mesh.

Two-color numbers on sleeve and back: white/"Periwinkle Blue". Uses the custom Angels "Disney" font, without drop shadow.

The numbers on these BP jerseys are simpler than those on the game jerseys. No player names on back.

© GameWornGuides.com

2002 Batting Practice

One-year use only. Two-button pullover design made of red mesh fabric. Numbers appear on the back only, with no player names. Three–color numbers in the custom Angels font red/navy/white.

© GameWornGuides.com

2003-2006 Batting Practice

Bill Henderson Collection

Made from softer, non-mesh, early moisture-wicking fabric with a two-button neck. These jerseys faded badly in the sun and were prone to snags and pulls. Player number colors changed from the previous year to white/red/navy, in custom Angels number style.

© GameWornGuides.com

2007-2010 Batting Practice

MLB redesigns all batting practice jerseys for every team in 2007, changing to a thin Cool Base fabric with contrasting color side panels—for every team ***except*** the Angels. Determined not to introduce a secondary fabric color into their uniform design (they wanted RED, RED, and nothing else), the Angels managed to avoid the new trend. Their updated jerseys looked nearly identical to the previous versions!

One-button neck. Flock appliqué (not sewn tackle twill) lettering. Three-color white/red/navy custom Angels font numbers on the back only. Player names not used. ***Top left:*** *These jerseys faded badly in the sun, as shown.*

© GameWornGuides.com

2011 Batting Practice

Jersey changes to a full button-front design. Otherwise, it looks like the 2010 jersey, but with a one-year-only gold halo on the front and the 50th Anniversary commemorative patch on the left sleeve.

© GameWornGuides.com

2012-2013 Batting Practice

The full button-front Cool Base batting practice jersey returns for 2012, minus the 2011 commemorative sleeve patch and with the halo restored to its usual silver color.

Numbers on back are three-color twill: white/red/navy.

No player names used on BP jerseys.

Left: *Jock tag reads "Angels Baseball," unlike other teams, which list both city and team name. The Angels were in a long negotiation with the city of Los Angeles over naming rights, and the team name was in flux.*

Left: *A prototype 2012 jersey features a tag that says "Los Angeles Angels." This version was not used.*

© GameWornGuides.com

2014-2016 Batting Practice

Batting practice jerseys were redesigned for all MLB teams in 2014. There is little noticeable difference between the Angels' 2013 and 2014 batting practice jerseys. The Angels were one of the only teams to retain solid-color jerseys, lacking the contrasting color side panels used by most other clubs. Note the red/navy/red knit trim on the collar and sleeve ends, and the new-style team tag on the lower front tail. Numbers on the back remain in white/red/navy. No player names were used.

© GameWornGuides.com

2016 Spring Training

Read the full story on MLB's new for 2016 Spring Training Jerseys in Chapter 8.

For the first time, in 2016 MLB introduces a Spring Training-specific jersey intended for workouts and preseason games. The jersey is based on the Flex Base game jersey template and features a special printed twill, decorated with "2016" and Spring Training symbols, as the main twill layer for all teams.

The Angels use their regular season red alternate, minus the player name on back, as a basis for their Spring Training jersey. The back numbers are red patterned twill/blue/white/gray 3D drop shadow. Front numbers are standard red/blue/white/gray 3D drop shadow. The jersey also features a rubberized CFX patch on the left sleeve in the style of an Interstate Highway sign, reading "2016" and "AZ" to represent where the Angels spend Spring Training.

© GameWornGuides.com

2017 Spring Training

Spring Training-only jerseys return for all teams in 2017, with some minor design modifications. Just as in 2016, the jersey is based on the Flex Base game jersey template and features special printed twill, this year decorated with “2017” and Spring Training symbols. However, all teams now use the same special twill, single-color white with gray printing, replacing the many team-specific combinations from the year before.

The Angels again use their regular season red alternate, minus the player name on back, as a basis for their Spring Training jersey. The back numbers are white patterned twill. Front numbers are standard red/blue/white/gray 3D drop shadow, as used in the regular season. The jersey features a recolored version of the rubberized CFX patch on the right sleeve, in the style of an Interstate Highway sign, reading “2017” and “AZ” representing where the Angels hold Spring Training.

© GameWornGuides.com

2017-2020 Batting Practice

With many players opting for lightweight cage jackets, which are void of player identification, instead of traditional BP jerseys with player names and numbers, Majestic introduces a replacement product that may be an attempt to gain acceptance by the pros on field while being more attractive to fans at retail. New for 2017, official team batting practice jerseys are replaced with what Majestic calls a 3/4 Sleeve BP Trainer. The new hybrid is cut in a pullover jacket silhouette, including a short zipper at the neck, but made from Cool Base jersey material. The underarm and back panels are of Cool Base mesh, like the sides and tail of Flex Base jerseys.

Team logos and other lettering is in what Majestic calls “lightweight twill” (as described in Chapter 8). The Majestic logo is applied to the middle of the left sleeve, and a new, heat-pressed Cool Base tag adorns the left front tail. The Angels jersey is red with red back and underarm gussets, very similar to their simple BP jerseys of years past. The haloed “A” logo appears on the front left chest. The back of the jersey is blank. While the MLB Style Guide shows these being worn with numbers on the sleeves, in practice the Angels wore them blank, without player identification.

© GameWornGuides.com

2018 Spring Training

The 2018 Spring Training jerseys continue the general design of the previous year, again featuring all back lettering using each team's regular fonts, simplified using only one layer of twill printed with special Spring Training and 2018-year-specific patterns.

The Angels use their regular season red alternate minus the player name on back as their base. The back numbers are sewn on in white patterned twill. Front numbers are standard red/blue/white/gray 3D drop shadow, as is used in the regular season. A new CFX patch, shaped like home plate, is stitched to the left sleeve, featuring "2018" and "AZ" representing their Spring Training home.

© GameWornGuides.com

2019 Spring Training

The 2019 Spring Training jersey evolves to create yet another iteration of the theme of the last three years. This time, jersey backs abandon the single-color printed twill treatment of the past few years and return to regular season multi-layered team-color twill like 2016, yet without 2016's printed patterns.

The Angels use a different jersey from years prior, with their cap logo on front left chest and right sleeve, carrying a new CFX patch on the left sleeve, featuring "2019" and "ARZ," referencing their Spring Training home. The back numbers are red/blue/white/gray 3D drop shadow. White/gray/white knit ribbon trim encircles the neck opening and just above both sleeve ends.

© GameWornGuides.com

2020-2023 Spring Training

Spring Training is simplified for 2020, league-wide. For the first time since 2016, Spring Training jerseys eliminate the special sleeve patch indicating the year and location of a team's Spring Training home, and now the lettering is the same non-patterned, multi-layered twill as teams wear in the regular season, making many teams' spring jerseys identical to their regular season alternates.

For 2020, the Angels use their spring training jersey from the year before, with their cap logo on the left chest and sleeve, with red/blue/white/gray 3D drop shadow back numbers. The sleeve patch adorns the right sleeve from 2020–2022, in 2023, it alternates sleeves based on the presence of an ad patch. White/gray/white knit trim encircles the neck opening and appears just above both sleeve ends.

Special Events Jerseys

1992 Turn Back the Clock to 1968

August 16, 1992: Replicas of the 1968 Angels uniform are rendered in double knit by Russell, for a Turn Back the Clock road game in Oakland.

Although the jersey is made from double knit material, all lettering and numbers are made from two-layer sewn felt.

Sadly, as far as authenticity goes, these are just plain wrong. Back numbers were originally done in McAuliffe/Red Sox font, and colors of all lettering are reversed.

Left: *Actual 1968 road jersey. .*

Game photos. Brad Mangin Photography.

© GameWornGuides.com

1995 Turn Back the Clock to 1961

Signed game jersey of Rod Carew, who was a coach on the 1995 team.

August 26, 1995: The Baltimore Orioles visited Anaheim and played the Angels in a Turn Back the Clock game commemorating the 45th anniversary of the Angels' first game (also played against the Orioles in 1961, but in Baltimore).

Mitchell & Ness made the flannel uniforms for both teams in typical true-to-history style, using correct fonts and colors. However, the neck trim is not an exact replica of the original *(**Right:** actual 1962 jersey).*

© GameWornGuides.com

1998 Turn Back the Clock to 1978

Steve Kraljic Collection

June 26, 1998: The Angels wore reasonably accurate reproductions of their 1978 road uniforms, created by Mitchell & Ness. While the originals were tightly tailored, these reproductions were much baggier. The Angels played the Padres in San Diego, who wore poor versions of their own 1978 brown/gold uniforms. One notable error on the Angels' jerseys: the name on back was not faithful to the original—it should have been solid red and positioned in a straight line across the back.

1999 Turn Ahead the Clock (Home)

Anaheim Angels Baseball Club

Is Proud To Authenticate This Collectible

Anaheim Angels

Jim Edmonds

"Turn Ahead the Clock" Jersey

- **June 26, 1999:** The Angels hosted the Oakland Athletics for this "Turn Ahead the Clock" game.
- Replicas of this jersey style—presumably produced for fan sales in 1999—have frequently surfaced on online auction sites in the years since. Their abundance suggests that many were manufactured for retail resale.

These few lines were found in the *LA Daily News*, June 27, 1999:

Saturday's game was billed as "Turn ahead the clock night" at Edison Field. Both teams wore futuristic uniforms, supposedly representing the year 2021.

The Angels wore bright red jerseys with the new logo taking up the entire front of the jersey. Said one Angels player: "All we need are red bottoms and we have the perfect pair of pajamas."

© GameWornGuides.com

1999 Turn Ahead the Clock (Road)

Bill Henderson Collection

Left, center: *Actual game worn Joe Maddon jersey.*

Near Left: *Perfectly lettered reproduction by Patsy Elmer of Big Time Jerseys.*

- Navy 1999 Turn Ahead the Clock jersey was worn only once—on July 25th in Baltimore.
- Features an unusual OCR-style font (Optical/Magnetic Character Reader – reminiscent of the numbers printed on bank checks). Strictly 1970s technology, it was presumably chosen here to suggest a “futuristic” look.
- Names on back are laid out vertically in metallic silver/red twill.

© GameWornGuides.com

2002 Turn Back the Clock to 1982

Steve Kraljic Collection

In 2002, the Angels dress in their 1982 home uniforms, reproduced here by Rawlings. Names on back should be in vertical arch to be faithful to the originals. Nameplate use is also inaccurate.

Angels played the Athletics in these uniforms on July 23–25, 2002. The A's wore their 1972-style gold uniforms.

© GameWornGuides.com

2008 Turn Back the Clock to 1971

May 15, 2008: The Angels faced the Chicago White Sox, who wore their standard uniforms, in a Turn Back the Clock game. Majestic produced near-exact replicas of the Angels' red-haloed 1971 flannel uniforms, now rendered in double knit fabric. The jerseys featured the distinctive lowercase "a" and used McAuliffe/Red Sox-style font for both front and back numbers. True to the originals, the front numbers were lighter in stroke weight than the back numbers.

© GameWornGuides.com

2010 Turn Back the Clock to 1995

June 5, 2010: The Angels visited Seattle for a Turn Back the Clock game celebrating the 1995 season. Both teams wore throwback uniforms: the Mariners in teal and the Angels in near-perfect recreations of their 1995 road jerseys, produced by Majestic. The Angels' jerseys included the distinctive 35th Anniversary sleeve patch worn only during the 1995 season.

© GameWornGuides.com

2011 Turn Back the Clock: Angels' 50th Anniversary Celebration "Flashback Fridays"

In 2011, 13 Friday home games were designated as "Flashback Fridays," during which the Angels wore throwback uniforms representing various decades of team history. These games were part of a season-long celebration marking the franchise's 50th anniversary.

Uniforms from the 1960s, 1970s, 1980s, and 1990s were worn for these games—shown here from left to right—with the team's then-current uniform appearing at far right.

Road teams did not play along in this concept; they wore their regular uniforms in these games.

Notably absent from the series were the "Periwinkle Blue" Disney-era Angels uniforms of the late 1990s and early 2000s. I doubt the omission was an oversight.

© GameWornGuides.com

2011 Turn Back the Clock: “Flashback Fridays” to the 1980s

Button-front style like this was worn 1989 to 1992, but the overall uniform “look” was worn 1973 to 1992. So, I guess we can count this as a flashback to the 1980s.

Majestic knit replicas are excellent reproductions of the original design.

Player names and numbers use the correct fonts. While the originals featured nameplates, these do not—still, I’d rate the accuracy a 99 out of 100.

The 50th Anniversary patch appears on the left sleeve, which forces the State of California patch (originally worn on the left) to be incorrectly placed on the right sleeve.

Worn on three dates:

- **Jays vs. Angels 4/8/2011**
- **Red Sox vs. Angels 4/22/2011**
- **Indians vs. Angels 5/6/2011**

© GameWornGuides.com

2011 Turn Back the Clock: “Flashback Fridays” to the 1960s

Worn on four dates:

- **Braves vs. Angels – 5/20/2011**
- **Yankees vs. Angels – 6/3/2011**
- **Royals vs. Angels – 6/10/2011**
- **Dodgers vs. Angels – 7/3/2011**
- Majestic full knit replicas are excellent reproductions of the original 1960s uniforms.
- Jerseys feature McAuliffe/Red Sox–style numbers on the back, with no player names—true to the style of the era.
- The 50th Anniversary patch appears on the left sleeve, forcing the LA patch (originally worn on the left) to be incorrectly placed on the right sleeve.

© GameWornGuides.com

2011 Turn Back the Clock "Flashback Fridays" to the 1990s

Worn on three dates:

- **Mariners vs. Angels – 7/8/2011**
- **Mariners vs. Angels – 8/5/2011**
- **Orioles vs. Angels – 8/19/2011**

Near-identical reproductions of the 1993–1996 home jerseys by Majestic. The absence of a white outline on the front lettering makes them most closely resemble the 1993 version. The "CA" patch appears on the opposite sleeve from its original 1990s placement, as the 50th Anniversary patch occupies the left sleeve.

© GameWornGuides.com

2011 Turn Back the Clock the the 1980s

Gray pullover jerseys in this style were originally worn by the Angels, 1973–1988.

July 17, 2011: This game in Oakland was billed as an "80s throwback" game. The home team A's wore white "OAKLAND" uniforms originally used from 1983–1986.

As part of their season-long anniversary celebration, the Angels wore a uniform very similar to those they used during the 1980s.

To be fully accurate, the player names should have been vertically arched, as they were from 1981–1986. Additionally, the front numbers are slightly undersized.

The 50th Anniversary patch appears on the left sleeve, causing the State of California patch to be (incorrectly) sewn on the right. On the original jerseys, this patch was worn on the left.

© GameWornGuides.com

2011 Turn Back the Clock: "Flashback Fridays" to the 1970s

Top left: *On retail sale jersey note that the patches are sewn on the opposite sleeves compared to the team-issued versions worn on the field.*

Worn on three dates:
- **Twins vs. Angels – 9/2/2011**
- **Yankees vs. Angels – 9/9/2011**
- **Athletics vs. Angels – 9/23/2011**

- Majestic's full-knit replicas are excellent reproductions of the original 1971–1972 design.
- Red Sox–style numbers appear on the back and front in a thinner font; player names are applied directly (no nameplates).
- 50th Anniversary patch on the left sleeve, causing the State of California patch to be (incorrectly) sewn on the right sleeve. The original had this patch on the left.

© GameWornGuides.com

2012 Turn Back the Clock to 1972

May 12, 2012: As part of their 40th birthday celebration, the Rangers invited the Angels to a Turn Back the Clock game.

Majestic produced outstanding replicas of the Angels' 1972 road uniforms. The fonts used for the wordmarks, player names, and numbers are spot-on.

© GameWornGuides.com

2012 Turn Back the Clock to 1955 PCL Los Angeles Angels

May 26, 2012: Turn Back the Clock game found the Seattle Mariners hosting the Angels in a game recreating the 1955 Pacific Coast League Championship Series.

The Angels wore Majestic knit replicas of the 1955 PCL Los Angeles Angels road uniforms—gray with navy/red lettering front and back. Player numbers appeared in Varsity font. The "LA" logo on the caps was similar to the style long associated with the Dodgers, making for an interesting twist.

Callaspo Slam Slays King Felix, Angels Avenge '55 PCL Series

by Rev Halofan on May 26, 2012
www.halosheaven.com

Wearing 1955 PCL Championship Series uniforms of the LA Angels and the Washington Rainiers, the Angels played the Mariners in a Saturday afternoon throwback affair. Pinch hitting in the 6th inning, Alberto Callaspo seemed to channel the ghost of LA Angel great Steve Bilko in hammering a grand slam off of King Felix Hernandez to turn a 2-1 score favoring the Rainiers into a 5-2 Angels lead that would not be relinquished. The 1955 Rainiers beat the LA Angels for the PCL Championship but 57 years later revenge was a dish served cold and on national television.

The Angels came from behind late for the second game in a row, won their fifth straight game and beat the pitcher who dominated the Rangers on Monday. Ernesto Frieri got the save and along with Jordan Walden and Scott Downs pitched scoreless bullpen mastery. The great Mike Scioscia teams have relied on shut-down bullpens and the blueprint seemed as fresh as the blue LA Angels helmets the team wore to great amusement of everyone but fans of the Chavez Ravine pseudo-Raiders.

© GameWornGuides.com

2013 Armed Services Day

May 18, 2013: The Angels hosted a day to honor members of the armed services, and the team wore white home jerseys with all adornments featuring desert camouflage twill. All outlining is the same as the team's regular home jerseys; the red top layer of the front wordmark, player numbers, and player name have been replaced with camo twill. Sleeve patches are unchanged from standard.

© GameWornGuides.com

2013 Memorial Day

May 27, 2013: The Angels visited the Dodgers for Memorial Day. Like all MLB teams, they wore camouflage-accented jerseys. Their gray road jerseys had the red top layer of all lettering (wordmark, player numbers, and name) replaced with desert camouflage twill. Sleeve patches remained unchanged from standard.

© GameWornGuides.com

2013 Turn Back the Clock to 1969

July 27, 2013: While visiting the Oakland Athletics, the Angels reprised their road uniforms from 1969, made by Majestic. These jerseys are made from full-weight polyester, not Cool Base fabric, and included the MLB 100th Anniversary patch on the left sleeve, just as all MLB teams wore in 1969.

The A's and Red Sox use the same McAuliffe/Red Sox font on their home jerseys. These Angels jerseys are good-quality reproductions of the originals.

© GameWornGuides.com

2013 Turn Back the Clock to the 1980s

August 16, 2013: The Angels hosted a Turn Back the Clock Weekend. On this Friday, they wore excellent replicas of their 1989–1992 uniforms—identical in style to those seen during several 2011 “Flashback Fridays,” though without the 50th Anniversary sleeve patch added that year. Player names and numbers matched the original 1989–1992 font. The visiting Astros, who seemingly never miss an opportunity to wear their garish older uniforms, id not participate and wore their standard uniforms instead. The decision may not have been theirs, however, as the home team traditionally covers the cost of the visitors’ throwback gear, and it’s possible the Angels simply didn’t offer.

© GameWornGuides.com

2013 Turn Back the Clock to the Early 1960s

Saturday, August 17, 2013: The Angels turned the clock back even further, wearing replicas of their 1962 uniforms—once again against the Astros, who wore their regular uniforms. These throwbacks closely resemble the ones worn on four occasions in 2011 during the team's "Throwback Thursday" promotion, minus the 50th Anniversary sleeve patch added that year. Back numbers are rendered in the McAuliffe/Red Sox font, similar to what the Angels used in the early 1960s.

September 5, 2013: These same uniforms were worn a second time, in a home game against the Tampa Bay Rays, who dressed in their normal navy alternates.

© GameWornGuides.com

2014 St. Patrick's Day

The Angels celebrated St. Patrick's Day during Spring Training for the first time in our records. Their commemoration was humorous in its subtlety: the only differences from the team's normal spring batting practice jersey were the addition of a green shamrock on the left sleeve and a change in the halo on the wordmark from silver to green.

© GameWornGuides.com

2014 Armed Services Day/Memorial Day

May 17 and May 26, 2014: Worn on Armed Services Day and again at home for Memorial Day, the Angels used their red alternate jersey as a canvas for camouflage. The top layer of all player names and numbers and of the team wordmark is changed to desert camouflage twill. Sleeve patches remain unchanged from normal, and all outlining on adornment is the same as normal.

© GameWornGuides.com

2014 Turn Back the Clock to the 1970s

August 29, 2014: At home against the A's, the Angels held a Turn Back the Clock to the 1970s game. They wore Majestic full-weight polyester replicas of their 1973–1978 jerseys, complete with proper McAuliffe/Red Sox-style numbers on the front and back—though the version of the font used on the front is not an exact match to the original.

© GameWornGuides.com

2015 Turn Back the Clock to 1965

Steve Kraljic Collection

April 18, 2015: For a game in Houston, the Angels wore 1965 throwback road gray knit uniforms, featuring blue/red twill lettering on the front and back. Made by Majestic, the jerseys are faithful reproductions of the originals, featuring period-accurate McAuliffe-style numbers (slightly smaller than in 1965). They are nearly identical to the 1969 throwbacks worn in 2013, except for the absence of the MLB 100th Anniversary patch and the addition of the anachronistic MLB Silhouetted Batter logo on the back of the collar.

© GameWornGuides.com

2015 Memorial Day

Repeating the look worn on Armed Services Day and Memorial Day, 2014, the Angels use their red alternate jersey for Memorial Day 2015. Once again, the top layer of all player names, numbers, and the team wordmark is desert camouflage; the rest of the jersey remains the same as usual. In 2015, the MLB Silhouetted Batter neck tag is changed to dark green/khaki/white, rather than its typical colors from 2014.

© GameWornGuides.com

2015 Independence Day

Read the full story on MLB's Independence Day Jerseys in Chapter 5.

For Independence Day 2015, all 29 U.S.-based teams adopt patriotic "Stars and Stripes" uniforms for the first time. All uniforms are lettered in a combination of red, white, and blue—regardless of the team's normal color palette. Jersey trim and patches remain the same as the team's regular jerseys. All teams sport a stars and stripes version of the MLB Silhouetted Batter logo on the back collar.

The Angels wear their road gray jerseys with the red-background version of the starred twill, which features large white stars; all lettering outlined in blue, including their front logo as well as front and back numbers. Player names on back are in blue. Two-layer twill replaces the usual three-color front lettering on the jerseys. An American flag patch is sewn on the right sleeve.

© GameWornGuides.com

2016 Special Batting Practice — Anaheim Ducks

The Angels held a “Ducks Night” on August 16 to honor their hometown hockey team, in response to a similar “Angels Night” hosted by the Ducks earlier that year. During batting practice only, Angels players donned cream-colored batting practice jerseys featuring an Angels/Ducks mashup logo on the front, with an Angels “Halo A” on the left sleeve and a Ducks logo on the right. The jerseys had no names on the back (consistent with the Angels’ regular BP jerseys), and player numbers were rendered in red/white/dark blue using the Angels’ special font. The jerseys were auctioned off for charity after the game.

© GameWornGuides.com

Read the full story on MLB's Mothers Day Jerseys in Chapter 5.

2016-2017 Mother's Day

May 8, 2016 and May 13–14, 2017: All teams wear special pink-trimmed uniforms for Mother's Day. All jerseys are of Flex Base construction, with the rubberized tag applied to the front-left tail. Every team also features the pink MLB Mother's Day ribbon on left chest (a carryover from past Mother's Days). The Majestic sleeve logo is rendered in pink, and the back-of-the-collar MLB Silhouetted Batter patch appears in dark pink/light pink/white.

The Angels wear their home white jerseys with the front logo lettering in pink with dark gray outlines. The player names on back are rendered in single-color dark gray; front and back numbers are pink/dark gray. The team's sleeve patches are also simplified to shades of pink, gray, and white. All jersey trim, normally red, becomes dark gray.

© GameWornGuides.com

2016 Memorial Day

May 30, 2016: Memorial Day jerseys are constructed in the Flex Base style for the first time, and the ChromaFlex MLB logo at back neck becomes black and dark gold for all teams. The new league-wide template, with higher-visibility woodland camo lettering and black outlines, makes this set more legible than in previous years.

The Angels apply the camouflage trimmings to their home white jerseys. The front lettering and front and back numbers are rendered in woodland camo with a black outline, and player names appear in single-color black. Like other teams, their sleeve patches are reduced to shades of green, gray, and black, and trim elements are also simplified to single-color black from the usual red.

© GameWornGuides.com

2016 Father's Day

Read the full story on MLB's Fathers Day Jerseys in Chapter 5.

June 19, 2016: For the first time, all teams wear special light blue-trimmed uniforms Father's Day. All jerseys are of Flex Base construction, with the rubberized front tag applied to the front left tail. Every team also features the light blue MLB Father's Day ribbon on left chest (a carryover from past Father's Days). The back-of-the-collar MLB Silhouetted Batter patch appears in dark royal blue/light blue/white.

The Angels wear their alternate red jerseys with the typical four-color front logo lettering reduced to light blue with dark gray outlines, with no drop shadows. Player names on back are rendered in single-color dark gray; front and back numbers are light blue/dark gray, without any of the usual drop shadows. The team's sleeve patches are also simplified to shades of light blue, gray, and white. All jersey trim, normally white/gray/white, becomes dark gray.

© GameWornGuides.com

2016 Independence Day

MLB creates another new Independence Day jersey template for the 2016 iteration, now built on Majestic's new Flex Base jersey construction. Each Independence Day jersey has a ChromaFlex rubberized "stars and stripes" pattern MLB appliqué sewn on the back of the neck. The Angels are on the road and wear their alternate red jerseys. All clubs have a choice of two styles of star-spangled lettering twill, and the Angels select the blue twill version with red outlines for their front lettering and for their front and back numbers, with a gray player name on back. Unlike most teams, whose front logo lettering is simplified to two colors for this game, the Angels' typical four-color front lettering becomes three-color—this time with blue star twill/red/gray, with no drop shadow layer. The front and back numbers, however, are reduced to two colors from the typical four. Every jersey has an American flag patch sewn on the right sleeve. New for 2016: team sleeve patches are now embroidered in red, white, and blue, replacing team colors. In an odd move, the left-sleeve 1961 Angles disc disappears, and is replaced by the right-sleeve silver halo-A patch, which moves to the left sleeve to make way for the flag. All jersey trim, normally white/gray/white, becomes single-color blue.

© GameWornGuides.com

2016 Turn Back the Clock to 1973-1975

July 15–16, and 20, 2016: On consecutive days against the White Sox, and again on July 20 vs. the Rangers, the Angels wore replicas of their 1973–1975 home uniforms. These white pullovers feature the classic "Halo A" Angels script in two-color twill on the front, with red/blue McAuliffe-style numbers on both front and back, and red/blue names directly sewn on the back. These are fairly faithful reproductions of the originals, though the number proportions on the front differ slightly from those used in the 1970s.

© GameWornGuides.com

2017 Memorial Day (Road)

The next incarnation of Memorial Day jerseys replaces the previous camo twill pattern with a new style that uses the team fonts in dark olive green with black outlines. The two adjacent dark colors are very difficult to tell apart, especially at a distance. All player names on back are now single-color black, while the back-of-collar MLB logo and team patches switch to an olive green and black treatment. A green bar patch with five black stars, representing the five branches of the U.S. military, appears on the right sleeve, and all trim elements are also simplified to single color black.

The Angels apply this style to their road gray jerseys as worn on May 27–28, 2017.

© GameWornGuides.com

2017 Memorial Day (Home)

The next incarnation of Memorial Day jerseys replaces the previous camo twill pattern with a new style that uses the team fonts in dark olive green with black outlines. The two adjacent dark colors are very difficult to tell apart, especially at a distance. All player names on back are now single-color black, while the back-of-collar MLB logo and team patches switch to an olive green and black treatment. A green bar patch with five black stars, representing the five branches of the U.S. military, appears on the right sleeve, and all trim elements are also simplified to single-color black.

The Angels apply this style to their home white jerseys as worn on May 29, 2017.

© GameWornGuides.com

2017 Father's Day

Light blue-trimmed Father's Day jerseys return on June 17-18, 2017. Once again, the Flex Base jerseys have the usual front left tail Majestic tagging and set tagging at the inside bottom of the placket. Returning as well is the light blue MLB Father's Day ribbon glued on left chest, the light blue Majestic embroidered sleeve logo, and the dark royal blue/light blue/white back collar ChromaFlex MLB Silhouetted Batter patch.

The Angels wear home white with the front logo lettering in light blue/dark gray. Their player names on back are rendered in single-color dark gray, while front and back numbers are light blue/dark gray. All jersey trim, normally red, becomes dark gray. The team's sleeve patches are also simplified to shades of light blue, gray, and white.

© GameWornGuides.com

2017 Independence Day (Home)

The 2017 version of MLB's Independence Day jerseys introduces a new patterned twill, one with a slightly less-busy pattern of stars and stripes suggesting a waving American flag. Teams again have a choice of two color options for the new twill – appropriately in red/blue or blue/red. The jerseys themselves are again Flex Base with typical manufacturer and set tagging. A ChromaFlex rubberized "stars and stripes" pattern MLB applique patch is sewn on the back of the neck.

On July 1-2, 2017, the Angels wear their home white jersey with red patterned twill/blue front logo lettering and front and back numbers. Player names on back are in single-color blue. Every jersey has an American flag patch sewn on the right sleeve. Once again, team sleeve patches are embroidered in red, white, and blue. All jersey trim is single-color red.

© GameWornGuides.com

2017 Independence Day (Road)

The 2017 version of MLB's Independence Day jerseys introduces a new patterned twill, one with a slightly less-busy pattern of stars and stripes suggesting a waving American flag. Teams again have a choice of two color options for the new twill – appropriately in red/blue or blue/red. The jerseys themselves are again Flex Base with typical manufacturer and set tagging. A ChromaFlex rubberized "stars and stripes" pattern MLB applique patch is sewn on the back of the neck.

On July 3–4, 2017, the Angels wear their road gray jersey with red patterned twill/blue front logo lettering and front and back numbers. Player names on back are in single-color blue. Every jersey has an American flag patch sewn on the right sleeve. Once again, team sleeve patches are embroidered in red, white, and blue. All jersey trim is single-color red.

© GameWornGuides.com

2017 Turn Back the Clock to 1977

Reaching back 40 years to the days of pullovers, the Angels wore 1977 road throwbacks on July 8, 2017. These Majestic Cool Base jerseys are a fair approximation of the originals — featuring red/blue front and back numbers in McAuliffe/Red Sox font, the “Angels” logo in matching colors on the front, and no names on the back. The front wordmark is close, if a little smaller than the 1977 set, and back numbers also appear smaller than they used to be – more scaled to a jersey with a name on back, which this jersey, appropriately, lacks. A haloed State of California patch is sewn on the left sleeve (with a thicker white border than in 1977), positioned above the anachronistic Majestic logo. While the neck and sleeve trim colors are accurate, the overall proportions differ from the originals.

© GameWornGuides.com

2017-2018 Players Weekend

To highlight players' personalities and to appeal to younger fans, MLB introduces the colorful Players Weekend promotion. In addition to relaxed regulations on team-standard color and design of cleats, bats, and other equipment, MLB encourages players to wear nicknames on the backs of a new set of very colorful jerseys. Meant to evoke the look of youth league designs, the two-toned Cool Base pullovers feature bright and contrasting body and sleeve colors and include a patch on the right sleeve with space for players to show their appreciation to special people in their lives with handwritten black marker messages. Both the patch, and the back-of-collar logo, feature a variant of the MLB logo showing the growth of a ballplayer from childhood to adulthood.

Heat-pressed Majestic manufacturer and set tags are applied on the front left hem, and the Majestic logo is embroidered on the left sleeve. All numbers on back are in single color Varsity, and the player names in 2 ¾" single color Block Condensed, regardless of the team's usual font. On August 25–27, 2017 and August 24–26, 2018, the Angels wear jerseys with navy blue bodies and red sleeves with white nicknames and red numbers on back. Sleeves and V-neck opening are lined with wide red/white/red trim. The front features a tightly spaced and straight-across version of their normally arched home-and-road wordmark, here rendered in red/blue/white kiss-cut lightweight twill.

© GameWornGuides.com

2017 Special Batting Practice — Anaheim Ducks

The Angels continued their annual tradition of saluting their crosstown neighbors, the Anaheim Ducks, with a special pregame jersey worn on September 19, 2017. The jersey uses a Majestic Flex Base template in black with red side panels. Red/black/red braid outlines the neck opening and sleeve ends. The Ducks' logo is sewn on the right sleeve, the Angels' logo on the left, and a mash-up Ducks/Angels patch appears on the front left chest. Numbers on the back are rendered in red/white/gold using the Angels' custom font, and the jerseys do not feature player names. These jerseys were auctioned off after the game.

© GameWornGuides.com

2018 Memorial Day

The 2018 Memorial Day jerseys repeat the pattern of 2017, with dark olive green/black front lettering and numbers joined by solid-color black player names on back. The outlines are nearly impossible to see as the two colors are so close in hue to each other. The back-of-collar MLB logo and team-specific sleeve patches also are repeated from 2017 with an olive green and black treatment. Trim elements are again simplified to single-color black, and a green bar patch with five black stars, representing the five branches of the US military, is stitched to the right sleeve.

The Angels apply this style to their red alternate jerseys on May 26–28, 2018. The effect of the olive on bright red is disharmonious and makes for an unpleasant combo.

© GameWornGuides.com

2018 Independence Day

The 2018 Independence Day jerseys repeat the pattern of 2017 featuring printed twill with a pattern of stars and stripes suggesting a waving American flag. Teams again have a choice of two color options for the lettering - red/blue or blue/red. The jerseys themselves are Flex Base with typical manufacturer and set tagging, and a ChromaFlex rubberized “stars and stripes” pattern MLB patch is sewn on the back of the neck.

On July 2-4, 2018, the Angels wear their alternate red jerseys with red patterned twill/ blue front logo lettering and front and back numbers. Player names on back are in single-color blue. Every jersey has an American flag patch sewn on the right sleeve. Once again, team sleeve patches are embroidered in red, white, and blue. While most teams simplify their jersey trim to one color, the Angels retain their white/gray/white braid near the sleeve ends.

2018 Turn Back the Clock to 1981-1984

The Angels threw back to their pullover era again on August 27–28, 2018, this time representing the 1981–1984 home jerseys, featuring that period's Varsity-style lettering and the State of California patch. These Majestic Cool Base V-neck pullovers are close in spirit, if not in exact detail. All red/blue lettering is correct, and the front logo is similar to the original, but the front numbers are much less bold than those from the early 1980s. The names on back are radially arched, though they should be vertically arched. The State of California patch on the left sleeve is accurate in design, but features a much thicker border than the original from 35 years prior. On the positive side, the blue/red/blue trim around the neck and jersey edges closely replicates the first incarnation of these classic Angels threads.

© GameWornGuides.com

2018 Special Batting Practice — Anaheim Ducks

On September 14, 2018, the Angels again honor their crosstown neighbors, the Anaheim Ducks, with a special pregame jersey. The template is a Majestic Flex Base, presented in gray with black sleeves featuring gray/black/white/gold/black/red stripes—mimicking the striping patterns found on the Ducks' own jerseys. Red/black/red braid encircles the neck opening. The Ducks' logo appears on the right sleeve, the Angels logo is on the left sleeve, and a mash-up Ducks/Angels logo patch is placed on the front left chest. Numbers on the back are rendered in gold/white/black in the Angels' custom font, with no player names. These jerseys are auctioned off after the game.

July 12, 2019: All Players Wear “Skaggs #45”

On July 12, 2019, in their first home game since the death of pitcher Tyler Skaggs, the Angels honored his memory by all wearing his name and number during a game against the Mariners. According to the team, the red jerseys were Skaggs’ favorite. That night, the Angels’ pitchers combined for a no-hitter—the first combined no-no thrown in Anaheim since July 13, 1991, the day Skaggs was born. After the game, players removed their jerseys and placed them on the mound, which was emblazoned with Skaggs’ #45 for the game.

© GameWornGuides.com

2019 Turn Back the Clock to the 1970s

The Angels love to throw back to their pullovers, and did so again on August 16–17, 2019—this time with a 1970s look. This version, featuring McAuliffe/Red Sox-style numbers and block lettering on the back, resembles uniforms from either 1973–1975 or 1978. Like their other recent turn-back-the-clock jerseys, this Majestic Cool Base version is decently executed overall but lacks some finer details. For instance, the front number font does not match the variant used in the 1970s (a common issue with these throwbacks), and the blue/red/blue sleeve trim is much too narrow compared to the originals. This version also includes the Tyler Skaggs “45” memorial patch stitched on the left chest

© GameWornGuides.com

2019 Players Weekend

The third incarnation of Players Weekend turns the colorful jersey concept on its ear, reducing all teams to monochromatic designs in either black or white, with all team sleeve patches and trim removed, leaving a clean but stark template. Gone are the contrasting sleeves and special patches with messages of inspiration. MLB says that this new approach is to emphasize the colorful, personalized cleats, bats, and other gear the players choose for the promotion, which spans August 23–25, 2019. Jerseys are now button-front Flex Base, with appropriate Majestic manufacturer and set tagging. Back-of-collar CFX MLB logo is now silver and black. All teams also wear a memorial patch for Angels pitcher Tyler Skaggs, a white “45” in a black circle, on the left sleeve. Most teams removed this patch before auctioning off the jerseys.

The Angels wear a black version of their home jersey with the front lettering and back Varsity numbers rendered in black/gray and the player’s nickname in gray on the back.

© GameWornGuides.com

2019 Special Batting Practice — Anaheim Ducks

On September 13, 2019, the Angels again honored their crosstown neighbors, the Anaheim Ducks, with a special pregame jersey. The template was a Majestic Flex Base, in white with black raglan sleeves and diagonal side stripes, mimicking the striping patterns on the Ducks' own jerseys. Gold/red/gold braid encircled the sleeves and neck opening. The Ducks' logo appeared on the right sleeve, the Angels logo on the left, and a mash-up Ducks/Angels logo patch was placed on the front left chest. Numbers on the back were in red/black/gold in the Angels' custom font, with no names appearing on back. These jerseys were auctioned off after the game.

2021 Turn Back the Clock to the 1970s

The late 1970s Angels pullovers returned once again on August 30–31, 2021, but this incarnation was the first from Nike. Like the 2019 version of this same jersey—then made by Majestic—this edition features McAuliffe/Red Sox numbers and Block names on back. And just like those, this entry is made of Cool Base fabric, without the Flex Base side panels or ventilated back tail. Overall, it is another well-executed throwback, but again lacks some of the same finer details as its predecessors. For instance, the front number font is not the same variant as was used in the 1970s (a frequent issue with these throwbacks), and the blue/red/blue sleeve trim is much too narrow compared to the originals. Finally, the name on back should be vertically arched, but is radially arched here. New since 2019 is the anachronistic MLB logo on the back of the neck, and of course, the Nike logo on the chest.

© GameWornGuides.com

2021 Little League Classic

Held on August 22, 2021, the Little League Classic saw the Angels take on the Cleveland Indians in Williamsport, PA, home of the Little League World Series. In this first-ever Little League Classic between two AL teams, the Indians and Angels wore special uniforms honoring the Little League regions their teams represented—West Region, in the Angels' case.

The Angels' Cool Base pullover featured red sleeves, a blue V-neck opening, and a red/blue/red "sash" insert sewn diagonally across the front. The "West" lettering was rendered in red/white drop-shadow twill. Front and back numbers were red/blue in the Angels' font, while player names on the back appeared in a rounded, condensed blue font.

The team's Halo-A logo was placed as a patch on the front right chest, pushing the Nike logo to the left chest position.

© GameWornGuides.com

2023 Turn Back the Clock to 1989-1992

The Angels featured throwbacks to their first post-pullover style from 1988–1992 on July 21 and 22 for games against the Pirates. However, since the 1989 version had the All-Star Game patch, and the 1992 version had the DJ memorial for Deron Johnson, it may be more accurate to say that this throwback reflects the 1990–1991 version. At first glance, these are reasonably faithful to the originals, with red/navy lettering throughout—though the dimensions of most of the lettering differ slightly from those on the original jerseys. Navy/red/navy knit trim is sewn-in at the neck and sleeve openings, and while the band sizes differed on the original neck and sleeve trims, they are identical here—a compromise between the two historical approaches. The original jerseys used nameplates for player names, which are not included on this version. Inexplicably, the State of California patch appears on the sleeve, despite having last been used on team jerseys in 1985. By 1989—the year this throwback is supposed to represent—the patch in use was the team's disc logo. The Nike logo, MLB logo, and sponsor patch are, of course, new additions for 2023.

An original jersey from 1990, showing some of the subtle—and not-so-subtle—differences.

Prototypes and Oddballs

1972 Prototype Home?

It is possible that this is a MLB Angels prototype jersey; then again, it could be nothing significant at all. Here are the conflicting facts:

- The style of the front lettering on this specimen mimics the style used on the Angels' home uniforms until 1970.
- Therefore, it is reasonable that this might have been a sample design for the Angels' first double knit uniform—maybe in 1971?
- However, still in flannel, the Angels had changed their team "look" completely for 1971, abandoning the old McAuliffe/Red Sox-style Angels on the front, replacing it with a modern and stylish wordmark pictured at the front of this chapter, with all lowercase letters and a halo floating atop the "A."
- Further confusing things, the Rawlings tag used on the tail is a style that did not come into use until 1972. Lacking this, we might have assumed this to be a 1971 prototype knit.
- And it seems odd that the team would have created a prototype double-knit jersey in an old-style design after they had just modernized their look.
- The large diamond-shaped tag inside the back collar is similar to ones we have seen before on prototypes, but again we cannot be sure. This uniform may simply have been made for the local beer league.
- *Interestingly: Since the Seventh Edition, I had found another one of these for sale, also with the numeral 9 on the back, and this time in size 42* ***(pictured here at right).***

© GameWornGuides.com

1973 Prototype Road?

I believe this is a prototype 1973 Angels jersey made for the team in 1972 by McAuliffe. However, given McAuliffe's practices, it could have been a one-off jersey made for a fan.

The "Halo A" front design was not used by the team until 1973, yet this jersey carries a 1972 year tag.

Jersey front numbers appeared in both 1972 and 1973, but this one has none.

Unknown Batting Practice/ Possible Prototype

This jersey design is reminiscent of styles worn in the early 1980s. We've never seen a photo of a player wearing this style, but pre-game photos from that period are uncommon. Judging from the visible wear and wash tag, someone clearly wore and enjoyed this jersey over the years.It may be a prototype, or perhaps it originated in the minor leagues. We share it here for your consideration

© GameWornGuides.com

1978: A Fan's Home Jersey (That Actually Made the Field)

Security at MLB ballparks isn't what it used to be...and by that, I mean it is much better now. Here we have a jersey that Angels Fan Kevin Barney purchased from Goodman and Sons in 1978. Instead of wearing it or framing it, Barney brought it to the ballpark, talked his way into the Angels locker room, and presented it to none other than Nolan Ryan to wear in a game. And miraculously, Ryan actually did it. In a letter he wrote when the jersey went up for auction at Lelands in 2024, Barney tells the rest of the story...

"In 1978 I went to the jersey manufacturer of the California Angels, W.A. Goodman & Sons, to see if they could make me a Nolan Ryan jersey. They created the jersey to all the California Angels specifications except for the patch on the left sleeve because of a copyright infringement. Instead, they stitched on a similar sleeve patch as a substitute that also displayed the State of California. However, this one had a rectangular gold border around it that spelled out "Angels". After acquiring the jersey, I had the idea of going to a game with my video camera to see if I could get into the locker room and present it to Nolan himself. On April 13 of 1978, I went to Angel Stadium holding the jersey on a hanger. I informed the clubhouse guard of what I was trying to do and shockingly enough, he let me in. With my video camera running, I saw Nolan at his locker and walked on over to let him know how big of a fan I was. As you can imagine, he was confused as to how I got into the clubhouse and laughed when I told him the guard just let me in. Considering he was the starting pitcher that day, I asked if he would be able to wear my jersey during the game. Nolan again laughed and said if I could get back down into the clubhouse after the game he'd wear my jersey today. My accompanying photographs and video show our clubhouse interaction and him wearing my jersey during that game. I got down to the clubhouse again after the game where he returned the jersey, signed it for me and it's been in my personal collection ever since."

Above: *Photos of Ryan wearing this fan jersey in a game on April 13, 1978. Right: A detail of the wrong team patch Goodman and Sons applied to the jersey. The fan's video from his experience meeting Ryan and convincing him to wear the jersey is on YouTube at https://youtu.be/3qrjwMJUk2w*

1986 Unknown McAuliffe Batting Practice

Several readers brought this auction jersey to my attention, asking, “What is it?” As far as I know, the Angels never wore a jersey like this. It has McAuliffe 1986 tagging but uses number fonts that the Angels stopped using after 1978. The knit neck and sleeve end trim in white/gray/red is not something that I—or any of my fellow Angels collectors—have ever seen before.

By 1986, McAuliffe was at the end of its existence. Seeing anything with a McAuliffe 1986 tag on it is a rarity, and I would hesitate to call it a prototype. It could have been a minor league issue, or sample. Or it could be a total phantom. We have learned that McAuliffe would sew almost anything custom for paying customers, and sew team tagging on it (like this) on request, so this could have been a custom commission by a retail customer.

1992-1993 Prototype Turn Back the Clock Vest?

Stephen Kraljic Collection

This gray vest carries early Russell Diamond Collection tagging, from 1992 or 1993. The Angels played their first Turn Back the Clock game in 1992, highlighted several pages back. We noted the jerseys had incorrect red lettering outlined with blue, when the originals had blue/red, and incorrect Varsity-style numbers—also in the incorrect red/blue color combination. The lettering on this jersey is 2-layer felt, red/navy blue.

The MLB Angels never wore vests during the 1962–1969 period. So if this is a prototype for that 1992 Turn Back the Clock jersey, it showcases a trifecta of inaccuracies.

Far left: *This style Diamond Collection tag with the nearly flat "Diamond" word script in the logo was used only during 1992 and 1993;*

Near left: *The same is true with the Intera Fabric tag (1992–1993 use).*

© GameWornGuides.com

1997 Design that *Almost* Made it Onto the Field ...

- This design nearly made it to production in 1997. The Angels had even released it as its official team specs to licensees before changing their minds and issuing new, revised pages in their place. I left the color swatches at the bottom so you can see how many colors were part of this original uniform combination.
- It would have been nice to see the vertical arched player names on back used, but they were replaced by vanilla Block Standard in actual use.
- The three-toned shoulder stripes (red and two shades of blue) were dropped, as was the navy-pinstriped alternate uniform top. The batting practice jersey design was used exactly as you see it here.
- Thanks to baseball historian and friend Donovan Moore for sharing this information.

© GameWornGuides.com

1997 (1999?) Prototypes

Spotted on eBay, these jerseys were listed as *"Angels 1999 Prototype Jerseys"* by their seller, who offered no reason for believing they were from that year. Perhaps the team was still fiddling with the design two years after its 1997 release, but these jerseys feature vertically arched, custom-font, two-color player names—just like the ones shown on the artwork from the previous page—and use rather plain (though not exactly Block Standard or Varsity Standard) numbers in place of the fancy ones that were actually adopted.

As is the custom with prototypes, it carries the numeral "5" and the NOB of "PLAYER."

I'd put my money on these being from 1997.

© GameWornGuides.com

1997-2001 Oddball Bat Boy Vests

Pictured here are four different 1997–2001 Angels home vests made up for bat boys. It is unclear if these were used with the big-league team, but all were made by Gunther's Athletic, which was located in Anaheim at the time. Angels home jerseys of this era were faux vests—pinstriped jerseys with set-in blue sleeves—the team did not wear actual vests on the field. We suspect, however, that sourcing these jerseys in youth sizes may have been difficult (note that the top left jersey is a men's size 30–32, and the top right is 26–28—both much smaller than typical MLB player jerseys). A local supplier like Gunther's likely wouldn't have had stock youth pinstriped jerseys with blue sleeves, so these may have been created to solve that problem. Sleeves aside, the front and back lettering are pro-quality and match the Angels' on-field jerseys perfectly.

© GameWornGuides.com

2002 Turn Back the Clock Oddballs

Normally when I see something like this promoted as "game used" I simply ignore it and move on without a second thought. The number font is not correct and is unlike the other jerseys from this game that we showed some pages back. I suggest that the only "game" this jersey is from is one being played in someone's mind!

But wait! Those game photos show pitcher Scott Shields pitching in that game—with the same incorrect numbers. Our conclusion? Both of these players were called up in June, and probably the uniforms for this July game had been ordered already. Likely these were lettered by the team's local tailor using standard numbers that they had on hand. Anyway, who would notice? Well, we did.

© GameWornGuides.com

Oops.

- New call-up outfielder Adam Riggs took the field against the Detroit Tigers on August 16, 2003, wearing his new Angels uniform … with a spelling mistake on the front. Apparently, no one noticed before the game, but it was not long before Fox TV highlighted the gaffe for the world to see.
- Manager Mike Scioscia suggested, "To welcome the community spirit, it looks like we had some kindergarteners come in and do some sewing and some spelling for us.“
- Riggs threw the shirt in the wash after the game, and never saw it again. MLB.com suggests it was probably “burned” by the Angels clubhouse staff, who should have caught the error and were embarrassed by the incident.
- From the photos at right, obviously Fox Sports and *Sports Illustrated* had a little fun with this at the Angels’ expense.

2020 Nike Sample Home (Modified)

Above: *Residue from the former "PLAYER" and "20" lettering is visible under the current name and number.*

Though Nike's 2020 entry into MLB jerseys resulted only in the rebranding and relabeling of Majestic's previous Flex Base jersey template, it appears that Nike still produced sample jerseys for team inspection. Here is one such example, made up for the Angels.

Note that this jersey originally had "PLAYER" as the name on back with "20" as the front and back numbers, signifying the year it was to be used. These are common signifies of a sample jersey, but they have been changed by a fan to make this a Mike Trout jersey. Residue under the 7 and NOB are still visible from the jersey's original state.

This jersey's pedigree as a sample is apparent in a few other details that remain. First, it is size 46, a common sample size. Further, it carries interior tagging with the tell-tale sample coding "ANG-HJ-D1-2-2020" indicating it is version 2 (D1-2) of an Angels (ANG) home jersey (HJ). We have seen others of these jerseys, all with "D1-1" so this is the first time we have come across a second version. It could mean that multiple copies of this one jersey were made, or that the team was considering some sort of change, but this second version represented their current jersey, which they kept. It is possible such samples were made for all of the teams jerseys, but any such examples have yet to turn up.

Outwardly, this home white jersey appears just as it did on the field in 2020, a testament to the fact the team did not make any changes for that season. However, there are still some small details in this sample that were updated before the full run of 2020 jerseys went into production. First, a heat-pressed neck tag which was not used in on-field jerseys. Next, an interior heat-pressed tag, almost twice as tall as the ones used by Majestic before and Nike after, appears inside the placket with the sample coding. This location was used by Majestic for team tagging, but Nike versions moved these tags below the jock tags on the lower front of the jerseys.

Finally, the "0730" code on the back of the laundry tag is the same used for Majestic's version of the Flex Base template. By the time these jerseys were released in 2020, the product code had been updated to "0890" to reflect the new Nike jerseys, even though nothing had really changed.

© GameWornGuides.com

2024 Nike Sample Spring Training

Harrison Katapodis/dormroomjerseys on eBay

In advance of the switch to Nike Vapor Premier Elite (VPE) in the 2024 season, Nike made prototypes of jerseys on the new template for team review. By the point that these samples were made, teams had already seen some early drafts with many missing or incorrect details, just to get a sense of the materials and construction. However, many of the later samples, like the one shown here, were very close to what eventually appeared on the field in 2024. But this Angels Spring Training version is something of an exception because the Angels scrapped this jersey design for Spring Training 2024 in favor of using their regular red alternates. Thus, this phantom is an example of what might have been...

Like all VPE jerseys, neck and sleeve-end trim is now sewn into the edge of the sleeve instead of on it. The back numbers on this sample are also perforated, which was not an element of the earlier version.

Note the sample information that is on the Nike tag, which reads “ANGELS ALT2 JERSEY 44 REGULAR FIT”, with 44 being the size, which was not typical in earlier Nike samples, which were usually size 46. Also, the designation of “regular fit” was something not commonly seen on jersey tags, so it may have indicated the intent to use “bucket sizing” on jerseys, where there were a handful of standard cuts in different proportions available to players rather than the specific customizations of years past. Nike’s 2024 pants were also done in bucket sizing, which was very unpopular with players. It is unclear what the “DD4912-611” text on the front tag means. It is likely they are internal production codes, as all 2024 samples we have seen have different codes in these spots that we have not yet deciphered. The handwritten “4” on the tag could mean that other iterations exist.

2023-2025 Angels Advertising Patches

With the start of the 2023 season, teams were permitted to sell an advertising patch, up to four inches square, to appear on one of their jersey sleeves. The sleeve on which the patch appeared could change from player to player, and each team that sold a patch handled the placement differently.

The Angels struck a sponsor patch deal with Foundation Building Materials, a construction supply company. The patches first appeared in Spring Training 2023.

The patch is white with a red border, with a white “FBM” in a blue field to the right of a cypress tree. The placement of the patch varies depending on the handedness of each player, except on the City Connect jersey, where it always resides on the left sleeve.

To accommodate the new patches, the Angels eliminated the team disc patch from their jerseys prior to the 2023 season.

Letter of Professional Opinion/Document of Restoration

Jim Spencer 1970 California Angels Game Worn Home Jersey

Examination Date: March 28, 2023 **Certification Number**: 23-0328J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Rawlings-made seven button home jersey of infielder Jim Spencer of the 1970 California Angels. Cream-colored lightweight flannel-blend body with old-style nylon uniform braid in Navy/red/Navy banding the sleeve ends and sewn tight to the edge around the collar. "ANGELS" in the team's Tiffany Font arched across both panels of the front in red over Navy felt; the red felt is straight-stitched to the navy bottom layer; the navy outline edge is tightly zig zag stitched to the jersey. On back is the player number "9" in the Angels correct font, one that we know as the McAuliffe or "Red Sox" font. The embroidered patch of the state of California with a gold star approximating the location of Los Angeles and a gold halo at its top left is stitched to the right sleeve. Four gusseted holes are sewn into diamond-shaped panels in the armpit seam of each sleeve. Size 44 would be appropriate for the 6' 2", 195 lb. Player. Wilson was the exclusive provider of 1970 Angels home jerseys.

Jim Spencer appeared in 146 games for the 1970 Angels as their starting first baseman, batting .274 in 511 at bats with 11 home runs. in 1970 he led the American League with 1,212 putouts at first and a .995 fielding percentage to win the Gold Glove award. He enjoyed a fifteen year MLB career, opening his first seven season with the Angels starting in 1968. He then went on to play for the Rangers, White Sox, Yankees and Athletics before his retirement in 1982.

Restoration Performed: As presented to me, the jersey was complete with the exception of the removal of its player name on back. The light table revealed the ghost-impression of SPENCER, the player who wore number 9 in 1971. The Angels routinely removed player names from its sets of team jerseys at the end of the season so they could be reused in either spring training the next year or sent to the minors. Finding one with its original player name on back would be extremely rare. Many 1970 Angels jerseys were completely stripped on the fronts to become 1971 issues, which carried a completely different team wordmark. This one somehow

Continued, overleaf

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

escaped that fate. With strict adherence to the surviving ghosts for both letter shape and placement, I cut new name-on-back lettering using the correct Rawlings font and stitched it in place.

Manufacturer and Team Tagging: Rawlings Red tag in the style used during the 1960s and through the 1971 season is stitched to the inside of the back collar. There are no stitching marks visible from the outside back of the collar, indicating that the tag was sewn there prior to the placket being sewn colored at the time the jersey was made, as is correct. On the lower outside left front tail is hand chain stitch embroidery in bright green, matching exemplars, "Spencer 44 70" (the player last name, size 44 1970). Centered beneath that is a rectangular linen tag bordered with blue and with six lines of wash instructions printed in red. Pinch-sewn under the right of that tag is a white flag tab with "SET 1 #8P 1970" printed on it in Navy Blue.

Wear & Repairs: This jersey is in exceptional condition. While it shows some puckering of the fabric behind the back number and around the sleeve ends and winkling and some staining of the wash instructions tail tag, showing use and washing, it is in beautifully preserved condition. The team lettering on the front is near perfect— so much so that I had to look at it very closely to determine if it was original or replacement. I have concluded that it is original to the garment. The jersey is undamaged by staining,

tears or insect-holes so common of flannels. This is the finest original-condition 1970 Angels jersey I have had the privilege to examine.

Conclusion: The jersey in review is in excellent and is all original, with the exception of the professionally restored player name on back with lettering identical to original. The jersey has no alterations or contrivances of of any kind. It has a team-issue tagging. It is my considered opinion that this jersey was made to team specifications and worn by Jim Spencer of the 1970 California Angels.

Letter of Professional Opinion/Document of Restoration

Eddie Fisher 1970 California Angels Game Worn Road Jersey

Examination Date: March 28, 2023 **Certification Number**: 23-0328J02

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: McAuliffe-tagged seven button road gray jersey of pitcher Eddie Fisher of the 1970 California Angels. Heather-gray with a slight blue tint-colored lightweight flannel-blend body with old-style nylon uniform braid in Navy/red/Navy banding the sleeve ends and sewn tight to the edge around the collar. "ANGELS" in the team's Tiffany Font arched across both panels of the front in Navy felt over red twill, a hybrid lettering technique used by only a few teams late in the flannel jersey era. The Navy felt lettering is straight-stitched to the red bottom layer; the red outline edge is tightly zig-zag stitched to the jersey. On back is the player number "24" in the Angels correct font, one that we know as the McAuliffe or "Red Sox" font. It is also felt over twill. The embroidered patch of the state of California with a gold star approximating the location of Los Angeles and a gold halo at its top left is stitched to the right sleeve. Four gusseted holes are sewn into diamond-shaped panels in the armpit seam of each sleeve. Size 46 would be appropriate for the 6' 3", 200 lb. Player. McAuliffe was the exclusive provider of 1970 Angels road jerseys.

Eddie Fisher was known as a knuckleball pitcher, and appeared in 67 games for the 1970 Angels, mostly as a reliever, and compiled a 3-3 record in 130.1 innings pitched with 74 strike outs and a 3.04 ERA. In his 15-year MLB career he played for seven teams and was an All-Star in 1965.

Restoration Performed: As presented to me, the jersey was complete with the exception of the removal of its player name on back. The light table revealed the very faint ghost-impression of FISHER, the player who wore number 24 in 1970. The Angels routinely removed player names from its sets of team jerseys at the end of the season so they could be reused in either spring training the next year or sent to the minors. Finding one with its original player name on back would be extremely rare. Many 1970 Angels jerseys were completely stripped on the fronts to become 1971 issues, which carried a completely different team wordmark. This one

bill@TheDream.Shop

somehow escaped that fate. With strict adherence to the surviving ghosts for both letter shape and placement, I cut new name-on-back lettering using the correct McAuliffe font and stitched it in place.

Manufacturer and Team Tagging: McAuliffe's set of three clustered tags are stitched to the outside of the front left tail. The McAuliffe manufacturer tag is on top, and below are a blue tag with "70" for the two-digit year, and a white tag with "46" for the jersey size. Centered beneath that is a rectangular white felt tag with "E. Fisher" hand chain stitched in dark blue thread in the familiar handwriting of the factory stitcher. These match exemplars. The stitching has failed on the top and left side of this tag leaving it partly detached, typical of felt tagging after a season of use.

Wear & Repairs: This jersey is in very good condition. It shows some puckering of the fabric behind the back number and around the sleeve ends and winkling and some staining of the tail tagging, as well as some abrasion to the felt's surface showing normal use and washing; it is in beautifully preserved condition. The jersey is undamaged by staining, tears or insect-holes so common of flannels.

Conclusion: The jersey in review is in excellent and is all original, with the exception of the professionally restored player name on back with lettering identical to original. The jersey has no alterations or contrivances of of any kind. It has a team-issue tagging. It is my considered opinion that this jersey was made to team specifications and worn by Eddie Fisher of the 1970 California Angels.

Name on back ghosts were very faint, but notice the holes at several "corners" of the letters showing where the letters had been roughly removed. The font is McAuliffe's, different from the Rawlings home-jersey style.

Document of Restoration

California Angels 1971 Road Jersey #8 O'Brien

This is not a letter of authenticity. Its purpose is to document the history of an alteration of a jersey in our shop.

As Received: Team tagged California Angels 1971 O'Brien road gray flannel jersey. The name on back had been removed and is to be restored to original.

Work Performed: Using the light table I was able to clearly see the ghost outlines of the removed letters on back. Using these images, my historic font library, and consulting period photos in my exemplar database, I recreated the player name on back in the correct font and colors. The new twill lettering was lightly media blasted to make it better match the organically worn originals, and was stitched in place using appropriately faded thread color and stitching size to match the rest of the jersey. This document shows the methodology of the name on back replacement.

Letter of Professional Opinion/Document of Restoration

Mel Queen California Angels 1972 Game Worn Road Jersey

Examination Date: October 7, 2024 **Certification Number**: 24-1007J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Size 44 Rawlings six-button jersey (currently measures as a size 38!), flat-bottom hemmed with side vents, California Angels road jersey of relief pitcher Mel Queen. 1972's One-year design, "Angels" arched on the front in red outlined with small halo atop the lower case "A" in Angels. #45 number lettering in the same colors, front and back sewn-in Navy/red/Navy 1/2" trim at the neck, and sewn-in 3/4" sleeve end trim in the same colors. Name on back has been removed and is still missing. The embroidered team patch of the state of California with a gold star approximating the location of Los Angeles and a gold halo at its top left is stitched to the left sleeve. The original size of the jersey is reasonable for the player, listed at 6' 01" and 197 lbs, but it has clearly shrunk from over-use.

Pitcher Mel Queen had an interesting career. He enjoyed a nine-year playing stint in MLB, starting in 1966 with the Reds as an infielder, then an outfielder, switching to pitcher before being traded to the Angels in 1970. His final season was 1972. He appeared in 17 games for the Angels in short relief, earning no decisions with a 4.32 ERA in 31 innings pitched.

Following his retirement as a player from baseball, he left the game for a decade, managing a friend's restaurant. But in In 1986, Queen was hired by the Toronto Blue Jays, where he would play a significant role in the development of the homegrown players during their 11 straight winning seasons. He started as a coach, was promoted as their farm director in 1990 and served as their major league pitching coach from 1996 through 1999. During his four seasons in that role, two Toronto hurlers won three consecutive Cy Young Awards as the top pitcher in the American League — Pat Hentgen in 1996 and Roger Clemens in the 1997 and 1998 seasons. However, one of his major achievements came in 2000, when the Blue Jays again coaxed him out of retirement to help revive the sagging career of Roy Halladay, by then a 23-year-old pitcher. Queen met Halladay in Dunedin, Florida, where the Jays had sent their once-promising hurler after his ERA had soared to 10.64 in the major leagues, at which he ran a virtual boot camp for Halladay, rebuilding his delivery, teaching him new grips for his pitches and helping him develop a new mental approach. In 2009, then

bill@TheDream.Shop

Above: Light table analysis shows the photo-enhanced ghosts of the "6" that originally was in the second position, as well as very faint ghosts of the central letters in "QUEEN" that had been sewn in a straight line above the number. Below: the inside stitching reveals that the "4s" were original, with mostly failing thread, while the "5s" are replacements that are almost certainly taken off of another used jersey and then straight stitched in place. In restoring the jersey, the absolute minimum was re-stitched to simply prevent the lettering from falling off without adding too much. Notice how the small halo over the A was originally sewn with two colors of thread directly to the shirt.

Toronto's general manager J. P. Ricciardi brought Queen out of retirement yet again to serve as a senior advisor, working on special assignments with minor league pitchers, retaining that position for the rest of his life. (*Wikipedia, Baseball Almanac*)

Manufacturer and Team Tagging: The red Rawlings "Mark of a Pro" tag showing he size as 44, a style newly used for 1972 is stitched inside the back left hem next to the side vent, pinch-sewn under the tag's bottom right edge is a white flag tab marked SET 1 #8P 1972. This matches exemplars from our library.

Wear & Repairs: A light table evaluation of this jersey shows signs that the second number in the set originally was a "6". The only ghost visible of the name on back, long ago removed, is two "Es" right in the center. Typically center-placed letters on a jersey are slightly more visible than the other letters, owing to the heat/pressure that is used to apply the lettering overtop the thicker, raised front placket. Queen wore #46 for the 1972 Angels. While the jersey now wears #45; the stitching inside clearly shows that the second digit was replaced with a "5" that was probably taken off another jersey while in the minor leagues, sloppily sewn with a straight stitch. The 5s on both front and back are slightly larger than the "4s" that are next to them, however there is a great deal of puckering behind both numbers indicating that the jersey was used and washed extensively in this configuration.

All of the lettering is faded, stained, edge-frayed, shrunken and extensively puckered and burnished. There is notable puckering behind all of the lettering that remains attached, since the twill lettering typically shrinks more aggressively than the knit jersey it is sewn to. The buttons appear to be the original set, and while slightly threadbare in spots, the original California sleeve patch is intact.

The numbers, especially the leading "4s" were very loose when the jersey was received for evaluation. The same was true of the front team wordmark. The owner had originally wanted to restore the player name and number, but desiring to preserve as much that was original as possible, decided against the effort because we would not have been able to closely match the patina and fraying/wear compared to the original sewn elements. Instead, we decided to leave it be, documenting what we can see, while tacking down the loose elements only as necessary to keep them from falling off completely, and slightly improve the appearance. 1972 Angels jerseys in original condition are a rarity in the hobby, as so many were simply used-up to the point of destruction in the minor leagues.

Conclusion: The jersey in review is in fair to poor but very original condition, appearing as it did when last used in the Angels' minor leagues. The front team crest is all original, the numbers "4" front and back are original while the "5s" are minor league replacements. The name on back has been removed and no attempt was made to restore it. The jersey has no alterations or contrivances of any kind. It has a team-issue tagging. It is my considered opinion that this jersey was made to team specifications and worn by Mel Queen of the 1972 California Angels.

Letter of Professional Opinion/Document of Restoration

Nolan Ryan California Angels 1973 Game Worn Home Jersey

Examination Date: August 1, 2024 **Certification Number**: 24-0801J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Size 44, McAuliffe-made first-year style white California Angels pullover jersey of Hall of Fame pitcher Nolan Ryan. "Angels" arched on the front in red outlined with Navy, a gold /Navy halo atop the "A" in Angels. Player name and number lettering in the same colors, front and back Sewn-in Navy/red/Navy V-neck, and sewn-on 1 1/2" sleeve end trim in the same colors. The embroidered team patch of the state of California with a gold star approximating the location of Los Angeles with a gold halo at its top left is straight-stitched to the left sleeve. The size of the jersey matches exemplars as worn by Ryan at this point in his career, and is reasonable for the player at 6' 2" 195 lbs. The player numbers are in the McAuliffe font as used specifically by the Angels in the early 1970s. The player name on back is a very narrow and condensed block font that is specific to McAuliffe in this time. Generally, when player names on back are stitched, numbers are sewn 8 inches from the collar. The early 1970s McAuliffe Angels jerseys stitched the numbers only 6 inches from the collar and then fit the names very tightly above them in a very shallow, almost flat arch. This spacing and placement was similar to the Oakland Athletics jerseys of the time, made by the same manufacturer.

Nolan Ryan had a brilliant, 27-year Hall of Fame career. 1973 was the seventh year of his MLB service, and his second with the Angels after five years with the Mets. He appeared in 41 games, compiling a 21 and 16 record, with a 2.87 ERA. 1973 was his first 20-win game season. Ryan threw a no-hitter against the Kansas City Royals on May 15, 1973. He threw a second no-hitter on July 15 against the Detroit Tigers, where he struck out 17 batters – the most in a recorded no-hitter. Ryan set his first major record when he struck out 383 batters in one season, beating Sandy Koufax's old mark by one. Ryan threw a record seven no-hitters during his major league career, three more than any other pitcher. In 1999, he was inducted into the Baseball Hall of Fame. (*Wikipedia, Baseball Almanac*)

Manufacturer and Team Tagging: McAuliffe supplied the Angels with home jerseys in 1973. The clustered set of (4) manufacturer tags are sewn on the outside center of the front tail; 1973 blue-bordered year tag, un-bordered McAuliffe manufacturer tag, wash instructions, and centered below these three is the size tag, "44". There was no specific player or team tagging beyond this. The tagging generally matches exemplars, McAuliffe had a habit of not sewing the tags in exactly the same configuration on every shirt.

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

Wear & Repairs: A light table examination shows that all lettering is original and untampered with. Looking closely at the stitching on the inside, we can see that all stitching is identical on both the front wordmark and the player customization indicating to me that everything was stitched at the same time on the same sewing machine. There is consistent and minor puckering of the fabric beneath all of the stitched on twill lettering. The jersey shows clear signs of honest use with yellowing of the fabric, puckering of the trim and lettering caused by hot water washing. The red top layer of the twill, shows puckering and wear marks where it has abraded against other fabric in use and in the wash. There is fading of the attaching thread, as well as numerous dirt splatter stains across the front. The right sleeve, and on the rear tail. There is ground-in dirt on the front above the wordmark.

In spring training of 1974, the Angels wore a black ribbon on their left sleeves for just a few weeks, commemorating death of minor leaguer Bruce Heinbechner, killed March 10 in a car accident. Because the 1973 uniforms were worn in 1974 spring training, I looked for evidence of this memorial having been there, and it is— barely visible to the naked eye with a partial outline of dirt splatters. When enhanced with ultraviolet light, it shows up more clearly as the spot beneath the ribbon protected from dirt shows up just slightly brighter than the surrounding fabric.

Additional Observations: This jersey was presented to us without provenance. Our exemplar library of team tagged 1973 Angels home jerseys is rather scanty: in our archives we have a total of six. And somewhat surprisingly four of the six are Ryan examples almost identical to this one, then one for a batboy, and just one for a common player, with its name on back missing (typical) and showing much more extensive wear. The lack of 1973 Angels jerseys ever appearing in auctions in the subsequent fifty years is most likely a testament to their wholesale transition to the minor leagues, subsequent overuse and eventual destruction. My assumption is, as a bona fide star, it appears that Nolan Ryan's jerseys were purposely saved and spared the normal process of minor league re-issue. Regarding the other four Ryan examples in our library— all have small differences in lettering and tagging that distinguish them from each other and from this example. Also, I cannot evaluate a 1970s Mcauliffe-made jersey without making the observation that back in those days, that company would make a jersey for any fan who requested it, complete with team year tagging stitched on it. I mention this only to say that I have looked for characteristics that I would expect to see in a souvenir jersey, and I believe that this one shows use and wear that would identify it as a game jersey.

At left, inside view of the stitching shows that the style and frequency of stitch between the wordmark and the player numbers is identical. Puckering beneath the numbers indicates hot water washing. Below, ultraviolet photo-enhanced evidence of the presence of the removed sleeve memorial.

Conclusion: The jersey in review is in good, original condition: all player lettering and the front team crest are original, The jersey has no alterations or contrivances of of any kind. It has a team-issue tagging and shows appropriate wear. It is my considered opinion that this jersey was made to team specifications and worn by Nolan Ryan of the 1973 California Angels (and in 1974 spring training).

Letter of Professional Opinion/Document of Restoration

John Stephenson California Angels 1973 Game Worn Home Jersey

Examination Date: January 20, 2025 **Certification Number**: 25-0120J03

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Size 42 (marked and measured), McAuliffe-made first-year-style white California Angels pullover jersey; "Angels" arched on the front in red outlined with Navy, with a gold /Navy halo atop the "A" in Angels. Player number lettering in the same colors, front and back Sewn-in Navy/red/Navy V-neck, and sewn-on 1 1/2" sleeve end trim in the same colors. The original embroidered team patch of the state of California with a gold star and with a gold halo is zig-zag stitched to the left sleeve. The original player numbers on both the front left and centered on the back are in the McAuliffe font as used specifically by the Angels in 1973. catcher John Stevenson wore #11 on the 1973 Angels. The size of the jersey is reasonable for the player at 5' 11" 180 lbs. A light table evaluation reveals that the name "Stephenson" had once been on the back. 1973 was Stephenson's final year in a ten year MLB career. That year, he appeared in 60 games as an occasional starter and a pinch hitter, and batted .246 with one home run. (*Wikipedia, Baseball Almanac*)

Restoration performed: As is typical for the team and the era, this jersey had its name on back removed. Jerseys were stripped of their player names at the end of the season as they were sent to the minor leagues for further use. The player name on back is a very narrow and condensed block font that is specific to McAuliffe in this time. Generally, when player names on back are used, numbers are sewn 8 inches from the collar. The early 1970s McAuliffe Angels jerseys stitched the numbers only 6 inches from the collar and then fit the names very tightly above them in a very shallow arch. This spacing and placement was similar to the Oakland Athletics jerseys of the time, made by the same manufacturer. I recreated the name on back using the McAuliffe 1973 font and noted that it matched the ghosts on the jersey exactly. The cut lettering was media blasted to age it and make it better match the patina of the extremely worn original number fabric, and was stitched it in place with suitably faded thread to match original. The team name and player number lettering had their edge-stitching touched up only as necessary to prevent them from detaching further from the garment.

Manufacturer and Team Tagging: McAuliffe supplied the Angels with home jerseys in 1973. The clustered set of (3) manufacturer tags are sewn on the inside center of the back tail; 1973 blue-bordered year tag, un-bordered white McAuliffe manufacturer tag, and centered below these two is the size tag, "42". On this jersey their standard red-lettered 7-lined wash instructions tag is sewn off to the right near the side vent. There was no specific player or team tagging beyond this. The tagging set generally matches exemplars, McAuliffe had a habit of not sewing the tags in exactly the same configuration on every shirt.

Wear & Repairs: This jersey clearly has experienced extensive use as the team crest and player numbers are very worn and the stitching around the edges is extremely loose and missing in many spots. The jersey body has extensively worn/ been washed to a grayish ivory color, and the numbers are severely puckered on top of the knit fabric they are stitched onto. A light table examination shows that all lettering is original and untampered with. There is consistent and minor puckering of the fabric beneath all of the stitched on twill lettering. The sleeve end trim is severely shrunken and puckered caused by hot water washing. The red top layer of the twill, shows puckering and wear marks where it has abraded against other fabric in use and in the wash.

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

Additional Observations: In spring training of 1974, the Angels wore a black ribbon on their left sleeves for just a few weeks, commemorating death of minor leaguer Bruce Heinbechner, killed March 10 in a spring training car accident. Because the 1973 uniforms were worn in 1974 spring training, I looked for evidence of this memorial having been there, and it is— invisible to the naked eye but when enhanced with ultraviolet light, it shows up more clearly as the spot beneath the ribbon protected from dirt shows up just slightly brighter than the surrounding fabric. (Photo provided). Stevenson retired after the 1973 season, and there was no #11 issued on the 1974 Angels 40-man roster. We do not have a record of who might have worn it in 1974 spring training.

At far left, the jersey as received missing its name on back. On the right, April 6, 1973 President Richard Nixon traveled to his home state of California to throw out the first pitch at the Angels/Royals game in Anaheim. Stephenson was the starting catcher in that game according to Baseball Almanac. Given that players were generally issued two sets of home uniforms each season, there is a 50% chance that Stephenson is wearing this jersey here, in that photo.

At left, enhanced photo of the jersey back on the light table shows the position of the original name on back. Below, ultraviolet photo-enhanced evidence of the presence of the removed sleeve memorial.Bottom left, Frank Robinson in 1974 spring training wearing the memorial strip.

Conclusion: The jersey in review is in fair original condition: player number lettering and the front team crest are original, the name on back has been restored to match original appearance. The jersey has no other alterations or contrivances of of any kind. It has a team-issue tagging and shows appropriate wear. It is my considered opinion that this jersey was made to team specifications and worn by John Stevenson of the 1973 California Angels, and then by another player in 1974 spring training, given the presence of the ghost of the sleeve memorial.

Letter of Professional Opinion/Document of Restoration

Bill Sudakis California Angels 1975 (Final Season) Game Worn Home Jersey

Examination Date: March 29, 2023 **Certification Number**: 23-0329J03

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Size 44 Goodman and Sons white California Angels pullover jersey of utility infielder and catcher Bill Sudakis. Angels arched on the front in red outlined with Navy, a gold /Navy halo atop the "A" in Angels. Player name and number lettering in the same colors, front and back Sewn-in Navy/red/Navy V-neck, and sewn-on 1 1/2" sleeve end trim in the same colors. The embroidered team patch of the state of California with a gold star approximating the location of Los Angeles and a gold halo at its top left is stitched to the left sleeve. The size of the jersey is reasonable for the player, listed at 6' 01" and 190 lbs.

Bill Sudakis spent a short time with the Angels, appearing in just 30 games in 1975 mostly as a pinch hitter before being released in late June. He was picked up by the Indians where he appeared in just twenty more games that season, but after 1975 he did not play in the major leagues again. In an eight-year career that started with the Dodgers, he played for a total of six teams, hitting a career .234 in 1548 at bats with 59 career home runs. (*Baseball Almanac*)

Restoration Performed: As received, the jersey wore #58 and was without any player name on back. The light table clearly revealed the ghost-impression of its former name on back , "Sudakis" and the ghost image of the number 9 centered on the back. The Angels routinely removed player names, and sometimes player numbers from its sets of team jerseys at the end of the season so they could be reused in either spring training the next year or sent to the minors. Finding one with its original player name on back would be extremely rare.

I stripped the numbers front and back, and using the Goodman 1975 fonts as a basis, matched them to the ghosts of the original name and numbers on this jersey. Clearly the jersey spent a greater percentage of its life in the minors than its single partial-season in the majors, and there was a significant jersey fabric color difference beneath the old numbers once they were removed; the fabric beneath was cleaner and white, while the rest of the jersey had taken on a pinkish/purplish cast from repeated hot water washing with other red and blue colored garments. I was able to spot-bleach the garment and then launder it, which evened out the color and whitened the jersey noticeably. After cutting new lettering that both matched the team's Goodman pattern and the ghost outlines visible on the jersey, I media-blasted and organically dyed the replacement lettering to simulate the same degree of use as the original front crest. I sewed all lettering with matching bleached-colored thread.

Continued, overleaf

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

Manufacturer and Team Tagging: The Angels switched off and on using Goodman as their team supplier of home jerseys throughout the 1970s. While Goodman did not year-tag the team's jerseys, they were the supplier of record for 1975, the only year that Sudakis played for the Angels.

Wear & Repairs: As professionally restored, this jersey presents nicely and shows good use, most of it from the minor leagues. It is free of rips or holes, and is now an even cream-color. The trim is still bright and intact. The original team crest is bleached from detergents so it is not as dark or vibrantly colored as it was when new, but it is in very good condition. While the player numbers and the name on back have been restored, care was taken to match the patina of the front team crest by aging the new fabric and using matching bleached colors of thread.

Conclusion: The jersey in review is in good, professionally restored condition: the front team crest is all original, and the player name and numbers have been properly restored with lettering near-identical to original. The jersey has no alterations or contrivances of of any kind. It has a team-issue tagging. It is my considered opinion that this jersey was made to team specifications and worn by Bill Sudakis of the 1975 California Angels.

Letter of Professional Opinion

Tommy John 1983-1984 California Angels Game Used Road Jersey

Examination Date: November 4. 2020 **Certification Number**: 20-1104J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: California Angels #25 Tommy John pullover full-weight Goodman-made gray knit jersey. Goodman was the sole supplier of Angels road jerseys during these years. 1 1/2" Navy/red/Navy knit trim sewn-in sleeve end trim and 1" similarly colored V-neck trim. Size 46, which is consistent with other jerseys worn by the player at this stage of his career. "Angels" in red and midnight blue tackle twill arched across the front, a gold halo encircles the top of the "A" in Angels. The team's secondary logo patch, red/blue State of California with a yellow halo and star is sewn on the left sleeve. All player-specific lettering is unoriginal and has been replaced. On the left chest below the team wordmark is John's number 25. It is sewn using Wilson varsity font in red/Navy. On back, player number "25" in Wilson Varsity font in the same colors, Name on back above, in the same two colors, incorrectly radially arched using a non vertical-arched block font. The original would have been vertically arched.

John was a midseason 1982 acquisition of the Angels. He wore #35 for the balance of that season, then switched to #25 for 1983-1985. In 1985 the team wore an anniversary patch on the right sleeve, and there is no trace of that patch ever having been sewn there. Therefore, we can narrow the use of this jersey to 1983-1984. This jersey shows signs of multiple number changes, as it was almost certainly stripped of its name/numbers and sent to the minor leagues for a second life. The numbers on both front and back are replacements of different ages and the numbers in each pair are not matched to each other, each of slightly different sizes, outline width, stitching detail and degree of wash/wear. The name on back is improperly restored, as the MLB Angels of these years wore vertical arched player names and this one is radial arched Block lettering. The letters also do not match each other in terms of age or stitching style/color. It is clear that there was never another name on back as there are no shadows, (Angels' minor leagues did not use player name on back). Importantly there are scant traces visible of the vertical arched name letters that had been there. While 99% of the ghosts are covered by the new incorrect lettering, enough shadow is visible to judge that the original NOB was vertically arched.

Manufacturer and Team Tagging: The white rectangular Goodman and Sons rectangular style locker tag showing the size as 46 is sewn on the outer, lower left shirt tail. The manufacturer tag style is correct for the period. There is no other tagging at all on the jersey, typical of Angels Goodman jerseys. As mentioned, there are clear signs on the light table of multiple re-numberings of the jersey, and the name on back is an inexact style replacement.

Light table images with visible ghost marks highlighted in red.

Conclusion: The scant evidence of the prior vertical arched name on back is the single most significant clue that this jersey had been issued to Tommy John before being reissued in the minor leagues. Without removal of all the player lettering, it is impossible to determine the chronology of use with different numbers affixed to it. Its size is correct for John to have worn. In my opinion, this jersey, while inexactly restored, was Tommy John's Angels road jersey in either 1983 or 1984.

Letter of Professional Opinion

Bob Boone 1985 California Angels Game Used Road Jersey

Examination Date: June 13, 2022 **Certification Number**: 22-0613J02

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: California Angels #8 Bob Boone pullover full-weight Goodman-made gray knit jersey. Goodman was the sole supplier of Angels road jerseys during the 1980-1986. 1 1/2" Navy/red/Navy knit trim sewn-in sleeve end trim and 1" similarly colored V-neck trim. Size 45, which is an odd in-between size rarely ever seen, but reasonable to fit the player at this stage of his career. (He wore size 44 earlier in his career and size 46 by 1987). "Angels" in red and midnight blue tackle twill arched across the front, a gold halo encircles the top of the "A" in Angels. The team's secondary logo patch, red/blue State of California with a yellow halo and star is sewn on the left sleeve. The Angels' 25th Anniversary patch is stitched to the right sleeve, used only in 1985. On the left chest below the team wordmark is Boone's number 8. It is sewn using the Angels' variant of Wilson varsity font in red/Navy. On back, player number "8" in Angels modified Wilson Varsity font in the same colors, Name on back above, in the same two colors, direct sewn (no nameplate) and vertical arched as is correct. Notably- the "8" on back is sewn upside down, a sewing room error, and while this is not proof of an absolute photo match, see the game photo I found of Boone in 1985 in a road jersey with an upside down back number. It may be the same jersey.

Manufacturer and Team Tagging: The white rectangular Goodman and Sons rectangular style locker tag showing the size as 45 is sewn on the outer, lower left shirt tail. The manufacturer tag style is correct use through very early 1985. There is no other tagging at all on the jersey, typical of Angels Goodman jerseys.

Wear & Repairs: A light table examination shows that all lettering on this jersey is original and unaltered. All stitching is tight but slightly bleached from washing, except the stitching holding the sleeve patch on which is very loose, typical from the abrasion with the player's arm during repeated throwing. The lettering shows puckering and burnishing from wear and washing, the jersey fabric beneath the back numbers is slightly puckered from shrinking in the wash more than the number sewn on top of it.

Above right, Boone batting in 1985 wearing a road jersey (possibly this one) with the back number upside down. Below: wearing a home jersey with the number properly sewn.

Conclusion: This jersey is in very good used condition, is all original and properly lettered without contrivance. It has the proper tagging and its original sleeve patch. It is my considered opinion that this jersey was made to team specifications and worn by catcher Bob Boone of the 1985 California Angels.

Letter of Professional Opinion

Gene Mauch 1986 California Angels Game Used Home Jersey

Examination Date: June 13, 2022 **Certification Number**: 22-0613J02

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: California Angels #3 manager Gene Mauch pullover full-weight Wilson-made white knit jersey. Wilson was a licensed supplier of Angels road jerseys 1979-1986. 1 1/2" Navy/red/Navy knit trim sewn-in sleeve end trim and 1" similarly colored V-neck trim. Size 44, which is reasonable to fit the manager and the same as other authenticated jerseys in our archive. "Angels" in red and midnight blue tackle twill arched across the front, a gold halo encircles the top of the "A" in Angels. The team's secondary logo patch in its first year of use in 1986 is a baseball-stitched disk with embroidery of red/blue State of California with a yellow halo and star is sewn on the left sleeve, and the team's hallo-A floating above it. On the left chest below the team wordmark is Mauch's number 3 It is sewn using the Wilson varsity font in red/Navy. On back, player number "3" in Wilson Varsity font in the same colors, Name on back above, in the same two colors, direct sewn (no nameplate) and vertical arched as is correct. The jersey is autographed and inscribed in black Sharpie with the year 1987 on the front right just below the team wordmark. I have no professional opinion on the authenticity of the autograph.

While he was at first a MLB player 1944-1957, Mauch was best known for managing four teams from 1960 to 1987. He is by far the winningest manager to have never won a league pennant (breaking the record formerly held by Jimmy Dykes), three times coming within a single victory. Mauch managed the Philadelphia Phillies (1960–1968), Montreal Expos (1969–1975 — as their inaugural manager), Minnesota Twins (1976–1980) and California Angels (1981–1982, 1985–1987). His 1,902 career victories ranked 8th in MLB history, when he retired, and his 3,942 total games managed ranked 4th. (Wikipedia)

Manufacturer and Team Tagging: The white rectangular Wilson "Prestige Teams" style style locker tag with a flag tab showing the size as 44 is sewn on the outer, lower left shirt tail. The manufacturer tag style is correctly used starting in 1986. There is a 3/4" square of white jersey knit fabric stitched to the immediate left of the Wilson tag with the numbers "86" hand chain stitched on them in black, in the familiar hand of the Wilson factory stitcher.

Conclusion: This jersey is in very good to excellent used condition, is all original and properly lettered without contrivance. It has the proper tagging and its original sleeve patch. It is my considered opinion that this jersey was made to team specifications and worn by Manager Gene Mauch of the 1986 California Angels.

Letter of Professional Opinion

Reggie Jackson 1986 California Angels Autographed Game Used Home Jersey

Examination Date: January 16, 2024 **Certification Number**: 24-0116J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: California Angels #44 Reggie Jackson pullover full-weight Wilson-made white warp-knit jersey. Wilson was the licensed supplier of Angels home jerseys in 1986. 1 1/2" Navy/red/Navy knit trim sewn-in sleeve end trim and 1" similarly colored V-neck trim. Size 46 (marked and measured), which is consistent with other Jackson authenticated jerseys in our archive; Jackson wore both size 46 and 48 at this stage of his career. "Angels" in red and Navy Blue tackle twill arched across the front, a gold halo encircles the top of the "A" in Angels. The team's secondary logo patch in its first year of use in 1986 is a baseball-stitched disk with embroidery of red/blue State of California with a yellow halo and star, sewn on the left sleeve, and the team's halo-A floating above it. On the left chest below the team wordmark is Jackson's number 44 sewn using the Wilson front varsity font specific to the Angels in red/Navy. On back, player number in Wilson Varsity font matching the team template in the same colors, Name on back above, in the same two colors, and vertically arched, direct sewn (no nameplate) as is correct. In those years, arched player names were drawn and cut by hand by a Wilson artist; every one is slightly different. The jersey is autographed in blue Sharpie on the front right just below the team wordmark. I have no professional opinion on the authenticity of the autograph. This jersey was presented without provenance.

In the 20th year of his 21 year Hall of Fame career, Jackson played in 132 games for the 1986 Angels, batting .241 with 16 home runs.

Manufacturer and Team Tagging: The white rectangular Wilson "Prestige Teams" style style locker tag with a flag tab showing the size as 46 is sewn on the outer, lower left shirt tail. The manufacturer tag style is correctly used starting in 1986. There is a 3/4" square of white jersey knit fabric stitched to the immediate left of the Wilson tag with the numbers "86" hand chain stitched on them in black, in the familiar hand of the Wilson factory stitcher.

Wear & Repairs: A light table examination shows that all lettering on this jersey is original and unaltered. All stitching is tight an unbleached from washing. The jersey fabric is slightly grayed; no longer bright white after many washings; the lettering shows some wear from use and washing, and is generally burnished but unfaded but with some stray threads. The tagging shows signs of repeated washing, as it is puckered and the edges of the flag-tabs are frayed. One small flag tag centered under the bottom of the larger tag is frayed to the point of being unintelligible; this tag generally displayed a garment code or special tailoring instructions. Overall, the wear to this jersey is commensurate with what one would expect from a full season of use.

Conclusion: This jersey is in good well-used condition, is all original and properly lettered without contrivance. It has the proper tagging and its original sleeve patch. It is my considered opinion that this jersey was made to team specifications and worn by Reggie Jackson of the 1986 California Angels.

Letter of Professional Opinion

Rex Hudler 1996 California Angels Game Worn and Autographed Home Jersey

Examination Date: May 2, 2022 **Certification Number**: 22-0502J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: White full-weight knit Wilson seven-button California Angels jersey, #10 Rex Hudler. Three-color wordmark lettering; red/Navy/white, "ANGELS" arched on front in the correct style for 1996. 2-color red outlined with white, HUDLER and number 10 on the back in the correct fonts and sizes. CA patch red outlined letters with blue with silver halo is stitched to the end of the left sleeve. Narrow, navy 1/8" soutache is sewn around the placket, and 1" from the end of each sleeve. The inside of the placket is lined with linen for player comfort. Jersey is autographed on the back "Rex Hudler "96" " in black Sharpie. (I offer no opinion on the authenticity of the autograph.) A study of authenticated Hudler jerseys from our exemplar library showed that the player wore size both 44 and 46 jerseys during his career. All player lettering is stitched through to the garment with both colors rather than just the outside edge, which seems to be the way that the 1996 Angels jerseys were stitched, as I have seen more than one like this.

A popular player with a winning personality, "Wonder Dog" Hudler played in 13 seasons for six different Major League Baseball teams, and at every position except pitcher and catcher throughout his career: the New York Yankees (1984–1985), Baltimore Orioles (1986), Montreal Expos (1988–1990), St. Louis Cardinals (1990–1992), California Angels (1994–1996), and Philadelphia Phillies (1997–1998). He also played for the Yakult Swallows of the Japanese Central League in 1993, contributing to the team's Japan Series championship. After his playing days concluded he became a baseball announcer for the Angels and later the Royals *(Stats from Wikipedia and Baseball Almanac)*

Manufacturer and Team Tagging: Wilson "Prestige Teams" tag sewn on the outside left front tail, flag tag pinched beneath the bottom edge is a flag tab showing size 46 a. A rectangular white knit fabric tag zig-zag stitched below the Wilson tag is machine embroidered "46 96" (size 46 1996). Wilson was the exclusive maker of on-field Angels road jersey in 1996. (Russell made "Authentic" retail sale versions) Two variants of team tagging were used in 1996, some show the year only, most others like this one show the size and the two-digit year. The team tagging properly matches other examples for the team and year in our photo library.

Wear & Repairs: The jersey shows signs of moderate wash/wear, appropriate of a game use. A light table evaluation of the garment shows that the lettering is all original and without alterations. There is evident puckering of all lettering from repeated washing in hot water, including wrinkling and curling of the tags. There is light wear to the inside linen lining, again showing use.

Conclusion: The jersey in review is in very good used condition, is properly lettered, and numbered, and appears to have no alterations of any kind. It has the correct team-issue style tagging. It is my considered opinion that this jersey was made to team specifications and worn by Rex Hudler of the 1996 California Angels.

Letter of Professional Opinion

Chili Davis 1996 California Angels Game Worn and Autographed Road Jersey

Examination Date: November 4. 2020 **Certification Number**: 20-1104J02

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Gray full-weight knit Wilson seven-button California Angels jersey, #44 Chili Davis. All three-color lettering; Navy/red/white, "ANGELS" arched on front in the correct style for 1996. DAVIS and number 44 on the back in the correct fonts and sizes. CA patch with silver halo in red, Navy and white is stitched to the end of the left sleeve. Narrow, 1/8" soutache is sewn around the placket, and 1" from the end of each sleeve. The inside of the placket is lined with linen for player comfort. Jersey is autographed on the back "Chili Davis 1996" in black Sharpie. (I offer no opinion on the authenticity of the autograph.) A study of authenticated Davis jerseys from our exemplar library showed that the player was wearing size 48 jerseys at this later point of his career, though we have not seen another with the extra length tailoring that this one exhibits. All player lettering is stitched through to the garment with all three colors rather than just the outside edge, which is uncommon but not disqualifying. The 7th button added to the bottom is consistent with the 2" extra length.

Manufacturer and Team Tagging: Wilson "Prestige Teams" tag sewn on the outside left front tail, flag tag pinched beneath the bottom edge is a flag tab showing size 50 with +2" length, and a pen marked +2" sleeve on an additional white flag tag pinched beneath the Wilson tag. A rectangular gray knit fabric tag zig-zag stitched below the Wilson tag is machine embroidered "50 96". Wilson was the exclusive maker of on-field Angels road jersey in 1996. (Russell made "Authentic" retail sale versions) Two variants of team tagging were used in 1996, some show the year only, others like this one show the size and the two-digit year. The team tagging properly matches other examples for the team and year in our photo library.

Wear & Repairs: The jersey shows signs of heavy wash/wear, appropriate of a season's use. A light table evaluation of the garment shows that the lettering is all original and without alterations. There is significant puckering of all lettering from repeated washing in hot water, including puckering of the fabric beneath the numbers. There is notable wear to the inside linen lining, again appropriate for a season's use.

Conclusion: The jersey in review is in good used condition, is properly lettered, and numbered, and appears to have no alterations of any kind. It has the correct team-issue style tagging. It is my considered opinion that this jersey was made to team specifications and worn by Chili Davis of the 1996 California Angels.

Letter of Professional Opinion

Mike Scioscia 2002 Anaheim Angels Autographed Game Worn World Series Jersey

Examination Date: December 29, 2023 **Certification Number**: 23-1220J02

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Angels gray Rawlings full-weight six-button knit road jersey, issued to manager Mike Scioscia. City name, "ANAHEIM," wordmark crest vertically arched across the chest in three-colored layered twill, red over navy over white, with sparkle silver halo over the first "A" . Player number "14" in red with Navy and white outlines directly under the player name on left chest and on back using the Angels team-specific font. Collar and sleeve ends trimmed with narrow red knit ribbon trim. Number 14 on back, arched above is "SCIOSCIA" in red/Navy two-color block condensed font with radially arched letters. The fonts used are accurate and authentic. Right sleeve has the 2002 World Series patch sewn on. The red/white/blue MLB Silhouetted Batter patch is correctly sewn to the back of the neck. Size 52 is accurate for Scoiscia at this point in his career. This style of jersey was worn in only two years, 2002-2003, and was made by Rawlings only in 2002. Scoiscia has autographed the jersey at the end of his name on back, with the inscription below "2002". I have no professional opinion on the autograph.

As a player, Scioscia made his major league debut with the Los Angeles Dodgers in 1980. He was selected to two All-Star Games and won two World Series over the course of his 13-year MLB career, which was spent entirely with the Dodgers; this made him the only person in MLB history to spend his entire playing career with one team and entire managing career with another team with 10+ years in both places. After his playing career ended, Scioscia was hired as the Angels manager after the 1999 season. As a manager, Scioscia led the Angels to their only-to-date World Series championship in 2002. He is the Angels' all-time managerial leader in wins, games managed, and division titles. Scioscia was honored with the American League Manager of the Year Award in 2002 (*Wikipedia*)

Manufacturer and Team Tagging: The Rawlings logo is embroidered in red thread on the end of the left sleeve. The jersey has a Rawlings Authentic Collection manufacturer tag on its front left tail, a white flag tag pinch-sewn below the locker tag notes the size as 52. There are three other tags; 2002 SET 2; +1" extra length; and +2" extra length. Measuring the jersey, it is clear that the 1" extra length tag refers to the sleeves (at 11") The jersey body is 35". Team tagging is consistent with other examples of 2002 Angels jerseys in our database. Its size and special tailoring matches other jerseys worn by Scioscia in his post-playing days as manager of the Angels.

Wear & Repairs: The jersey shows signs of wear as might be expected from the jersey of a coach/manager, and it shows moderate wash/wear use with some puckering of the lettering and curling/ink smudging of the tags. There is no sign of repair or any contrivance.

Conclusion: The jersey in review is properly tagged and lettered. It is consistent with known exemplars, and appears to have no alterations of any kind. Therefore, it is my considered opinion that this jersey is genuine issue to and worn by Mike Scioscia of the Anaheim Angels in the 2002 season.

Letter of Professional Opinion

Mike Scioscia 2014 Los Angeles Angels Red Alternate Jersey

Examination Date: January 21. 2021 **Certification Number**: 21-0201J26

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Angels alternate red, six-button-front, Majestic Cool Base 2014-tagged Los Angeles Angels jersey issued to manager Mike Scioscia. Team name, "ANGELS," word-mark crest vertically arched across the chest in four-colored layered twill. Player number "14" in red with black and white and gray outlines directly under the player name on left chest and on back using the Angels team-specific font. Collar and sleeve ends trimmed with white-gray-white knit ribbon trim. Number "14", arched above is "SCIOSCIA" in red/Navy/ white three-color block condensed font with radially arched letters. Right sleeve has Angels secondary logo, an embroidered red "A" bordered with Navy and white, capped by a silver halo. The red/white/blue MLB Silhouetted Batter patch is correctly sewn to the back of the neck. On the left sleeve is the 2014 Postseason patch, adjacent below is a white embroidered Majestic logo. Notably, the Angels did not wear their red jerseys in the 2014 Postseason, so this may have been prepared as a backup.

Manufacturer and Team Tagging: Jersey has a heat-pressed Majestic manufacturer tag on its front left tail, indicating its size, 54. On the inside side seam are pinched a number of tags, including a Majestic stock tag with the code 0630 printed on it, which identifies this jersey as one made to on-field specifications for the team. There are three other tags; 2014; +2" sleeve length; and +3" body. The jersey exhibits these tailoring characteristics. There is no other team tagging, consistent with other examples of 2014 Angels jerseys in our database. A MLB Authentication Program hologram is affixed to the Majestic tail locker tag with the serial number HZ376155. A database lookup of this code shows that the jersey was prepared for Sciosica but does not indicate that it was game worn. Its size matches other jerseys worn by Scioscia in his post-playing days as manager of the Angels.

Wear & Repairs: The jersey shows signs of light wear as might be expected from the alternate jersey of a coach/manager, and while its MLB hologram does not identify it as game worn, from our experience that is not conclusive evidence that it has not been game worn, just that it was not marked as such.

Conclusion: The jersey in review is properly tagged, lettered, and numbered. It is consistent with known exemplars, and appears to have no alterations of any kind. Therefore, it is my considered opinion that this jersey is genuine issue to and worn by Mike Scioscia of the Los Angeles Angels in the 2014 season.

Letter of Professional Opinion

1991 Scott Bailes California Angels Home Game Worn Jersey

Examination Date: March 5, 2025 **Certification Number**: 25-0305J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Rawlings-made size 44 (marked and measured) six button white home jersey, California Angels. 1 ¾" knit sewn-in sleeve end trim in Navy/red/Navy with 1" similarly colored trim sewn at the neck opening. Rawlings script embroidered into the trim on the end of the right sleeve. "ANGELS" arched on the front across both panels in red outlined by Navy; the leading "A" has a gold/Navy halo stitched around its top. Team disk patch correct for 1991 stitched to the left sleeve. Jersey is customized for pitcher Scott Bailes, with his roster number 43 on left front and centered on the back, and his name arched above and stitched to a separate single-needle serged edge nameplate, all lettering in red over Navy layered twill. The fonts and placement are correct for the 1991 Angels. Size 44 is appropriate for the player, (6' 2" 184 lbs) and matches other exemplars offered at auction. Bailes made 42 appearances for the 1991 Angels, all in middle relief, when he compiled a 1-2 record with a 4.18 ERA in 51.2 innings pitched.

Manufacturer and Team Tagging: Besides the Rawlings logo embroidery on the sleeve end, the 1991-correct Rawlings locker tag is stitched to the outside bottom of the left tail, around all four sides of its perimeter as is typical with team-issued jerseys. There is no team/year tagging present, a noted characteristic of 1991 Angels jerseys. (Bailes was on the team and wore this style Rawlings jersey in 1990-1991. While the two years' jerseys are identical, the 1990 jerseys are team year-tagged and the 1991 ones are not, in our experience.) While this was presented without provenance, it was sourced from a reputable dealer who made a large purchase of team issued and game worn items from a long-time Angels affiliate, and the jersey has a stamp inside the tail on the reverse of the Rawlings locker tag that reads "Purchased from the California Angels".

Wear & Repairs: The jersey shows appropriate use by a relief pitcher, meaning it is undamaged from rough treatment, but shows signs of repeated washing including some puckering to the twill lettering, some slight graying of the fabric, and softening of the edges of the twill . Notably, the thread holding all stitched elements in places shows evidence of being washed with bleach, as it has faded to a dark purple consistent with that treatment.

Conclusion: The jersey in review is in very good used condition, is properly lettered, and appears to have no alterations of any kind. It has the correct tagging for team issue. It is my considered opinion that this jersey was made to team specifications and worn by Scott Bailes of the 1991 California Angels.

Chapter 10

Houston Astros

Game Worn Guide to MLB Jerseys

1970-2025, Tenth Edition

William F. Henderson

Astros Uniform History Notes

- Without question, the Houston Astros have been the most colorful team in baseball throughout their more than 60 years of history.
- Born as the expansion "Houston Colt .45s" for the 1962 season, the new team from the Lone Star State adopted the wild west theme that had suited the region for well over a hundred years. Their symbol was a large embroidered smoking pistol, displayed prominently on the jerseys of all players. But principal team owner Roy Hofheinz was never a fan of the name and preferred the name "Stars", saying that Houston should embrace its future rather than its past.
- The opening of the Houston Space Center to support the Apollo space missions began to give the area a different feeling in the early 1960s. On December 1, 1964, the team was rechristened "Astros." Team colors stayed the same (navy blue and orange) but the theme seized the promise of the space program—and optimism for the future.*
- The Astrodome—billed by promoters as 'the Eighth Wonder of the Modern World'—was the very first indoor sports stadium big enough to play baseball in, famous for its computerized scoreboard, which stretched across the entire outfield and displayed what now seem like primitive animations for home runs, strikeouts and the like.
- The 1965 flannel uniforms were simple and elegant in a "mid-century modern" sort of way. Truly dated by time, the 'ASTROS' wordmark was chain-stitched in navy blue, outlined in orange. A blue shooting star, followed by orange vapor trails, rocketed across the top of each player's chest. Player names on back were introduced in 1971 and have been used every year since, except for 1974.
- The Astros' switch to knit uniforms came in 1972, when their 1971 flannel design was translated almost identically onto the new 'miracle fabric.' The result featured a zipper front, joining the White Sox as the only zipper-clad teams at the time—followed the next year by the Phillies.
- But the big, shocking change came for the 1975 season… no one had seen anything like it before or since. The Astros introduced "Rainbow" striped uniforms that were so garish that players first thought it was a joke. Sometimes called the "Tequila Sunrise" or "Rainbow Guts" design, these uniforms were so unique that the team wore the same duds at both home and on the road for five seasons.
- Tamer, more traditional uniforms were reintroduced for road use for the 1980–1981 seasons. In 1982, a similar white version of the 1980–1981 style was used at home as an alternate and the Rainbow jersey jersey was being used less and less. By 1987, it was gone. Rainbow patterns were used as shoulder trim only 1987–1993.
- In 1994, the Astros made an abrupt 180-degree change. Their new uniforms were stark in their design—in black, gray and white and completely devoid of trim.
- For 2000, the Astrodome had become a hopeless relic, and the team moved into a new ballpark with a retractable roof. The team look changed completely yet again, including colors. Brick red, Sand, Black and Silver were the new primary colors. With the Space Race but a memory, the Astros curiously took on a ballpark railroad motif, embracing that their new stadium stood on the site of the old Houston rail yards.
- In 2013, coinciding with their shift to the American League, the team completely rebranded, returning to the navy blue and orange colors they wore from their 1962 inception through 1993.
- In 2022, the Astros joined MLB's City Connect program with a space-themed alternate uniform. The design celebrated Houston's identity as 'Space City,' featuring NASA-inspired fonts and trim details that subtly echoed the team's classic Tequila Sunrise rainbow palette.
- In 2025, the Astros introduce a completely redesigned "City Connect 2.0" uniform—retaining the space theme, but built on a white base incorporating visual callbacks to the 1990s look, including a prominent asymmetrical star on the chest and a "STROS" wordmark, creating a cleaner, brighter update that blended retro Astros iconography with modern visual themes.
- The Astros have more style changes, varieties and flat-out inconsistencies than any other team in baseball, even the Padres. They are by far the hardest team to catalog. For every rule, whether related to a manufacturer, style, silk screened or sewn on, there seems to be an exception.
- With seven almost completely different uniform design themes since 1970 and 35 different game jerseys in that period (not counting batting practice jerseys), there are no fewer than 20 different game jersey styles in the 2000–2025 era alone… and each uses different rules for number placement and colors.

	Off-white pullover	No	Block 2 color	1 color block	Yes	Silver Anniversary	-	Goodman/Rawlings

* Number font is very close but not quite identical to Giants Varsity of 1973-1976. The Astros version numbers seemed to be stretched just a little taller.

** Numbers are very close but not identical to the style cataloged as "San Diego Padres Varsity" from 1973.

*** For 1986, the old alternate white jersey became the official "home jersey", and the old Rainbow jersey is now officially listed as the Alternate.

^ Though this jersey is listed as only a BP in 2013 (and not an alternate) in the MLB Style Guide, the team wore it as a Sunday home alternate 11 times, hence its inclusion here.

+ The "Rainbow Side" BP jersey received minor updates in 2014 with all MLB BP jerseys. It was made an official alternate in the 2014 and 2015 MLB Style Guides. Nevertheless, the team stopped wearing it in July 2014 and did not use it on-field in 2015.

* Milo Hamilton patch was worn on left chest starting September 18, 2015

** Starting September 2, 2017

Home, Road and Alternate Jerseys

1970 Home

- Introduced in 1965, the Houston Astros' 'Shooting Star' uniform is an all-time classic of the 1960s Space Age aesthetic. In that year, the Astros completely dropped their original wild-west moniker of "Colt .45s," along with the smoking gun featured on the front of their uniforms.
- The Astros wordmark is fully chain-stitched, just like the Colt .45 emblem. This detail was also used by a few other teams, including the Phillies and Cardinals.
- The 1965–1970 flannel jersey features navy blue lettering as the primary color, outlined in orange.
- The shooting star itself is navy blue and also chain-stitched. An orange Astros disc is sewn onto the left sleeve.
- Player names were not used on the home uniform in 1970. The number font is a unique Astros-specific variant of Varsity. Only year tagging appears on the front tail, beneath the Wilson tag

© GameWornGuides.com

1970 Road

Size, player number, and year strip tags sewn inside the back of the collar.

- When the Houston Colt .45s were born as an expansion team in 1962, their road uniforms featured the city name “HOUSTON” in Varsity style lettering, arched in navy and outlined in orange across the front. The back displayed similarly-colored Red Sox-style font numbers.
- When the team became the Houston Astros in 1965, they kept the same road uniform—changing only by replacing the State of Texas flag on the left sleeve with the new Astros disc patch. The Astros disc proudly featured the Astrodome as its centerpiece—the team’s indoor stadium, christened (perhaps prematurely) as “one of the new wonders of the modern world.”
- While the flannel home uniforms were made by Wilson, the road uniforms were made by Rawlings, likely explaining the difference in player number fonts between home and road jerseys. This was a detail that didn’t seem to matter to teams back then.

© GameWornGuides.com

1971 Home

Left: *Side by side, the 1970 (front) and 1971 (back) jerseys. 1971 features an orange chain-stitched shooting star.*

Bottom right: *Both jerseys are likely sales samples for previewing the 1971 colors, as the name on back is not a player's but refers to Colt 45s/Astros founder Judge "Roy" Hofheinz who was also the political architect of the Astrodome.*

At a glance, the Astros flannel 1971 home jersey looks identical to its 1965–1970 predecessors. But a closer look proves that all the colors on front and back have been completely reversed—what was blue is now orange, and vice versa. Call this the "Orange Star" flannel jersey.

The entire front design is still chain-stitched as before. The Astros disc patch remains on the sleeve. Wilson makes the home uniforms and stitches the two-digit year on the front below the Wilson tag.

The colors are reversed on the back of the jersey as well. The number font remains unchanged. Player names were added for 1971, and they appear in a crisp vertical arch.

SHOWING OFF the Astros' new uniforms before the opening game of the season are, from left, coach Hub Kittle, shortstop Roger Metzger, catcher Jack Hiatt and pitcher Buddy Harris. The Astro uniforms, for the first time, have the names on the back of the blouse. The caps, belts, stockings and lettering are bright orange.

8 ★ THE SPORTING NEWS, APRIL 17, 1971 ★

1971 Road

Just as the flannel home uniform reversed its color scheme for 1971, the flannel road uniform followed suit. All lettering that had previously been blue, outlined with orange, was now orange, outlined with blue. Rawlings continues to tailor the road uniforms for the Astros. Player names appear on the back for the first time, along with McAuliffe–Red Sox-font numbers in two colors: orange outlined in navy blue.

Chain-stitch detail on the shooting star.

1973

The "Shooting Star" jersey continues in double-knit fabric. The word "Astros" appears on the front in orange/navy blue. It features a zipper-front, with a knit collar and sleeve trim. Chain-stitching is used for the entire front lettering design.

Numbers on the back remain two-color (orange/navy), in Varsity style—though the font is a unique variant specific to the Astros. The font closely resembles the one used by the Giants 1973–1976.

Astros orange disc logo patch on sleeve 1972–1973. No patch in 1974.

1973

Year-tag square on front tail

1974— no NOB

- **Names on back and the orange disc sleeve patch used in 1972–1973.**
- **No names on back, and no sleeve patch, in 1974.**

1972 Road

Photo courtesy Jerry Reuss

The 1972 zipper-front road jersey was a one-year style made by Spalding and marked the first Astros road jersey produced in double-knit fabric. Blue/white/orange knit collar and sleeve trim, with a flat-bottomed shirt tail typical of Spalding-made jerseys. The front features a plain 'Houston' wordmark in Varsity Bold font, rendered in orange outlined with navy blue—similar to, but not identical to, the final flannel versions (note the squared-off interiors of the letters 'o' and 's').For 1972 only, the number font is a unique varsity variation, similar to the 1972 Texas Rangers/Washington Senators font. Player NOB is used in 1972. Most surviving examples have had the name on back either stripped or later restored. A white-background Astros logo disc patch is sewn on the left sleeve. 1972 is the only year the white patch is used. No player or set tagging was used on these jerseys.

1975-1986 Rainbow Jerseys

Instantly recognizable, and to many the pinnacle of baseball's 1970s kitsch, the Astros Rainbow jersey is a true icon of the decade. This bold style caused much talk when it debuted in 1975. So odd was it, that there was no need for a different road jersey. The Rainbow jersey was worn both at home and on the road by the Astros 1975–1979… it was their only uniform! This style remained the team's official home jersey through 1985. When the more restrained white alternate jersey—with rainbow-sleeve tops—was introduced in 1982, the full-Rainbow version was gradually phased out. By 1986, it was relegated to an alternate, while the white jersey took over as the official home jersey. After 1986, the Rainbow jersey style disappeared entirely. While casual fans may see all Rainbow jerseys as identical, there are numerous subtle variations over the 12-year run—which will be detailed on the following pages. Early game worn jerseys of this style are often thoroughly worn out—after all, they are used both at home and on the road through 1979! Because these jerseys were not set-tagged and often lacked year tags, we have it on good authority—from the team batboy during the early Rainbow years—that each player was issued ***four*** uniform sets, since they were used both at home and on the road.

Left: *Early Sand-Knit jersey with screened-on front lettering and red-bordered star.* **Bottom left:** *Later Sand-Knit jersey features white-bordered star and sewn-on lettering.* **Below and Bottom right:** *Later Goodman jersey has smaller white-bordered star with all lettering and designs sewn on. Back numbers use a different font than before.*

The star received a white outline in 1982. Though worn less frequently in later years, the Astros happened to wear it one final time on the day they clinched the NL West crown in 1986.

© GameWornGuides.com

1975 Rainbow

Guy Hankel Collection

1975 featured a unique back number treatment: a Circus-style font placed within a large white circle—almost like the gumball numbers on a race car's doors!

Note the 1975 #40 Don Wilson memorial patch on the left sleeve.

This wild design sparked considerable discussion when it debuted in 1975. It was so distinctive that there was no need for a separate road jersey—the Rainbow jersey was worn for both home and road games by the Astros from 1975 to 1979.

In 1975 only, the back has a large tackle-twill white circle sewn on for the number. The numbers themselves are heat-pressed (not sewn) in special one-color navy Circus-style font. Players reported that the huge twill circle was heavy, hot, and uncomfortable to wear.

Front lettering and star are screen-printed/heat-pressed on, not sewn. The tackle-twill name on a nameplate uses a very thin version of Block, steeply curved to match the arc of the circle below it.

© GameWornGuides.com

1976 Rainbow

The 1976 numbers use the 1975 circus-look font, but now without the white circle. They are one-color navy. The style is very similar (though not identical) to the 1972–1973 numbers used on Braves uniforms—also made by Sand-Knit. This specific number size and treatment of the 1976 jersey are unique to the 1976 jersey, and all examples should have the 1976 National League Centennial patch sewn on the right sleeve.

The "Astros" lettering, front star, and back numbers are all heat-transferred or screened-on—a technique common in the NFL but rare on Major League Baseball uniforms! Twill player names sewn on nameplates at a steep arch. It remains a mystery what happened to all of these one-year-style jerseys in the hobby.

© GameWornGuides.com

1977-1979 Rainbow

1978

Nearly all Astros jerseys from this period—likely including those shown—have had their nameplates stripped and/or replaced following use in the minor leagues after their MLB service.

A large, red-outlined star—screened-on rather than sewn—spans the entire front stripe pattern, touching all the stripes on the jersey front. The "Astros" lettering is also screened-on. The collar is blue and orange striped, with no team year tagging. Sand-Knit block font is used for player names, sewn on nameplates in a steep arch.

Note the distinctive sewn-on Sand-Knit Varsity style numbers on the back, which are shorter and wider than numbers used in later years by Goodman and Sons. With a little practice, you can indentify the jersey manufacturer in player photos and baseball cards by recognizing subtle details like these. These jerseys have flat-bottomed shirt tails and relatively lightweight fabric construction.

Left: *Screen-printed star and Astros lettering are evident on this baseball card photo, likely taken during 1979 Spring Training using a 1978 jersey.*

How many *different* jerseys did the 1980-1988 Astros actually wear?

1980–1981

1982–1983

1984–1986

1986–1988

Images from the Baseball HOF Website, http://exhibits.baseballhalloffame.org/dressed_to_the_nines/database.htm Drawings by Marc Okkonen

In earlier editions of this Guide, we speculated on the question posed at the top of this page. The white, cream, and gray jerseys are so similar in shade that they're nearly indistinguishable in news photos of the day, which are almost always in black and white. We wondered whether the Sand-Knit gray road uniform (so pale it often appears dingy white) might have been worn at home as an occasional alternate in 1982 (it wasn't—in fact, it was retired after 1981). Further research revealed there was indeed a separate set of white home uniforms issued in 1982. But then we also uncovered 1982 cream-colored uniforms! But we didn't know if they were worn at home as a separate set from the whites or only on the road.

Very few color news photos exist of the Astros from this era, apart from a few showing Nolan Ryan during his 1983 milestone strikeout achievement.

Only the 1981–1983 Sand-Knit and 1987–1988 Rawlings jerseys from this era featured distinguishing year tags. All others had only manufacturers' tags, leaving uncertainty about year of issue and player use. As a result, much of the jersey history has been 'manufactured'—decades later. Many jerseys have been altered to include famous player names and numbers to increase collectibility. Fake Nolan Ryan jerseys are the most common example.

Our research was often slowed by printed materials from large, reputable auction houses that occasionally listed jerseys with incorrect—or even impossible—years of use. These errors were only revealed through detailed comparisons of manufacturer tagging styles to other confirmed examples from the same year

Finally, there's the question of when a jersey was actually worn, regardless of its year of issue. Most of these jerseys were reused by the team from season to season, and many entered the hobby with their nameplates removed. To close this discussion, here's a quote from an avid Astros collector I know. In a note to me, he wrote:

> *"The club had tons of variations in that era, some jerseys made by Sand-Knit, others with Goodman tags. I was quite close to the club at that point and spent hours on various projects. In photos from that era you could see three guys standing around the BP cage and all three had on different style jerseys…subtle differences perhaps but differences, nonetheless. Kind of quaint, compared to the cookie-cutter stuff of today."*

The following pages in this chapter reflect our most current findings and conclusions as of this 10th edition.

1980-1981 Road Gray

1980

1981—with sewn back numbers and nameplate restored

Steve Kraljic Collection

Goodman gray jersey, screened lettering, no year tag

The Astros wore light gray pullover road jerseys with one-color, all-screened front lettering from 1980–1981. As seen in these photos, the gray is so pale it appears almost dirty white—but close inspection confirms the jerseys are indeed gray. Newspaper photos offer little help, as there's often barely any visible difference between the gray, white or cream colors!

While we previously believed all Astros gray jerseys were made by Sand-Knit, we've since uncovered a Goodman-tagged example ***(bottom left)***. Even that jersey uses Sand-Knit-style number and name fonts on the back. Names and numbers are one-color. Sometimes the back numbers are screened on.

The 1980 jerseys I've seen have no team tagging, while 1981 jerseys are marked with the year. The Tartabull jersey is not year-tagged, but we believe it dates to 1981 and was later passed down to the minors in 1982, where José Tartabull was a minor league coach through 1984.

Note the screen-printed lettering on this 1980 road jersey. How can I tell it is a road jersey? Those are the old seats in Philadelphia Veterans Stadium in the background, crafted in the same era. The 1970s-brown, red and yellow are "in". Remember your Mom's kitchen?

© GameWornGuides.com

1982-1986 Home Rainbow

Sand-Knit 1982-1983

1983

Sand-Knit remains the uniform supplier in 1982, but two minor changes are made to the Rainbow jersey. The front "Astros" lettering is now either sewn on **OR** screened on in one-color navy blue. The star now features a white border, replacing the earlier red one, but it is still always screened on. Team tagging appears for the first time on Rainbow jerseys with the 1982 year tag. Nameplates have been restored on most surviving examples, as the Astros likely removed them before the jerseys were sent to the minors.

1983

1982

1983

1982-1986 Home Rainbow, continued: Sand-Knit 1982-1983

Below: This 1982 year-tagged Sand-Knit jersey was well worn before it was retired. Note the two-color screened-on star outlined in white, and the one-layer sewn-on team name. From my handling of original 1975–1983 Rainbow jerseys, they are surprisingly thin—many almost feel like heavy T-shirts. While this may be attributed to overuse before being retired, my experience leads me to believe the fabric was never as heavy as a typical MLB uniform..

The Astros wordmark is designed so that the bottom point of the V-neck collar trim bisects the “s” and “t”— a detail missed by nearly all makers of Turn Back the Clock uniforms (except Mitchell & Ness’ July 1999 game version).

Bill Henderson Collection

1979 version has screened on wordmark and red-bordered star

© GameWornGuides.com

1982-1986 Home Rainbow, continued: Goodman 1984-1986

1984–1986 jerseys were made by Goodman & Sons. Goodman jerseys always have the star sewn and outlined in white; the Astros wordmark is also sewn on and outlined in white.

These jerseys have no team year or set tagging.

The star is significantly smaller than the Sand-Knit version—it only extends to the first red stripe

Numbers and names use Goodman's custom Block style, with sharp corner angles. Used with nameplates that are more gently arched than those used by Sand-Knit.

1984

1986

1986

1984 or 1985

The lettering fabric used by Goodman on these jerseys was a matte-finished, square-weave navy fabric, very similar to Goodman's dark royal blue "Dodger Twill" introduced by the Dodgers in 1980. It was not the standard tackle twill used by other teams. Many of these jerseys were notably short-waisted.

Left: *The Knepper jersey is made by Goodman & Sons. Note the lettering and star are sewn on the front in two colors—navy outlined in white. Rainbow jerseys were worn less frequently as the 1980s progressed. Goodman jerseys are heavier and of higher quality than the earlier Sand-Knit versions.*

© GameWornGuides.com

1982-1988 Road Cream

Sand-Knit 1982-1983

1982

Do You Want Cream With That?

With this 10th edition, we've once again revised our conclusion: the cream-colored jersey first appeared in 1982, immediately replacing gray as the Astros' road jersey. (Previously, we had misidentified some Sand-Knit jerseys tagged 1982–1983 as gray, when they were in fact cream-colored.) We've now updated all references, removing gray as a color for 1982–1983.

As you'll see on the following pages, the cream jersey is so close in shade to the white version that one wonders why the team bothered. The difference is only apparent when the two are side by side. Still, the subtle tint was clearly intentional—four manufacturers (Sand-Knit, Goodman, Rawlings, and Russell) produced Astros road jerseys in this specific shade through 1993.

Key detail: 1982–1983 cream jerseys have white outlines on the Astros wordmark and back numbers. White jerseys have none.

Right: *Sand-Knit tagging with an "S" after the size number (e.g., 42S) indicates a slimmer waist taper ("Slim"?)*

1983

Side by Side: Comparing the Too-Similar Gray, Cream, and White Jerseys

Collector Chris McShan helped me research the confusing array of Astros rainbow-era jerseys. ***Left:*** For comparison, he placed his 1981 gray road jersey next to a 1983 cream colored version. Both were made by Sand-Knit. Each has sewn-on back numbers, but both have had the nameplates removed. The team wordmark and star are screened on the front. The gray jersey features solid navy lettering, while the off-white jersey has navy lettering outlined in white.

Right: *All three Astros jersey colors side by side—gray, cream, and white.*

© GameWornGuides.com

1982-1988 Road Cream, continued: Goodman 1984-1986

1984 and 1985 jerseys appear identical, no team tagging used.

1986 jersey with Silver Anniversary sleeve patch

Goodman made the Astros cream-colored road jerseys exclusively in 1984–1985, and *possibly* shared production in 1986 with Rawlings. However, because Goodman jerseys are not year-tagged (making it impossible to distinguish 1984 from 1985 issues), it's entirely possible that the jerseys with the 1986 sleeve patch were actually 1985 leftovers or reissues—and that Rawlings was the only true maker of cream road jerseys for 1986. Since sleeve logos did not appear until 1987, the jerseys appear identical, and we may never know for certain.

The player name on back fonts are slightly different between Rawlings and Goodman, and careful photo analysis can sometimes identify which brand a player wore. But those who were "there then" tell us that little attention was paid to what brand of shirt a player was wearing until visible sponsorship sleeve logos changed everything in 1987.

The two-color lettering for the team crest and back numbers sometimes used navy Dazzle twill or even a matte-finish "Dodger Twill." Player names were applied on nameplates using Goodman's blocky NOB font.

© GameWornGuides.com

1982-1988 Road Cream, continued: Rawlings 1986-1988

1988

1986-tagged, plain sleeves, and missing sleeve patch

Rawlings' 1986 cream-colored pullover V-neck jerseys are virtually identical in appearance to the 1984–1985 Goodman versions. The 1986 season marks the final year of "blank" sleeves; beginning in 1987, the Rawlings logo is embroidered in navy blue at the end of the right sleeve. Player NOB use the taller Rawlings house font.

1986-tagged with 1987 Rawlings logo on sleeve

© GameWornGuides.com

And just when one thinks one has seen it all, an example like this appears—enough to make the researcher throw up his hands. These two jerseys are for the same player, the same year (1983), and made by the same manufacturer (Sand-Knit)—yet they are clearly different colors. *But what are they?* If not for the subtle differences in tagging and the fact that one has a white outline around the star and numbers while the other does not, one might easily be convinced they're the same jersey photographed under different lighting conditions.

This example highlights the countless hours your author has spent staring at individual jerseys, color photos, and (God forbid) black-and-white images. Here, let me propose that one is white and the other cream-colored. But viewed in isolation, you could easily convince yourself they're both cream… or white… or even gray. This ambiguity underscores just how difficult visual identification can be—especially in photographs.

1982-1988 Home White

Sand-Knit 1982-1983

1983 with screened-on wordmark and star

Sewn-on one-color NOB/number

By 1982, the Astros considered their disco-era '70s gaudy Rainbow home jersey to be looking quite dated. To modernize their look, they introduced a plain white pullover with rainbow accents, worn as an alternate home jersey starting in 1982 (see "How Many Jerseys Did the 1980–1988 Astros Actually Wear?" on a prior page).

The team referred to this style as "White Alternate" from 1982 to 1985, then "Home White" from 1986 to 1988. Sand-Knit made the Astros jerseys for the 1982–1983 seasons. Note the three variations shown here, all using Sand-Knit's version of the Varsity font.

1982–1983 variant with star, wordmark and number all screened on!

1983 variant with all-sewn graphics/lettering front and back; Two-color number (navy/white),one-color NOB.

1982 variant with all-sewn graphics/lettering front and back; one-color NOB and number

Top left: *1983 Gainey has screened-on front graphics, one-color sewn on numbers and name on nameplate.*

Right: *#54 was not issued to anyone in either 1982 or 1983, so this jersey may never have had a name sewn on. Screened-on front graphics AND back numbers.*

Bottom left: *#35 Sambito is undated but likely from 1982 as he was not on the 1983 roster. Front graphics and back numbers all sewn-on two-color, NOB is one-color on nameplate.*

© GameWornGuides.com

1982-1988 Home White, continued: Goodman 1984-1986

1984, from the Barry Halper Collection

Goodman-made Astros jerseys do not have year- tagging.

1986

1984–1988 Goodman jerseys use two-color sewn lettering and sewn star exclusively. The NOB is one-color and is sewn to a nameplate. Number font is now Block Standard, numbers like the front graphics are navy outlined with white. IIt was not uncommon during this period to see both Goodman and Sand-Knit jerseys in use simultaneously. A trained eye could distinguish between manufacturers by examining the number font on the back of the jersey.

Nolan Ryan's Special Jerseys

Throughout his career, Nolan Ryan was notably particular about the uniforms he wore—whether due to fit, superstition, or personal preference. He was reportedly allowed to have his uniforms tailored separately from those of his teammates.While I have not personally authenticated these examples—and remain cautious about superstar jerseys I haven't examined firsthand—there are consistent reports of Ryan's preferences. During his time with the Angels (1972–1979), he developed a preference for Goodman jerseys by 1974. For the remainder of his career, with the Astros (1980–1988) and Rangers (1989–1993), he reportedly continued to favor Goodman uniforms. However, we do have photos of Ryan as a Ranger wearing Rawlings jerseys, which became easier to identify after 1987 due to the addition of sleeve logos.

1982-1988 Home White, continued: Rawlings 1987-1988

- Rawlings becomes the third company to make the Astros pullover jerseys, beginning in 1987
- These jerseys feature all sewn-on graphics and numbers in two-color navy/white. Names on back are single-color navy on name-plates.
- Note the differing Rawlings tags used in 1987 and 1988, as well as the three distinct tagging styles across these examples.

© GameWornGuides.com

1989-1993 Home White

Goodman 1989-1990

1989

1989

1990

The pullover style is discarded in favor of this traditional button-front design. The design of the lettering remains the same: The Astros lettering and star are navy outlined in white Name on a plate, navy Block numbers on back only, two-color navy/white.

On some jerseys, the lettering splits as “Ast–ros” (like the 1993 Russell on the next page), while on others—like those shown here—it splits as “As–tros.” Though the style remains consistent over these five years, the jerseys were made by three different vendors: Goodman (1989–1990), Rawlings (1991), and Russell (1992–1993).

Proper Lettering Fabric: *Check the front wordmark and star. The back lettering should match the fabric used on the front. The Astros often specified the matte-finished polyester knit fabric on many of their on-field jerseys in these years that we have come to call “Dodger Twill” based on that team’s use of this style during the 1980s and 1990s. It is without the traditional tackle twill diagonal weave lines seen on tackle twill. Retail sale Authentic jerseys sometimes lacked this feature.*

© GameWornGuides.com

1989-1993 Home White, continued:

Rawlings 1991

1991

1991

Russell 1992-1993

Russell varied the placement of the front lettering, splitting it at times as As–tros and at other times as Ast–ros.

1993

1992

Left: *Russell's Intera fabric lasted just over a year before being discontinued. In addition to its penchant to fade or yellow, it was always a wrinkly mess, as demonstrated by this example.*

© GameWornGuides.com

1989-1993 Road Cream

1989

1990

1992

Road cream-colored jerseys are button-front, just like the home versions, and aside from a slight fabric tint, they are identical in appearance. The Astros lettering and star are navy outlined in white. Back numbers are in two-color navy/white block font. Player names appear on nameplates in one-color navy.

1989 and 1991 jerseys were made by Rawlings, 1990 by Goodman, and 1992–1993 by Russell. Russell often varied the placement of the front lettering, splitting it as either "As–tros" or "Ast–ros."

1993

Right: *Ken Caminiti wearing his road cream uniform. How can we be sure? Only because the un-cropped photo reveals the outfield wall behind him is in San Diego.*

Side by Side: Comparing Home White vs. Road Cream

Bill Henderson Collection

Above: *Velcro closures were sometimes used—but not always—to hold the jersey closed at the center of the split wordmark.* ***Below:*** *Note how the word "Astros" splits at different points on different jerseys—sometimes as As–tros, other times as Ast–ros.*

When viewed side-by-side, **these jerseys make one wonder why they bothered**. Yet the Astros had three different manufacturers—Goodman, Rawlings, and Russell—all producing jerseys in both white and cream fabric for ten straight years. One has to wonder how often they got mixed up on the field—and whether anyone even noticed. Button-front jerseys were introduced in 1989.

© GameWornGuides.com

1994 Home

Bill Henderson Collection

After nearly two decades of bold and colorful styles, the Astros adopted a much plainer and more traditional design in 1994—known as the *"Gold Star"* jersey. There are no numbers on the front. These jerseys are not team-year or set-tagged. They feature a special 1990s Astros-only font for names and numbers, with nameplates applied. Lettering consists of three colors: black/white/Nugget gold.

While this basic style remained in use from 1994–1999, minor changes to the wordmark distinguish the 1995–1999 version, which is shown on the following page. All 1994 versions should include the MLB 125th Anniversary patch on the right sleeve, and the Astrodome "The Original" patch on the left.

The team wordmark and back numbers are officially listed as "Astro Blue," though the twill used is clearly black.

© GameWornGuides.com

1994 Road

Bill Henderson Collection

Known as the *"Small Gold Star"* jersey, it is identifiable by the star ***inside*** the second "O" in "Houston." These jerseys feature a special 1990s Astros-only font for names and numbers. There are no numbers on the front. Lettering is three-color—black/white/Nugget Gold. Nameplates are used. These jerseys are not team-year tagged, though most team-issued examples include a small "100% polyester" flag tag below the Russell jock tag. While nearly identical to the 1995–1996 road version shown on the next page, the 1994 jersey features a smaller and differently styled front wordmark. Since these jerseys were used only in 1994, all team-issued examples should feature the MLB 125th Anniversary patch on the right sleeve.

© GameWornGuides.com

1994 Alternate

Left: *Comparison with a black Orioles jersey highlights just how visually similar "Astro Blue" truly is.*

Astros on the front in white/black/white; star trimmed in gold. Officially designated 'Astro Blue,' the jersey color is nearly indistinguishable from black. In fact, the twill lettering layer on the Astros jersey of this period *is* black. No numbers on front. Special 1990s Astros-only font for names and numbers. Nameplates are used. Three-color names and numbers, white/black/Nugget Gold. No team set or year tagging used.

© GameWornGuides.com

1995-1999 Home

1998

In just the second year of this design, the front wordmark is altered enough to warrant treatment as a separate style. The lettering is slightly bolder, the point of the "A" at the left is shortened, and the bottom loop of the final "S" is now white instead of black (as it was in 1994). The "O" appears narrower and taller, with the star placed differently within it.

The back of the jersey stays the same, nameplates are used along with the special Astros player name and number font in three-color black/white/Nugget Gold.

Bottom left: A comparison of the 1994 and 1995 designs.

1995

1996

1994

1997-1999 Alternate

1997

1997

Embroidered patch with metallic gold/black/white star sewn on the left chest. Although it closely resembles the BP jersey from the same era, it is not identical. There is no trim around the sleeve ends and neck, and the fabric is solid, not mesh.

There are no numbers on the front. The special 1990s Astros-only font for names and numbers continues. Nameplates are used, and the three-color names and numbers—white/black/Nugget Gold—remain consistent. No team set or year tagging is used, though special tailoring tags may be present.

2000-2012 Home

2001

The move to a new stadium brought a new look for the Astros. A fancy Astros script appears on the front in black/sand/brick with a gray drop shadow. A new Astros-only font is introduced for player names and numbers. Small dark red numbers appear on the front, while the back features three-color names and numbers in black/sand/brick. No nameplates on pinstripe jerseys. Team Texas star left-sleeve patch worn all years except when replaced by a commemorative patch between 2002 and 2012.

The 2000–2001 jerseys differ from later versions in two key ways. They feature a multi-layer tackle twill wordmark and smaller numbers on both the front and back. Starting in 2002, the team name script is executed in an attractive, old-fashioned looped chain stitching—last seen on Astros home jerseys in 1974. After 2001, front numbers become larger and bolder, increasing from 3 1/2” to 4 1/8”, while back numbers grow from 8” to 8 3/4”. Player name size remains consistent at 2 7/8”.

Above: *2000–2001 version, with layered twill wordmark and smaller numbers front and back.*
Below: *2002–2012 version, with chain-stitched wordmark and larger numbers front and back.*

2000-2012 Road

2000 or 2001

A new "Houston" script appears on the front in brick/sand/black. The 2000–2001 jerseys differ from later versions in two significant ways: they feature a multi-layer tackle twill wordmark and smaller player numbers on both the front and back. Starting in 2002, the team name is rendered in an attractive old-fashioned looped chain stitching—last seen on Astros home jerseys in 1974. After 2001, front numbers become larger and bolder, increasing from 3 1/2" to 4 1/8", while back numbers grow from 8" to 8 3/4". Player name size remains consistent at 2 7/8". The Astros' custom font style continues to be used for names and numbers. Front numbers are plain black; back names and numbers are three-color brick/sand/black, applied on a nameplate. The Texas state sleeve patch is worn from 2002–2012. Starting around 2008, the Astros wore their brick red "Houston" jersey as their road jersey almost exclusively. They seemingly wore grays only when forced to do so by the home team's choice to wear their own red or orange alternate home jerseys.

Above: *2000–2001 version, with layered twill wordmark and smaller numbers front and back.*
Below: *2002–2012 version, with chain-stitched wordmark and larger numbers front and back.*

2000-2001 Alternate Home White

Plain white jersey featuring the stylized star logo on the left chest in brick, sand, and black. There are no numbers on the front. All lettering—names and numbers—is rendered in three-color brick/sand/black using the Astros' custom font. Names are applied on nameplates. A strip of Velcro is present between the second and third buttons from the top.

© GameWornGuides.com

2000-2001 Alternate Home Black

- Team script is layered tackle twill
- Solid fabric button-front jersey
- Astros custom font is used for names and numbers, three-color sand/black/brick
- The backs of both home and road alternate jerseys are identical
- Name on back on nameplate
- No front numbers used on the black alternate jerseys

© GameWornGuides.com

2000 Alternate Road/2001 Alternate Road Black

- Team script is layered tackle twill
- Solid fabric button-front jersey
- Astros custom font is used for names and numbers, three-color sand/black/brick
- The backs of both home and road alternate jerseys are identical
- Name on back on nameplate
- No front numbers used on the black alternate jerseys

© GameWornGuides.com

2001 Alternate Road Brick/2002-2012 Alternate Road

Left sleeve patch 2002–2012

- Jersey features layered tackle twill team lettering from 2001–2002.
- Starting in 2003, the team name script on the front of all jerseys is done in old-fashioned looped chain stitching, last seen on Astros home jerseys in 1974.
- Astros custom typeface is used for names and numbers. Back numbers and nameplate letters are rendered in three-color brick/sand/black.
- Nameplates are used.
- Front numbers are added beginning in 2002, in three-color black/brick/sand.
- Texas left-sleeve patch worn 2002–2012.

© GameWornGuides.com

2002-2012 Alternate Home Brick

- The home "Astros" version of the brick-colored jersey is added to the lineup in 2002, replacing the black home alternate that was discontinued after 2001.
- Beginning in 2002, the team script on the front of all team-issued jerseys is rendered in old-fashioned looped chain stitching—last seen on Astros jerseys in 1974.
- Lettering is sand/brick/black, as are the back name and numbers.
- The front number is black/brick/sand. The name appears on a nameplate.

Above: *Velcro closure, as added to many player-worn jerseys. The reverse side shows chain stitching applied directly to the jersey. The only other team that used this direct-to-jersey method at the time was the Cardinals. The Phillies also used a chain-stitched wordmark, but theirs was sewn to a patch before being attached to the jersey front.*

2013 Astros Rebranding: with Switch to American League

- For 2013, the Astros made a rare move in MLB by switching leagues. The franchise had originally joined baseball as a National League expansion team in 1962 (then as the Houston Colt .45s), before being rebranded the "Astros" for the 1965 season. Such a league shift had occurred only once before in modern times—when the Milwaukee Brewers moved in the opposite direction, leaving the American League to join the National League for the 1998 season.
- Along with the league switch, the Astros introduced a completely redesigned uniform set. The new look was officially unveiled in early November 2012, although it had been inadvertently leaked by the team nearly a month earlier.
- The new color scheme revived the navy and orange combination used from 1962–1993. The classic "H" within a star was brought back as the cap logo, a sleeve patch on game jerseys, and the chest logo on new batting practice jerseys. Though very similar to the historic version, the updated logo is not identical.
- The uniform set features full-button (placket) jerseys with narrow one-color knit trim. Home jerseys and alternate orange jerseys display "Astros" arched across the front, while the gray road jersey features "Houston."

- Player numbers appear on the front left and back, in a custom font unique to the Astros. Player names on the back are used on all game uniforms, and they match the front "Astros" or "Houston" wordmark in both font and nearly identical size. All wordmarks, letters, and numbers are rendered in two-color twill. A circular team patch featuring the "H" and star appears on the sleeve of each game jersey.
- The navy blue batting practice jersey is also worn as an alternate jersey in 2013–2014. Midway through 2014, it was deemed unacceptable for on-field use and was removed from the game jersey rotation. It features "rainbow" striped side panels in yellow and orange.
- Overall, the new look is highly restrained—arguably classic, though perhaps a little bland. The use of the same font *and* size for player names as the front wordmark is unusual. All Astros jerseys were made with Cool Base fabric when introduced.

© GameWornGuides.com

2013-2023 Home

- Home jersey is bright white and features “ASTROS” arched across the front in two-color navy/orange.
- Thin orange knit trim runs down the placket and around the back of the collar, and extends approximately ½” from the sleeve ends.
- A navy-based sleeve patch featuring an orange star, ringed in orange, appears on both sleeves. This is a different patch than the one used on road or alternate jerseys.
- Player numbers are located on the front left and back, in a special font that matches the front wordmark, using the same navy/orange color scheme.
- Player NOB is direct-sewn without a name-plate, using the same font, size, and color scheme as the front “ASTROS” wordmark.
- Originally manufactured by Majestic; Nike assumed production in 2020.

© GameWornGuides.com

2013-2023 Home, continued

Over the course of this jersey's timeline, the team has worn several different sleeve patches, in addition to the standard disc patch. These include:

- **2015:** Astros 50th Anniversary patch, right sleeve
- **2015:** "MH" patch (for broadcaster Milo Hamilton) worn on the left chest after September 18
- **2017:** "Houston Strong" patch, left chest (starting September 2)
- **2022:** Astros 60th Anniversary patch, right sleeve
- **2023:** Sponsor ad patch worn on various sleeves depending on player handedness, with the team disc patch placed on the opposite sleeve

More details can be found in the Commemorative Patch section of this chapter.

© GameWornGuides.com

2013-2023 Road

2017
Postseason

- Road jersey is gray and features "HOUSTON" arched on the front in two-color navy/orange.
- Thin navy knit trim adorns the placket and around the back of the collar, and approximately ½" from the sleeve ends.
- A navy-centered sleeve patch with an orange star is ringed with orange, a different patch than is used on the home or alternate jerseys.
- Player numbers appear on the left front and on the back, in a special font that matches the wordmark and uses identical colors.
- Player NOB is direct sewn without a nameplate and is in the same font, colors, and size as the "ASTROS" wordmark on front.
- Originally made by Majestic. Nike takes over manufacture in 2020.

2013

© GameWornGuides.com

2013-2023 Alternate Orange

- Alternate orange jersey features "ASTROS" arched on the front in two-color navy/white. These are worn on the road and for Friday night home games.
- Navy narrow knit trim adorns the placket and around the back of the collar, and approximately ½" from the sleeve ends.
- A navy-centered sleeve patch with an orange star is ringed with navy—a different patch than is used on the home jersey, and the same as is used on the road gray.
- Player numbers appear on the left front and on the back, in a special font that matches the wordmark, in identical colors.
- Player NOB is direct sewn without nameplate, and is in the same font, colors, and size as the "ASTROS" wordmark on front.
- Originally made by Majestic. Nike takes over manufacture in 2020.

2013 Batting Practice/Alternate Home Rainbow

The 2013 batting practice jersey is made of lightweight Cool Base fabric in navy, with side panels striped in five shades of yellow and orange. The white “H” in an orange star logo is an embroidered applique applied to the left chest. There are no numbers on the front of these jerseys. Numbers on back are orange over white twill; player NOBs are direct applied without nameplates and are white over orange, in the same font as the other game jerseys. Team-issued versions exist both with and without player names. No-NOB jerseys are typically from Spring Training non-roster invitees.

Besides being used in Spring Training and for regular season pregame warm-ups, it was also worn during the entire 2013 regular season as a Sunday home game jersey, despite not being listed in the MLB Style Guide as an official alternate.

Ultimately, during the middle of the 2014 regular season, the slightly redesigned-for-2014 version was pulled from game use. Players complained that it was uncomfortable and was improperly tailored for use as a game jersey.

Quoted on MLB.com, team authentication manager Mike Acosta said, “It wasn’t built like a game jersey. It’s totally different material than a game uniform. Once they voted to stop wearing it on the field, we had a discussion behind the scenes and said, ‘It’s really a shame we can’t have that on the field anymore,’ so why don’t we try to come up with a new jersey that is designed to be on the field, constructed to where you can tailor it and guys will feel comfortable in it?” It took two years to find an answer. The result was the new 2016 Batting Practice/Alternate, introduced in the game jersey section earlier in this team chapter.

Reader Note: This page is duplicated in the Batting Practice section as well.

2014-2015* Batting Practice/Alternate Home Rainbow

Majestic's redesign of MLB batting practice jerseys for 2014 introduced only minor changes for the Astros. This version features multi-colored side panels that extend all the way to the bottom of the garment, unlike the construction of other teams' jerseys which have a smaller side panel insert. Knit navy sleeve ends and collar trim feature a center orange stripe. The Majestic logo on the sleeve changes to the new style; the jock tag on the lower left front also reflects the updated 2014 design. These jerseys were used in Spring Training games and for regular season pregame warm-ups. While originally planned for Sunday home game use—as alternate game jerseys, like in 2013—they were only worn in 2014 during the first half of the season. Usage ended prematurely after July 17, when players voiced complaints that the tailoring was unsuitable for game wear (see prior page). Although they remained in the MLB Style Guide as an alternate through 2015, they were not used on the field again.

2016: Flex Base Jersey Construction and Branding

Read the full story on MLB's adoption of Flex Base jerseys for 2016 in Chapter 2.

In 2016, all teams adopt Majestic's new "Flex Base" on-field game jerseys, which are made of Cool Base fabric, but with several new elements designed to make them lighter and more breathable. The new jerseys have mesh side panels that run the length of the jersey, and one on the back tail called the "Air Belt." They also use "Kiss Cut" layering for front decorations, names, and numbers, which Majestic says is 10-20% lighter than traditional layered twill. Finally, the MLB logo on the back neck is now a rubberized patch, called CFX by Majestic, and the heat-pressed tag on the front tail differs from Cool Base jerseys of old.

© GameWornGuides.com

2016-2021 Alternate Home Rainbow/2022-2023 Alternate Rainbow

For the 2016 season, the Astros modified their rainbow-sided alternate jersey. After the failed 2013–2014 experiment using the batting practice jersey as a game jersey, this new version was designed as a standard, tailored game jersey to improve player comfort.

The new jersey features the “Astros” wordmark in place of the “H Star” logo. Based on the Flex Base game-jersey template, it takes full advantage of the colorful side inserts in its design. Player names and numbers are rendered in orange/white using the Astros’ special font. Note that player names are now the same color as the numbers—previous versions had player names stitched in white outlined with orange.

This style was also used as a batting practice jersey in 2016. Initially worn only as a home alternate from 2016–2021, it was later adopted for both home and road use starting in 2022.

Originally made by Majestic, Nike takes over manufacture in 2020.

2022-2023 City Connect

The Astros enter the City Connect program in 2022 with a space-themed uniform set meant to celebrate Houston's role as home to NASA's Johnson Space Center, while also honoring the Astros' own "Tequila Sunrise" color scheme. The dark blue Flex Base jerseys read "SPACE CITY" in orange/blue across the front in a NASA-style font, which is also echoed on the orange name and the orange/yellow-to-orange gradient/blue number on back. Following from the number outlines, a gradient narrow knit trim encircles each sleeve, the neck opening, and placket—though Nike indicated that each jersey's rainbow trim pattern is slightly different. The grid pattern printed on the jersey's set-in sleeves references star charts used by astronomers. On the left sleeve is a NASA-style "mission patch" containing Houston's four area codes and an "Astros version" of the Texas flag. Finally, Nike and the Astros also included two hidden space-themed details (not visible during gameplay but featured on retail versions for more local appeal):

- Orange embroidery inside the collar reading "Go for Launch"
- A front jock tag with a lunar lander silhouette and the words, "Houston, the Eagle has Landed," paraphrasing Neil Armstrong's line upon Apollo 11's touchdown on the Moon on July 20, 1969.

2024 Nike “Vapor Premiere Elite” Jersey Template

Nike Flex Base 2020–2023

Nike Vapor Premier Elite 2024

Following league-wide sweeping changes to MLB jerseys with all teams switching from Nike’s 2020–2023 continuation of the Majestic Flex Base jersey shell to its new Vapor Premier Elite (VPE) template, the jerseys of the 2024 season become an anomaly — a “one and done” season of changes that brought intense scrutiny from players and fans alike. Based on the negative feedback, especially from MLB players, Nike rolled back some but not all of the 2024 changes in time for the 2025 season.

The full rundown of the changes is outlined earlier in “The Basics” chapter, but generally speaking, 2024’s crop of jerseys had changed from earlier versions in several key ways.

- VPE home jerseys are off-white, or light cream color. The earlier Flex Base white jerseys are a bright, purer white. Grays are standardized.
- The front placket is narrower on VPE, which often causes team wordmark lettering that crosses the placket to break differently.
- Neck and sleeve trim elements (when used) are no longer sewn on top of the jersey material, but are now “sewn-in” to the jersey at the seams. Placket trim adornment remains the same, though the trim is now spaced closer together with the narrowing in placket size.
- For improved visibility, the MLB logo on the back of the jersey is moved several inches lower onto the back, down from the collar placket area where it had been since 2000.
- VPE loses the integrated mesh side and back tail panels that had been part of the Flex Base jersey template.
- Player names on VPE are much smaller, and for many teams are done in a standardized block font, all using a much steeper, nearly semi-circular arch.
- For teams with front numbers, the new 2024 font is simply always a reduced size of the back numbers. This was not the way it had been in the past for most teams, with front numbers being a font variant (smaller but usually wider and bolder) than the back font.
- Team logo sleeve patches, and in some cases sponsor sleeve patches change from traditional raised embroidery to flat printed plastic or to sublimated cloth/twill
- All lettering is done using a new more lightweight (thinner) kind of matte-finished twill (commonly called “Nike Twill”). Most, but not all jerseys incorporate barely visible micro-perforation on the numbers, front and back.
- Universally, nameplates are no longer used.

© GameWornGuides.com

2024 Home

The template shift to Nike Vapor Premier Elite (VPE) brings many of the same changes to the Astros home jersey, even if the intent is to apply the exact details of the previous iteration to the new template. Most obvious is the league-wide downscaling of the player names and numbers on back. Coupled with the narrower placket, lower MLB logo on back, and sewn-in sleeve trim replacing the former sewn-on trim, the changes make the jersey still seem different, even if the plan was to stay the same. The narrower placket also means the front lettering, specifically the "R", intersects with the trim differently, though the effect is not as jarring as it is for some other teams. The Astros disc and sponsor patches are still embroidered, but in a different style on lighter backing, though from the stands or on TV, those do not appear much different. The Astros do not use perforated twill on these jerseys.

© GameWornGuides.com

2024 Road

Much as it did for the team's home jerseys. the template shift to Nike Vapor Premier Elite (VPE) brings many of the same changes to the Astros road jersey, even if the intent is to apply the exact details of the previous iteration to the new template. Most obvious is the league-wide downscaling of the player names and numbers on back. Coupled with the narrower placket, lower MLB logo on back, and sewn-in sleeve trim replacing the former sewn-on trim, the changes make the jersey still seem different, even if the plan was to stay the same. The narrower placket also means the front lettering, specifically the "S", intersects with the trim differently, though the effect is not as jarring as it is for some other teams. The Astros disc and sponsor patches are still embroidered, but in a different style on lighter backing, though from the stands or on TV, those do not appear much different. It is unclear if the Astros use perforated twill on these jerseys; more research is required.

© GameWornGuides.com

2024 Alternate Orange

As it does with the Astros' other jerseys, the template shift to Nike Vapor Premier Elite (VPE) brings many of the same tiny changes to the Astros road jersey, even if the intent is to apply the exact details of the previous iteration to the new template. Most obvious is the league-wide downscaling of player names and numbers on the back. Coupled with the narrower placket, lower MLB logo on back, and sewn-in sleeve trim that replaces the previous sewn-on version, the changes make the jersey still seem different, even if the plan was to stay the same. The narrower placket also means the front lettering, specifically the "R", intersects with the trim differently, though the effect is not as jarring as it is for some other teams. The Astros disc and sponsor patches are still embroidered, but in a different style on lighter backing, though from the stands or on TV, those do not appear much different. It is unclear if the Astros use perforated twill on these jerseys; more research is required.

© GameWornGuides.com

2024 Alternate Rainbow

Debuting as a Spring Training jersey back in 2013, the Astros "Rainbow Sides" jersey—inspired by the team's classic Tequila Sunrise motif—has become a popular choice in the team's jersey lineup. Since that time, the basic concept has been used across several templates, including two batting practice designs, Flex Base (both Majestic and Nike), and now Nike's Vapor Premier Elite (VPE) template. In an era where Nike tries to simplify and systematize everything, this jersey's existence stands out. The defining feature of these jerseys—the colorful side inserts—lent themselves well to BP and Flex Base designs of past years, where those templates had separate side panels to work with. But VPE has a more traditional, standard side seam—so carrying this design over takes additional work for Nike to produce.

Like the team's other jerseys, the template shift to Nike Vapor Premier Elite (VPE) brings many of the same tiny changes to this style. Most obvious are the league-wide downscaling of player names and numbers on the back and the lower MLB logo. The Astros disc and sponsor patches are still embroidered, but in a different style on lighter backing, though from the stands or on TV, those do not appear much different. The Astros use perforated twill on these jerseys.

© GameWornGuides.com

2024 City Connect

It's the same...but different. The 2024 City Connect jersey copies all of the elements of the original and pastes it on to Nike's Vapor Premier Elite template. And in doing so, makes a handful of adjustments to better suit the new template. Most obvious is the league-wide downscaling of the player names and numbers on back. Back numbers are perforated twill. The Astros "Space City" and sponsor patches are still embroidered, but in a different style on lighter backing, these changes are barely noticeable. The construction of the front lettering changes on the VPE version, with spaces between and inside letters no longer filled with blue twill — see the "SP" and "CI" letters as an example. And as for hidden messaging elements that no one will ever see on field, the "Houston, the Eagle has landed" text is now heat-pressed rather than embroidered on a patch. The "Go for Launch" lettering on the inside collar is still heat-pressed, but is now arched rather than straight. Finally, though the change to VPE typically meant that sleeve-end trim became sewn-in to sleeve ends rather than sewn on top, this jersey retains its traditional sewn-on trim, just above the sleeve end. It is likely that the pattern on the sleeves themselves and the unusual rainbow knit trim both conspire to require this vestige of the earlier version.

Above: *A detail showing the differences in front lettering between Flex Base and VPE.* ***Left:*** *The "Eagle" slogan is now heat-pressed vs. an embroidered patch. Right: Sleeve-end trim remains sewn-on vs. sewn-in, likely because of the sublimated pattern on the sleeves and the gradient trim color.*

© GameWornGuides.com

2025 Home

The 2025 season brings minor modifications to elements of the VPE template across all teams' non-gray jerseys, a step toward more comprehensive changes to come for the 2026 season. Among them, back name and numbers are enlarged, in most cases, back to 2023 sizes and font styles, and perforated numbers are gone. The sleeve-end trim remains sewn in, carried over from 2024. Overall, except for the lower MLB logo on the back of the jersey and the narrower placket, accentuated by the trim, these look very close to the 2023 version, minus the Flex Base side panels.

© GameWornGuides.com

2025 Road

The 2025 season brings many changes to road gray jerseys across MLB. The 2024 VPE gray jerseys were plagued by significant sweat-staining issues during games, so 2025 gray jerseys revert to the same fabric used for Flex Base, but now applied to the VPE template (no mesh side panels or “Air Belt” back panel). Also removed is the largely invisible, jersey-colored set-in band of collar trim—unless a team uses contrasting trim around the collar opening.

Other pre-2024 elements return, including collar/placket and sleeve trim being sewn on to jerseys again rather than sewn in. Since this is still the VPE template, the placket is smaller than Flex Base, so placket trim appears closer together as it did in 2024, rather than how it appeared in 2023. Sleeve patches also return to full embroidery, replacing the printed or lightweight embroidered versions used previously.

2025 City Connect 2.0

The Astros start 2025 with a new City Connect 2.0 design that replaces there CC 1.0 “Space City” uniforms. This new entry still leans heavily on Houston’s association with the space program, as noted in these explanatory points adapted from the MLB press release:

- Front Crest: The wordmark is an expression of the sleek and futuristic design of this uniform. The phrase “Stros” has always been integrated in Astros fan culture, it’s the first time the organization has formally adopted the fan-driven nickname.
- Player Lettering: Numbers are navy blue with sublimated 3D drop shadow beveled edges that gradate from gold at the top through orange to red at the bottom. Player names are bright orange.
- Neckline: The phrase “Space City” (of the CC 1.0 uniforms) sits in the neckline on a lunar surface texture.
- Sleeve Patch: The sleeve mission patch takes its inspiration from the long-time Union Station logo that adorns the historical building next to Daikin Park and includes the Astros “H” alongside an additional nod to Space City.
- Sleeve Trim: The sleeve trim showcases a lunar pattern that pays tribute to the history of the moon landing and the pursuit to return to the moon in the coming years. The rainbow gradient is a notable carryover from City Connect version 1.0 and is designed as a modern version of the famous “Tequila Sunrise” pattern.
- Jock Tag: The heat-pressed quote comes from a speech about space travel by President John F. Kennedy delivered at Houston’s Rice University.

As a new 2025 jersey, this design uses the Vapor Premier Elite (VPE) template. Based on Nike documentation, we believe it may use the same fabric previously found in Nike’s version of Flex Base. We will be able to confirm this in future editions. Also note the use of a white Nike jock tag on the front—one of a handful of known uses of this newer tag, which was typically black. The black version was more visible when worn under white pants.

Batting Practice and Spring Training Jerseys

1978-1993 Batting Practice

1993 (Majestic)

1992

1992

Bill Henderson Collection

- Rainbow trim along shoulders
- Some BPs are mesh, while others use a solid, non-mesh fabric.
- These jerseys are used for Spring Training and batting practice. They are sometimes referred to as “alternate jerseys”, and may have been worn *ad hoc* in a few regular season games.
- Shoulder stripes are sewn *in*, not sewn on top.
- In earlier years, numbers, lettering, and the star were often screened on both front and back. Later examples used sewn tackle twill. Some later models featured entirely sewn-on lettering and star.
- No numbers on front. No names on back from 1979–1983, names appear on back from 1984–1993, although inconsistencies are common.
- One-color white number on the back, Extra Bold Block Style
- Many of the jerseys shown are made by Rawlings, while earlier versions were made by Goodman. From 1992–1993, they were produced by Majestic, Rawlings, and Russell..
- These jerseys were often heavily used before being sold off. Game-worn examples typically show sun-faded shoulder trim, which was originally bright.

CERTIFICATE OF AUTHENTICITY

This is an Astros batting practice jersey worn by Craig Biggio in the early 1990s. The jersey features "Astros" across the chest in single-layer white tackle twill. This style of jersey, known as the "shoulder rainbow", features the Astros colors on the sleeve in vertical fashion up to the collar. The color of the actual jersey navy and there is a Rawlings tag on the lower front left of the jersey stating it is a size 42. In addition, there is a "Set 1 1990" tag in this area. The Astros wore this style of jersey from the late 1970s to 1993. The back of the jersey features the name "Biggio" in white tackle twill onto a name plate. A number "7" is sewn below the name, also in single-layered white tackle twill. Craig Biggio played for the Astros from 1988-2007 and holds franchise records for career games (2,850), at-bats (10,876), runs scored (1,844), hits (3,060), extra-base hits (1,014), total bases (4,711) and doubles (668). In 2005 Craig Biggio scored the first-ever World Series run in Texas and became the 27th player in Major League Baseball history to attain 3,000 career hits. His number 7 was retired by the Astros in 2008.

Mike Acosta
Manager, Authentication & Retail Operations
Houston Astros Baseball Club

This 1990 team-tagged jersey, made by Rawlings, is featured here as yet another variant—constructed from a shiny, non-mesh knit fabric that some have dubbed "*Comfort-weave*." This same fabric was also used by the Mets and a few other teams for batting practice jerseys.

Having a legitimate and verifiable COA for a game-used item worn by a well-known player is absolutely essential if you're purchasing the item as an investment.

Chris McShan collection

Left: *1990 Goodman version of the "Comfort-Weave" fabric variant. Note that the orange outline of the star has rounded points—similar to Goodman's white and cream Astros jerseys from the same period—unlike the Russell version, which features sharp star points.*

1986-1993 Alternate Batting Practice Zip-Neck

Bill Henderson Collection

Majestic introduced this zip-neck variant of batting practice jerseys during the late 1980s and early 1990s. Here are two Astros variants.

Top row: Example used 1986–1992 features large-hole mesh, a half-zip neck, and the typical colorful knit trim on the neck and sleeves. It also has slash pockets and an elastic waistband. The Majestic logo on the sleeve is embroidered, while the one on the slash pocket is heat-pressed.

(Chris McShan collection)

Bottom row: Made of solid light-weight knit fabric and features a Majestic tag that dating it to 1993.

© GameWornGuides.com

1994-1996 Batting Practice

Chris Boyd Collection

Introduced with the new game uniform design of 1994. Navy blue with Astros lettering on front, white/midnight navy/white with metallic gold-edged navy blue star in the design.

All certifiable team-worn BP jerseys are made by Majestic and are decidedly navy blue. There are some of these made by Russell that appear to be team prepared, have neck size tabs, and are nearly black in color. To date, we have not been able to confirm that Russell-made jerseys in this style were worn on-field by players, but we continue to search for photographic evidence.

Astros sleeve patches are identical to those used on game jerseys, including commemorative patches like the 1994 MLB 125th anniversary design.

Bottom center: Notably different proportions of front wordmark on 1994 and 1995–1996 Majestic jerseys, notice especially the length of the point on the left side of the word, and the more squat lettering.

© GameWornGuides.com

1994 Alternate Batting Practice Zip-Neck

Chris McShan Collection

Majestic provided this zip-neck mesh batting practice jersey they named "The *Gamewarmer*" as an option to all teams in the late 1980s and early 1990s. Collector Chris McShan shares his team-issued example here and notes that he believes the Astros used this style only in 1994—without player names or numbers on the back

The jersey features slash pockets, gold/white/navy knit trim at the collar and sleeve ends, and hidden elastic at the waist.

No known photos exist of players wearing this style jersey.

© GameWornGuides.com

1997-1999 Batting Practice (Narrow Gold Trim)

Chris Boyd Collection

This style features a very dark 'midnight' navy blue mesh in a pullover design with two-button Henley-style collar. Lettered identically to that of the navy alternate game jersey from the same years. The front chest team logo is embroidered in gold over black over white. A gold star also appears on the left chest. There are no numbers on the front. The distinctive 1990s Astros-only font for names and numbers remains in use. Mesh nameplates are used, and names and numbers appear in three colors—white/black/Nugget Gold. Sleeves feature knit navy/gold/navy trim. This style was made for the team by both Russell and Majestic, with each brand embroidering its logo on the right sleeve.

© GameWornGuides.com

1997-1999 Batting Practice (Wide Gold Trim)

This variant of the “Big Star” batting practice jersey features significantly wider gold trim on the knit neck and sleeve ends. All examples of this style in my collection and photo archives are made by Russell. Although I don’t have photographic documentation, I suspect these were worn interchangeably with the more common narrow gold trim variant on the field.

Although the official color for Astros dark-bodied jerseys is “Astro Blue,” this example from my collection appears definitively black. I have found no photos of players wearing this style jersey. The lettering is rendered in white “Glacier” twill, featuring an embossed pattern.

© GameWornGuides.com

2000-2001 Home Batting Practice

- Brick-red mesh jersey with a two-button neck and Astros script on the front in sand/brick/black tackle twill. No numbers appear on the front.
- Three-color names and numbers on back: sand/brick/black.
- Uses Astros' custom font for both names and numbers.
- Player names are smaller than typical—just 2½" tall for the innermost, outline-free layer—and are placed on nameplates.

Chris Boyd Collection

© GameWornGuides.com

2000-2001 Road Batting Practice

Left: *A closer look at the back of this game-worn jersey reveals a darker, unfaded area where the nameplate was once sewn.*

- Black mesh jersey with a two-button neck and stylized star logo sewn on the left chest.
- Astros' custom font for names and numbers.
- Three-color name and number styling: sand/black/brick.
- Nameplates used.
- Also worn during 2000–2002 Spring Training.

© GameWornGuides.com

2002 (?) Home Batting Practice

Chris Boyd Collection

This style remains something of a mystery, and we are still seeking more information. It features a two-button neck and red, black, and beige twill script on the front. ***Near right:*** We've seen examples made of mesh (on left), as well as one using early Cool Base-style fabric (on right).

To date, we haven't located reliable pregame photos showing both the front and back of these jerseys, and even seasoned Astros collectors have been unable to confirm the exact years of use.

Two different name/number color combinations appear on the back: brick/black/sand and sand/black/brick. The Astros' custom font is used for all lettering..

© GameWornGuides.com

2003-2006 Batting Practice

- Made of early-generation, non-mesh “tech” fabric that’s soft to the touch. Pullover design with two-button neck.
- Fabric is prone to fading and fabric pulls with regular use.
- Tackle twill Astros wordmark on front.
- All previous BP jersey variations were discontinued—this was the only BP style worn from 2003–2006.
- No front numbers.
- Player name on a nameplate; three-color name and number in sand/brick/black.

© GameWornGuides.com

2007-2010 Batting Practice

Chris Boyd Collection

- Astros' version of the 2007 Cool Base batting practice jersey. Features a one-button neck and lightweight fabric.
- Appliqué-style lettering, names, and numbers replace traditional tackle twill.
- Side panel inserts are solid black.

© GameWornGuides.com

2011-2012 Batting Practice

Chris Boyd Collection

- All MLB teams switched to button-front batting practice jerseys for 2011.
- The Astros' 2011 design is identical to their 2010 version, with the exception of the button-front construction.
- Back numbers and names return to multi-layered tackle twill.

© GameWornGuides.com

2013 Batting Practice/Alternate Home Rainbow

The 2013 batting practice jersey is made of lightweight Cool Base fabric in navy, with side panels striped in five shades of yellow and orange. The white “H” in an orange star logo is an embroidered applique applied to the left chest. There are no numbers on the front of these jerseys. Numbers on back are orange over white twill; player NOBs are direct applied without nameplates and are white over orange, in the same font as the other game jerseys. Team-issued versions exist both with and without player names. No-NOB jerseys are typically from Spring Training non-roster invitees.

Besides being used in Spring Training and for regular season pregame warm-ups, it was also worn during the entire 2013 regular season as a Sunday home game jersey, despite not being listed in the MLB Style Guide as an official alternate.

Ultimately, during the middle of the 2014 regular season, the slightly redesigned-for-2014 version was pulled from game use. Players complained that it was uncomfortable and was improperly tailored for use as a game jersey.

Quoted on MLB.com, team authentication manager Mike Acosta said, “It wasn’t built like a game jersey. It’s totally different material than a game uniform. Once they voted to stop wearing it on the field, we had a discussion behind the scenes and said, ‘It’s really a shame we can’t have that on the field anymore,’ so why don’t we try to come up with a new jersey that is designed to be on the field, constructed to where you can tailor it and guys will feel comfortable in it?” It took two years to find an answer. The result was the new 2016 Batting Practice/Alternate, introduced in the game jersey section earlier in this team chapter.

Reader Note: This page is duplicated in the Home, Road, and Alternate Jerseys section as well.

© GameWornGuides.com

2014-2015* Batting Practice/Alternate Home Rainbow

Majestic's redesign of MLB batting practice jerseys for 2014 introduced only minor changes for the Astros. This version features multi-colored side panels that extend all the way to the bottom of the garment, unlike the construction of other teams' jerseys which have a smaller side panel insert. Knit navy sleeve ends and collar trim feature a center orange stripe. The Majestic logo on the sleeve changes to the new style; the jock tag on the lower left front also reflects the updated 2014 design. These jerseys were used in Spring Training games and for regular season pregame warm-ups. While originally planned for Sunday home game use—as alternate game jerseys, like in 2013—they were only worn in 2014 during the first half of the season. Usage ended prematurely after July 17, when players voiced complaints that the tailoring was unsuitable for game wear (see prior page). Although they remained in the MLB Style Guide as an alternate through 2015, they were not used on the field again.

Reader Notes: *This page is duplicated in the Home, Road, and Alternate Jerseys section as well.*

Find the **2016 Batting Practice jersey** *listed in the "Game Jersey" section, as it is also classified by the team as an alternate game jersey.*

© GameWornGuides.com

Read the full story on MLB's new for 2016 Spring Training Jerseys in Chapter 8.

2016 Spring Training

For the first time in 2016, MLB introduces a Spring Training-specific jersey intended to be worn for workouts and games in the preseason. The jersey is based on the Flex Base game jersey template and features a special printed twill, decorated with "2016" and Spring Training symbols, as the main twill layer for every team. The Astros use their regular season blue alternate as a basis for their Spring Training jersey. The name and back numbers are orange patterned twill/white. The jersey also features a rubberized, CFX patch on the right sleeve in the style of an Interstate highway sign, reading "2016" and "FL" representing where the Astros spend Spring Training.

This same jersey body, but using non-patterned solid-color lightweight twill lettering, was used as both a regular season batting practice jersey and a Sunday alternate home jersey starting in 2016. See the game jersey section, prior, for its detail.

© GameWornGuides.com

2017 Spring Training

Spring Training-only jerseys return for all teams in 2017 with some minor design modifications. Just as in 2016, the jersey is based on the Flex Base game jersey template and features special printed twill, this year decorated with “2017” and Spring Training symbols. However, all teams now use the same twill, in single-color white with gray printing, replacing the many team-specific combinations from the year before. The Astros again use their regular season blue alternate as a basis for their Spring Training jersey. The name and back numbers are white patterned twill. The jersey features a recolored version of the rubberized CFX patch on the right sleeve in the style of an Interstate highway sign, reading “2017” and “FL” representing where the Astros spend Spring Training.

© GameWornGuides.com

2017-2019 Batting Practice

With many players opting for lightweight cage jackets, which are devoid of player identification, instead of traditional BP jerseys with player names and numbers, Majestic introduces a replacement product that may be an attempt to gain acceptance by the pros on field while being more attractive to fans at retail. New for 2017, official team batting practice jerseys are replaced with what Majestic calls a 3/4 Sleeve BP Trainer. The new hybrid is cut in a pullover jacket silhouette, including a short zipper at the neck, but made of Cool Base jersey material. The underarm and back panels are of Cool Base mesh, like the sides and tail of Flex Base jerseys. Team logos and other lettering is in what Majestic calls “lightweight twill” (as described in Chapter 8). The Majestic logo is applied to the middle of the left sleeve, and a new, heat-pressed Cool Base tag adorns the left front tail. The Astros jersey is blue with orange back with rainbow underarm gussets. The "H-Star" logo, from their caps and alternate jersey, appears on the left front chest. The back of the jersey is blank. Player number in orange/white in the Astros special font on the left sleeve.

© GameWornGuides.com

2018 Spring Training

The 2018 Spring Training jerseys continue the general design of the previous year, again featuring all player name and number lettering using each team's regular fonts in one layer of twill printed with special Spring Training and 2018 year-specific patterns on back. The Astros use their regular-season blue alternate as their base. The name and back numbers are sewn on in white patterned twill. A new CFX patch, shaped like home plate, is stitched to the right sleeve, featuring "2018" and "FL" representing their Spring Training home.

© GameWornGuides.com

2019 Spring Training

The 2019 Spring Training jersey evolves to yet another iteration of the theme of the last three years. This time, jersey backs abandon the single-color pattern-printed twill treatment of the past and return to regular season-style multi-layered team-color twill like 2016, yet now without 2016's printed patterns. The Astros use their regular season alternate jersey as the base for this design, applying a new CFX patch on the right sleeve, featuring "2019" and "FLA," referencing their Spring Training home. The name and back numbers are orange/white.

© GameWornGuides.com

2020-2024 Spring Training

Spring training is simplified for 2020, league-wide. For the first time since 2016, Spring Training jerseys eliminate the special sleeve patch indicating the year and location of a team's Spring Training home, and now the player lettering is the same non-patterned, multi-layered twill as the teams would wear in the regular season, making many teams' spring jerseys identical to their regular-season alternates. For 2020, the Astros use their regular-season navy alternate with the red/orange/yellow rainbow pattern on each side, with orange/white name and back numbers.

Special Events Jerseys

1995 Turn Back the Clock to 1965

Brandon Bartholomew Collection

Above: *Thanks to collector John Oates, who snapped this shot at the game and shared it with us.*

Astros host "Turn Back the Clock" night, Phils take free-for-all/Schilling chills Astros

ALAN TRUEX Staff:SAT 05/13/1995 HOUSTON CHRONICLE, Section Sports, Page 1, 3 STAR Edition Astros owner Drayton McLane Jr. gave away every seat in the house Friday night, but he still couldn't sell Houston on baseball. There were huge gaps of empty seating in the Astrodome, even with two first-place teams competing and their No. 1 pitchers on the mound.

The Astros wore their turn-back-the-clock Shooting Star uniforms, but they could not turn back the Philadelphia Phillies. The unlikely leaders of the National League East won 5-2 to stretch their season record to 11-4.

The idea of giving away 54,350 tickets was to thank the fans for their support at a time when many are embittered by the labor dispute that wiped out one-fourth of last season, including the World Series, and chopped 18 games per team off of this season.

But fan support was not much in evidence Friday night, even though the Astros were starting a nine-game homestand after a productive 7-2 road trip. Only 30,828 made it through the turnstiles and most of those people were heading out before the eighth inning.

You could find more electricity in a triple-A battery. You could say the fans got what they paid for-a listless performance from the home team.

This was the Astros' first-ever Turn Back the Clock game, held on May 12, 1995, at the Astrodome against the Phillies (who wore their standard uniforms). The front wordmark is fully rendered in twill rather than the chain stitch style used in 1965. The back numbers do not match any font the Astros have historically used.

The jerseys were produced by Victory Athletic. Notably, the Victory logo appears on the sleeve—something likely not approved by MLB. By 1995, strict guidelines were in place regarding which manufacturer logos were allowed and where. Collectors report that players including Biggio, Bagwell, and Donnels liked the feel and fit of the jerseys so much that they ordered additional custom jerseys from Victory afterward (see "Oddballs" section for more).

The embroidered sleeve logo was almost certainly a violation of MLB's licensing rules. It's likely that no one from Victory (conveniently) sought prior approval—intentionally or not. At the time, only Russell Athletic was permitted to display a sleeve logo on-field.

© GameWornGuides.com

1999 Turn Back the Clock to “Shooting Star” Astros

The Astros played the Giants on May 16, 1999 and wore Turn Back the Clock uniforms made by Rawlings. The Giants dressed in their regular road uniforms. This game is a new discovery for us and was added in the 10th edition. At first we had only grainy video stills of this game. Our friends at Kruk Jerseys came across this item in a purchase of team issued uniforms and shared photos of the Bagwell ***(top left)*** with us. One caveat—we have not been able to positively authenticate any actual game worn jerseys from this event. Examining in-hand the Bagwell above which is shown tagged as a size 48 is actually closer to a size 54, which seems very large for him to have worn. There is no team tagging of any kind on this jersey. Notice the incredibly long sleeves on these, including as seen in the game photo at right; very odd and not true to the period. The wordmark is amazingly accurately fully chain-stitched onto white knit patches and sewn to the jersey, just like the pre-1975 originals. Beautiful embroidered team sleeve patch. The names are on nameplates. However, the name and number fonts are not exactly true to the originals.

© GameWornGuides.com

1999 Turn Back the Clock to 1980-1981

Chris Boyd Collection

This game was played on June 26, 1999, against the visiting Cincinnati Reds (who wore their regular road uniforms).

Mitchell & Ness's label is on these nearly perfect replicas of the 1980–1981 Rainbow uniforms. Note the screened-on lettering and star within the orange border, plus the correct Sand-Knit varsity numbers on the back and a stripe pattern that runs fully through the mid-chest—unlike later Majestic replicas. The only detraction is that names on back should be arched, not sewn in a straight line as these are.

A clue emerges as to why these are so spot-on perfect: Close examination of the inside tags on these indicates they were made in Berlin, Wisconsin, home of Ripon sportswear, acquirer of Sand-Knit in 1992. When the original rainbows were made, the two companies were separate (but neighbors). So, not exactly the same company making the originals and the throwbacks, but pretty close. This also explains the non-standard M&N set tagging.

Astros collector Chris Boyd recalls: "These were given away to random fans and season ticket holders after the game, on the field. Each player signed the jersey, stuffed it in a bag, and then fans got to pick bags to see if they were lucky. I purchased this a few years later from a lucky fan. Pants were not specific, and I later obtained a pair from the team. Those, too, were made by M&N."

1999 Turn Back the Clock to 1989-1993

Game played August 29, 1999 at home vs. the Marlins, who wore their regular road uniforms.

These Rawlings recreations from 1999 faithfully replicate the white home jerseys worn from 1989 to 1993. They are high-quality reproductions, nearly indistinguishable from the originals.

SPORTS

Monday, August 30, 1999 The Orange Leader

Astros club Marlins

Ward, Berkman hit HRs to pace Houston's 10-4 win

HOUSTON (AP) — Even at less than his best, Mike Hampton is tough to beat.

The Houston left-hander tied a career-high with seven walks, but managed to pick up his 17th victory — tying teammate Jose Lima for the league lead — in Houston's 10-4 victory over Florida on Sunday. Hampton (17-3) set a career-high for victories and tied the single-season franchise record for most victories by a left-hander. Dave Roberts was 17-11 for Houston in 1973, and Bob Knepper was 17-12 for the Astros in 1986.

"I didn't have my best stuff," Hampton said. "Fortunately I was able to hang in there against a very good pitcher, and the guys came through with some big hits."

Hampton has pitched seven or more innings in 14 consecutive starts. During that time, he is 10-1 with three no-decisions.

He has won eight consecutive decisions to tie Lima and Cincinnati's Pete Harnisch for the longest winning streaks in the league this season.

"Mike battled, but he got the job done," Houston manager Larry Dierker said. "He didn't have his best velocity until the third inning and struggled a little bit during the early going, but after that he was OK."

Hampton allowed three earned runs in 7 1-3 innings.

"It took me a while to figure out their game plan," Hampton said. "The were sitting on the sinker and taking the outside pitch the other way. Once (catcher Tony Eusebio) realized what they were doing, we starting going inside on them more."

Florida loaded the bases in the third against Hampton and failed to score.

"We had chances," Marlins manager John Boles said. "But we couldn't come up with the big hit against them and they starting hitting the long ball."

The Astros hit four homers, including three-run homers by rookie Daryle Ward and Ken Caminiti and solo shots by Craig Biggio, who finished with four hits, and rookie Lance Berkman. Ward's three-run homer and Berkman's solo shot erased the Marlins' 2-1 lead in the sixth inning. "Over the next 10 days to two weeks, Ward and Berkman are going to get their at-bats. It's a lot to ask them to step in and play in a pennant race every day, but right now we don't have any choice."

With five outfielders on the disabled list and center fielder Carl Everett day-to-day because of a groin injury,

Dierker relied on the two rookies and Bill Spiers in the starting outfield. All three are infielders.

"The Astrodome is not the easiest place for an outfielder to get comfortable, but I feel like I can handle either of the corner positions," Berkman said. "It's a tough situation and we try not to put pressure on ourselves. I'm just glad we were able to contribute today."

Biggio hit a leadoff homer in the first for the Astros and broke his own team record with his 52nd double. Ken Caminiti added a three-run homer in the seventh.

"Biggio led off the sixth with a single, and Jeff Bagwell walked. With two outs, Alex Fernandez (6-8) gave up the consecutive homers by Ward and Berkman into the right-field seats.

Biggio doubled in the seventh and Bagwell was intentionally walked before Caminiti homered off Rafael Medina for an 8-3 lead. Eusebio hit an RBI double later in the inning off Vic Darensbourg.

"The first year in this league is tough enough and it's even harder when you're asked to step in in a pennant race," Biggio said. "Even so, (Ward and Berkman) are handling it well."

Luis Castillo extended his hitting streak to 18 games for the Marlins. He singled in the first and scored on Orange native Bruce Aven's groundout. Castillo doubled home a run in the sixth and drew a bases-loaded walk in the eighth from Jay Powell. Biggio hit his 12th home run on Fernandez's first pitch of the game. An error by Berkman in right field gave the Marlins an unearned run in the fourth for a 2-1 lead.

2002 Turn Back the Clock to 1970

Chris Boyd Collection

July 1, 2002, the Astros appeared against the Reds as the 1970 (wool flannel era) Astros, in road uniforms made of modern double-knit. Compared to an actual 1970 road jersey ***(above right),*** the front letters are sewn in a different arc, names on the back (on nameplates) are added to the 2002 edition, and the number font actually used by the Astros in 1970 was McAuliffe—also known as the Red Sox number font. These replicas use a non-standard version of Varsity.

© GameWornGuides.com

2004 Turn Back the Clock to 1982-1983

Chris Boyd Collection

- Game played July 4, 2004 vs. the Texas Rangers who dressed in normal 2004 uniforms. The Astros jersey has the large, white bordered star on front as was used in 1982–1983.
- Uniforms made by Majestic, positively notable because the team wore correct pants, with elastic banded snap waists and wide side stripes. Majestic logo embroidered on the left sleeve end.
- The design of the Majestic Rainbow jerseys is not authentic in that the rainbow stripes start too low on the garment. Therefore, most noticeably the numbers on back are half in the white and half in the rainbow. The originals had the numbers completely on top of the rainbow stripes.
- Numbers in 1982–1983 were Sand-Knit Varsity, not Block as is used here. The style numbers on these replicas were used in 1984–1986.
- Names on back are sewn on nameplates and are straight across, while the originals were arched.
- These jerseys were significantly oversized compared to the originals.

2006 Turn Back the Clock to 1976

August 3, 2006 vs. 1976 Padres in San Diego. Red-bordered star was used 1975–1981.

I will admit special pride in these 2006 TBTC Rainbow uniforms, as Majestic used my number font recreations to letter these team jerseys and pants in their unusual "Circus" number font used only in 1975–1976. However, the rainbow stripes on the back do not come high enough on the body, ending right in the middle of the numbers. The originals had the numbers fully within the higher-riding stripes ***(inset, right)***.

© GameWornGuides.com

2007 Turn Back the Clock to the Early 1990s

- The September 28–30, 2007 homestand against the Braves marked Craig Biggio's final games as a pro. Having spent his entire 20-year career with the Astros, the team retired his number 7 in a ceremony during August.
- For the last three games of the season, the team wore the three different home uniform styles that Biggio appeared in during that long career (the first two styles worn were throwbacks, the third and final was the current brick alternate).
- Made by Majestic, the September 28 uniform was a replica of the 1992–1993 home uniform. The reproduction is perfect; indistinguishable from the original except for the 2007-era Majestic jock tag and "triple peaks" sleeve logo.

© GameWornGuides.com

2007 Turn Back the Clock to 1997

Chris Boyd Collection

- **September 29, 2007**: The Astros dressed in uniforms from 1997 as part of a three day celebration of Craig Biggio's final games, after a 20-year career played entirely with the Astros
- These Majestic reproductions of the 1997 uniform make me cry—the fronts are perfect, the Jackie Robinson patch is in place, the player names are right—but the player-number font is completely wrong. It's baffling how this happens.

© GameWornGuides.com

2008 Turn Back the Clock to 1982-1983

- I am not sure exactly what year the Astros were trying to recreate on June 21, 2008 when they visited Tampa Bay to play the Rays, who dressed as the independent Senior League St. Petersburg Pelicans of 1989–1990, a team that lasted all of a season and a half.
- The Rays' press release simply says that the Astros "will be wearing a retro uniform from the 1980s"
- The fact that the star is outlined in white with the bottom of the star touching the top of the last gold stripe, this would date the jersey as a recreation of the 1982–1983 version originally made by Sand-Knit.
- These Majestic jerseys are identical to the ones worn in the Astros' home 2004 TBTC contest.
- But in keeping with our tradition of obsessive attention to detail, the back lettering is rendered in the 1984–1986 Block font, albeit not bold enough to match the Goodman originals. Player names are sewn flat (should be arched).
- But just like the 2004 and 2006 Majestic throwbacks, the rainbow stripes on this TBTC jersey back do not come far enough up compared to originals which began about two inches below the player name ***(inset, right)***. These reproduction uniform stripes begin halfway down the players' backs right in the middle of the numbers.

Right: *Mid-1980s original Goodman jersey; compare the back stripes to the 2008 TBTC version.*

2010 Turn Back the Clock to 1965

Members of the ground crew donned replicas of the "space-suits" worn by groundskeep-ers at the Astrodome.

Celebrating the Astros 45th Anniversary, the Astros and the Phillies dressed in Majestic knit recreations of their 1965 uniforms **April 10, 2010.** The Astros' uniforms are well executed. They are made of cream colored, full-weight knit, their front wordmark is fully chain stitched, the player numbers on back look relatively close to the original font.

© GameWornGuides.com

2010 Turn Back the Clock to 1989-1993

Chris Boyd Collection

July 24, 2010, Reds vs. Astros, Astros wear near-perfect copies of the 1989–1993 button-front home white uniforms, made by Majestic. All two-color sewn-on graphics and numbers on back, blue/white, one-color name on back on a nameplate. If you took away the Majestic "triple peaks" logo from the sleeve, indistinguishable the jersey is otherwise indistinguishable from the Goodman/Rawlings/Russell originals from those years.

Now, it would be tempting to say that they are identical to the 2007 uniforms also made by Majestic… but they are not! Notice that on these the wordmark splits as **As–tros**, whereas it splits **Ast–ros** on the 2007 version. Unexplainable to your author.

2011-2012 Hispanic Heritage

Chris Boyd Collection

2011

2012

- On August 20, 2011 the Houston Astros wore Latin-inspired jerseys at Minute Maid Park. The jerseys were the white alternates, with the simple addition of the word “Los” on the right chest above the existing Astros crest. The added word was styled to match the Astros wordmark, in brick/sand/black. However, it is sewn in layered twill like the player numbers and not chain stitched like the rest of the front wordmark.
- May 5, 2012 version had 50th Anniversary patch on the right sleeve.
- The backs are identical to normal jerseys. It is even possible the team sewed the word onto the current set of jerseys that were already in use, especially since it was late in the season. In the “old days” prior to 1990 they would have all been gathered up and stripped of the sewn-on adornments the next day. I doubt that happened in 2011.

© GameWornGuides.com

2012: Astros 50th Anniversary Celebration

The Astros commemorated 2012 as the 50th year of Major League Baseball in Houston in a season-long celebration. During the 2012 season, the Astros hosted "Flashback Fridays," wearing replica team jerseys of a different eras for every Friday home game during the season.

Uniforms from 1962, 1965, 1978, 1982, 1986 and 1997—five different eras and six different designs—were represented and worn for a total of 15 home games during the 2012 season. All uniforms reasonably faithfully recreated by Majestic, with details highlighted on the following pages.

Photo: Houston Astros

© GameWornGuides.com

2012 Turn Back the Clock to 1962

Chris Boyd Collection

As part of their 50th Anniversary year, the Astros dressed in 1962 Colt .45 uniforms on **April 10 and 20, and September 21, 2012**. Knit uniforms made by Majestic.

The Colt .45 logo wordmark, with its (incredibly politically incorrect—for 2012) smoking gun is nicely chain stitched just like the originals.

Back numbers are an accurate reproduction of the original team font, a very nice detail that adds authenticity.

© GameWornGuides.com

2012 Turn Back the Clock to 1965

As part of their year-long 50th Anniversary celebration, these jerseys were worn on **May 4, 18, 22, 2012.** Beautifully chain stitched wordmark is sewn onto individual patches, which are then sewn to the jersey. Back numbers are rendered in the correct version of the Varsity font used by the Astros in the 1960s. On the originals, however, the centers of the letters were cut out to reveal the jersey fabric underneath, while these 2012 versions feature solid centers in the A, R, and O, along with a noticeably wider twill border. Twill sleeve patch very closely resembles embroidered original, but is not identical. The only deviation from authenticity is that this jersey is pure white, instead of the 2010 Turn Back the Clock version that was crafted in cream-colored knit to make it more closely resemble flannel.

© GameWornGuides.com

2012 Turn Back the Clock to 1978

As part of their year-long 50th Anniversary celebration, these jerseys were worn on **June 1, 22, and September 23, 2012.** Majestic finally corrects the biggest complaint we had about their past recreations of the Rainbow jersey, because on this version the rainbow stripes rise several inches higher on the chest and back, allowing the player number to rest fully on the rainbow stripes instead of being clumsily placed half on and half off.

Though to be critical, the tailoring is still not quite right, and the numbers are still too low. The front star features the correct orange border for 1978, but it is not properly positioned beneath the word 'Astros' (***right***: see comparison to a 1978 original). Names are on nameplates as they should be for authenticity. The 1999 Mitchell & Ness TBTC replicas remain the "ones to beat."

1978 original shows differences in tailoring and placement of lettering and star.

© GameWornGuides.com

2012 Turn Back the Clock to 1982 (Home White)

As part of their year-long 50th Anniversary celebration, these white pullover jerseys were worn on **June 1, June 22, July 6, and July 27, 2012.** They are as perfect as replicas can be, differing from the originals of 30 years prior only in their Majestic sleeve and tail tagging and the fact that 2012 players wear their uniforms several sizes larger than players in 1982 did. Names are on nameplates as would be authentic for 1982. Note that these same uniforms were not worn during the June 16 game in Texas; see the next page for more.

© GameWornGuides.com

2012 Turn Back the Clock to 1986 (Road Cream)

June 16, 2012 The Astros were invited by the Texas Rangers to participate in their Turn Back the Clock to 1986 game. While the Astros could have gotten away with wearing their already-made 1982 white uniforms to the away game (after all, they were the same style in both years), the Rangers instead paid for a whole new set of Astros uniforms, those which included the correct-for-1986 Astros Silver Anniversary sleeve patch. This way, the Rangers were able to auction the Astros uniforms off after the game. In keeping with a familiar theme in this chapter, the color of these jerseys is difficult to categorize: call them "off-white"—not as dark as the cream-colored ones were, but not bright white either.

© GameWornGuides.com

2012 Turn Back the Clock to the 1990s

As part of their year-long 50th Anniversary celebration, these jerseys were worn on **August 10, 11,12,18 and 31**. The copies are really quite good, but being picky, the front wordmark is the 1995–1999 version; while the left sleeve patch was used only in 1994. And if they were recreating 1994, the MLB 125th Anniversary patch is missing from the right sleeve as well. The only team tagging consissts of a year tab and tailoring instructions (if needed) sewn inside the side seam.

© GameWornGuides.com

2013 Memorial Day

MLB asked all teams to wear camouflage lettered uniforms for Memorial Day, **May 27, 2013**. The Astros jerseys feature hard-to-see USMC Desert Camouflage twill in place of the normal navy blue twill lettering on their jerseys, both front and back. The lettering, outlined in orange, is difficult—but not impossible—to see from the stands. Their opponents that day were the Colorado Rockies.

Read the full story on MLB's Memorial Day Jerseys in Chapter 5.

© GameWornGuides.com

2013-2014 Hispanic Heritage

The Astros created a modified version of their new-style home uniforms for use twice in each of 2013 and 2014, by simply adding a the word “LOS” in twill above the standard wordmark, Dates of use are **May 5 and September 28, 2013** and **May 3 and September 20, 2014**. Each set of uniforms (one for 2013 and one for 2014) is bar code tagged on the tail by Majestic.

© GameWornGuides.com

Read the full story on MLB's Memorial Day Jerseys in Chapter 5.

2014 Memorial Day

In a repeat of the MLB request to have all teams wear camouflage-trimmed uniforms for Memorial Day, May 26, 2014, the Astros complied by replacing the navy blue lettering on their road uniforms with desert camouflage twill.

The combination of desert camouflage outlined in orange against a gray background is nearly invisible—and certainly illegible—even from just a few feet away, rivaling the Pittsburgh Pirates' road uniforms (camo/yellow/gray) as one of the least effective executions of the concept.. The Astros opponents that day were the home Kansas City Royals.

© GameWornGuides.com

2014 Civil Rights Game

May 30, 2014: Houston hosted the annual Civil Rights Game, playing the visiting Baltimore Orioles who dressed as the Baltimore Elite Giants. The Astros' uniforms—completely white and devoid of trim, with navy blue lettering—appear to be an exact copy of those worn by the 1949–1950 Houston Eagles, seen in surviving photographs. After the game, the uniforms were auctioned on MLB.com.

© GameWornGuides.com

2014 Turn Back the Clock to 1977

May 24 in Seattle, July 21 in Tampa Bay, 2014—Majestic had it down to a science at this point, as these uniforms appear identical to those used in the Astros' 2012 50th anniversary celebration season. The same comments and criticisms apply to these, therefore. This set features Majestic's then-new bar code tagging on the front tail. Note the 1977–appropriate orange and blue V-neck.

Chris McShan collection

2015 Turn Back the Clock to 1965

Chris McShan Collection

Left: *Compare the 2015 Astros wordmark and shooting star (top) with that of the 2010 version (bottom). Note the differences in the wordmark outlines. The 2015 star has rounded points compared to the 2010 jersey, which has sharp star points.*

To celebrate their 50th anniversary, the Astros throw back to their first Astros home jersey (and their first TBTC jersey) against the Angels on April 18, who also wear 1965 uniforms for the occasion. The "Shooting Star" jersey returns for the fourth time as a throwback, this time very faithfully rendered in full knit by Majestic. The front lettering and graphics are once again presented in beautiful chain-stitch embroidery on patches that are then sewn on to the jersey (like the originals). This time, Majestic even cut out the material inside the front 'O'—a detail they had neglected when the Astros last wore this jersey in 2012. Back numbers are in the correct version of Varsity font used by the Astros in the 1960s, in blue/orange, and the Astrodome disc sleeve patch correctly adorns the left sleeve.

© GameWornGuides.com

2015 Hispanic Heritage

Chris McShan collection

As they did in 2013 and 2014, the Astros repurpose a jersey in their rotation and add a small "LOS" above the front wordmark to create their Hispanic Heritage jersey. In 2015, they use the orange alternate, which remains otherwise unchanged from the original. The jersey is worn three times: July 25 at KC (who wear Los Reales jerseys), September 26 vs. TEX, and October 3 at AZ (who wear Los D-Backs jerseys). The "MH" memorial patch is added to jerseys starting on September 18, so it is apparent on this jersey only in the second and third games. MLB authenticates the game-worn versions as being used for all three games, so all such examples in circulation likely have the "MH" patch.

Once again, the combination of desert camo outlined by orange on a gray background is nearly invisible and certainly illegible from even a few feet away. The 2015 version differs in that MLB Silhouetted Batter neck tag is changed to dark green/khaki/white and the Astros' 50th anniversary patch appears on the right sleeve.

© GameWornGuides.com

2015 Independence Day

Read the full story on MLB's Independence Day Jerseys in Chapter 5.

For Independence Day 2015, all 29 U.S.-based teams adopt patriotic "Stars and Stripes" uniforms for the first time. For this day, all uniforms are re-lettered in a combination of red, white, and blue, regardless of what the team's normal color palette might be. Jersey trim and patches remain the same as the team's regular jerseys. All teams sport a stars and stripes version of the MLB Silhouetted Batter logo on the back collar. The Astros wear their road gray jerseys with the blue-background version of the starred twill, which features large white stars, with all lettering outlined in red, including their front logo and both front and back numbers. Player names on back are in red. An American flag patch is sewn on the right sleeve.

© GameWornGuides.com

2015 Turn Back the Clock to the 1980s

Stephen Kraljic Collection

The Astros resurrect the Rainbow jersey for a seventh time in 2015, this time for an interleague match-up against the cross-state Rangers on July 18, who also wear 80s throwbacks. Once again, Majestic uses its flawed template for this throwback, with several small inconsistencies from the originals, detailed in earlier entries. This jersey, as with many throwbacks, is rendered in full knit fabric rather than Cool Base material, and the 2015 edition sports the same Majestic bar code tagging that debuted in 2014.

***Right**: Note that players did not wear pant-leg numbers in this game, as the Astros had dropped them in 1980.*

© GameWornGuides.com

2016, 2018 St. Patrick's Day

The Astros go green for St. Patrick's Day 2016 and 2018 in Spring Training games held March 17. Based on the Astros' home jersey, this Flex Base model is in solid green with front logo and back numbers in white/gray and player name in white, all in the Astros' special font. The layer of gray is thin and light enough that it disappears from a distance. The Astros' left sleeve patch is reduced to shades of gray and white, while the right sleeve sports a white shamrock, a feature shared by many teams for the St. Patrick's Day promotion. Narrow white knit trim encircles both sleeves, however, the neck trim of the regular home jerseys is absent here.

© GameWornGuides.com

Read the full story on MLB's Memorial Day Jerseys in Chapter 5.

2016 Memorial Day

Chris McShan Collection

The 2016 Memorial Day jerseys are constructed in the Flex Base style for the first time, and the ChromaFlex MLB logo at back neck becomes black and dark gold for all teams. The new, league-wide template with higher visibility woodland camo lettering and black outlines, makes this set more legible than in prior years. The Astros apply the camouflage trimmings to their road gray jerseys for the game on May 30. The front lettering and back numbers are rendered in woodland camo with a black outline, and player names appear in single-color black. The bolder, serif font the Astros use on the front of the jerseys is slightly hard to read in camo/black over road gray, and did not offer the same contrast as the usual navy and orange of their standard road set. Like other teams, the Astros reduce their sleeve patches to shades of green, gray, and black, and trim elements are simplified to single-color black from the usual blue.

Read the full story on MLB's Mother's Day Jerseys in Chapter 5.

2016 Mother's Day

Chris McShan collection

For the first time in 2016, all teams wear special pink-trimmed uniforms for Mother's Day, Sunday, May 8. All jerseys are of Flex Base construction with the rubberized tag applied to the front left tail. Every team also adds the pink MLB Mother's Day ribbon on left chest (a carry-over from past Mother's Days), while the Majestic sleeve logo is rendered in pink and the back of the collar MLB Silhouetted Batter patch appears in dark pink/light pink/white. The Astros wear their home white jerseys with the front logo lettering in pink with dark gray outlines. The player names on back are rendered in single-color dark gray, with front and back numbers are pink/dark gray. The team's sleeve patches are also simplified to shades of pink, gray, and white. All jersey trim, normally blue, becomes dark gray.

© GameWornGuides.com

Read the full story on MLB's Father's Day Jerseys in Chapter 5.

2016-2017 Father's Day

Chris McShan collection

For the first time in 2016, all teams wear special light blue-trimmed uniforms for Father's Day, Sunday, June 19. All jerseys are of Flex Base construction with the rubberized front tag applied to the front left tail. Every team also features the light blue MLB Father's Day ribbon on the left chest (a carryover from past Father's Days), while the back of the collar MLB Silhouetted Batter patch appears in dark royal blue/light blue/white. The Astros wear their home white jerseys with the front logo lettering in light blue with dark gray outlines. The player names on back are rendered in single-color dark gray, while front and back numbers are light blue/dark gray. The team's sleeve patches are also simplified to shades of light blue, gray, and white. All jersey trim, normally blue, becomes dark gray. The look returns unchanged for 2017, worn on June 17–18.

© GameWornGuides.com

Read the full story on MLB's Independence Day Jerseys in Chapter 5.

2016 Independence Day

MLB creates yet another new Independence Day jersey template for the 2016 iteration, now built on Majestic's new Flex Base jersey construction. Each Independence Day jersey has a ChromaFlex rubberized "stars and stripes" pattern MLB appliqué sewn on the back of the neck. The Astros are at home and wear their home jersey. All clubs have a choice of two styles of star-spangled lettering twill and the Astros select the red twill version with blue outlines for their for their lettering and both front and back numbers, with a blue player name on back. Every jersey has an American flag patch sewn on the right sleeve. New for 2016, team sleeve patches are now embroidered in red, white, and blue, replacing team colors, and all jersey trim, normally blue, becomes single-color red.

© GameWornGuides.com

2016 Turn Back the Clock to 1986

The original jersey patch is shown at left; the 2016 reproduction at right is slightly larger.

August 6, 2016: In celebration of the 30th anniversary of the 1986 NL West Division championship team, the Astros present the eighth incarnation of the Rainbow jerseys as a throwback. They take on the Rangers, who also wear 1986 road jerseys. Once again, Majestic creates full-weight knit jerseys to replicate the 1986 version, originally created by Goodman and Sons. To Majestic's credit, they accurately reproduce the bolder version of the front "Astros" lettering, in blue/white twill, and outline the smaller front star in white. Names on back are in blue block, correctly applied to a nameplate, while numbers are the correct Block style in blue/white. Finally, the 1986 All-Star Game patch appropriately adorns the left sleeve. Overall, the jersey is a fairly close duplication of the original, though it suffers from today's players' penchant for wearing uniforms several sizes too big, which makes the back numbers seem too low.

© GameWornGuides.com

2016, 2018-2019, 2022-2023 Hispanic Heritage (Orange)

Chris McShan collection

At first glance, the 2016 Los Astros jersey appears identical to the 2015 version, but there are subtle differences that distinguish them, including the use of the new-for-2016 Flex Base template and the updated Majestic logo on the sleeve end. In addition, the Silhouetted Batter patch on the back of the neck is the new plastic style vs. the earlier embroidered cloth, and the 2016 edition lacks the sleeve anniversary patch and chest memorial patch. The twill lettering on the 2016 version is the new "lightweight" version, and the tacked-on "LOS" on the chest above the wordmark is sewn closer to the center of the jersey. Worn September 24, 2016. This same jersey takes the field again on September 14, 2018 and September 20 & 22, 2019. It returns again, made by Nike, on September 16, 2022 and September 22, 2023. The 2023 version carries the team's ad patch as well.

© GameWornGuides.com

Read the full story on MLB's Mother's Day Jerseys in Chapter 5.

2017 Mother's Day

Pink-trimmed Mother's Day jerseys return on May 13–14, 2017. Once again, the Flex Base jerseys have the usual front left tail Majestic heat-applied vinyl locker tag and team inventory tag inside the bottom of the placket. Returning as well is the pink MLB Mother's Day ribbon glued on left chest; the pink Majestic sleeve logo; and the dark pink/light pink/white ChromaFlex MLB Silhouetted Batter appliqué stitched on the back of the collar. All multicolored lettering is done in the lightweight-twill style. The Astros wear their road gray jerseys with the front logo lettering in pink/dark gray. The player names on back are rendered in single-color dark gray, while front and back numbers are pink/dark gray. The team's sleeve patches are also simplified to shades of pink, gray, and white. All jersey trim, normally blue, becomes dark gray.

2017-2018 Memorial Day (Road)

The next incarnation of Memorial Day jerseys replaces the previous camo twill pattern with a new style that uses the team fonts in dark olive green with black outlines. The two adjacent dark colors are very difficult to tell apart, especially at a distance. All player names on back are now single-color black, while the back-of-collar MLB logo and team patches switch to an olive green and black treatment. A green bar patch with five black stars, representing the five branches of the U.S. military, appears on the right sleeve, and all trim elements are also simplified to single-color black. The Astros apply this style to their road gray jerseys as worn on May 29, 2017 and again May 26–28, 2018.

© GameWornGuides.com

2017 Turn Back the Clock to 1977

The Astros love reliving the more colorful periods of their uniform history, and once again, they return to the beloved “Tequila Sunrise” uniforms for a Turn Back the Clock night on June 24, 2017. This version replicates the 1977–1979 jersey, originally made by Sand-Knit—so distinctive that it was used for both home and road. Majestic made other throwbacks of this style in 2012 and 2014, and aside from the updated sleeve logo, they are very much the same template, and thus slightly flawed in the same ways. The front star and “Astros” don’t align in the same way as the originals, and the back numbers—though properly placed within the rainbow—sit lower than on the original Sand-Knit versions.

© GameWornGuides.com

Read the full story on MLB's Independence Day Jerseys in Chapter 5.

2017 Independence Day (Home)

The 2017 version of MLB's Independence Day jerseys introduces a new patterned twill, one with a slightly less busy pattern of stars and the addition of stripes suggesting a waving American flag. Teams again have a choice of two different color options for the new twill—appropriately in red/blue or blue/red. The jerseys themselves are again Flex Base with typical manufacturer and set tagging. A Chroma-Flex rubberized "stars and stripes" pattern MLB appliqué patch is sewn on the back of the neck. On July 1–2, 2017, the Astros wear their home white jersey with red patterned twill/blue front logo lettering and front and back numbers. Player names on back are in single-color blue. Every jersey has an American flag patch sewn on the right sleeve. Once again, team sleeve patches are embroidered in red, white, and blue. All jersey trim is single-color blue.

2017 Turn Back the Clock to 1999

Playing their cross-state rival Rangers on August 12, 2017 in Arlington, the Astros break out an 18-year-old "Big Gold Star" road design from 1999, complete with Astrodome commemorative patch on the left sleeve. The backs of these full-knit remakes are impressively spot-on, including the three-color names (correctly on nameplates) and numbers in black/white/Nugget Gold. The fronts, however, are another matter, with the "Houston" lettering squatter and wider than the original, and the placement of the star relative to the text is completely different from how it appeared in 1999.

© GameWornGuides.com

2017 Turn Back the Clock to 1997

Stephen Kraljic Collection

A week after wearing similar-era road jerseys in Arlington, the Astros return home and turn back the clock to 1997 on August 19, 2017, complete with Jackie Robinson anniversary patch on the right sleeve. Like the road versions from a week before, the home version looks quite convincing from the back, with the three-color names (on correct nameplates) and numbers in black/white/Nugget Gold. But the front leaves much to be desired, with a much smaller, squatter wordmark and star. Only five years ago, the team wore much more accurate versions of the identical late 1990s set, also made by Majestic, so the lack of attention to detail here is surprising and disappointing.

Original
1997

2017 Players Weekend

To highlight players' personalities and to appeal to younger fans, MLB introduces the colorful Players Weekend promotion. In addition to relaxed regulations on team-standard colors and equipment designs—such as cleats and bats—MLB encourages players to wear nicknames on the backs of a new set of very colorful jerseys. Meant to evoke the look of youth league designs, the two-toned Cool Base pullovers feature bright and contrasting body and sleeve colors, and include a patch on the right sleeve with space for players to show their appreciation to special people in their lives with handwritten black marker messages. Both the patch, and the back-of-collar logo, feature a variant of the MLB logo showing the growth of a ballplayer from childhood to adulthood. Heat-pressed Majestic manufacturer and set tags are applied on the front left hem, and the Majestic logo is embroidered on the left sleeve. All numbers on back are in single color Varsity, and the player names in 2 ¾" single-color Block Condensed, regardless of the team's usual font. On August 25–27, 2017, the Astros wear jerseys with orange bodies and powder blue sleeves with white nicknames and powder blue numbers on back. Sleeves and V-neck opening are lined with wide powder blue/white/powder blue trim. The front features their home jersey lettering, here rendered in powder blue/white kiss-cut lightweight twill.

2017-2019, 2021-2023 Hispanic Heritage (White)

After a three-year absence, the white “Los Astros” jersey returns, this time on the Flex Base template but otherwise identical in appearance to the 2013–2014 version. Dates of use are September 23, 2017 (with the Houston Strong patch on left chest); September 16, 2018; and September 21, 2019. The jersey returns again, this time made by Nike, on September 18–19, 2021, September 17, 2022, and September 23, 2023. The 2023 version carries the team’s advertising patch as well.

2018 Special Opening Series Gold Trimmed

Anthony Nunez Collection

As with many recent World Series winners, the Astros open the following season by adding flashy gold metallic twill to their jersey lettering on April 1–3, 2018. The team adorns its standard white Flex Base home jersey with metallic gold/blue letters and numbers on front and back, a special World Series Champions patch on the right sleeve, and a gold version of the MLB logo on the back of the collar. The contrast of gold on white, even with blue outlines, makes it more difficult to read from a distance, but in the afterglow of a championship, one would assume that few Houston fans cared.

Read the full story on MLB's Independence Day Jerseys in Chapter 5.

2018 Independence Day (Road)

The 2018 Independence Day jerseys repeat the pattern of 2017 featuring printed twill with a pattern of stars and stripes that evoke a waving American flag. Teams again have a choice of two different color options for the lettering—red/blue or blue/red. The jerseys themselves are Flex Base with typical manufacturer and set tagging, and a ChromaFlex rubberized "stars and stripes" pattern MLB patch is sewn on the back of the neck. On July 2–4, 2018, the Astros wear their road gray jerseys with blue patterned twill/red front logo lettering and front and back numbers. Player names on back are in single-color red. Every jersey has an American flag patch sewn on the right sleeve. Once again, team sleeve patches are embroidered in red, white, and blue. All jersey trim is single-color blue.

© GameWornGuides.com

2018 Turn Back the Clock to 1977-1979

It's another tequila sunrise for the Astros on August 10, 2018 when the late '70s rainbows rise again. They are identical to the full-knit set used just a year before and carry with them the same details as the year prior, including proper nameplate with stripe and number placement slightly too low on back. The two-color collar cements this one as a late '70s model, whereas the early '80s version had a solid blue collar.

© GameWornGuides.com

2018 Players Weekend

Players Weekend returns for a second year—a promotion intended to highlight players' personalities and appeal to younger fans. Brightly-colored jerseys are worn on the field on August 24–26, 2018, and once again, the Cool Base pullover jerseys are based on youth league designs with a patch on the right sleeve with space for players to show their appreciation to special people with handwritten messages. Both the patch, and the back-of-collar logo, feature an adaptation of the MLB logo showing the evolution of a ballplayer from childhood to adulthood. Heat-pressed Majestic and set tags appear on the front left hem, and the Majestic logo is embroidered on the left sleeve. The Astros wear jerseys with orange bodies and black sleeves with white nicknames and black numbers on back. Sleeves and V-neck opening are lined with wide black/white/black trim. The front features lettering based on their home jerseys, here rendered in black/white kiss-cut twill.

© GameWornGuides.com

2019 St. Patrick's Day

While many other teams limit their St. Patrick's Day jerseys to white, green, and, more recently, some gray, the Astros' March 17 Flex Base jersey goes full Irish flag, drawing on the presence of orange in the team's color scheme. Otherwise, it is an identical take on the 2016 and 2018 Astros St. Patrick's Day jerseys, here with orange replacing white as the main color for all lettering, and white replacing gray as the outline color on front wordmark and back numbers. The impact of the orange and green is striking, and somewhat jarring to look at, especially in daylight photos from the game. The gray-hued team patch remains on the left sleeve from the previous version, along with the white shamrock on the right sleeve. A set was made up for 2020 by Nike, but was not worn because of the COVID-19 shutdown of Spring Training.

© GameWornGuides.com

2019 Turn Back the Clock to 1989-1993 (Home White)

The Astros throw back to their 1989–1993 home white "rainbow sleeve" button-up set, made in full knit fabric by Majestic, on June 28. Overall, these are very faithful reproductions of the originals, which were made by Goodman and Sons, Rawlings, and Russell, depending on the year. Two-color front graphics and back numbers in blue/white, one-color blue name on back, on a nameplate, consistent with the originals. Note here that Majestic chose to follow recent throwback precedent in splitting the word "Astros" as **As–tros**—as they did in 2010—but not in 2007, when it was split as **Ast–ros**. The originals did both, likely based on different manufacturers' approaches.

© GameWornGuides.com

2019 Turn Back the Clock to 1989-1993 (Road Cream)

Your eyes do not deceive you—this is, in fact, a different jersey from the one shown on the previous page. For their August 9 throwback on the road, the Astros use the cream version of their 1989–1993 “rainbow shoulders” set. How do we know these are different? The June home version was constructed in full knit by Majestic and bears the code ‘HUS3’ on the set tag, while this cream version uses Majestic’s Cool Base fabric and carries the ‘AS9G’ code. From the stands or on TV, these differences would not be noticeable and one would have to compare the color to the home whites worn by the Orioles that day. Either way, just like the white version of two months before, these are very faithful reproductions of the originals, which were made by Goodman and Sons, Rawlings, and Russell, depending on the year. Two-color front graphics and back numbers in blue/white, one-color blue name on back, on a nameplate. Once again, Majestic chose to follow recent throwback precedent in splitting the word “Astros” as **As–tros**—as they did in 2010—but not in 2007, when it was split as **Ast–ros**. The originals did both, likely based on different manufacturers’ approaches.

2019 Players Weekend

The third incarnation of Players Weekend turns the colorful jersey concept on its ear, reducing all teams to monochromatic designs in either black or white, with all team sleeve patches and trim removed, leaving a clean but stark template. Gone are the contrasting sleeves and special patches with messages of inspiration. MLB says that this new approach is to emphasize the colorful, personalized cleats, bats, and other gear the players choose for the promotion, which spans August 23–25, 2019. Jerseys are now button-front Flex Base, with appropriate Majestic manufacturer and set tagging. Back-of-collar CFX MLB logo is now silver and black. All teams also wear a memorial patch for Angels pitcher Tyler Skaggs, a white “45” in a black circle, on the left sleeve. Most teams removed this patch before auctioning off the jerseys. The Astros wear a white version of their home jersey with the front lettering and back varsity numbers rendered in white/gray with gray nickname on back.

© GameWornGuides.com

2023 World Series “Gold Program”

As they did in 2018, the Astros celebrate their second championship at the start of the following year by adding flashy gold metallic twill to their jersey lettering on March 30–31, 2023, though with different stylistic elements than in their 2018 version. The team again adorns its standard white home jersey (now made by Nike, and called “Gold Program” in their terminology) with metallic gold/blue numbers on front and back, and blue/metallic gold letters for the front team name and back player name. They also add a special World Series Champions patch to one sleeve and place a gold version of their sponsor logo on the other.

© GameWornGuides.com

2023 Negro Leagues Tribute (1950 Houston Eagles)

On the road against the Royals on September 16, 2023, the Astros throwback to the short-lived Houston Eagles. The Eagles started in Newark, New Jersey in 1943, but moved to Houston for the 1949–1950 seasons, before leaving for New Orleans for their final year in 1951. The Astros also wore very similar Eagles jerseys for the 2014 Civil Rights Game, though that version included a special sleeve patch for the occasion. In 2023, the Astros' sponsor patch appears instead. Made by Nike, these stark white jerseys have no ornamentation outside of the script team name on front and simple Block player numbers on back, both in single-color navy blue. Photos of the Houston Eagles are scarce, and some show the team wearing pinstriped uniforms, but others show them in uniforms strikingly similar to these, making them a very good representation of what the team wore. Oddly, the Royals, who hosted the event and thus paid for the uniforms, advertised that the Astros would wear Eagles road jerseys rather than these home whites. It is unclear why the Astros ended up in white instead of gray, but the Royals' own Monarchs throwbacks—cream-colored with red details—provided at least some contrast between the two teams on field.

***Above**: Bob Harvey of the Houston Eagles models a similar uniform in a 1950 newspaper clipping.*

What Happened With These Uniforms?

*Prior to the game, the Royals provided graphics of the Astros' uniforms that showed them as gray with player numbers on the pants (**above left,** from sportslogos.net). On-field, the jerseys were white and the pants had no numbers. What's more, the auction listings for the Astros jerseys noted, "Jersey sleeves may have additional wear due to patch removal." On close inspection, many sleeves had the ghost of a removed patch **(above center)** one that looks suspiciously like the Civil Rights Game patch from 2014 **(above right)**, where the Astros also wore similar Eagles uniforms. Perhaps one of those was possibly used as a reference, which Nike may have interpreted too literally, so they simply reproduced the 2014 uniforms rather than the intended gray uniforms? We'd love to hear from any readers with the inside scoop!*

2024 Hispanic Heritage (Orange)

The Astros continue their tradition of wearing "Los Astros" jerseys in September. For 2024, they wore the orange version on September 20. In concept, the jersey remains the same from previous years, now applied to Nike's Vapor Premier Elite (VPE) template. VPE jerseys have a narrower placket. As a result, the knit trim around the collar and down the front appears closer together than in past years. The change slightly impacts the way the "ASTROS" lettering crosses the placket as well. Sleeve-end trim is now sewn-in to the sleeve rather than sewn onto it, and the new approach makes the blue part of the trim wider than it once was. The most glaring change from the previous version is the considerably larger size of the "LOS" lettering, which almost equals the "ASTROS" letters, and may rival the size of the player name on back. This example was issued to a bat boy, so no front number or back lettering was applied, but as in past years, all of the lettering matches exactly to the team's standard orange jersey.

Left: *The 2022 version of this jersey, showing how small the "LOS" lettering was compared to 2024. Perhaps Nike did not want to cut and sew lettering in a custom size for a one-day jersey, and opted for back lettering to do the job instead?*

Prototypes and Oddballs

Early Astros Design Concept ? (Perhaps 1964-1965)

Although this artwork falls outside the official scope of this Guide, it is too “good” not to include.

Possibly from the planning stages of the Colt .45s transition to the Astros for the 1965 season, this hallucination might show a uniform design that is hard to take seriously. Astros collector Andy Greenstone shared this concept in a public forum and we have borrowed it to be included here.

And we thought the 1975 rainbow was cutting edge!

© GameWornGuides.com

Pre-1975 Prototype Rainbow Uniform

Compare the prototype to what was eventually adopted in 1975. Elements that were carried forward include the front numbers on the pants leg, the oversized star on the jersey front, the odd player numbers in the gumball disk, radically arched names. Some features did not make it: White star was changed to navy, "A" in Astros has an additional shooting star inside of it, notice the white area to the big star's right, giving the illusion that the star is shooting across the jersey. Also abandoned was the white cap with a multi-colored 'A' logo, which was abandoned because it too closely resembled another company's trademarked design.

(Excerpted from "From Pistols To Pinstripes, A Look At Astros Uniforms (1962-Present)" by Bob Hulsey)

"…Before the 1975 season, the advertising firm of McCann and Erickson was hired to re-brand the Astros. Their creation combined a futuristic use of eye-catching color and a touch of early-century lettering that was outrageous to baseball traditionalists. The early prototype was modeled below by pitcher Tom Griffin:

The white cap was ultimately rejected for the current orange cap with the blue star and the white 'H'. The jersey star was switched to navy. The uniform number was moved up to the right hip from closer to the knee and other minor modifications were made. The "Rainbow" uniforms made their debut in April 1975 and they took some getting used to, even for those wearing them.

"We had all heard that we were going to get new uniforms for the start of the season," Metzger said, "and the word had gotten around that they were kind of flashy. But the first day we saw them, I think there were three or four of us looked at each other and wondered if they were really serious."

"We thought it was just one of the Judge's promotions, like the cowboy suits he had us wear," said pitching coach Cot Deal, alluding to the 1962 effort to dress all the Colt .45s in cowboy duds for road trips - an idea that was ridiculed by the players and eventually dropped…."

1970s-1980s Rainbow Sweaters

1976

If these were not so cool looking I might have considered them jackets and left them out. The Astros issued these synthetic knit Orlon sweaters for players to wear on the bench. Made by Sand-Knit, these are snap-front sweaters with player names—but no numbers—on the back

Bottom left: Later models are zip-front.

Bottom right: There's something oddly jarring about seeing Yogi Berra in this outfit.

1985–1986

© GameWornGuides.com

Astros collector Chris McShan submits these two Astros dugout sweaters from his collection. The top one is a Sand-Knit ffeaturing a one-year-only 1980 neck tag, which helps date the garment.

Oddly, the wordmark is sewn over the red stripe rather than entirely within the blue section, as seen on other examples. Below is a Goodman-made sweater as well.

Chris McShan collection

© GameWornGuides.com

1982: Umpire Joe West's Rainbow Sweater

Legendary MLB umpire "Cowboy" Joe West also had his own experience with the Astros' Rainbow sweater. For a game in Houston between the visiting Braves and the Astros, West wore Astros gear behind the plate, most notably, the distinctive Rainbow sweater. A newspaper report from the time indicates that the umpires' luggage did not make it to Houston from their previous stop in Chicago. As a result, West was forced into a makeshift outfit that included Astros team-issued pants and shin guards.

Though the same newspaper article said that all of the umpires had to borrow Astros road caps, and video from the game appears to show that John McSherry at second and Dutch Rennert at third may have had their proper umpire jerseys and pants on the field. First base umpire Bill Williams was not so lucky — he is wearing a dark (possibly navy) shirt and white pants, likely either his street clothes or garments borrowed from the Astros. At the very least, they could have outfitted him with a cool matching sweater like West's.

The Braves won the contest 5-3, suggesting the clothes had no influence over the umpires or the outcome of the game.

Top left, top right: *Umpire Joe West with his Astros gear behind the plate.*

Above*: First base umpire Bill Williams signals the final out of the game in a dark shirt and white pants, which may have been borrowed from the Astros as well.*

© GameWornGuides.com

1980, 1982 St. Patrick's Day

Mitchell & Ness has made recreations of another Astros green jersey that features a slightly more refined design. We have no photos of an original jersey in this style.

These Sand-Knit green jerseys with black and white V-neck trim just scream "Sunday Beer League" to us.

While they do include the 'Exclusively for the Houston Astros' Sand-Knit tagging, the iron-on lettering both front and back, and the goofy holiday sentiment in place of the player name, give the jersey an exaggerated, novelty appearance.

© GameWornGuides.com

1980-1983 Goodman Rainbow?

The jersey shown at right appeared in the 2021 baseball uniform exhibit at the Worcester (Mass.) Art Museum on loan from the National Baseball Hall of Fame, and listed as a 1983 Joe Niekro Astros jersey both at the art museum and in the Hall of Fame's database. At a glance, this seems perfectly legitimate. Niekro was on the Astros for 11 years from 1975–1985 and wore the bright "tequila sunrise" style jersey for much of his tenure with the team. Given the Hall of Fame's reputation, the attribution seems credible.

BUT look closely and you will see that this jersey is the large star/orange border/blue V-neck style that was worn by the team in 1980–1981. Further, all of the front lettering is screened on, typical of the earliest iteration of this style. Goodman never (officially) made this style of jersey for the team, and in fact did not appear as an Astros supplier until 1984. However, the rounded hem is a hallmark of Goodman jerseys, and the tagging appears consistent.

However, this is now the second such jersey we've found, along with the #79 jersey at right, which differs from the Niekro in that it has the large star with white border. That one could have been passed off as a Spring Training or minor league issue, but the existence of the Niekro jersey leads to even more questions than answers.

1980–1981 Sand-Knit

1982–1983 Sand-Knit

1984–1985 Goodman

Right: *We won't cover all the details of these three style variants again, but they are shown here for comparison to these mystery Goodman jerseys, which are decorated like earlier Sand-Knit jerseys but on a Goodman jersey base.*

© GameWornGuides.com

1985 Cabell "Captain" Jersey

Veteran Enos Cabell was named team captain early in the 1985 season, a year that apparently featured a great deal of clubhouse contention. In early July, just weeks after being named captain, he was traded to the Dodgers. This is his Goodman jersey with the captain's "C" in a star sewn on the left sleeve, worn on the field in this configuration for less than half a season.

© GameWornGuides.com

Early 1990s Goodman Prototypes

Normally when I see something like this for sale on eBay I would dismiss it as a remnant from the local beer league. But these specimens pique my curiosity. They came from the estate auction of an avid collector who had a large collection of game-worn jerseys and bats in his possession, all sold off after his death.

These were made by Goodman, who was a major supplier to the MLB Astros during the 1970s and early 1980s. Its restrained style and black-and-dark-gold palette closely resemble the jersey design adopted in 1994, following years of rainbow-themed gaudiness.

These were likely prototypes created by Goodman for the Astros in the early 1990s, during a period of uniform reconsideration.

© GameWornGuides.com

1992 Protype Turn Back the Clock to 1971?

This unusual example is mysterious in a few ways. The period-correct Rawlings tagging has a 1992 Set 1 flag tag, something typically seen on team-issue jerseys. It is possible that this was a prototype of some sort. Rawlings stopped making Astros jerseys after 1991, so they may have mocked this up as an example of a possible Turn Back the Clock jersey for the team while they were still making Astros jerseys. It's not a particularly faithful reproduction of the team's one-year-only 1971 jersey—aside from the "Astros" lettering being reasonably close, everything else is just a bit off from the originals. However, the use of twill for the H-star logo on the sleeve (vs. an embroidered throwback patch) may suggest this was a quick mock-up rather than a fully fledged prototype. Ultimately, the Astros did not hold a Turn Back the Clock Game until the 1995 season, where they used a similar 1965-style home throwback.

The Astros switched to Russell for the 1992 season, and changed their uniforms completely in 1994, so this may also have been an example of Rawlings' bid to get the Astros business back by proposing a fauxback home jersey for the rebrand. Regardless, it was not to be, and we are left with this example, and many questions.

Original
1971

© GameWornGuides.com

Prototype 1992-tagged Road Jersey

This is surely a Rawlings prototype submission to the Astros for a new design road jersey, with 1992 tags and featuring the side “racing stripes” that were so popular in the 1980s into the early 1990s. Lettering is navy over orange. A team star patch appears on the right sleeve, featuring a white ‘H’ overlaid.

© GameWornGuides.com

1992-1994 Prototype Batting Practice?

Here is a strange batting practice design we have not come across before. It is a pullover mesh BP jersey with Rawlings tagging that places it approximately in the 1992–1994 range. Rawlings stopped making Astros jerseys after 1991, so they may have mocked this up as an example of a possible BP jersey for the team while they were still the team's supplier. The neck and sleeve trim on this example hearken back to the trim used on the team's early 1970s jerseys, before they introduced the "rainbow" color scheme that carried the team through the mid-1970s and 1980s. The player name, applied on a nameplate, is one-color white, while the player number in orange/white is atypical for this period as the Astros consistently used single-color white twill for BPs during that era.

Note the use of Craig Biggio's name and number for this example. Biggio was one of the team's big stars in the era, and his name was also on the sample seen a page before. Similarly, the front chest mark of this jersey, the simple, two-color H-star, closely resembles the sleeve patch on Rawlings' throwback sample on the preceding page. Perhaps these were created around the same time in an effort to hold on to the Astros' business by showing how Rawlings could look back and forward at that same time. Alas, it was not to be. Soon after the likely creation date of this sample, the Astros embarked on a complete rebrand and never looked back—to this design or to Rawlings.

© GameWornGuides.com

1993-1994 Prototype Batting Practice?

This jersey, discovered by collector Chris McShan on eBay, presents a curious case. The Astros never wore anything like this on the field. The jersey is a pro-quality mesh with a “6000” inside seam tag, which would normally be found on a retail-sale jersey. The wordmark is in pro-quality two-layer twill in orange and white. The style of the wordmark is similar to the 1997 road jersey ***(below, left)***, and 1994–1995 home jersey ***(below, right)***, but notably, the Astros did not use orange with this design theme.

In all our collecting, we have never seen this style jersey offered for retail sale. My estimation is that it is a prototype design for club consideration, sewn on a retail authentic blank pulled from the production line.

© GameWornGuides.com

1994 Bat Boy Oddball

Presented here is what appears to be a 1994 Astros road jersey, made up for a bat boy (hence the “BB” on back). The odd part is that the “BB” lettering on back is the wrong color scheme for the gray road jersey. Rather than black/white/metallic gold, it features white/metallic gold/black, which was the proper style for the dark blue alternate jersey.

This appears to be a team issued jersey, with the “100% Polyester” flag tag under the size tag, and no tagging in the neck. The size 40 is consistent with bat boy sizing.

Bat boys rarely travel on road trips, so teams typically carry multiple sizes of road bat boy jerseys to accommodate the varying sizes of those assigned. It is likely that the wrong-color lettering on back was just a mistake. Perhaps the Astros didn’t have a size 40 jersey on a road trip, and one had to be made up quickly by the host team, which used the wrong lettering. Whether this jersey was actually worn by a bat boy during the Astros’ 1994 road games remains unknown.

© GameWornGuides.com

1994-1995 Prototype Road

Chris McShan Collection

Victory Athletic was a Los Angeles-based uniform manufacturer that clearly coveted the Astros business. You will see them mentioned more than once in this chapter, as a preferred though non-approved maker of uniforms for Jeff Bagwell, Graig Biggio, and others who reportedly preferred them, and the maker of the Astros' 1995 Turn Back the Clock uniforms. These were likely prototypes submitted by Victory for the Astros' pending 1994 uniform redesign. Alternatively, they may represent early versions of the 1995 Turn Back the Clock uniforms. The neck tagging here is the same as the 1995 examples we have shown. These are full-weight pro knits, sized with a numeric designation (48) rather than small/medium/large, using a rather generic font for the number on back. Ultimately the Astros selected Russell, MLB's official provider as their uniform company, but you can't blame Victory for trying.

© GameWornGuides.com

Mid-1990s Victory Athletic Uniforms, Biggio *et al.*

Steve Kraljic Collection

For some years, I had heard rumors that Craig Biggio and Jeff Bagwell wore on-field jerseys made for them by Victory Athletic rather than by Russell, the team's official supplier. I initially dismissed these as idle rumors, common in collecting circles—especially when tied to a sales pitch needing a convincing story to accompany the "evidence." My search of period news photos of these players showed them wearing jerseys with the Russell logo on the sleeve, so I dismissed the chatter and moved on.

Here are some of these I have seen. Search "Astros Victory Athletic" on the web and you'll find a few collecting forum threads with discussion of the high price some brought at auction.

Chris Boyd supplies the following:

"Several theories exist, but the most plausible is this: In 1994, the Astros introduced the new gold/navy/white uniforms. After the 1994 season, the team collected the entire team set and sold to Hartel Sports. Players like Biggio and Bagwell were not thrilled as they typically kept a handful of their items. Biggio, Bagwell, and Donnels placed some custom orders for white and gray ones from Victory. This allowed the players to retain control of the jerseys—meaning the team did not own them. I was told that Victory could not reproduce the exact navy color, so all three did wear the alternate navy Russell jerseys for Sunday's and day games. From 1995–1998, the Astros again sold most of the team jerseys to dealers as a set. Biggio and Bagwell Russell jerseys were included, but all I have seen looked unworn. Biggio and Bagwell appeared to keep all of their Victory jerseys, and very few have surfaced. The few that have surfaced appear to have come from the player through a friend or other team employee that likely traded with the Astros equipment people."

Above: *Victory apparently produced pants for select Astros players as well, in at least two different seasons. Additional examples likely exist in the hobby, based on the variety of players and years represented in known jersey and pants tagging.*

VICTORY CUSTOM ATHLETIC, INC.

Letter of Authenticity

Congratulations on the acquisition of your Houston Astros away jersey

Memorabilia: 1994 Chris Donnels game used Houston Astro Jersey

Victory Athletic supplied this jersey to the player in question. We supplied regular season Home and Away jersey's to Craig Biggio, Jeff Bagwell and Chris Donnels in the 1990's. The authenticity of this jersey is unconditionally guaranteed, and the undersigned certifies it's validity.

On behalf of Victory Athletic we hope you enjoy the addition of this amazing item to your collection.

© GameWornGuides.com

1994 Goodman Home Jersey

This jersey appeared in a large lot of team-issued surplus sold by Kruk Jerseys. Another oddball piece, yet again with Chris Donnels' name on the back, this 1994 Astros home jersey, complete with sleeve patches, is tagged as a Goodman and Sons make. This is a full two years after Goodman stopped making MLB jerseys for any team. It is a size 45—an unusual size—with the designation handwritten on the neck tag in pen. Yet another oddball mystery.

© GameWornGuides.com

1999 Protoype Turn Back the Clock to “Shooting Star”

Steve Kraljic Collection

This Mitchell & Ness jersey appears to be a prototype submitted as a proposal to outfit the Astros for a 1999 Turn Back the Clock game, a contract that was eventually awarded to Rawlings. Notice the chain stitched front wordmark. The unusually generous dimensions were also evident in the Rawlings-issued versions.

© GameWornGuides.com

2000 Prototypes: Alternate Home

These sample jerseys represent a great deal of change all in one place. The Astros rebranded in advance of the 2000 season, including several new uniforms. Pictured here are two prototypes for their alternate home jerseys that very closely represent what made the field that year. They also changed official suppliers that season from Russell to Majestic, which had just broken into the on-field jersey market after many years of producing BP jerseys. As such, these samples were also made during a time that Majestic was establishing its own jersey branding and tagging to reflect its new status as on-field supplier, which also shows in some of the unusual aspects of these jerseys' details.

Photos: Gary Taylor

As for the jerseys themselves, they show typical sample hallmarks like the use of "Player" on back as player name. The jersey number "6" is also occasionally used as a sample number (5 is more typical), though sometimes the year of issue for the jersey is used. However, it is possible that either Majestic or the Astros did not want to use "0" or "00" here, as it is not a common baseball number. The Inaugural Season patch occupies the left sleeve as it did on the final jerseys that year. All lettering and logos front and back appear the same as they did in the final versions as well, with the notable exception of a direct-sewn player names on the samples, where the on-field jerseys used a nameplate. They also lack the back-of-collar MLB logo that all teams added in 2000. Perhaps these were made before that mandate came about, or before those patches were readily available.

Photos: Gary Taylor

Some elements of these prototypes that are unusual are the hand-written prototype tags reading "HouWALT1" for Houston White Alternate 1 and "HouBALT1" for Houston Black Alternate 1. It is unclear if there were other prototypes made, but Majestic usually numbered all samples in this way, though later prototype tags were embroidered. The jock tag on these examples use the "Authentic Collection" branding that replaced "Diamond Collection" for 2000, but does so using a tag that was seen on BP jerseys rather than game jerseys. Again, like the MLB logo on the neck, this tag may have been all that was on hand when the samples were made, and final tags may not have been created yet. Similarly, the Majestic logo embroidered on the sleeves is the full wordmark version more common on BP jerseys, rather than the simple mountain logo that was used on game jerseys. Here, it appears on the right sleeves, again, a hallmark of Majestic BP jerseys, while their on-field jerseys ultimately had the logo on the left sleeve.

© GameWornGuides.com

2002 Prototype Batting Practice

As with many prototypes, it has the name PLAYER sewn on back. Numbers and names are three-color, sand/brick/black. A jersey-fabric nameplate is used.

These prototype jerseys are made by Majestic. Both are likely candidates that did not make the cut for team use in 2002. The number “02” on the back of the one above/left indicates the intended production year, 2002. It features the embroidered Majestic sleeve logo. Its brick/black/sand star logo sewn on the chest is much smaller than the one used on the team’s white alternate and batting practice jerseys. The undated mesh one above at right has a different star and a Majestic retail-style heat-pressed sleeve logo.

2002 Oddball Prototype Black Batting Practice

Above, left: *A closeup of the underarm gusset present on these jerseys that was used in the 2003–2006 BP jerseys.* ***Above, right:*** *A comparison of a 2002 mesh BP jerseys (left) and the early moisture-wicking fabric on these jerseys (right). Below: A gallery of the iterations of this jersey seen thus far, perhaps with many more yet undiscovered. All of the players and coaches represented here shared a single season with the Astros in 2002.*

At first glance nothing about this jersey looks remotely unique. But closer investigation will prove that the team *never wore a black button-front jersey like this one.* Collector Chris McShan says he found the Lamont one at, of all places, the *Astros Authentics* store at Minute Maid Park. Since then, several more have come up for sale online, all of different players and coaches who appeared together for the Astros only in 2002. But they are still a mystery.

It is a solid black jersey but with the wordmark and back numbers/lettering used on the similar black mesh pullover batting practice jersey. Chris comments that fabric and construction are identical to the fabric used on the 2003–2006 brick red BP jerseys, Majestic's first attempt at moisture-wicking fabric—the one that preceded Cool Base. They could be prototypes for a game jersey or BP jersey (note that the very, very early BP jerseys in the 2003–2006 style did indeed have regular Majestic "Authentic" tags instead of the revised, rubberized tag that was used when they were released to full production). And the 0065 code on the wash tag also lines up with some team issued 2003–2006 BP jerseys as well. But why did they make so many in 2002? Perhaps they were a planned alternate in the new fabric and the team rejected them once receiving the first full set? After all these years, it remains a mystery. If any readers have any inside info, we'd love to hear it!

Mid-2000s Prototype Road?

This gray jersey features “Astros” instead of “Houston” on the front. It features chain stitching in the post-2003 style. It could be a Astros prototype, or possibly for one of their minor league affiliates that would not use the MLB city name on its road jerseys. Three of the Astros farm teams are called “Astros” and this might be for one of them, but usually minor league jerseys don’t carry the Majestic Authentic tagging or sleeve logo.

Umm....

The phrase “politically incorrect” may not have been widely used when this program cover was issued—likely in 1965 or 1966. Either hallucinogenic drugs were not viewed as seriously then, or the Astros Marketing Department was having a silly day, but can you imagine an MLB club issuing a game program cover like this today?

2020 Nike Home Sample

Though Nike's 2020 entry into MLB jerseys resulted only in the rebranding and relabeling of Majestic's previous Flex Base jersey template, it appears that Nike still produced sample jerseys for team inspection. Here is one such example, made up for the Astros.

This jersey's pedigree as a sample is apparent in a few details. First, it is size 46, a common sample size, and the name "PLAYER" and number "20" are also typical for samples, where 20 represents the year for which the sample was made. Further, it carries interior tagging with the tell-tale sample coding "AST-HJ-D1-1-2020" indicating it is version 1 (D1-1) of an Astros (AST) home jersey (HJ). Outwardly, this home white jersey appears just as it did on the field in 2020, a testament to the fact the team was not planning any changes for that season. However, there are still some small details in this sample that were updated before the full run of 2020 jerseys went into production. First, a heat-pressed neck tag which was not used in on-field jerseys. Next, an interior heat-pressed tag, almost twice as tall as the ones used by Majestic before and Nike after, appears inside the placket with the sample coding. This location was used by Majestic for team tagging, but Nike versions moved these tags below the jock tags on the lower front of the jerseys.

Finally, the "0730" code on the back of the laundry tag is the same used for Majestic's version of the Flex Base template. By the time these jerseys were released in 2020, the product code had been updated to "0890" to reflect the new Nike jerseys, even though nothing had really changed.

© GameWornGuides.com

2020 Oddball Nike Home Sample

Like every other MLB team, the Astros switched from Majestic to Nike for the 2020 season. We have already seen one 2020 sample home jersey for the Astros, shown elsewhere in this chapter. This unusual example appears to be another one, which lines up to similar (strange) samples we've seen for other teams around the same time.

This jersey's possible pedigree as a sample is apparent in a few details. First, the player number "20" represents the year for which the sample was made. The use of "Nike" as the player name, rather than "Player" is unusual for MLB samples, however, Nike has done this for samples made in other sports in the past, and we have seen other examples in baseball as well, though not frequently.

Since the Astros were not changing their uniform design for 2020, this sample was likely made just so the team could see their jersey with the new Nike branding. Most of those had "0730" coded wash tags and heat-pressed neck tags, indicating that they were likely made before the final decisions on Nike branding were completed. This jersey had the wash tag cut out, so we can't be sure what code was there. However, on the other "Nike" name on back sample we have seen (for the Rangers) the tag code was 0890, Nike's eventual number for their version of this style of jersey. Thus, it is possible that this is a later version of the 2020 sample earlier in this chapter, though it lacks some typical prototype tagging that would support this.

2020 Unused St. Patrick's Day

The Astros made up a set of 2020 St. Patrick's Day green jerseys that were never worn because of the COVID shutdown. Made by Nike, they were identical in style to the 2019 Majestic versions that came before. Even though the jerseys were not used on the field, they were sold by the team online with MLB authentications noting that they were team issued.

2023-2025 Astros Advertising Patches

With the start of the 2023 season, teams were permitted to sell an advertising patch, up to four inches square, to appear on one of their jersey sleeves. The sleeve on which the patch appeared could change from player to player, and each team that sold a patch handled the placement differently.

The Astros struck a sponsor patch deal with Occidental Petroleum, or OXY, an energy company. The patches first appeared in the regular season in 2023.

The patch is a white circle with "OXY" in red letters in between two blue arc shapes. For the team's 2023 World Series celebration jersey, the patch was white with all other elements in gold.

The placement of the patch varies depending on the handedness of each player. The team's disc logo patch remains on each jersey, on the opposite sleeve from the ad patch.

Letter of Professional Opinion/Document of Restoration

Wade Blasingame 1972 Houston Astros Game Worn Road Jersey

Examination Date: November 7, 2023 **Certification Number**: 23-1107J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Spalding-made gray zipper-front 1972 Houston Astros Road jersey, first-year knit, and a one-year style. Tagged as a size 44. Navy/white/orange sewn-on knit sleeve-end trim and similarly colored trim edging the neck opening. Original "HOUSTON" arched on the front in orange over Navy Blue. The front lettering is surprisingly unfaded, showing some burnishing but with very tight stitching and bright unbleached colors. Flat-bottom, side vented tails as was the characteristic of these one-year only Spalding jerseys. 1972-only white background ASTROS team left sleeve patch is original, an shows typical heavy puckering. Original Talon zipper is present and working. Trim is bright and unbleached.

Pitcher Wade Blasingame was nearing the end of his 10 year MLB career spent with the Braves and Astros, entering the 1972 season. He appeared in just ten games for the Astros in April and May, pitching fewer than twelve innings total, all in relief and posting an 8.64 ERA. He was traded to the New York Yankees to start June where he saw similar limited action, and then retired at the end of that season.

Restoration Performed: As received, this jersey had an inaccurate name and number restoration on the back. I removed the replacement lettering from the back. The light table revealed two things: first, the ghost outlines of the original BLASINGAME #36 in its correct original arch, fonts and locations. Photographing it on the light table revealed the exact outlines of the original unique name and number fonts used by Spalding in 1972, for both the player name and numbers. Small holes in spots along the perimeter of the original lettering showed placement, and ample glue marks made the examination easy. But also visible was the ghost image of less-faded fabric showing that a number "6" had been stitched to the center of the back without a player name above it. The nature of the differently-faded area tells me that the jersey was exposed to the sun and laundered repeatedly for some time with that "6" in place.

Unraveling the post-1972 history of this jersey is really only speculation. It is significant that when this jersey was made, MLB jerseys were not considered very collectable, and teams used them like any other piece of equipment, reissuing them and using them over and over until they were worn out. Isolating the year of issue, besides the 1972 Spalding tagging in the tail, this was the only year that the team wore this style and the only year that Spalding was the team uniform supplier. Because this was a one-year style, it would not have been reissued for the 1973 MLB season. And because it retained the major league city name "HOUSTON" on the front, it was not of much use in the minor leagues unless stripped, which it was not. Regarding the ghost of the "6" on back: The Astros had a practice of issuing most of the single digit numbers to their coaching staff during these years, though in an exception, #6

bill@TheDream.Shop

Top: As received, jersey wore an inaccurate restoration on the name and numbers on back, front is judged all original. At left, after being stripped, the light table reveals three sets of numbers: the original (larger) number 36, the poor restoration #36, and a sole "6" in the middle of the back in a font that is not the same. Used by the 1972 Astros. Below, the original player name ghost arch is highlighted in color, the just-removed inaccurate replacement name ghost is seen above in a flatter arch. Original NOB is not perfectly letter-spaced, and is slightly crooked, with the left side of the name decidedly lower than the right.

was worn 1972-75 by infielder Cliff Johnson. As there is no sign of another player name ever having been on back, I do not believe this jersey was ever issued to Johnson; I do not know who wore it with the "6" on back.

Manufacturer and Team Tagging: 1972 Spalding tagging is sewn inside the center of the bottom of the back tail. It consists of a set of three tags: A blue square tag with "72" machine embroidered in silver, the 1 3/4"x 1" rectangular Spalding PROFESSIONAL tag, and a small size tag noting the size as 44. 1972 Astros jerseys were not further tagged with player information. The tagging present matches exemplars, and notably in 1972 Spalding was not licensed to make or sell on-field spec jerseys to the public. So it is reasonable to assume that year tagged examples are team-issue.

Conclusion: The jersey in review is in good to very good original and partly-restored condition: the front is all original, and the back is properly restored with lettering near-identical to original. Given the rarity of any surviving 1972 Astros team jerseys, this example is in the best condition of any I have ever seen. The jersey has no contrivances of any kind. It has a team-issue tagging. It is my considered opinion that this jersey was made to team specifications and worn by pitcher Wade Blasingame of the 1972 Houston Astros.

Letter of Professional Opinion/Document of Restoration

Bob Watson 1972 Houston Astros Game Worn Road Jersey

Examination Date: May 10, 2023 **Certification Number**: 23-0510J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Spalding-made gray zipper-front 1972 Houston Astros Road jersey, first-year knit, and a one-year style. Tagged as a size 42 but currently measures as a 46, even after expected wash shrinkage. Navy/white/orange sewn-on knit sleeve-end trim and similarly colored trim edging the neck opening. Original "HOUSTON" arched on the front in orange over Navy Blue. The front lettering is well worn, with fading and fraying on the edges. Flat-bottom, side vented tails as was the characteristic of these one-year only Spalding jerseys. As received, this jersey had an incorrect font #5 on the back, and a replacement name on back "Watson" that was not exactly the same colors as the 5, nor in the correct font for the Astros. It was missing its disk sleeve patch, and a large unfaded spot showed where the patch had been. The light table revealed that the number 27 had been on back previously. Outfielder Bob Watson wore 27 in 1972. Original Talon zipper is present and working, the pull tab is broken off at the end.

In 1972 Bob Watson appeared in 147 games for the Houston Astros batting .312 with 16 home runs. In a 19 year MLB career spent with the Astros, Red Sox, Yankees and Braves, Watson was twice an All-Star with the Astros. *(Baseball Almanac)* After retiring as a player, Watson was a coach for the Oakland Athletics for four years, before he joined the Astros' front office. In 1993, he became the second African-American general manager in major league baseball history with the Astros. He then served as the Yankees general manager from 1995 through 1998, during which time the team won the 1996 World Series. Watson became the first African-American general manager to operate a team which would win the World Series. He later served as MLB's vice president in charge of discipline and vice president of rules and on-field operations, from 2002 to 2010. In 2020, Watson was inducted into the Houston Astros Hall of Fame. *(Wikipedia)*

Restoration Performed: Unraveling the history of this jersey was a challenge. It is significant that when this jersey was made, MLB jerseys were not considered very collectable, and teams used them like any other piece of equipment, reissuing them and using them over and over until they were worn out. Isolating the year of issue, besides the 1972 Spalding tagging in the tail, this was the only

Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

year that the team wore this style and the only year that Spalding was the team uniform supplier. This jersey was very dirty and stained. Putting this jersey on the light table, it was clear that there had been a the number 27 on it before, and that the name WATSON covered outlines that did not match the current letters. The "5" On the back showed that it had been there for some time, as it was faded and puckered. The name on back was brighter in color, suggesting it was was added at another time.

It is difficult to say exactly what journey this jersey followed…typically, at the end of the season, MLB jersey were stripped of their player names and sometimes their numbers, and were either saved and reissued for the next year's spring training or sent to the minor leagues for a second life. However, team road jerseys with the city name on front were decidedly less useful in the minor leagues, and usually when they were sent to the minors; the front crest was then usually removed and replaced by something more apropos to the minor league club. This one retains its original front crest which shows a great deal of fading and wear, more than a single season of use. Reason would suggest that this jersey should have simply reissued to Watson for 1973 spring training. The Astros were issued new road uniforms for 1973 made by Wilson that were slightly different from the 1972 Spalding issues, so this jersey would not (likely) have carried into the 1973 regular season, unless as an emergency backup. One concern was the size of the jersey: Bob Watson (6' 2" 205 lbs) did not wear size 42; researching his game worn uniforms showed that he wore size 44 or 46 even early in his career. However, measuring this jersey shows that even in its

As received, jersey missing sleeve patch with vintage replacement 5 on back and more recent replacement "WATSON"; chest measurement showing that jersey is larger than its size tag specifies, and below that the progression the back restoration from light table images, also on the next page.

heavily used and wash-shrunken state, it was 46" at the chest. My guess is that this jersey was given the wrong size tag at the factory. Coach Bob Lillis (5' 11" 160 lbs) was a new addition to the 1973 on-field team roster, and wore #5. He might have been issued this jersey for use in 1973 spring training.

We elected to strip the back of the jersey for a closer examination. Photographing it on the light table revealed the exact outlines of the unique name and number fonts used by Spalding in 1972, for both "Watson" and #27. Small holes in spots along the perimeter of the original lettering showed key placement, and ample glue marks made the examination easy. The original name on back showed the wide letter spacing that was typical of the 1972 Astros road jerseys. The removal of the "5" from the back showed a significantly less faded spot, matching the color of the spot on the sleeve where the team patch had been removed. In contrast, where the name on back was removed, the jersey fabric was faded equally to the surrounding areas. One can surmise from this that this jersey spent significant time with the 5 on back and without a player name present. It would be guesswork to decide if it was used in the Astros organization so-lettered, was sent to a local club-team who wore it in amateur play, or by a fan who enjoyed wearing it to games after it was disposed of by the team. In any event, someone chose to amateurishly reletter the WATSON On back at some point, roughly covering the original glue-mark ghosts without regard to the font they were using.

It took a great deal of work with solvents and detergents to remove the glue that was left over from the replacement name and number, and the unfaded area where the "5" on back likely spent significant time in the sun could not be erased. But after finally getting the jersey clean enough, I recreated the original style name and numbers from team patterns and surviving exemplars, showing that they exactly matched the Spalding fonts of the 1972 Astros. We located a replacement 1972 sleeve patch (one year style with the white background) and it exactly covered the scar on the sleeve. Prior to stitching the name and number on back, I aged the lettering by media blasting it to remove the sheen, then bleached/dyed it to make it better match the patina of the rest of the jersey. Finally, I stitched it in place with off-color thread to match the bleached look of the original lettering on front.

Manufacturer and Team Tagging: 1972 Spalding tagging is sewn inside the center of the bottom of the back tail. It consists of a set of three tags: A blue square tag with "72" machine embroidered in silver, the 1 3/4"x 1" rectangular Spalding PROFESSIONAL tag seen only in 1972, and a small size tag noting the size as 42, which as we previously mentioned is inaccurate given the 46" chest measurement of the jersey. 1972 Astros jerseys were not further tagged with player information. The tagging present matches exemplars, and notably in 1972 Spalding was not licensed to make or sell on-field spec jerseys to the public. So it is reasonable to assume that year tagged examples are team-issue.

Conclusion: The jersey in review is in fair to good restored condition: the front is all original, and the back is properly restored with lettering near-identical to original. The jersey has no alterations or contrivances of of any kind. It has a team-issue tagging. It is my considered opinion that this jersey was made to team specifications and worn by Bob Watson of the 1972 Houston Astros.

Letter of Professional Opinion

Larry Dierker 1975 Houston Astros Rainbow Game Worn Jersey

Examination Date: February 14, 2023 **Certification Number**: 23-0214J02

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Houston Astros pullover full-rainbow style jersey, Sand-Knit made size 44, both marked and measured. The 1975 Astros jerseys were a shock to the community of baseball purists; a pullover V-Neck, white panels at the very top of the chest, and then a cascade of alternating colors of orange, gold and red horizontal, wrap-around stripes from the mid chest all the way to the tail. The stripes repeated on the jersey sleeves as well. Orange and blue V-Neck. "Astros" is screened in Navy on the white area on the top of the chest, left justified. On the left chest a large navy star is screened onto the fabric with a dark red border. On back, the player number was screened in a Sand-Knit fancy house font (also used by the company for the Atlanta Braves of 1972-73, and was used on Sand-Knit jerseys in the NBA) onto an 11" diameter serged-edge fabric disk which was stitched in place with a wide zig-sag stitch. Defining the top edge of the back number disk is a semi-circular arc of orange silkscreening, splitting the distance between the player name disk and the name on back. The player name is stitched onto a matching fabric nameplate in the Sand Knit player name font that matches my team templates, the plate has a serged edge and is cut in a steep arc that mirrors the shape of the top of the back number disk. On the left sleeve is sewn the 3.5" diameter navy blue disk with the number "40" screened on it in white, a memorial to pitcher Don Wilson who had died in January 1975 and worn all season. The patch is basted in place by hand— needle and thread, and this matches the examples of other originals I have evaluated. Certainly no other team in baseball had ever worn something like this, and in fact all that season, the team wore this jersey both at home and on the road as their only uniform. The colors, the placement of the elements, the use of silkscreening for the lettering compared to traditional methods, the huge sleeve memorial patch were all distinctive elements that people either loved… or hated.

Larry Dierker was a popular Astros pitcher and later a broadcaster. He played for the Colt .45s /Astros for 13 of his 14 MLB seasons, retiring in 1977 after a single year with the Cardinals. He made his first big league appearance for the Colt .45s the Astros original name) in 1964 when he was 17 years old (as of 2019 the last 17 year old to make a MLB debut), and struck out Willie Mays in his first inning pitched. His number 49 has been retired by the Astros. In 1975 he appeared in 34 games, all as starter, and compiled a 14-16 record with a 4.0 ERA. (*Wikipedia, Baseball Almanac*)

Manufacturer and Team Tagging: On the lower left outside of the shirt tail is a set of two stacked tags, each 2" wide and 1.5" tall. The bottom tag lists the size (44) and the maker's name in bold black lettering; wash instructions below in gold embroidery, and then the company logo along the bottom line . The top tag is known familiarly as the "Exclusive" tag: It reads, *"Designed and tailored exclusively for the Houston Astros by Sand Knit"* with the company logo embroidered below. Both tags are firmly attached, and careful inspection reveals that the left border of both tags has been reinforced with a tight line of stitching; not unsurprising as other examples of this jersey style show that these tags easily came un-sewn and often fell off.

bill@TheDream.Shop

Wear & Repairs, Other Observations: These jerseys were surprisingly lightweight in construction. They are made of a double knit fabric that is notably more shear than the typical MLB jersey of the day. Because players wore these as both home and road jerseys, multiple sets were issued to each player, though exactly how many were issued to each player is not known. There are no repairs to this jersey, and a thorough light table evaluation shows that all stitched elements are original and uncontrived. The player name on back is stitched onto the correct matte-finished double knit fabric that is cut from the same fabric as the back number disk, and the stitching that secures the letters of the player name lettering to the plate is slightly purple-tinged from having been washed in detergents. This jersey shows wear, but not excessive use; the seams are still tight and the colors bright. I would suggest that given its use profile (it belonged to a pitcher who did not play every day) and the fact that it has its original number disk on back as well as the original nameplate that this jersey was spared use in the minor leagues after the 1975 season had ended. A slightly different configuration of this same jersey was used in 1976, so these jerseys were not used again after spring training of 1976.

The only noteworthy thing about this particular jersey when compared to both other surviving originals and in viewing period game photos is the player nameplate. Commonly, the player name letters on 1975 Astros jerseys were widely spaced on the arc with 1/4" to 3/8" between letters. This particular jersey has the lettering spaced uncharacteristically closely, with about 1/8" between each. The nameplate border is also narrower on the jersey in review, with a 3/8" fabric margin compared to 5/8" or more on exemplars in our files. Notably: we must realize that all of this layout work was done back in the day completely by hand, and things like letter spacing and nameplate margin was done purely at the discretion of the stitcher. Secondly, we do not know how many of the other jerseys in our exemplar library have had their nameplates restored, correctly or not. Nonetheless, it is notable that this one has different letter spacing than is typically seen. Perhaps it was made at a different time in the season from the initial sets. Whatever the reason, the light table verifies that there was not another nameplate or number-disk on this jersey besides this one; no traces of any other stitching can be seen.

Exemplars on the left.

Jersey in review on the right,

Exemplars on the left, note that while the lettering is of the exact size and shape on both, on the exemplar (typical of the year) the lettering is more widely spaced and the nameplate has a larger margin. The jersey tagging identical on both. The photo at top right is on the light table, which shows no evidence of any other elements having been sewn on this jersey other than the ones on there now. At far right, the original and correct Don Wilson sleeve patch on the jersey under examination. Fabric puckering beneath that patch suggests that it is original and was not removed/ replaced.

Conclusion: This jersey is in very good, original condition, with what I believe are its original numbers and nameplate as well as the memorial sleeve patch. It is free of repairs and contrivances. A thorough examination of this jersey allows me to conclude that it was issued to and used by Astros pitcher Larry Dierker during the 1975 season

Letter of Professional Opinion/Letter of Restoration

Ed Herrmann 1976 Houston Astros Rainbow Game Worn Jersey

Examination Date: April 26, 2023 **Certification Number**: 23-0426J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Houston Astros pullover full-rainbow style jersey, Sand-Knit made and tagged as size 46, but now measured as a 44. This style of jersey was first unveiled by the Astros in 1975 and was a shock to the community of baseball purists; a pullover V-Neck, white panel at the very top of the chest, and then a cascade of alternating colors of orange, gold and red horizontal, wrap-around stripes from the mid chest all the way to the tail. The stripes repeated on the jersey sleeves as well. Orange and blue V-Neck trim. Bold "Astros" is screened in Navy on the white area on the top of the chest, left justified. On the left chest a very large navy star (9' across) is screened onto the fabric with a dark red border. For 1976 only, on back, the player number was sewn in Navy twill in a Sand-Knit fancy house font (also used by that company for the Atlanta Braves of 1972-73, and was used on some Sand-Knit jerseys in the NBA). While the back player number had been surrounded by a large white disk in 1975, for 1976 alone it appeared sewn directly to the jersey in a single color over the rainbow stripes. Player names were sewn in a steep arch on a nameplate above. 1976 jerseys also featured the National League 100th Anniversary disk patch centered on the right sleeve. Certainly no other team in baseball had ever worn something like this, and in fact all through the 1975-1976 seasons, the Astros wore this jersey both at home and on the road as their only uniform. The pullover shirt style, tight tailoring, the wild colors, the asymmetrical element placement, use of silkscreening for the lettering compared to traditional sewn crests: all were distinctive elements that people either loved… or hated.

Ed Herrmann was acquired by the Astros in early June 1976 from the California Angels, was assigned #8, and immediately became the team's regular catcher replacing Milt May who had broken his ankle on just the sixth game of the season. Herrmann was known as one baseball's best knuckleball catchers. At 6" 1" and 195 lbs, he would have fit into a size 46 jersey. In 1976 his combined Angels/Astros stats he appeared in 109 games, and hit .257 with 5 home runs.

Manufacturer and Team Tagging: On the lower left outside of the shirt tail is a set of two stacked tags, each 2" wide and 1.5" tall. These tags match exemplars as used by Sand-Knit in 1976-1979. The bottom tag lists the size (46) and the maker's name in bold black lettering; wash instructions below in gold embroidery, and then the company logo along the bottom line . The top tag is known familiarly as the "Exclusive" tag: It reads, *"Designed and tailored exclusively for the Houston Astros by Sand Knit"* with the company logo embroidered on the tag below. Both tags are firmly attached around their full perimeter with what appears to be their original stitching. Astros jerseys in 1976 were not year tagged for the player who they were issued to, there was no player identifying/team tagging on Astros jerseys between 1975-1980.

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

Restoration performed: As received, this jersey was in very good condition and all original except for the absence of the sleeve patch and the nameplate, both of which were typically stripped at the end of the season so the team jerseys could be repurposed for further use in the minor leagues. While there not clear evidence of the sleeve patch having been there, the ghost of the original name plate was clearly obvious when placed on the light table. Sand-Knit sewed the Astros uniforms in 1976, using uncharacteristically wide spacing between the player name letters. That, combined with the high arch of the plate and the length of Herrmann's last name, the ghost of this plate is nearly semicircular, with both ends horizontal and flat against the top row of the rainbow stripes. I feel confident in the conclusion that this jersey was issued to Herrmann in 1976 based on the style of the back number, the marked size and the length/shape of the nameplate. Notably, in 1976 Sand Knit was not authorized to sell retail examples of the Astros jerseys with the "exclusive" Sand Knit tagging in place.

I cut the player name from Midnight Blue twill using the patterns for the original Sand-Knit font, and prior to being stitched with eggplant colored thread, the lettering was both media blasted and dyed to try to better approximate the patina of the back number "8" which shows discoloration from repeated washing in strong detergent and probably bleach. I recreated the nameplate from a pair of game-used Astros 1970s pants to match the uniform color, and cut the exact shape of the one that had previously been there, and serged the edge as originally done. I sewed the nameplate to the jersey with a wide zig-zag stitch as were the originals.

Wear & Repairs, Other Observations: These jerseys were surprisingly lightweight in construction. They are made of a double knit fabric that is noticeably more shear than the typical MLB jersey of the day. Because players wore these as both home and road jerseys, multiple sets were issued to each player, though exactly how many were issued to each player is not known. There are no repairs to this jersey, and a thorough light table evaluation shows that all stitched elements are original and uncontrived. The stitching that secures the back number to the jersey is notably purple-tinged from having been washed in detergents. This jersey shows wear, but not excessive use; the tagging shows abrasion and some thread loss, the screened-on elements are un-cracked, the seams are still tight and the colors bright.

photonegative image shows the clear outline imprint of the original semi-circular nameplate. Baseball card at left shows how Herrmann's name was spaced wall-to-wall on the back of his jersey.

Conclusion: This jersey is in very good condition, with what I believe is its original player number, and a nameplate that I reproduced to match original specifications. It is missing the 1976-issue sleeve patch. It is free of repairs and contrivances. A thorough examination of this jersey allows me to conclude that it was issued to and used by Astros catcher Ed Herrmann during the 1976 season

Letter of Professional Opinion/Letter of Restoration

Mike Scott 1983 Houston Astros "Rainbow" Game Worn Jersey

Examination Date: August 10, 2022 **Certification Number**: 22-0810J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Sand-Knit made pullover Rainbow style Houston Astros game jersey, size 44, #33 on the back in the correct team font. Horizontally boldly-striped jersey body in five shades of red, orange and gold, Navy V-neck trim. ASTROS is stitched across the top of the front in Navy twill, a large two color five-pointed star in Navy outlined with with white is screened on the left chest. This specific style of the Rainbow jersey was worn only in 1982-1983. These jerseys are characteristically rather lightweight in construction, notably more-so than other teams' double knit jerseys.

Scott enjoyed a 13 year career pitching for the New York Mets and the Houston Astros. He won the National League Cy Young Award in 1986. Scott is part of a select group of pitchers that have thrown a no-hitter and struck out 300 batters in the same season. In 1983, Scott had a productive first year with the Astros making 24 starts and going 10–6 with a 3.72 earned run average. His number has been retired by the Houston Astros. (Wikipedia, Baseball Almanac)

Restoration Performed: As received, the jersey wore a replacement nameplate from an earlier restoration that have been commissioned by its owner. The autographed nameplate that was added was incorrect as it omitted the player's first initial "M"; in 1983 that initial was included on Mike Scott's jersey to differentiate him on the field from teammate, outfielder Tony Scott. I removed the replacement nameplate and using the team template as well as scant evidence of the ghost of the original plate, made a replacement in the original style, using a pair of donor vintage Astros pants, with a properly double-needle serged edge.

Manufacturer and Team Tagging: The correct set of two Sand Knit "Exclusive style" tagging is stitched to the front outside bottom tail. The printed fabric "Medalist Sand Knit" tag sewn on the right side had blue outlined hollow-white lettering, usually seen only 1980, but not impossible to have carried over and used in later years as well. The stitching holding the tags in place is original and untampered with. The embroidered "Designed Exclusively for the Houston Astros" maker's tag to the left shows signs of heavy use and repeated washing, as the embroidery that spells out the writing is somewhat wear-obliterated. Finally, stitched to the left of these

Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

two tags is a small strip tag with Plastisol ink printing in the correct Sand-Knit hollow-letter style that reads "83 * 44" 1983 size 44) . While earlier years also incorporated a player name into the tagging, in 1983 exemplar tagging shows that player designations were not included in the team tagging during 1983.

Wear & Repairs: This jersey is in uncharacteristically good condition. By 1983, the Astros were wearing the rainbow jerseys less frequently than in prior years. The removal of the nameplate may signal that it was sent to the minor leagues for use after its MLB service was through, but if it was used in the minors it was well treated there. Light table examination shows that all stitched elements of the jersey are original and untampered with . There is a tiny vintage repair to close a hole about the size of a grain of rice on the back to the right edge of the top of the first "3" . The Navy over white lettering is puckered and burnished from use, and as is characteristic of jerseys that were well-worn, some of the stitching along the inside center of the back is worn away from constant abrasion with the player's back.

Conclusion: The jersey in review is in very good, game used condition: all original, with the nameplate on back properly restored with lettering near-identical to original. The jersey has no alterations or contrivances of of any kind. It has a team-issue tagging. It is my considered opinion that this jersey was made to team specifications and worn by pitcher Mike Scott of the 1983 Houston Astros.

Letter of Professional Opinion/Document of Restoration

Mike Scott Houston 1985 Astros Game Worn Cream Colored Road Jersey

Examination Date: April 3, 2023 **Certification Number**: 23-0403J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Goodman and Sons cream colored pullover cream-colored road jersey size 46 (measured and marked). The size matches other reliably authenticated exemplars for the player at this point in his career. ASTROS across the front in navy outlined with white with a large similarly colored star sewn below on the left chest. Navy matte-finish "Dodger Twill" is used for the lettering. Rainbow sleeve-top sewn-in inserts with seven alternating stripes in Navy, red, orange and yellow. 1" wide blue knit trim down each side seam, and outlining the neck opening. The Navy colored player name and number are sewn using the same Navy matte-finished fabric, not traditional tackle twill. All but the player name are two-layers, Navy matte fabric over white tackle twill. The player name on back is in the proper Goodman font, and is stitched to a matching nameplate. The plate has a serged edge, and is also zig-zagged to the jersey

Manufacturer and Team Tagging: Goodman tag on the outside of the left front tail noting the size as 46. Goodman did not tag its Astros jerseys for year, player or set. Because they did not have the license to make retail jerseys to sell to the public; Goodman jerseys were made only for use by the team. Goodman had the contract to make the team's cream colored pullover jerseys in 1984-1986: the lack of a ghost shadow on the sleeve for the 1986-only Al-Star Game sleeve patch dates this to either 1984 or 1985. Teammate Tony Scott was on the 1984 Astros, and so Mike Scott's 1984 jerseys had his first initial on the nameplate, which this one lacks. This isolates the year of issue to 1985.

Wear & Repairs: A light table examination confirms that these are the original numbers on the jersey and that the nameplate is original and has not been removed or replaced, an uncommon event with Astros jerseys of the period. Generally they were stripped of nameplates and sent to the minor leagues for heavy reuse. This jersey was spared that fate. The garment shows signs of solid use, including puckering, fading and abrasion to the Goodman tail tag, some puckering of the fabric beneath the numbers, and notable detergent-fading of the blue thread used to secure the stitched elements.

Conclusion: The jersey in review is in very good condition: It is all original including the the player nameplate; uncommon on Astros jerseys of this vintage. The jersey has no alterations or contrivances of of any kind. It has a team-specification tagging. It is my considered opinion that this jersey was made to team specifications and was used by Mike Scott of the 1985 Houston Astros.

Letter of Professional Opinion

Mike Scott 1988 Houston Astros Road Cream-Colored Game Jersey

Examination Date: January 12, 2024 **Certification Number**: 24-0112J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Rawlings-made size 46 (marked and measured) Houston Astros pullover jersey prepared for pitcher Mike Scott. Cream-colored heavyweight knit body with Navy Blue V-Neck. 4-inch wide "rainbow" style 7-color banded inserts sewn-in to the tops of the sleeves. 1" Navy trim sewn-on down the side seams of the jersey. ASTROS sewn boldly across the front in Navy over white tackle twill, with a large similarly-colored star sewn below on the left chest. On back, Scott's name in 3 1/4" Navy block lettering sewn to a matching single-needle serged-edge nameplate, above his number 33, in Navy over white twill. Scott was wearing size 46 jerseys at this point of his career. Notably the nameplate is made of the exact fabric that the jersey is made from. This is important because this specific fabric is very difficult to match and jerseys customized but not original to that year generally have nameplate fabric that is not identical to the jersey itself.

Scott had a good year in 1988, and although the Astros finished in fifth place in their division, he ended the season 14-8 with a 2.92 ERA, appearing in 32 games, all as a starter. (*Baseball Almanac*)

Manufacturer and Team Tagging: In 1988, Rawlings was in their second year of supplying all of the Astros game uniforms. The company had been named official supplier to MLB in 1987, and so all jerseys they made for on-field use starting in their year should properly have the Rawlings script logo embroidered into the trim at the end of the left sleeve, as this one does. My photo archives show that two styles of Rawlings tail tagging were used in that year, some (probably early season) jerseys received the customary red tag, while jerseys made later had the new larger white style tag that notes Rawlings as a Figge International Company after their acquisition. These later jerseys had different style team tagging and some had a taller NOB font than the earlier ones. The Rawlings tag is sewn to the outside of the left front tail, and beneath it is a strip tag with a new style of machine-embroidery on it, "33 88 46 1" (player number 33, 1988 size 46 set 1). A small white flag tab pinch-sewn under the right side of this strip tag says SET 1 1988. All of this matches exemplars.

Wear & Repairs: A light table evaluation shows that all elements sewn on the jersey are original and are without alteration. This jersey does not show obvious signs of use; it appears to be unwashed. All elements are crisp and fresh. It is not unreasonable to assume that this is an extra jersey prepared after the start of the season. (Notably: any tagging designation as "set 1" is meaningless. These tags were used mostly indiscriminately in the 1980s). There is a small brown stain dot about 1/8" in circumference on the back tail that looks like drop of oil.

Exemplar tagging for comparison

Conclusion: The jersey in review is properly sized, tagged and lettered. It is consistent with known exemplars. While it does not exhibit obvious wear, it appears to have no alterations of any kind. Therefore, it is my considered opinion that this jersey is genuine team issue to Mike Scott of the Houston Astros for the 1988 season.

Letter of Professional Opinion/Document of Restoration

Bob Knepper 1987 (1986 Tagged) Houston Astros Game Worn Cream Color Road

Examination Date: February 22, 2023 **Certification Number**: 23-0222J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Rawlings pullover cream colored road jersey, size 44 (measured and marked) of pitcher Bob Knepper. ASTROS across the front in Navy outlined with white with a large similarly colored star sewn below on the left chest. Rainbow sleeve-top inserts with seven alternating stripes in Navy, red, orange and yellow. 1" wide blue knit trim down each side seam, and outlining the V-neck. The jersey is not noted as being made with special tailoring, but it is notably longer than normal. Knepper preferred extra-length jerseys and this one matches that characteristic. Rawlings red tag appropriate for 1986 sewn inside the bottom front left tail, 1986 Set 2 flag tab pinch-sewn under its right side, matching exemplars.

There is an oddity on this jersey, in that it is tagged for 1986, but it has the Rawlings sleeve-end embroidery that was first used in the 1987 season. I would reasonably ascribe this to human error— either the 1987-issued jersey was incorrectly tagged at the factory with leftover 1986 tags, OR there were blank jerseys left over at the factory from the 1986 season and before they were issued to the team for use in 1987, the Rawlings script was added on the sleeve end. I have seen this happen before, and inaccurate year flag tags are not something that anyone was going to pay attention to back in 1987. The jersey style used by the team was identical, 1986-1987. Knepper was on the team roster in both 1986 and 1987.

Wear & Repairs: The jersey shows honest use, probably it was used in the minor leagues or spring training with its nameplate removed after its MLB service was through. There are several small slice-holes in the front tail of the jersey, each about 1/2" long, of undetermined origin.

Restoration Performed: This jersey was delivered to me otherwise intact for a nameplate restoration. I examined it to verify that the player wore that number in the tagged year, that it was a reasonable size for the player; that a light table evaluation of the jersey showed that the numbers were original and without contrivance, and that the ghost of the removed nameplate was a reasonable length for the player's last name. I replaced the nameplate using the correct font and fabric, using a pair of period Astros pants for the best fabric match. I serged the edge of the plate as would have been done to the original.

Conclusion: The jersey in review is in good condition: It is all original save for the replacement noted of the player nameplate. The jersey has no alterations or contrivances of of any kind. It has a team-issue tagging. It is my considered opinion that this jersey was made to team specifications and worn by Bob Knepper of the 1987 Houston Astros.

Letter of Professional Opinion/Document of Restoration

Terry Puhl Houston 1989 Astros Game Worn White Home Jersey

Examination Date: February 22, 2023 **Certification Number**: 23-0222J09

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Goodman and Sons six-button-front white home jersey with supplemental Velcro closure, size 42 (measured and marked). The size matches other reliably authenticated exemplars of the player at this point in his career. Goodman tag in the back of the neck. ASTROS across the front in navy outlined with white with a large similarly colored star sewn below on the left chest. Navy matte finish "Dodger Twill" is used for the lettering. Rainbow sleeve-top sewn-in inserts with seven alternating stripes in Navy, red, orange and yellow. 1" wide blue knit trim down each side seam, and outlining the neck opening. Goodman did not tag its Astros jerseys for years, teams or sets. Goodman did not have the license to make retail jerseys to sell to the public; Goodman jerseys were made only for use by the team. Goodman made the team's white jerseys in 1989-90: a ghost armband shadow dates this to 1989.

Wear & Repairs: The jersey was delivered to me complete but missing its nameplate and armband, part of a huge stash of Astros jerseys that had been rescued from long-term storage. The jersey shows good use, it may have been used in the minor leagues or spring training with its nameplate removed after its MLB service was through. There is some pilling of the white fabric around the right side of the Astros wordmark; this was caused from abrasion with the rough side of the Velcro closure strip in the washing machine. The edges of the neck tag are worn and the tag shows puckering and abrasion.

Restoration Performed: I was requested to do an authentication and nameplate restoration. I examined the jersey to verify that the player wore that number in the tagged year, that it was a reasonable size for the player; that a light table evaluation of the jersey showed that the numbers were original and without contrivance, and that the ghost of the removed nameplate was a reasonable length for the player's last name. There was clear ghost-evidence of the removal of an armband on the left sleeve; the Astros wore memorial armbands in 1989 after July 21. I replaced the nameplate using the correct font and fabric, using a pair of period Astros pants for the best fabric match. I serged the edge of the plate as would have been done to the original. I replaced the armband over the ghost, using

Conclusion: The jersey in review is in very good condition: It is all original save for the replacement noted of the player nameplate and the memorial armband. The jersey has no alterations or contrivances of of any kind. It has a team-specification tagging. It is my considered opinion that this jersey was made to team specifications and was used by Terry Puhl of the 1989 Houston Astros.

Letter of Professional Opinion/Document of Restoration

Mike Scott Houston 1989 Astros Game Worn White Home Jersey

Examination Date: February 22, 2023 **Certification Number**: 23-0222J08

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Goodman and Sons six-button-front white home jersey with supplemental Velcro closure, size 46 (measured and marked). The size matches other reliably authenticated exemplars of the player at this point in his career. Goodman tag in the back of the neck. ASTROS across the front in navy outlined with white with a large similarly colored star sewn below on the left chest. Navy matte finish "Dodger Twill" is used for the lettering. Rainbow sleeve-top sewn-in inserts with seven alternating stripes in Navy, red, orange and yellow. 1" wide blue knit trim down each side seam, and outlining the neck opening. Goodman did not tag its Astros jerseys for years, teams or sets. Goodman did not have the license to make retail jerseys to sell to the public; Goodman jerseys were made only for use by the team. Goodman made the team's white jerseys in 1989-90: a ghost armband shadow dates this to 1989.

Wear & Repairs: The jersey was delivered to me complete but missing its nameplate and armband, part of a huge stash of Astros jerseys that had been rescued from long-term storage. The jersey shows good use, it may have been used in the minor leagues or spring training with its nameplate removed after its MLB service was through. There is some pilling of the white fabric around the right side of the Astros wordmark; this was caused from abrasion with the rough side of the Velcro closure strip in the washing machine. The edges of the neck tag are worn and some of the thread from the tag and the adjacent neck seam are coming loose.

Restoration Performed: I was requested to do an authentication and nameplate restoration. I examined the jersey to verify that the player wore that number in the tagged year, that it was a reasonable size for the player; that a light table evaluation of the jersey showed that the numbers were original and without contrivance, and that the ghost of the removed nameplate was a reasonable length for the player's last name. There was clear ghost-evidence of the removal of an armband on the left sleeve; the Astros wore memorial armbands in 1989 after July 21. I replaced the nameplate using the correct font and fabric, using a pair of period Astros pants for the best fabric match. I serged the edge of the plate as would have been done to the original. I replaced the armband over the ghost, using the same knit material as original.

Conclusion: The jersey in review is in very good condition: It is all original save for the replacement noted of the player nameplate and the memorial armband. The jersey has no alterations or contrivances of of any kind. It has a team-specification tagging. It is my considered opinion that this jersey was made to team specifications and was used by Mike Scott of the 1989 Houston Astros.

Letter of Professional Opinion/Document of Restoration

Curt Schilling 1991 Astros Game Worn White Home Jersey

Examination Date: August 1, 2023 **Certification Number**: 23-0801J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Rawlings six-button-front white home jersey with supplemental Velcro closure, size 48 with "T" (tapered) tailoring marked (measured and marked). (Schilling wore size 48 jerseys at this stage of his career, I had never seen one before with tapered tailoring, but looking at game images of him in 1991, his jersey does seem very tight around the middle) Rawlings tag on the lower outside left tail. ASTROS across the front in navy outlined with white with a large similarly colored star sewn below on the left chest. Navy matte finish "Dodger Twill" is used for the lettering. Rainbow sleeve-top sewn-in inserts with seven alternating stripes in Navy, red, orange and yellow. 1" wide blue knit trim down each side seam, and outlining the neck opening. Tagged as Set 1 1991.

Wear & Repairs: The jersey was presented to me complete but missing its nameplate. The jersey shows good use and is generally clean; while it was stripped of its nameplate as was typical of team issues at the end of the season, it appears to have escaped the usual hard-time in the minors or spring training that many Astros game jerseys endured. I have found that often jerseys in larger sizes were spared such use because they did not fit the younger players who might have worn them.

Observations: This jersey was presented to me without provenance, making it challenging to determine with complete certainty who it belonged to. However, consider the following facts: 1) This jersey is correctly team-tagged for the 1991 season. 2) The back numbers are original without any signs of replacement or contrivance, show equal wear to the other elements on the jersey, and are in the team's special fabric that matches the front crest. 3) In Schilling's career, the sole year he played for the Astros was 1991 and he wore #19. 4) 3) Nobody else on the Astros roster wore #19 in 1991 5) 1991 Astros Jerseys were made by Rawlings, with the Rawlings script shown on the sleeve, by license. Starting in 1992, Russell made the Astros home jerseys, and by license their logo appeared on jersey sleeves. Therefore, the team did not reissue 1991 jerseys to be worn on field in 1992. 6) In 1992 #19 was a much smaller player, Juan Guerrero, who would likely not have worn a size 48, even in spring training. 7) There is light table evidence of the removal of a nameplate that would be the proper size and arch for the name "Schilling", matching period photos.

Restoration Performed: Based on my reasonable conclusion of authenticity, I was requested to do a nameplate restoration. Using a pattern made from the ghost of the original nameplate and the Astros team font and special fabric of 1991, I replaced the nameplate using a pattern of period Astros pants for the best fabric match. I serged the edge of the plate as would have been done to the original.

Conclusion: The jersey in review is in very good condition: It is all original save for the replacement noted of the player nameplate. The jersey has no alterations or contrivances of of any kind. It has a team-specification tagging. It is my considered opinion that this jersey was made to team specifications, shows appropriate wear and was issued to Curt Schilling of the 1991 Houston Astros.

Letter of Professional Opinion/Document of Restoration

Ron Washington 1989 Houston Astros Game Worn Cream Colored Road Jersey

Examination Date: February 22, 2023 **Certification Number**: 23-0222J05

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Rawlings button-front cream colored road jersey, size 42 T (Tapered) (measured and marked) of infielder Ron Washington. Year tagged 1989 SET 1 on a flag tab sewn under the right edge of the Rawlings red tag, located inside the left tail appropriate for 1989. Below the Rawlings tag is a small twill tag with machine embroidery "15 42T" (player number 15, size 42 Tapered) that matches exemplars. This jersey is a reasonable size for Washington at 5" 11" 163 lbs. ASTROS across the front in navy outlined with white with a large similarly colored star sewn below on the left chest. Rainbow sleeve-top inserts with seven alternating stripes in Navy, red, orange and yellow. 1" wide blue knit trim down each side seam, and outlining the neck opening. Rawlings script embroidered in Navy Blue on the end of the right sleeve, correct for 1989 team issue.

Wear & Repairs: The jersey was delivered to me complete but missing its nameplate and 1989 armband, part of a huge stash of Astros jerseys that had been rescued from long-term storage. The jersey shows light use, it may have been used in the minor leagues or spring training with its nameplate removed after its MLB service was through.

Restoration Performed: I was requested to do a nameplate restoration. I examined the jersey to verify that the player wore that number in the tagged year, that it was a reasonable size for the player; that a light table evaluation of the jersey showed that the numbers were original and without contrivance, and that the ghost of the removed nameplate was a reasonable length for the player's last name. There was clear ghost-evidence of the removal of an armband on the left sleeve; the Astros wore memorial armbands in 1989 after July 21. I replaced the nameplate using the correct font and fabric, using a pair of period Astros pants for the best fabric match. I serged the edge of the plate as would have been done to the original. I replaced the armband over the ghost, using the same knit material as original.

Conclusion: The jersey in review is in very good condition: It is all original save for the replacement noted of the player nameplate and the replacement armband. The jersey has no alterations or contrivances of of any kind. It is my considered opinion that this jersey was made to team specifications for by Ron Washington of the 1989 Houston Astros.

Letter of Professional Opinion

Randy Johnson 1998 Houston Astros Home Game Jersey

Examination Date: January 16, 2024 **Certification Number**: 24-0116J03

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Houston Astros white heavyweight jersey made by Russell, Size 50 marked and measured. 5" extra length tagging. Jersey measures 39" in length compared to 34" for a regular size 50, so this is accurate. No trim, three color team crest across the chest, ASTROS in black over white over black. An embroidered star n white and metallic gold is stitched on the top of the left side. On back is the player's name, Johnson, is sewn using the team's stylized font in three colors of layered twill, black/white/Nugget Gold, arched on a single-needle serged edge nameplate made from identical fabric as the jersey body. Beneath are the player's numbers #51, in the same three colors. They are in the team font and correctly stitched The size and special tailoring is consistent with exemplars for the player. This jersey was presented without provenance.

Johnson was acquired in a trade with the Seattle Mariners in August 1998, and went 11-1 in 12 starts to finish the season as the Astros won their division. While the jersey is not team-tagged or dated in any way (as is accurate for Astros jersey of this period) the only time Johnson played for the Astros was September-October 1998, so we can assume the jersey is from 1998. Johnson was elected to the Baseball Hall of Fame in 2015.

Manufacturer and Team Tagging: Russell "Diamond Collection" locker tag sewn to the outer left front tail in the appropriate style for 1998. There are two flag tags sewn pinched under the bottom edge of the Russell tail tag; one that says 100% polyester and one that says 5" extra body length". There is no size tag in the neck, as is correct with team issues. Johnson is the only player I know of who required such extreme tailoring. The Russell "R" is embroidered in black thread at the end of the left sleeve.

Wear & Repairs: A light table examination shows that all lettering on this jersey is original and unaltered. All stitching is tight an unbleached from washing. There is some slight puckering of the back numbers as well as some slight splatter-staining of what could be mud on the tops of the sleeves and under the left arm. This could be from use or improper storage. The tagging shows signs of having been washed. Overall, the wear to this jersey is commensurate with what one would expect from just a few weeks of use, given that this was certainly not his only jersey.

Conclusion: This jersey is in good lightly used condition, is all original and properly lettered, has correct custom tailoring and is without contrivance. It has the proper tagging It is my considered opinion that this jersey was made to team specifications and worn by Randy Johnson of the 1998 Houston Astros.

Letter of Professional Opinion

Jeff Bagwell 2001 Houston Astros Home Game Worn Jersey

Examination Date: January 17, 2024 **Certification Number**: 24-0017J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Houston Astros white with black pinstripes, heavyweight knit jersey made by Majestic, Size 50 marked and measured. Four color stylized Astros script across the chest, layered twill (as correct for 2000-2002) black over beige over dark red over gray. Beneath the team crest and on the left chest is his number "5" in dark red twill, in the smaller size 3 3/8" numeral correct for 2000-2001. The Astros commemorative *40 Years in Houston* patch is stitched to the left sleeve, worn only in 2001. On back the player's name is sewn in three colors of layered twill, black over beige over dark red arched and direct sewn to the jersey. Beneath is the player's number 5, 8" tall as correct for 2001, in the same three colors. They are in the team font and correctly stitched. Bagwell wore a size 50 jersey in this time period, noting other exemplars in our library. While this jersey was presented without provenance, my research shows that it can likely be photo-matched to news photos of Bagwell playing in the postseason in early October 2001 against the Atlanta Braves. This jersey has the USA flag on the back of the neck, (covering the MLB logo patch still sewn beneath) added after the tragic events of 9-11-2001, showing that it was worn late in the season. When authenticating Astros jerseys, I carefully compare all player lettering to team templates for their year of issue, and this one matches perfectly to specifications.

Bagwell enjoyed a 15 year career in MLB, all with the Astros, and was elected to the Baseball Hall of Fame in 2017. In 2001, he appeared in 161 games, and hit .299 in 600 at bats with 39 home runs. (*Baseball Almanac*) While hitting his 32nd home run on August 19, 2001, against Pittsburgh, Bagwell collected his 100th RBI. It was the sixth consecutive season he reached at least 30 home runs and 100 RBI, making him the eighth player in MLB history to achieve such a streak, and the only Houston player to do so. Five days later, also against Pittsburgh, he scored his 100th run, joining Jimmie Foxx, Lou Gehrig, and Babe Ruth as the only players in MLB history with six consecutive seasons of 30 homers, 100 RBI and 100 runs scored. On September 30 at Chicago, Bagwell walked for his 100th of the season, thus making him the only player in MLB history to register six consecutive seasons of at least 30 home runs, 100 RBI, 100 runs scored, and 100 walks. (*Wikipedia*)

Manufacturer and Team Tagging: Majestic "Authentic Collection" locker tag sewn to the outer left front tail in the appropriate style for 2001. Pinch-sewn under the bottom border of this tag is a flag tab showing the size, 50. The Majestic "M" logo is embroidered in black at the end of the left sleeve. The inside side-seam Majestic garment tag codes this as a 0062, the style designation used for on-field specification jerseys generally made only for the team's use. The Astros did not otherwise team or player tag jerseys at all in 2001.

Wear & Repairs: A light table examination shows that all lettering on this jersey is original and unaltered. All stitching is tight an unbleached from washing. There is significant pilling of the fabric on the bottom sides of both sleeves, caused from the rubbing of the sleeves, especially during batting, against the ridiculously thick four-layer twill wordmark. Overall, the wear to this jersey is commensurate with what one would expect from a jersey worn as a regular issue and in extended use. In 2001 there were no special sleeve patches worn in the first round of the playoffs, and it seems likely that Bagwell's playoff jersey was the same one worn late in the regular season.

Fabric pilling shown on left sleeve; right sleeve is similar.

Conclusion: This jersey is in good well-used condition, is all original and properly lettered, and is without contrivance. It has the proper tagging. It is my considered opinion that this jersey was made to team specifications and worn by Jeff Bagwell of the 2001 Houston Astros.

Letter of Professional Opinion

Andy Pettitte 2004 Houston Astros Home Game Jersey

Examination Date: January 18, 2024 **Certification Number**: 24-0018J04

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Houston Astros white with black pinstripes, heavyweight six-button knit jersey made by Majestic, Size 50 marked and measured; pitcher Andy Pettitte #21. Exemplars show that this was the preferred size used by the player at this point in his career. Three-color stylized Astros script across the chest in direct chain stitch (as correct for 2002-2012) black/beige/dark red. Beneath the team crest and on the left chest is his number "21" in dark red twill, in the larger size numeral correct for 2002-2012 (compared to smaller numbers, 2000-2001) at 4 1/8". Team Texas/star patch on the left sleeve, 2004 All Star Game patch on the left sleeve. On back the player's name is sewn in three colors of layered twill, beige over dark red over black, arched and sewn directly to the jersey fabric without a nameplate. The MLB logo patch is sewn to the back of the collar in black, white and dark red. Beneath is the player's number 21, 8 7/8" tall as correct for 2002-2012, in the same three colors. They are in the team font and correctly stitched. The MLB logo patch is sewn to the back of the collar in black, white and dark red. When authenticating Astros jerseys, I carefully compare all player lettering to team templates for their year of issue, and this one matches perfectly to specifications. This jersey was presented without provenance.

Pettitte joined the Astros in 2004 and started 15 games, earning a record of 6-4 with an ERA of 3.9. His 2004 season, in which he held batters to a .226 batting average, was shortened by elbow surgery to repair a torn flexor tendon. In an 18 year career, Pettitte played three seasons for the Astros bookended by 15 seasons with the Yankees (*Baseball Almanac, Wikipedia*)

Manufacturer and Team Tagging: Majestic "Authentic Collection" locker tag sewn to the outer left front tail in the appropriate style for 2001. Pinch-sewn under the bottom border of this tag is a flag tab showing the size, 50. The Majestic "M" logo is embroidered in black at the end of the left sleeve. The inside side-seam Majestic garment tag codes this as a 0062, the style designation used for on-field specification jerseys generally made only for the team's use. The Astros did not otherwise team or player tag jerseys at all in 2000-2012.

Wear & Repairs: A light table examination shows that all lettering on this jersey is original and unaltered. All stitching is tight and unbleached from washing. The lettering and the tagging is crisp, showing extremely light use. Overall, the wear to this jersey is commensurate with what one would expect from a jersey worn for a game or two by a pitcher.

Conclusion: This jersey is in excellent lightly used condition, is all original and properly lettered, and is without contrivance. It has the proper tagging. It is my considered opinion that this jersey was made to team specifications and worn by Andy Pettitte of the 2004 Houston Astros.

Letter of Professional Opinion

Lance Berkman 2000/2001 Houston Astros Road Game Worn Jersey

Examination Date: January 18, 2024 **Certification Number**: 24-0018J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Houston Astros gray, heavyweight six-button knit jersey made by Majestic, Size 48 marked and measured, Lance Berkman #17. Four color stylized Astros script across the chest, layered twill (as correct for 2000-2001) dark red over beige over black over gray. Supplemental Velcro closure added, Beneath the team crest and on the left chest is his number "17" in black twill, in the smaller size 3 3/8" numeral correct for 2000-2001. No sleeve patches; the Astros road jersey was essentially identical in 2000 and 2001, as no team tagging was used at all. On back the player's name is sewn in three colors of layered twill, dark red over beige over dark red, arched and sewn to a matching serged edge nameplate. The MLB logo patch is sewn to the back of the collar in black, white and dark red. Beneath is the player's number 17, 8" tall as correct for 2000-2001, in the same three colors. They are in the team font and correctly stitched. Berkman wore a size 48 jersey in this time period, noting other exemplars in our library. This jersey is without the USA flag on the back of the neck, meaning only that it was not worn after 9-11-01. When authenticating Astros jerseys, I carefully compare all player lettering to team templates for their year of issue, and this one matches perfectly to specifications. This jersey was presented without provenance.

Manufacturer and Team Tagging: Majestic "Authentic Collection" locker tag sewn to the outer left front tail in the appropriate style for 2001. Pinch-sewn under the bottom border of this tag is a flag tab showing the size, 48. The Majestic "M" logo is embroidered in black at the end of the left sleeve. The inside side-seam Majestic garment tag codes this as a 0062, the style designation used for on-field specification jerseys generally made only for the team's use. The Astros did not otherwise team or player tag jerseys at all in 2000-2001.

Wear & Repairs: A light table examination shows that all lettering on this jersey is original and unaltered. All stitching is tight an unbleached from washing. The lettering and the tagging is softened from washing and visibly puckered. There are many loose sewing threads, and significant pilling of the fabric on the bottom sides of both sleeves, caused from the rubbing of the sleeves, especially during batting, against the ridiculously thick four-layer twill wordmark. Overall, the wear to this jersey is commensurate with what one would expect from a jersey worn as a regular issue and in extended use.

Fabric pilling shown the bottom of the left sleeve. Right sleeve is similar

Conclusion: This jersey is in good well-used condition, is all original and properly lettered, and is without contrivance. It has the proper tagging. It is my considered opinion that this jersey was made to team specifications and worn by Lance Berkman of the 2000-2001 Houston Astros.

Letter of Professional Opinion

Andy Pettitte 2006 Houston Astros Road Game Worn Jersey

Examination Date: January 18, 2024 **Certification Number**: 24-0018J02

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Houston Astros gray, heavyweight six-button knit jersey made by Majestic, Size 50 marked and measured, pitcher Andy Pettitte #21. Exemplars show that this was the preferred size used by the player at this point in his career. Three-color stylized Astros script across the chest in direct chain stitch (as correct for 2002-2012) dark red/beige/black. Beneath the team crest and on the left chest is his number "21" in black twill, in the larger size numeral correct for 2002-2012 (compared to smaller numbers, 2000-2001) at 4 1/8". 2006 Houston 45 years patch. On back the player's name is sewn in three colors of layered twill, dark red over beige over dark red, arched and sewn to a matching serged edge nameplate. Beneath is the player's number 21, 8 7/8" tall as correct for 2002-2012, in the same three colors. They are in the team font and correctly stitched. The MLB logo patch is sewn to the back of the collar in black, white and dark red. When authenticating Astros jerseys, I carefully compare all player lettering to team templates for their year of issue, and this one matches perfectly to specifications. This jersey was presented without provenance.

In 2006, Andy Pettitte appeared in 36 games for the Astros, going 14-13 with a 4.20 ERA. 2006 was the 12th season of his 18 year career. (*Baseball Almanac*) He tied for the National League lead in starts (35), tied for sixth in pickoffs (4), and was eighth in double plays induced (26), and tenth in strikeouts (178) and batters faced (929) (*Wikipedia*).

Manufacturer and Team Tagging: Majestic "Authentic Collection" locker tag sewn to the outer left front tail in the appropriate style for 2001. Pinch-sewn under the bottom border of this tag is a flag tab showing the size, 50. The Majestic "M" logo is embroidered in black at the end of the left sleeve. The inside side-seam Majestic garment tag codes this as a 0062, the style designation used for on-field specification jerseys generally made only for the team's use. The Astros did not otherwise team or player tag jerseys at all in 2000-2012.

Wear & Repairs: A light table examination shows that all lettering on this jersey is original and unaltered. All stitching is tight and unbleached from washing. The lettering and the tagging is crisp, showing light use. Overall, the wear to this jersey is commensurate with what one would expect from a jersey worn by a pitcher for part of a season, especially considering that the Astros had five jersey styles to choose from, multiple sets of each, and that the gray jerseys were probably the least frequently worn by the team.

Conclusion: This jersey is in very good used condition, is all original and properly lettered, and is without contrivance. It has the proper tagging. It is my considered opinion that this jersey was made to team specifications and worn by Andy Pettitte of the 2006 Houston Astros.

Letter of Professional Opinion

Andy Pettitte 2005 Houston Astros Road Alternate Red World Series Game Jersey

Examination Date: January 18, 2024 **Certification Number**: 24-0018J03

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Houston Astros dark red, heavyweight six-button knit jersey made by Majestic, Size 50 marked and measured; pitcher Andy Pettitte #21. Exemplars show that this was the preferred size used by the player at this point in his career. Three-color stylized Astros script across the chest in direct chain stitch (as correct for 2002-2012) beige/dark red/black. Beneath the team crest and on the left chest is his number "21" in layered twill; black/dark red/beige. Team Texas/star patch on the left sleeve, 2005 World Series patch on the left sleeve. On back the player's name is sewn in three colors of layered twill, beige over dark red over black, arched and sewn to a matching double-needle serged edge nameplate. Beneath is the player's number 21, 8 7/8" tall as correct for 2002-2012, in the same three colors. They are in the team font and correctly stitched. The MLB logo patch is sewn to the back of the collar in black, white and dark red. When authenticating Astros jerseys, I carefully compare all player lettering to team templates for their year of issue, and this one matches perfectly to specifications. Players were typically issued new jerseys for the postseason, and I will note that this one has lettering that is laser-cut, new technology for the time. This jersey was presented without provenance.

In 2005, Andy Pettitte appeared in 33 games for the Astros, all as a starter, going 17-9 with a 2.39 ERA. 2005 was the 11th season of his 18 year career. (*Baseball Almanac*) He had a standout season, helping the Astros to the 2005 World Series, His 2.39 ERA was a career-best, and second in the NL behind teammate Clemens. He was also second in the league walks/9 IP (1.66) and LOB percentage (79.7%; a career best), third in sacrifice hits (15), fifth in wins (17), and eighth in winning percentage. (.654). He held left-handed batters, who over his career have outhit righties when batting against him, to a .200 batting average, had a career-best 4.17 SO/BB ratio. (*Wikipedia*)

Manufacturer and Team Tagging: Majestic "Authentic Collection" locker tag sewn to the outer left front tail in the appropriate style for 2001. Pinch-sewn under the bottom border of this tag is a flag tab showing the size, 50. The Majestic "M" logo is embroidered in beige at the end of the left sleeve. The inside side-seam Majestic garment tag codes this as a 0062, the style designation used for on-field specification jerseys generally made only for the team's use. The Astros did not otherwise team or player tag jerseys at all in 2000-2012.

Wear & Repairs: A light table examination shows that all lettering on this jersey is original and unaltered. All stitching is tight and unbleached from washing. The lettering and the tagging is crisp, showing light use. However, the front tail tag is notably stained with red as often happens the very first time a red jersey is washed in water that is too hot. Overall, the wear to this jersey is commensurate with what one would expect from a jersey worn in only the post-season, then not used again.

Conclusion: This jersey is in very good used condition, is all original and properly lettered, and is without contrivance. It has the proper tagging. It is my considered opinion that this jersey was made to team specifications and worn by Andy Pettitte of the 2005 Houston Astros.

Letter of Professional Opinion

Andy Pettitte 2005 Houston Astros Home White Alternate Game Jersey

Examination Date: January 18, 2024 **Certification Number**: 24-0018J04

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Houston Astros pure white, heavyweight six-button knit jersey made by Majestic, Size 50 marked and measured; pitcher Andy Pettitte #21. Exemplars show that this was the preferred size used by the player at this point in his career. Supplemental Velcro closure added, Three-color stylized Astros script across the chest in direct chain stitch (as correct for 2002-2012) dark red/beige/black. Beneath the team crest and on the left chest is his number "21" in three color layered twill in the same colors. Team Texas/star patch on the left sleeve. On back the player's name is sewn in the same three colors of layered twill, arched and sewn on a white double-needle serged nameplate. Beneath is the player's number 21, 8 7/8" tall as correct for 2002-2012, in the same three colors. They are in the team font and correctly stitched. The MLB logo patch is sewn to the back of the collar in black, white and dark red. When authenticating Astros jerseys, I carefully compare all player lettering to team templates for their year of issue, and this one matches perfectly to specifications. This jersey was presented without provenance. While the jersey is without team year tagging (as is correct) it year of issue can be isolated to 2005, as this was the only season that Pettit was on the Astros and the team did not wear a commemorative sleeve patch on this style jersey.

In 2005, Andy Pettitte appeared in 33 games for the Astros, all as a starter, going 17-9 with a 2.39 ERA. 2005 was the 11th season of his 18 year career. (*Baseball Almanac*) He had a standout season, helping the Astros to the 2005 World Series, his 2.39 ERA was a career-best, and second in the NL behind teammate Clemens. He was also second in the league walks/9 IP (1.66) and LOB percentage (79.7%; a career best), third in sacrifice hits (15), fifth in wins (17), and eighth in winning percentage. (.654). He held left-handed batters, who over his career have outhit righties when batting against him, to a .200 batting average, had a career-best 4.17 SO/BB ratio. (*Wikipedia*)

Manufacturer and Team Tagging: Majestic "Authentic Collection" locker tag sewn to the outer left front tail in the appropriate style for 2001. Pinch-sewn under the bottom border of this tag is a flag tab showing the size, 50. The Majestic "M" logo is embroidered in black at the end of the left sleeve. The inside side-seam Majestic garment tag codes this as a 0062, the style designation used for on-field specification jerseys generally made only for the team's use. The Astros did not otherwise team or player tag jerseys at all in 2000-2012.

Wear & Repairs: A light table examination shows that all lettering on this jersey is original and unaltered. All stitching is tight and unbleached from washing. The lettering and the tagging is crisp, showing very light use. Overall, the wear to this jersey is commensurate with what one would expect from a jersey worn for a few games by a pitcher.

Conclusion: This jersey is in excellent lightly used condition, is all original and properly lettered, and is without contrivance. It has the proper tagging. It is my considered opinion that this jersey was made to team specifications and worn by Andy Pettitte of the 2005 Houston Astros.

Letter of Professional Opinion

Jose Altuve 2017 Houston Astros Road Jersey

Examination Date: November 4, 2020 **Certification Number:** 20-1104J03

This letter will serve as the opinion of Sports Investors Authentication LLC regarding the item in review.

Description: Road gray, six-button-front, size 40 Majestic FlexBase Houston Astros jersey issued to Jose Altuve in 2017. The player is noted wearing size 40 jerseys in the 2017 season. All two-color kiss-cut lightweight twill lettering front and back, Orange outlining Midnight Blue, HOUSTON arched on the front. 27 below and one the left panel. On back, ALTUVE arched above the number 27. The numeral 7 is signed by Altuve in silver Sharpie. (I have no opinion on the authenticity of the autograph.) The Astros Navy/white/orange disk patch is stitched to the left sleeve. The 2017 Postseason patch is stitched to the right sleeve. Navy 1/8" soutache lines the placket and rings each sleeve 1/2" from the edges. The "STRONG" disk patch is stitched to the upper left chest. This patch was added to all team jerseys from September 2 to the end of the season.

Manufacturer and Team Tagging: Two heat pressed Majestic manufacturer tags are found on the jersey (front left tail and lower right placket), indicating size "48". The second is a "2017 PROP. OF HOUSTON ASTROS" QR-barcode style tag with player-specific information. A Navy Blue embroidered Majestic logo is under the team patch on the left shoulder. There is no MLB hologram or serialized sticker on this jersey indicating its certification as game used. The inside seam tag bears the code 0730 indicating it is a team issued specification jersey, not one made for retail sale.

Wear & Repairs: A light table examination shows that all lettering on this jersey is original and unaltered. It shows no signs of wash or wear, as all elements and tagging are still crisp.

Conclusion: The jersey in review is properly tagged, lettered, and numbered. It is consistent with known exemplars. Therefore, it is my considered opinion that this jersey is genuine and was team issued and made to the specifications of Jose Altuve of the 2017 Houston Astros.

Letter of Professional Opinion

Randy Johnson 1998 Houston Astros Team Issue BP Jersey

Examination Date: January 16, 2024 **Certification Number**: 24-0116J02

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Houston Astros Midnight Blue heavyweight mesh jersey made by Russell, Size 52 marked and measured. Sewn-in elastic sleeve ends, very dark blue bands with a 1/8" dark gold stripe running through the middle, the same trim is used on the neck opening. Two button Henley neck closure. Three color stylized star logo on the left chest, sparkle-gold embroidery over black over white. On back the player's name, Johnson, is sewn in three colors of layered twill, white/black/Nugget Gold arched on a double needle serged edge nameplate made from identical mesh fabric as the jersey body. Beneath are the player's numbers #51, in the same three colors. They are in the team font and correctly stitched Johnson typically wore a size 50 jersey, so a 52 BP is a reasonable substitute. This jersey was presented without provenance.

Johnson was acquired in a trade with the Seattle Mariners in August 1998, and went 11-1 in 12 starts to finish the season as the Astros won their division. While the jersey is not team-tagged or dated in any way (as is accurate for Astros jersey of this period) the only time Johnson played for the Astros was September-October 1998, so we can assume the jersey is from 1998. Johnson was elected to the Baseball Hall of Fame in 2015.

Manufacturer and Team Tagging: Russell "Diamond Collection" locker tag sewn to the outer left front tail in the appropriate style for 1998. There is a flag tag in the neck, generally correct for BP jerseys (1998 game jerseys have no neck tag) and layered underneath the neck tag is a flag tag that says 5" extra body length". A normal size 52 jersey is 34" neck to tail. This one 36", which means it is actually 2" extra length. In my judgement, the fact that it displays any extra length is sufficient to me; Johnson was a late-season pickup by the team, and Russell likely had to scramble to get uniforms ready for him. I would suspect that there were no 5" extra length jerseys in this unique style made at the start of the season— in fact Johnson is the only player I know of who required such extreme tailoring. Educated speculation: they likely used what they had, which was 2" extra length, hoping it would be acceptable. The Russell "R" is embroidered in dark metallic gold thread at the end of the left sleeve.

Wear & Repairs: A light table examination shows that all lettering on this jersey is original and unaltered. All stitching is tight an unbleached from washing. There is some slight puckering of the back numbers as well as some slight splatter-staining of the white twill. The tagging shows signs of having been washed. Overall, the wear to this jersey is commensurate with what one would expect from just a few weeks of use, given that this was probably not his only warm-up jersey.

Conclusion: This jersey is in good lightly used condition, is all original and properly lettered, has acceptable custom tailoring and is without contrivance. It has the proper tagging It is my considered opinion that this jersey was made to team specifications and worn by Randy Johnson of the 1998 Houston Astros.

Letter of Professional Opinion/Letter of Restoration

Alan Ashby 1981 Houston Astros Road Gray Game Worn Jersey

Examination Date: November 15, 2024 **Certification Number**: 24-1115J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Sand-Knit made pullover gray road Houston Astros game jersey, size 42 (now measures closer to a size 40), #14 stitched on the back in the correct team font. Solid light tan/gray jersey body, Navy V-neck trim and up the sides of the jersey body seams. Seven-striped rainbow trim stitched into the sleeve tops. ASTROS is screened (not stitched) across the top of the front in Navy ink, a large two color five-pointed star in Navy is screened on the left chest. This specific style of the gray/rainbow trimmed jersey was worn only in 1980-1981. These jerseys are characteristically rather lightweight in construction, notably more-so than other teams' double knit jerseys. They are very uncommon in the hobby, most having been destroyed after hard minor league use.

Restoration Performed: As received, the jersey was without a nameplate. Using the team template as well as edge evidence of the ghost of the original plate, made a replacement in the original style, using fabric that matched the original as closely as possible, with a properly double-needle serged edge. Ashby was the only player to wear #14 in 1981, and the size of the original plate matches the player's short name.

Manufacturer and Team Tagging: The correct set of two Sand Knit "*Exclusive Style*" tagging is stitched to the front outside bottom tail and the fabric "Medalist Sand Knit" tag sewn on the right side. The stitching holding the tags in place is original and untampered with. The embroidered "Designed Exclusively for the Houston Astros" maker's tag to the left shows signs of heavy use and repeated washing, as the embroidery that spells out the writing is somewhat wear-obliterated. Finally, stitched to the left of these two tags is a small strip tag with Plastisol ink printing in the correct Sand-Knit hollow-letter style that reads "81". Exemplars from 1981 show that simple, two digit team tagging was the standard. There is a small wash instruction tag sewn into the inside of the side seam.

Wear & Repairs: While the tagging reveals many washings, the shoulder-top rainbow trim is in surprisingly unfaded condition. There is some puckering under the back numbers from wash shrinkage. There is an approximately 2" long team repair of a vertical rip on the back above the right edge of the nameplate. The removal of the nameplate signals that it was to be sent to the minor leagues for use after its MLB service was through, but if it was used in the minors it was well treated there. Light table examination shows that all stitching is original and untampered with.

Conclusion: The jersey in review is in good, game used condition: all original, with the nameplate on back now properly restored with lettering near-identical to original. The jersey has no alterations or contrivances of of any kind. It has a team-issue tagging. It is my considered opinion that this jersey was made to team specifications and worn by catcher Alan Ashby of the 1981 Houston Astros.

Chapter 11

Athletics

Oakland Athletics 1970-2024

Athletics 2025

Game Worn Guide to MLB Jerseys

1970-2025, Tenth Edition

William F. Henderson

Athletics Uniform History Notes

- The team, officially known as simply “Athletics” starting with the 2025 season, migrated from Philadelphia to Kansas City to Oakland. After 55 years in Philadelphia, 13 in Kansas City and 57 in Oakland, the A’s arrived in Sacramento in 2025, expected to be their temporary home for three years until a newly built stadium in Las Vegas is ready for them in 2028.
- They first adopted the green and gold color scheme for the 1963 season in Kansas City, introducing a third “alternate” uniform top which at the time was a real rarity in Major League Baseball. They had at least one alternate jersey in their set almost every year thereafter.
- The team wore vests through 1971 and numbers on the back were sewn very high up, and as a result, names had to be sewn in a straight line at the top to make them fit, made even more difficult because the tops of the vests were so narrow.
- When the A’s switched to double knits in 1972 along with most of baseball, they made especially good use of the new fabric. Using its bold colors and its multi-hued striped knit sleeve and collar trim (and wearing white shoes), the A’s remained among the most flashy of all of MLB’s teams. They dropped the vests that they had worn for many years, and changed to pullover shirts with short sleeves. For part of 1972 only the A’s kept numbers on their jersey fronts.
- The A’s wore so many different styles of jerseys in the 1970s and 1980s that it is extremely difficult to determine rules about what lettering is correct and what is not. For one thing, many of the jerseys in the hobby are well-worn (worn out?) and many have been restored in some way with names and numbers replaced. It can be difficult to determine what is original and what may not be.
- Unlike almost any other team, the A’s did business with several different jersey manufacturers simultaneously–as many as four different vendors in some years! Back in the days of pre-standardization of lettering, it is apparent that each manufacturer did its own lettering for the team – using their own interpretation of details like fonts for numbers and names, how thick the outlines were or whether player names were arched or straight. Looking at jerseys grouped by manufacturer, some similarities begin to emerge. McAuliffe, the A’s supplier for many years, used its own unique version of Varsity numbers, and its own version of the Block name font. Rawlings, Sand-Knit and Wilson each made different styles of jerseys for the team, each using their own fonts.
- Consistency was seemingly an afterthought, as even player name fonts from the same manufacturer from the same years have variations.
- There are a couple rules of thumb: during the entire double knit era, A’s numbers have always followed the same color pattern as the A’s lettering on the front.
- From 1970 through 1986, player names on all jerseys are one-color and uniquely sewn straight across the back of the jersey with no arch. Starting 1987, names become arched like all other teams.
- In 1982, Kelly green, a staple in the A’s color palette since 1963, is dropped in favor of dark green in the first sign of the team moving toward a more conservative look from the wild mix-and-match ‘70s. A white full-button style is also introduced as an alternate home jersey
- In 1987, the team moves to a full-time classic button jersey look, wearing white at home and gray on the road, and abandoning the V-neck pullovers worn since 1972.
- A green alternate with script Athletics wordmark is introduced in 1994 and is worn through 2013, when it’s replaced by a different dark green alternate with the classic A’s logo on the chest.
- Two different black alternates have short runs of one year (2000) and three years (2008–2010)
- A gold alternate, somewhat resembling the team’s classic 1970s gold jersey, is worn 2011–2018, then mothballed for six years, before being reinstated in 2025 for the team’s first year in Sacramento.
- In 2018, Kelly green returns to the team repertoire after a 26 year absence in the form of an alternate jersey that quickly becomes a popular option with players and fans.
- The temporary move to Sacramento in 2025 results in the script “Oakland” dropped from the road green and Kelly green alternate and replaced with the script “Athletics”.
- Despite the many alternate jerseys through the decades, the team has maintained remarkable consistency in its core home and road looks since 1987. The return of classic elements like Kelly green and gold alternates in recent years reflects a renewed appreciation for the franchise’s bold and unconventional uniform legacy.

A's Hit Gold?

NORM SIEBERN

"Everything's up to date in Kansas City . . ." So goes the Rodgers and Hammerstein song—and the Kansas City Athletics baseball club. When the team takes the field against the Minnesota Twins tonight at Kansas City, the Athletics will be wearing gold and green nylon uniforms. Maj. Gen. Abner Doubleday, who supposedly staked out the first baseball diamond, might find it hard to believe. Traditionally, home teams hav ealways worn uniforms which are predominantly white.

The Baseball Hall of Fame "Dressed to the Nines" database is a wonderful resource, incorporating the incredible research begun by historian and author Mark Okkonen, and updated over the years with new information. While it is very tempting to use this research as the definitive source, and although it is usually correct, I have serious doubts about it accuracy when referring to the various styles of jerseys worn by the A's in specific years in the 1980s. Therefore, on various pages, I have noted where my research disagrees with what is published there. One thing the illustration above suggests is that the Athletics have been wearing (at least) a third, alternate jersey since the mid-1960s—twenty years before this practice was adopted by much of the rest of baseball. This array of illustrations over nine years resembles a virtual army of Athletics. In reality, the team did not wear as many different uniforms in some years as the database suggests.

Left: This item from the April 12, 1963 *Kansas City Star* announces the A's new colors for the 1963 season, though the specific jersey shown in the illustration was never worn. Note that the uniforms are described as "nylon" in the caption. Today, we recognize this fabric as Durene—a nylon/natural fiber blend, not true double knits as we know them today..

Home, Road and Alternate Jerseys

1970-1971 Home White Vest

Chip Allgrove Collection

The Athletics introduced the flannel vest as standard attire in 1962 (Kansas City era), and adopted the now-iconic green and gold color scheme in 1963.

Simple green and gold sewn-on narrow knit braid adorns the arm holes and neck opening.

Notice the design of the "A" on the front, sewn in twill, it lacks the center serif (or brush stroke) that appeared later.

The vest is worn with a green-sleeved undershirt.

Player numbers are in two-color Red Sox style, green names on back are sewn in a straight line within the narrow space between the shoulders. Long names were particularly challenging to fit on the narrow upper back!

Mark Heller Collection

© GameWornGuides.com

1970-1971 Road Gray-Green Vest

Chip Allgrove Collection

The road gray-green vest is identical to the home white vest save for the color of the greenish-gray flannel fabric. Its official name is said to be "Seafoam Green."

The old flannel uniforms were worn in Spring Training at least through 1973. Most were likely shipped to the minor leagues afterwards, and surviving examples generally show signs of number changes and most are missing player names like the example shown ***(right)*** or have had them restored.

1970-1971 Alternate Gold Vest

1970

Chip Allgrove Collection

The alternate flannel gold vest is identical to the home white vest save for the color of the fabric. These gold vests are worn both at home and on the road, and represent one of the very first uses of an alternate and colorful uniform to break with the tradition of home whites and road grays.

The old flannel uniforms were worn in Spring Training at least through 1973. Most were likely shipped to the minor leagues afterwards, and surviving examples generally show signs of number changes, and most are missing player names or have had them restored.

1971

Chip Allgrove Collection

© GameWornGuides.com

1972 Home

For 1972, the A's introduced a white pull-over knit jersey with wide green and gold knit trim on the sleeve ends. Distinguish this one-year style jersey by the "A" on the front that lacks a center serif as found on 1973 and later white jerseys.

Front numbers, in the Expos font, were added after the All-Star break and remained through 1973 Spring Training only. Unusual because the back numbers are McAuliffe's version of Varsity font.

Most surviving originals probably endured several years of use in the minor leagues before being retired and are either missing front numbers or have had them replaced. Game photos of this jersey in use are elusive, as the team wore these only for Sunday home games—hence the nickname 'Wedding Gown Whites"

© GameWornGuides.com

1972 Alternate Gold

In 1972, the A's wore a gold alternate jersey, with a white "A" and white player numbers outlined in green. Notice the "A" on the front—it has only two serifs, or points, on the left side unlike in later years when there are three. Player name on back is one-color, green, sewn with no nameplate and in a straight line.

In 1972 only, the jersey featured white/green Expos-style numbers on the right chest. This was unusual because McAuliffe Varsity numbers were used on the back. It is the only known post-1970 example of a team jersey that intentionally uses two completely different number fonts on the front and back. Front numbers were added after the All-Star break and worn through the end of the season only.

Notice that there are three green stripes on the sleeve ends. Similar-looking gold batting practice jerseys have only two sleeve-end stripes. See page ahead titled "1972 A's Jerseys: An Enduring Mystery." for more insight.

© GameWornGuides.com

1972 Alternate Green

Though listed as an alternate jersey, the sheer number of game photos showing this style being worn in 1972 both at home and on the road indicates it was a popular choice for the team. The 1972 version of the "A" on the front has only 2 serifs (fancy brush-strokes) on the left side, lacking the central serif that appeared in later years. The 1972 jersey is the only year that featured front numbers using the Expos number font. Back numbers were a blocky version of Varsity, different from those used on the gold or white jerseys in 1972. It is also notable that completely different number styles were used on the front and back; we can't recall another example of this happening in baseball post-1970. Front numbers were added by the team midseason. Names on back were used in one-color white. They were sewn straight across the top. Extremely few of these jerseys remain unaltered in the hobby today—the reason for that is suggested on the next page.

1972 A's Jerseys: An Enduring Mystery

This publication has been improved over the years because readers write to share with me things they remember about teams' uniforms from decades ago. Sometimes I can find photos to back up the claims, other times not. But the mystery of the numbers on the front of Oakland Athletics 1972 jerseys of all three colors came up just after the release of the Seventh Edition of this guide. "I don't think the A's wore numbers all season on their 1972 jerseys" challenged reader Scott Johnston. Well, I knew they certainly wore them in the World Series. There are lots of photos of those games. But some 53 years later finding "every-day" news photographs from that era is not always easy. Scott shared this photo from the 1972 All-Star Game posted on Uni-Watch, proving that at mid-season the A's players were not wearing front numbers. Referring to a film of the event he had seen he said, "There were other A's on the team too, and they wore green jerseys, also without the front numbers."

We've since learned from long time A's equipment manager Steve Vucinich that the front numbers were added to all three styles of team jerseys after the All-Star break. We now have photo proof ***(below)*** that the front numbers remained in 1973 Spring Training.

And then…?

I have long wondered what happened to the front-numbered 1972 A's jerseys, those without the center flourish on the "A." The sidebar helps explain why there seem to be so few in the hobby. I suspect the odd Expos-style numbers were removed and most of the jerseys recycled into 1973. For one more word on this topic, see the page on the 1974 World Series near the end of this chapter.

The A's 'Go Green':
Recycling, 1973 Style

Some (or perhaps many) of the 1972 green, and gold with white lettering game jerseys were recycled into 1973.

Looking at game photos from the 1973 season, some players on the field have green jerseys with the 1972 style *"A"* on the front ***(left)***, one which is missing the center serif "flourish" seen on jerseys from 1973 and later. It is likely that returning players who had not abused their 1972 jerseys were reissued them again in 1973, albeit with the front numbers stripped off.

1973 Spring Training

© GameWornGuides.com

1973-1981* Home

For 1973 the front numbers disappear again from the jersey, and the "A" now includes a third brush stroke serif on the left side. Everything else stays the same. Still mostly worn for Sunday home games through 1980. Two-color McAuliffe A's Varsity numbers on back gold/green. One-color names in green, sewn straight across the back, with no curve, no nameplates. This style was used as the full time home jersey in 1981, the final year of its use.

* The Baseball Hall of Fame "Dressed to the Nines" database lists this jersey as an available alternate jersey choice for the team through the 1984 season. However, I have not been able to locate game photos of it in use after 1981, nor have I ever come across a jersey of this style tagged later than 1982. Some experts believe that the 1982-tagged set was created but never used by the team. I would welcome information from collectors that document the use of this jersey after 1981.

1973-1980* Alternate Green

1976 with sleeve patch removed

1973

This jersey is different from the 1972 style in that it has no numbers on the front. Back uses A's Varsity two-color white/gold numbers on the back, one-color (white) names sewn straight across the upper back without a curve. The "A" is taller too. In all cases, there are three gold stripes on the sleeve ends of green game jerseys. Similar-looking green batting practice jerseys from later in the era have only two sleeve-end stripes.

1976

* The Baseball Hall of Fame "Dressed to the Nines" database lists this jersey as an available alternate jersey choice for the team through the 1982 season. However I have not been able to locate game photos of it in use after after 1980, nor have I come across any examples tagged beyond that year. I would welcome information from collectors that document the use of this jersey after 1980.

1973 Alternate Gold (White “A”)

- There were two styles of gold jerseys worn by the A’s in 1973. This version matches the same style as worn in the previous year, white lettering edged in green. Notice the “A” on the front, it lacks the center serif (or center brushstroke flourish) that appears on the newly introduced 1973 white, gold, and green jerseys. On the next page you will see the new style of gold jersey with green/white logo and lettering, newly introduced for 1973. I still have never seen a 1973 year-tagged jersey in this style.
- Examining game photos from the 1973 season leads me to conclude that these likely are actually the set of 1972 jerseys, simply with their front numbers removed. I would conclude that this style of jersey was worn far less often in 1973 than the ones on the next page, judging only from the imbalance of existing game photos depicting this style in use.
- These white-lettered jerseys today are ultra rare, and the few that survive probably change hands privately among the select few who covet them. Given that the A’s won the World Series wearing these in Game 7 the prior year, one might expect at least some “common” original examples to have been preserved. However, it is likely that the entire set was sent to the minor leagues and used until worn out and discarded. In those years game jerseys did not yet carry the broad collector interest or cachet they hold today.

© GameWornGuides.com

1973 Alternate Gold (Green "A")/1974-1980 Alternate Gold

Two-color A's style McAuliffe Varsity numbers on back only, green/white. These jerseys feature three green stripes on the sleeve ends. Also note that the "A" on the front has three serifs (or flourishes) on the left side. Player names were sewn straight across the shoulders without an arch.

1970s A's "Mix-and-Match"

Although the term "Mix-and-Match" is commonly associated with the 1977–1980 Pirates, the A's embraced this concept as early as 1972. With at least three jersey colors and a trio of distinct pant colors to choose from during most of the 1970s, the Athletics engaged in mix-and-match combinations from time to time. Other combinations may have existed, but these are the only ones documented in my archive.

© GameWornGuides.com

Athletics Jerseys Sent to the Minor Leagues

Burlington Bees

Clockwise from above left: Ghost evidence when the numbers were removed front and back show that no other numbers had been there before, and that the replacement numbers were a reasonable match to the originals. Top right and center, mid-1960s examples of Burlington Bees jerseys, and a modern reproduction of a 1971 Bees jersey. Below, side by side, removal of the front crest shows the ghost shadows of the Bees' crest, highlighted in pink. The dark spot is a stitched team repair backed up with a scrap of fabric.

The A's were remarkably frugal—even compared to other cost-conscious teams. It was not uncommon for the team to re-use jerseys at the MLB level for several years, either as a spare or backup for the same player from the previous year, or re-lettered for newly acquired players. Compared to many other teams, the Athletics have a modest minor league system typically consisting of four or five affiliates as a part of the family. Of these teams many were named "A's," just like the parent club, so they could use the A's MLB uniforms by simply removing the player names from the back. Nearly every A's uniform from the 1970s through the mid-1980s was, in my experience, sent to the minors for extensive reuse. For those jerseys where "OAKLAND" was sewn on the front, this re-use was far less common. I have yet to encounter any jerseys stripped of an "OAKLAND" wordmark and re-lettered for something else.

One team that received a fair number of hand-me-downs in the A's farm system was the Burlington Bees. I have restored a number of Athletics flannels that once had the Burlington Gothic-B on the chest. Click on the image below to read my writeup of the restoration of one that had been issued first to future Hall of Famer Reggie Jackson!

© GameWornGuides.com

1981 Road

1981 gold jerseys dropped the prominent capital "A" from 1980 and gained this vertically arched "OAKLAND" wordmark. Note the three sleeve stripes. The "Dressed to the Nines" database incorrectly shows the 1981's with two stripes—a detail also incorrectly depicted in earlier editions of this guide. Only the 1981 examples of this jersey style used Kelly green lettering, while the team's other uniform styles transitioned to a darker green. In 1982 the gold jersey also transitions to darker green lettering. It appears that both Rawlings ***(above left)*** and McAuliffe ***(above right)*** provided a set of these jerseys to the team in 1981. Note that each manufacturer used its own distinct 'house' number font. This style was used as the full time road jersey in 1981.

© GameWornGuides.com

1982* Home/1983-1984 Alternate Home

On this style jersey the numbers switch to Wilson's Varsity Standard style. Numbers on back only, green/gold. Knit sleeve ends are three stripes: green/gold/green. One-color names in green, sewn straight across the back without an arch. Primary home jersey for 1982, and a home alternate in 1983–1984.

**The extensive Baseball Hall of Fame "Dressed to the Nines" database shows this style as starting 1981, however I have never come across 1981 year-tagged jerseys or game photos in all my years of collecting. This style likely actually started with 1982.*

Left: *Most jerseys we have come across in this style were made by Wilson, but this well-worn 1982 example at right has Sand Knit team tagging. Not surprisingly, note the use of Sand Knit Varsity numbers. This is the only Sand-Knit example we've encountered*

1982-1984 Road

The Hall of Fame's "Dressed to the Nines" database and prior editions of this book lists this jersey style as beginning in 1981, though evidence indicates it was actually introduced in 1982. Two-color dark green/gold OAKLAND on the front. Sleeve and collar trim is thin green/gold/green, narrower than prior years' jersey designs. I believe that these gray jerseys are made exclusively by Sand-Knit. Only this gray jersey features two-color Block numbers with serifs; sewn on back only, green/gold. One-color names in green, in Sand-Knit Block usually sewn straight across with no curve. The 1982 tagged Underwood jersey ***(bottom right)*** and Lopes jersey ***(bottom left)*** have exaggerated curved names, the only ones like them I have seen. Most likely done on the whim of the seamstress and not because any rule was being followed.

Dark green replaced Kelly green in the team's color palette beginning in 1982.

© GameWornGuides.com

1982, 1985-1986 Alternate/1983-1984 Alternate Gold

Two-color green/white Oakland on the front, green/gold/green sleeve and collar trim.

Two-color Block numbers on back only, green/white

One-color names in green, sewn straight across the back with no curve.

Both Rawlings and Sand-Knit made sets of gold jerseys in 1986, each using its own distinct font styles.

Bill Henderson Collection

Chip Allgrove Collection

© GameWornGuides.com

1983-1984 Alternate Green/1985-1986 Road

A darker green replaces the previously used Kelly green in the team's color palette.

Two-color white/gold Oakland vertically arched on the front, Gold/green/gold sleeve and collar trim.

Worn as an alternate jersey 1983–1984, then as the primary road jersey 1985–1986.after the gray jersey is dropped.

Two-color Block numbers on back only, white/gold.

One-color names in white, sewn straight across the back without an arch.

The jersey directly above is made by Sand-Knit. A skilled observer can identify it by the style of the back numbers (and, under very close examination, the name on the back as well), which use Sand-Knit's own variant—slightly different from all the Rawlings jerseys shown on this page.

1983-1986 Home

According to my research, these jerseys debuted in 1983—conflicting with the Hall of Fame's 'Dressed to the Nines' database, which lists 1986 as their first year.

White jersey body with green/gold/green sleeve and collar trim. It's rare for a home jersey to display the city name instead of the team name—a notable design quirk. The 2009–2019 Texas Rangers' jerseys are another rare example. Two-color Block numbers on back only, green/gold. One-color names in green, sewn straight across the back with no arch.

© GameWornGuides.com

1972-1986 Athletics Team Tagging

McAuliffe was the exclusive maker of A's jerseys 1972–1980. Four tags are clustered, seemingly in whatever order the seamstress desired that day. Tags are usually on the center of the front tail, sometimes outside and sometimes inside the garment.

** Previously I have said I have never seen a credible 1982 year tagged McAuliffe A's jersey. This tag is from a photo of a Billy Martin-lettered size 38 Wedding Gown White jersey that may be a sample, in my judgment. I share this here for information only should another example surface.*

Wilson contributed the A's button-front alternate white jersey from 1981–1984

Sand-Knit contributed a few jersey styles in the 1981–1986 timeframe. Sand-Knit jerseys are tagged with a strip in the inside back tail, and have the "Exclusively for the Oakland Athletics" tag on the outside front tail.

The Athletics' Changing Color Palette

Everyone thinks of "green and gold" when they imagine the A's uniforms. This unique MLB color scheme has been the team's trademark since 1963 when the team was located in Kansas City. The team brought the colors with them to Oakland in 1968 and have used them ever since. Careful observers may notice that the shades of green and gold have evolved over time.

Greens: The original bright Kelly green lettering changed to dark green in 1982, then to a green hue with a high blue content used for a few years in the early-to-mid 1990s, a color I cannot find reproduced for lettering twill today. They returned to dark green again in the 1990s. Around 2016 they changed it again to "Packer Green", a very dark shade with a high percentage of black mixed in—yes, the same shade used by the Green Bay Packers. Oddly, along with this change to a darker green for team lettering in 2018, they simultaneously introduced a Kelly green-bodied alternate jersey.

Golds: The shades of gold used by the team for their lettering have changed over the years, too. Liebe/Webster "Gold" was used through 1991. From 1992–2002, the team switched to a new shade named, appropriately, "Oakland Gold" which adds a bit of red. Its RGB code places it in the "orange" family. Gold is switched back to the old lighter shade when Majestic takes over in 2003. Starting in 2024, new Nike fabrics are used which do not precisely match the legacy colors.

The swatches above were generated by scanning the actual tackle twill lettering used on A's jerseys using a NIX color sensor. The top number in each set is a numeric hex code that represents the formulation. Below, each set of three numbers separated by commas is that color's RGB code—red, green, blue. Entering these codes into a graphics program (like Adobe Illustrator or Photoshop) will reproduce these scanned swatches.

1983-1993 Athletics Team Tagging

Rawlings began supplying jerseys to the A's in 1981 and was the team's primary provider from 1985 to 1991. Rawlings jerseys typically tagged on the inside front tail.

Russell takes over, as it becomes official supplier to MLB in 1992, and the Athletics stay with Russell exclusively through the end of 1999. Russell jerseys seem to be devoid of any team/year/set or player name/number tagging, featuring only special tailoring tags ***(bottom right)***. Russell tags are on the outside front tail. Russell team-issued jerseys have no tab tags in the back of the neck, and instead place them below the jock tag on the front tail.

1992–1999: No year tagging, just tailoring instructions

2000-2001, 2008-2013 Alternate Green/2002-2007 Alternate

2001

Patch on left: 2000–2003. Patch on right: 2004–2013.

This version retained the same design as the 1994–1999 edition—a button-front jersey made of solid, non-mesh fabric Numbers added to front in 2000 and MLB logo appears on the back of the collar. Rawlings becomes the team's supplier for three seasons (2000–2002) and jerseys are date tagged by Rawlings. Majestic takes over for 2003 and continues year tagging. Elephant-with-sunglasses sleeve patch continues through 2003, then is replaced by the green elephant-on-ball for 2004–2013. All lettering two-color gold/white. Names on nameplates used through 2009; starting 2010, NOBs are direct-stitched without nameplates. In 2000, it is is barely worn—if at all—having been functionally replaced by the short-lived black alternate. In 2001 it returns as the primary alternate, used both home and away.

2003

2010

© GameWornGuides.com

2000-2001* Alternate Black

Steve Kraljic Collection

It seems that between 1998 and 2000, half the teams in baseball experimented with black: adding a black alternate jersey or adding black drop shadowing to their team script or player names/numbers. The Athletics succumbed to the trend for 2000, launching a black alternate jersey with two color green/white numbers and name. Player names were arched in standard style across the back. This jersey displaced the green jersey as the main alternate for most—if not all—of 2000, before being unofficially retired at the end of the season.

** Although the official MLB Style Guide lists this black alternate as available from 2000-2005, it was only worn on the field in 2000, and while we have now seen at least a few examples team tagged for 2001* ***(right)*** *we do not believe the team issued these to players or used them on field in 2001 or after. This style remained available as a retail 'Authentic' item for several years.*

© GameWornGuides.com

2008-2010 Alternate Home Black

Bill Henderson Collection

The black alternate is reintroduced and redesigned for 2008, becoming a home jersey option. All lettering—team script, player name, and number—are switched to three-color white/green/gold. Note the narrow green outline and the unusually wide gold outline. Elephant-on-ball patch matches that used on other team jerseys—green and white. These were supplied to the team in both full-weight knit and Cool Base fabric.

© GameWornGuides.com

2011-2024* Alternate Home Gold

For the first time since 1986, the Athletics have a gold jersey in their lineup for 2011. It features the green-and-white "A's" logo, last seen on a regular game jersey in 1980. This Cool Base jersey features front-placket and sleeve-end trim in white and green. The green 'Elephant on a Ball' patch is sewn to the left sleeve. Initially worn only at home, the A's began wearing these gold alternates for some road games in June 2011—likely for good luck, as they had been winning in them at home. By 2012, the jersey reverts back to its originally intended home-only status and continues as such for the rest of its run. No nameplates are used on these jerseys. Our research shows some players had these issued in full-weight fabric.

** While this jersey remains included in the official MLB style guide through 2024, our sources tell us that these were not issued to players after 2018, being functionally replaced by the Kelly green alternates.*

2011-2024* Alternate Home Gold, continued

2015

2017

Note: Although these jerseys remain listed as an alternate through 2024 in the MLB Style Guide, they have not been worn on-field since 2018, it does not appear any Nike versions were made for team use from 2020–2024. If any surface, they will be documented in future editions of this guide.

© GameWornGuides.com

2014-2021 Alternate Green

After a 20-year run, the A's update their green jersey, creating a version that stylistically matches the gold alternate introduced in 2011. It has white lettering outlined with gold on all adornment and has gold/white/gold knit braid trim on the placket, collar, and sleeve ends. The style recalls the popular green pullover alternate worn by the club from 1973–1980. Numbers appear on the back only, in a bold version of Block. Player names sewn without nameplates. The green elephant-on-ball patch is on the left sleeve. The style is worn for both select home and road games. Nike takes over manufacturing in 2020. The jersey is discontinued after 2021.

2016: Flex Base Jersey Construction and Branding

Read the full story on MLB's adoption of Flex Base jerseys for 2016 in Chapter 2.

In 2016, all teams adopt Majestic's new "Flex Base" on-field game jerseys, which are made of Cool Base fabric, but with several new elements designed to make them lighter and more breathable. The new jerseys have mesh side panels that run the length of the jersey, and one on the back tail called the "Air Belt." They also use "Kiss Cut" layering for front decorations, names, and numbers, which Majestic says is 10-20% lighter than traditional layered twill. Finally, the MLB logo on the back neck is now a rubberized patch, called CFX by Majestic, and the heat-pressed tag on the front tail differs from Cool Base jerseys of old.

2024 Nike “Vapor Premiere Elite” Jersey Template

Nike Flex Base 2020–2023

Nike Vapor Premier Elite 2024

Following league-wide sweeping changes to MLB jerseys with all teams switching from Nike’s 2020–2023 continuation of the Majestic Flex Base jersey shell to its new Vapor Premier Elite (VPE) template, the jerseys of the 2024 season become an anomaly—a “one and done” season of changes that brought intense scrutiny from players and fans alike. Based on the negative feedback, especially from MLB players, Nike rolled back some but not all of the 2024 changes in time for the 2025 season.

The full rundown of the changes is outlined earlier in “The Basics” chapter, but generally speaking, 2024’s crop of jerseys had changed from earlier versions in several key ways.

- VPE home jerseys are off-white, or light cream color. The earlier Flex Base white jerseys are a bright, purer white. Grays are standardized.
- The front placket is narrower on VPE, which often causes team wordmark lettering that crosses the placket to break differently.
- Neck and sleeve trim elements (when used) are no longer sewn on top of the jersey material, but are now “sewn-in” to the jersey at the seams. Placket trim adornment remains the same, though the trim is now spaced closer together with the narrowing in placket size.
- For improved visibility, the MLB logo on the back of the jersey is moved several inches lower onto the back, down from the collar placket area where it had been since 2000.
- VPE loses the integrated mesh side and back tail panels that had been part of the Flex Base jersey template.
- Player names on VPE are much smaller, and for many teams are done in a standardized block font, all using a much steeper, nearly semi-circular arch.
- For teams with front numbers, the new 2024 font is simply always a reduced size of the back numbers. This was not the way it had been in the past for most teams, with front numbers being a font variant (smaller but usually wider and bolder) than the back font.
- Team logo sleeve patches, and in some cases sponsor sleeve patches change from traditional raised embroidery to flat printed plastic or to sublimated cloth/twill
- All lettering is done using a new more lightweight (thinner) kind of matte-finished twill (commonly called “Nike Twill”). Most, but not all jerseys incorporate barely visible micro-perforation on the numbers, front and back.
- Universally, nameplates are no longer used.

© GameWornGuides.com

2024 Home

The switch to Nike's Vapor Premier Elite (VPE) results in a handful of changes to the Athletics clean, classic home jersey. Most visible are the league-wide rescaling of the back names and numbers, making them smaller, and arching the name lettering more prominently. Front numbers are also scaled down and move closer to the team script. The narrower placket on VPE jerseys also makes the team script break in a different, and more awkward location than before. The Elephant-on-Ball patch returns, varying in sleeve placement depending on the handedness of each player, despite the team not having an ad patch. The patch is now thinner and more flexible than before as well. It is unclear if the team opts for perforated numbering, more research is required.

© GameWornGuides.com

2024 Road

The switch to Nike's Vapor Premier Elite (VPE) results in a handful of changes to the Athletics clean, classic road jersey. Most visible are the league-wide rescaling of the back names and numbers, making them smaller, and arching the name lettering more prominently. Front numbers are also scaled down and move closer to the team script. The narrower placket on VPE jerseys also makes the team script break in a different, and more awkward location than before. 2024 Alternate Kelly Green

The switch to Nike's Vapor Premier Elite (VPE) results in a handful of changes to the Athletics Kelly green alternate jersey. Most visible are the league-wide rescaling of the back names and numbers, making them smaller, and arching the name lettering more prominently. Front numbers are also scaled down and move closer to the team script. The A's opt for perforated front and back numbering on this jersey. The narrower placket on VPE jerseys also makes the team script break in a different, and more awkward location than before. Sleeve-end trip moves from being a sewn-on braid to a sewn-in trim, and becomes slightly narrower as a result. The Elephant-on-Ball patch returns, varying in sleeve placement depending on the handedness of each player, despite the team not having an ad patch. The patch is now thinner and more flexible than before as well. Note the change in style code from FZ34 on the Nike Flex Base template to FZA1 on the VPE.

© GameWornGuides.com

2025 Home

The 2025 season brings minor modifications to elements of the VPE template across all teams' non-gray jerseys, a step toward more comprehensive changes to come for the 2026 season. Among them, back name and all numbers are enlarged, in most cases, back to 2023 sizes and font styles, and perforated numbers are gone. Overall, except for the lower MLB logo on the back of the jersey, these look very close to the 2023 version, minus the Flex Base side panels. The Athletics' 2025 jerseys have the Rickey Henderson memorial patch and Sacramento patch on one sleeve, and a sponsor patch on the opposite sleeve. Patch locations vary based on player handedness.. The jersey also features the new-for-2025 white Nike jock tag used on a handful of jerseys around MLB. Otherwise, these remain the same as in 2024.

© GameWornGuides.com

2025 Road

With their temporary move to Sacramento, the A's drop all references to Oakland from their uniforms, so their road jerseys switch to read simply "Athletics." Otherwise, the 2025 season brings many changes to road gray jerseys across MLB. The 2024 VPE gray jerseys suffered from significant sweat-staining issues during games, so 2025 gray jerseys revert back to the same fabric used for Flex Base, but applied to the VPE template (no mesh side panels or "Air Belt" back panel). Also, unless a team has contrasting trim that encircles the collar opening, the superfluous, jersey-colored set-in band of trim (which was largely invisible) is also deleted. Since this is still the VPE template, the placket is smaller than Flex Base, so placket trim appears closer together as it did in 2024, rather than how it appeared in 2025. Sleeve patches also revert to full embroidery, back from printed or lightweight embroidered patches. The Athletics' 2025 jerseys have the Rickey Henderson memorial patch and Sacramento patch on one sleeve, and a sponsor patch on the opposite sleeve. Patch locations vary based on player handedness.

© GameWornGuides.com

2025 Alternate Gold

As far as our research can tell, the A's last wore their gold alternate jerseys in 2018, though the style remained in the MLB Style Guide through the 2024 season. Upon the club's temporary move to Sacramento, during which all references to "Oakland" were scrubbed from their uniforms, the team resurrects the gold alternate for 2025. Overall, it is the same jersey as last seen in 2018 applied to the 2025 version of Nike's VPE template. As such, aside from a few minor details, it is almost identical to how it last appeared. Changes include the lower MLB logo on back neck, and with VPE's narrower placket, the front knit trim is a little closer together than before. The neck and placket trim is slightly different too, with the bands of white/green/white about equal in width, where the green band was wider before. Sleeve-end trim is now sewn in to the jersey rather than on it, so it appears right at the end of the sleeve instead of slightly above the end as in the last iteration. The Athletics' 2025 jerseys have the Rickey Henderson memorial patch and Sacramento patch on one sleeve, and a sponsor patch on the opposite sleeve. Patch locations vary based on player handedness.

Left: *A 2017 Flex Base version of this style for comparison.*

Batting Practice and Spring Training Jerseys

1975-1977 Green and Gold Warmup Pullovers

Team warm-ups were a new concept in the mid-1970s; very few teams had them. This pullover with a wide elastic waistband might have been made from a cut-down game jersey, and I have no photos of players wearing one. But the McAuliffe tag set was purposely sewn inside the waistband. Examples shown from our archives are tagged 1977 (green) and 1975 (gold), both worn by A's trainer, Joe Romo.

1976 photo of Joe Romo, A's trainer, wearing green warmup pullover. Note 1976 Liberty Bell Bicentennial patch on left sleeve.

© GameWornGuides.com

1980-1982 Gold Batting Practice (Hollow “A”)

- Gold mesh with screen-printed green-outlined hollow A’s logo; these may have been Spring Training issue only.
- Alpha Sportswear, Inc. is the manufacturer, also made a similar style of BP jersey for the Giants around the same time. Not terribly good quality.
- Green/gold/green sleeve stripes, green V-neck trim.
- Heavy vinyl numbers on the back are heat-pressed on, not sewn.

© GameWornGuides.com

1980-1994 Gold Batting Practice (Green "A")

Early variant ***(top left, bottom right)*** is mesh only, has thick green/white/gold sleeve striping and neck trim (1980–1982). More common style ***(above left, near right)*** has green/gold/green neck trim and thick sleeve striping and is seen in both mesh and solid fabric. Alpha-made jerseys ***(above)*** are mesh, have a large "A's" logo on front, a rounded V-neck collar, and use an Alpha house-version of Varsity font. Eariler Majestic versions ***(top right)*** are solid lightweight fabric, have a smaller "A," a very pointed V-neck collar, and use a different number font (note very odd #5). All versions are tackle twill-lettered, not screened on. BP jerseys were not carefully controlled in this era; it's very likely multiple styles were worn on the field at the same time.

© GameWornGuides.com

1980-1994 Gold Batting Practice (Green "A"), continued

Rawlings (solid)

By the mid-to-late 1980s, gold BP jerseys are supplied by Rawlings and Majestic, joined by Russell in the early 1990s. Both solid and mesh fabrics are used. Rawlings jerseys have narrower sleeve stripes compared to Majestic and Russell ***(bottom right)***. Majestic solid fabric jerseys have a pointed V-neck compared to Rawlings and Russell rounder versions. All versions are tackle twill-lettered, not screened on.

On Rawlings jerseys ***(top left, top right)***, two-color Block with Serif numbers in two-color green/white. 1992 Russell mesh jersey ***(bottom left)*** uses two-color Varsity numbers on back. 1992 solid-fabric Majestic jersey ***(below)*** uses Majestic's house Varsity number font. All of versions are lettered with tackle twill and not screened on. Typical of many teams in this era, BP jersey consistency was an afterthought.

1990 Rawlings (mesh)

1992 Russell (mesh)

1992 Majestic (solid)

Above: *Note the difference in greens and stripe width used by Rawlings (top) and Majestic (bottom).*

© GameWornGuides.com

1986-1994 Gold Batting Practice (White "A")

Steve Kraljic Collection

- Majestic made. Tagging style dates these back to at least 1986.
- Solid lightweight fabric construction, not mesh. Note the very pointed V-neck design.
- Numbers use Majestic's in-house Varsity style.
- Sewn-on tackle twill, not screened-on.

© GameWornGuides.com

1984-1992 Green Batting Practice

Steve Kraljic Collection

This style is seen in both mesh and solid fabric. Made by Majestic, Alpha, Rawlings, and Russell. These look similar to the regular 1972–1980 game jersey, except there are no names on back and only two gold sleeve stripes (not three) and the sleeve stripes are narrower.

1989 Rawlings ***(top left)*** and 1992 Russell ***(bottom left)*** both use two-color Block bold with Serifs on back only–white/gold. Majestic uses their house Varsity number font. Apparently, the team did not care, allowing each manufacturer to use their own fonts.

Rawlings jerseys have narrower sleeve stripes compared to Majestic and Russell versions. Majestic solid fabric jerseys tend to have a more pointed V-neck compared to Rawlings and Russell versions.These are also used in Spring Training.

Above: *This baseball card shows what is probably a Majestic version of the BP jersey with very wide knit trim/sleeve stripes.*

© GameWornGuides.com

Batting Practice — Modesto Minor League

These are shared here only because there are so many of them floating around. The A's minor league affiliates often use uniforms that very closely copy the look of the MLB club. They are often made by the same manufacturers with similar tagging. Details of the jersey trim, team logo and the fonts of numbers used on them differ from the big-league club's. When offered for sale, they are often claimed to be game-used MLB jerseys.

1997

1995–2001

- Green mesh pullover, matches the home alternate uniform in design.
- It features numbers only—no names on the back—in two-color gold/white.
- The sleeve patch varies by year.
- Elephant-with-crossed-bats patch was used from 1993–1994, while Elephant wearing sun-glasses appeared from 1995–2002

Early 1990s-2000 (or later) Alternate Batting Practice Zip-Neck

1991–1992

Here are three different examples of zip-neck Majestic "*Gamewarmer*" jerseys. These were released in the early- to mid-1990s, and while we have found at least one game-worn example for every team, they never proved popular except for a couple of teams. The A's likely issued them only to players who requested them, even sewing player numbers onto the back—something not all teams did. In any event, they were not popular and are rather uncommon to find today.

The example above lacks knit trim on the sleeve ends and the neck, while the other examples have both. We can tell that these two are from 2000 or later, as they have the MLB Silhouetted Batter on the back of the neck and the Majestic twin-peaks logo on the sleeve.

© GameWornGuides.com

2003-2006 Batting Practice

Bill Henderson Collection

Majestic's first attempt at a moisture-wicking fabric is tried out on team batting practice jerseys for the 2003 season. The material is soft and lightweight, but fades quickly in sunlight and is highly prone to snags—even from a fingernail. Identify by gold sleeve inserts. Elephant-with-sunglasses patch appears on the left sleeve.

The back has two-color numbers in gold/white, with no player names. All lettering and numbers are done in tackle twill.

© GameWornGuides.com

2007-2010 Batting Practice

In 2007, all Major League Baseball teams adopted a new one-button, Henley-necked Cool Base batting practice jersey. Very sheer and lightweight, these jerseys feature logos, lettering, and numbers that are no longer sewn on; instead, they are heat-applied appliqués.

The A's version is solid green with a bright gold side panel insert. The back features two-color block numbers in gold/white, with no names.

© GameWornGuides.com

2011-2013 Batting Practice

Like all MLB teams, the Athletics redesigned their batting practice jerseys in 2011, switching to a button-front style. Although the overall appearance remains similar, the lettering returns to layered twill, replacing the lightweight flocked style used previously. The side panels are bright gold. Numbers on the back are in block-bold style, two-color—just like the Athletics script on the front.

© GameWornGuides.com

2014-2016 Batting Practice

Major League Baseball once again redesigns BP jerseys league-wide for the 2014 season, and the Athletics return to their classic warm-up look last used in 1992. Gold side panels cover the under-sleeve area. The jersey features green/gold striped knit trim bands on the sleeve ends and neck opening. A plain white 'A's' logo appears on the left chest, with two-color white/gold twill numbers sewn on the back and no player names.

© GameWornGuides.com

Read the full story on MLB's new for 2016 Spring Training Jerseys in Chapter 8.

2016 Spring Training

For the first time in 2016, MLB introduces a Spring Training-specific jersey intended for workouts and preseason games. Based on the Flex Base game jersey template, the jersey features printed twill decorated with "2016" and Spring Training symbols as the main twill layer for every team. The Athletics use their regular-season green alternate—minus the player name on the back—as the basis for their Spring Training jersey. The back numbers are white patterned twill with a gold outline. The jersey also features a rubberized CFX patch on the right sleeve, styled like an Interstate highway sign, reading "2016" and "AZ," representing where the Athletics spend Spring Training.

© GameWornGuides.com

2017 Spring Training

Spring Training-only jerseys return for all teams in 2017 with minor design modifications. Just as in 2016, the jersey is based on the Flex Base game jersey template and features special printed twill. This year, the twill is decorated with “2017” and Spring Training symbols. All teams now use the same twill: single-color white with gray sublimated printing, replacing the unique team-specific combinations from the prior year.

The Athletics again use their regular-season green alternate—minus the player name on the back—as the basis for their Spring Training jersey. The back numbers are white patterned twill. The jersey features a recolored version of the rubberized CFX patch on the right sleeve, styled like an Interstate highway sign, reading “2017” and “AZ,” representing where the Athletics spend Spring Training.

© GameWornGuides.com

2017-2019 Batting Practice

With many players opting for lightweight cage jackets, which are devoid of player identification, instead of traditional BP jerseys with player names and numbers, Majestic introduces a replacement product that may be an attempt to gain acceptance by the pros on-field while being more attractive to fans at retail. New for 2017, official team batting practice jerseys are replaced with what Majestic calls a 3/4 Sleeve BP Trainer. The new hybrid is cut in a pullover jacket silhouette, including a short zipper at the neck, but made of Cool Base jersey material. The underarm and back panels are of Cool Base mesh, like the sides and tail of Flex Base jerseys. Team logos and other lettering are in what Majestic calls “lightweight twill” (as described in Chapter 8). The Majestic logo is applied to the middle of the left sleeve, and a new, heat-pressed Cool Base tag adorns the left front tail. The Athletics jersey is green with green back with yellow underarm gussets. The white A's logo, also seen on their caps, appears on the front left chest. The back of the jersey is blank. Player number in gold/white Block on the left sleeve.

© GameWornGuides.com

2018 Spring Training

The 2018 Spring Training jerseys continue the general design introduced the previous year. Player names and numbers use each team's regular fonts in a single layer of twill printed with Spring Training– and 2018-specific patterns.

The Athletics use their regular-season green alternate—minus the player name on the back—as their base. The back numbers are sewn on in white patterned twill. A new CFX patch—shaped like home plate—is stitched to the right sleeve, featuring "2018" and "AZ," representing their Spring Training home.

© GameWornGuides.com

2019 Spring Training

The 2019 Spring Training jersey represents the latest evolution in the design trend of the past three years. This version abandons the single-color printed twill used in recent years, returning to regular-season, multi-layered team-color twill as seen in 2016—but without that year's printed patterns. The Athletics use their regular-season dark green alternate—minus the player name on the back—as the base. A new CFX patch appears on the right sleeve, featuring "2019" and "ARZ," referencing their Spring Training home. The back numbers are white/gold.

© GameWornGuides.com

2020-2023 Spring Training

Spring Training is simplified league-wide for 2020. For the first time since 2016, Spring Training jerseys eliminate the special sleeve patch indicating the year and location of a team's Spring Training home. The lettering now matches the non-patterned, multi-layered twill used in regular-season games. As a result, many teams' Spring Training jerseys are identical to their regular-season alternates. For 2020–2023, the Athletics use their regular-season dark green alternate—minus the player name on the back. The back numbers are white/gold.

© GameWornGuides.com

Special Events Jerseys

1992 Turn Back the Clock to 1968

Left: *Close-up of game-worn embroidery from a 1968 jersey,*

Left: *Close-up of the 1992 recreation, with layered twill lettering sewn to the jersey using a green embroidery stitch. Not an exact match, but close.*

The Athletics invited the California Angels to join them in their very first Turn Back the Clock game on August 16, 1992. The A's wore their white 1968 vests with "Oakland" spelled across the fronts. The Angels wore replicas of their road gray 1965 suits.

These uniforms were made of double-knit fabric by Russell. All ornamentation was done in tackle twill. Originals in 1968 featured all-embroidered wordmark; the reproductions had two-color layered twill wordmark and numbers (not three) sewn onto the jersey with a wide green embroidery stitch.

Steve Kraljic Collection

© GameWornGuides.com

1994 Turn Back the Clock to 1955 PCL Oakland Oaks (Road)

Steve Kraljic Collection

These gray road flannels were made by Ebbetts Field Flannels for the A's to wear as the 1955 Oakland Oaks of the old Pacific Coast League, both at home and on the road in 1994. On April 2, the A's wore these in an exhibition against the Giants in San Francisco, where the Giants dressed as the Pacific Coast League San Francisco Seals. Then, on June 11, the A's wore these to visit the Mariners, who dressed as the 1955 Pacific Coast League Seattle Rainiers. 1955 was chosen because it was the last year the Rainiers won the PCL Pennant.

© GameWornGuides.com

1994 Turn Back the Clock to 1955 PCL Oakland Oaks (Home)

Before Turn Back the Clock games became standard fare in Major League Baseball, the A's and the Giants had a tradition of playing each other in an exhibition game just before the season opened, unofficially called the Bay Bridge Series. They wore old time flannel Pacific League uniforms in some of those games, recreated by Ebbets Field Flannels.

The A's dressed as the 1955 Oakland Oaks of the old Pacific Coast League on April 3, 1994 in a preseason game with the cross-bay Giants. The uniforms were made by Ebbetts Field Flannels.

© GameWornGuides.com

1999 Turn Back the Clock to 1979

Actual 1973 McAuliffe jersey for comparison.

On June 5, 1999, the A's and Giants played an Interleague game in San Francisco wearing 1979-style uniforms, recreated by Mitchell & Ness. Aside from being overly baggy, the A's uniforms were otherwise believable. For purists, the back numbers were the wrong style. The real 1979 green jerseys were made by McAuliffe, which used the Boston supplier's own version of the Varsity font, not faithfully reproduced here.

The names on the back also should have been straight across, not curved. ***Inset:*** Actual McAuliffe-lettered jersey from the 1970s.

Right: In the game photo, note that while the player is wearing the correct gold sanitary hose, the uniform is missing the green stirrups that would have been worn in 1979. The pants are the A's standard 1999 grays—identifiable by the absence of side stripes and the presence of belt loops—and the batting helmet should be a brighter green with a gold brim.

© GameWornGuides.com

1999 Turn Ahead the Clock

The A's participated in a futuristic Turn Ahead the Clock game on June 26, 1999 vs. the California Angels at the Angels' Edison Field.

Thanks to Steve Sale, the tailor for the Athletics, we now have photos of an actual game jersey. Thanks to Steve, we've also secured the templates for the unusual typeface used on the jerseys.

Sleeve patch sewn to the left arm of the gold undershirt is of a fearsome-looking mastodon who would be right at home in a kids' Saturday adventure cartoon.

The Athletics used the same unconventional font as the Mets and Royals. Numbers are gold/white; names, white/gold..

Regarding the game, these few lines were found in the *LA Daily News*, June 27, 1999: **Saturday's game was billed as "Turn Ahead the Clock Night at Edison Field." Both teams wore futuristic uniforms, supposedly representing the year 2021. The Angels wore bright red jerseys with the new logo taking up the entire front of the jersey. Said one Angels player: "All we need are red bottoms and we have the perfect pair of pajamas."**

© GameWornGuides.com

1999 Independence Day

Left: *Sequentially numbered tags were applied to the limited commemorative jerseys the A's produced for retail sale for the July 4, 1999, Independence Day game. The game-worn jersey above does not have this tag.*

Playing at home on Independence Day, July 4, 1999, the A's wore these red, white, and blue jerseys, made by Russell and displaying the Russell logo in red on the right sleeve.

An American flag patch adorned the right sleeve, while the elephant-on-a-ball patch on the left sleeve was recolored in a patriotic red, white, and blue scheme for the occasion.

To longtime fans, the Athletics' red, white, and blue color scheme would not have seemed unusual—it was their official palette from 1954 through 1962, before the franchise adopted green and gold.

© GameWornGuides.com

2000 Turn Back the Clock to 1911 Philadelphia Athletics

Steve Kraljic Collection

The A's appeared on June 3, 2000 as the 1911 Philadelphia A's, playing the Giants who were attired as the 1911 New York Giants, recreating the 1911 World Series between the two clubs. These uniforms were made of white flannel.

Although player numbers were not used in 1900, these contemporary recreations feature player numbers using the Red Sox-style font.

© GameWornGuides.com

2001 Turn Back the Clock to 1901 Philadelphia Athletics

The A's played the Twins in this game where they turned back the clock one hundred years, on May 26, 2001. They wore gray wool flannel uniforms with wide collars made by Mitchell & Ness, featuring a bold "A" on the left chest.

Red Sox-style numbers are used on the back, even though the actual 1901 uniforms did not include numbers.

The Athletics played in Philadelphia in 1901. The Twins began in Washington as the Nationals/Senators and had moved to Minnesota in 1961 when they became the Twins.

© GameWornGuides.com

2001 Independence Day

Bill Henderson Collection

On July 4, 2001, the A's wore red, white, and blue jerseys at home, made by Rawlings and featuring the manufacturer's logo mark in red on the left sleeve.

This year, instead of using the usual home-script 'Athletics' on the front, the team opted for the road-style 'Oakland' script—even though the jersey was worn at home.

An American flag patch adorns the right sleeve, while the elephant patch—rendered in a matching color scheme—appears on the left. Names are applied to nameplates.

© GameWornGuides.com

2002 Turn Back the Clock to 1972

Steve Kraljic Collection

These uniforms got a nice work-out for the A's, worn for eight games in July 2002.

First, they appeared at home vs. the Rangers for a three-game series from July 19–21. The Rangers dressed as the 1961 Washington Senators for the series.

Then, they wore them on the road against the Angels from July 23–25, and again vs. the Rangers, but this time at Texas, on July 27–28.

First, the A's logo on the front is poorly rendered; the 1972 version included front numbers. The sleeve stripes are narrower than the originals, and the name on back should be sewn straight across with no curve. Additionally, the use of nameplates is inaccurate.

Given this, we will overlook that the back numbers are not the McAuliffe Varsity variant they should be. Credit is due, however, for the beltless pants that accurately reflect the 1972 design, as well as for the inclusion of green stirrups—an element skipped in previous throwback games.

© GameWornGuides.com

2004 Turn Back the Clock to 1974

Steve Kraljic Collection

The A's wore 1974 throwback uniforms on July 17, 2004, at home against the White Sox (who did not participate), and again on the road July 30–31 against the Rangers (who did). Numbers on back are not the correct font. Note the manager wearing a white hat, a detail true to what the A's did in that era. However, the team is also wearing their current white pants, which lack the proper side stripes and include a belt—both of which are inaccurate for 1974.

© GameWornGuides.com

2006 Turn Back the Clock to 1983

Majestic made these green road/alternates, styled after the A's 1983–1986 design, for a June 23, 2006 Turn Back the Clock game played in San Francisco against the Giants. The Giants wore their 1982 alternate orange jerseys.

The reproductions are reasonably accurate, although the green is slightly off compared to the originals—these appear too blue.

On the originals, the knit sleeve ends had three equal width stripes. The reproductions' stripes are not equal width. Back numbers should be less bold version of block. Names sewn straight across the top are an accurate feature.

© GameWornGuides.com

2007 Turn Back the Clock to 1977

Steve Kraljic collection

- On July 29, 2007, both the visiting A's and the home Mariners wore 1977 throwback uniforms, courtesy of Majestic.
- The original 1977 A's uniforms were made by McAuliffe, which used its own version of the Varsity font for back numbers. The recreations instead used block font, which is incorrect.
- The team wore special TBTC pants with side stripes, but they also included belts—which were not part of the A's 1977 uniform.
- Kelly green batting helmets with gold brims were a nice touch. Teams rarely go to the trouble or expense of producing special helmets for TBTC games.

© GameWornGuides.com

2008 Turn Back the Clock to 1968

Above: Majestic did an artful job replicating the original uniform front in three-layered twill. However, it is worth noting that the 1968 original was a masterful piece of full-front embroidery rendered by McAuliffe. An original 1968 jersey close-up is shown above at left, compared to the 2008 version at right.

- On Sunday, May 4, 2008, the A's wore beautifully accurate bright white knit replicas of their one-year-only 1968 home uniforms, celebrating the club's 40th anniversary in Oakland. Bert Campaneris threw out the first pitch and fans got retro Campaneris T-shirts.
- McAuliffe-style numbers on the back were rendered in green and gold twill, attached to the jerseys with thick green embroidery stitching.
- The team played the Texas Rangers, who wore 1968 Washington Senators throwbacks. All A's jerseys were auctioned off after the game.

© GameWornGuides.com

2009 Turn Back The Clock to 1939 PCL Oakland Oaks

Steve Kraljic Collection

On May 2, 2009, the A's played a Turn Back the Clock game in Seattle, appearing as the 1939 Oakland Oaks. The Mariners dressed as the 1939 Seattle Rainiers. The uniforms were made by Majestic in full-weight knit fabric. Note the 1939 Baseball Centennial patch on the sleeve.

Top left: This example is missing the 1939 sleeve patch worn in the game; its tagging identifies it as a pre-production sample.

© GameWornGuides.com

2009 Turn Back the Clock to 1973-1980

On July 11, 2009, the Athletics visited the Tampa Bay Rays, who— for the first time—held a Turn Back the Clock game featuring their own past uniforms. In previous TBTC events, the Rays had worn Negro League, college, or minor league throwbacks, as their franchise dates only to 1998.

The A's wore Majestic Cool Base replicas of their 1973–1980 road green jerseys. However, the sleeves were too long, and the neck trim too wide. Oddly, player names were omitted from the backs—despite the fact that the A's have long used them and were one of the earliest adopters of names on back, dating back to the flannel era. Oh yes–and again that pesky problem of the wrong font for the back numbers. But strangest of all was the inaccuracy of the "A's" symbol on the front—even though Majestic had previously produced this jersey style using the correct logo.

© GameWornGuides.com

2009 Turn Back the Clock to 1929 Philadelphia Athletics

Derek Damian collection

On August 16, 2009, the A's wore uniforms styled after the 1929 Philadelphia Athletics for a Turn Back the Clock contest against the Chicago White Sox, who also wore 1929-vintage uniforms. Majestic produced the jerseys using regular-weight double knit fabric. In keeping with the period design, the jerseys were pullovers with a half-button front. Block-style numbers were applied to the back, even though player numbers had not yet been introduced in 1929.

1931 A's jersey worn by Lefty Grove

© GameWornGuides.com

2010 Turn Back the Clock to the 1970s

- The A's hosted the Pirates on June 26, 2010, for "Joe Rudi Day," honoring the former player.
- This was a true celebration of 1970s "Mix-and-Match" as the A's wore their rarely seen all-gold uniforms, while the Pirates dressed entirely in black.
- Regarding accuracy, I have resigned myself to the fact that Majestic will probably never use the correct Sand-Knit Varsity font on the uniform backs. Player names on back are properly sewn in a straight line, without a curve as was done by the A's in the day.
- Again, as in 2009, an odd version of the front team logo is used that is not correct, and everything is generally too baggy. On the plus side, the sansabelt gold pants have the proper side stripes and many players wore the green stirrups that were supplied with the set.

© GameWornGuides.com

2010-2013 Hispanic Heritage

The A's hosted special days celebrating the Hispanic heritage of the Oakland community in 2010, 2011, 2012, and 2013. The games were played on August 22, 2010; August 14, 2011; September 16, 2012; and September 8, 2013.

The full-weight Majestic knit uniform jerseys have *"Atleticos"* scripted on the front—a subtle change... that likely went unnoticed. Jersey backs are identical to the standard everyday uniforms.

© GameWornGuides.com

2011 Turn Back the Clock to the Mid-1980s

On July 17, 2011, the Athletics hosted the Angels for a Turn Back the Clock game, wearing home uniforms originally seen 1983-1986. Majestic made these uniforms and did a commendable job, including details like the elastic-waist pants. The players contributed to the authenticity by wearing them with a tight, high-cuffed look. Very nice, guys!

The number and name fonts were accurate for the era—this time, Majestic's default throwback font happened to match the originals.

Fans in attendance received M.C. Hammer bobblehead dolls. Hammer had served as a member of the A's clubhouse staff and as a batboy during the 1970s.

© GameWornGuides.com

2012 Turn Back the Clock to 1936 Philadelphia Athletics

May 2, 2012: The Red Sox invited the Oakland A's to participate in their 100th anniversary celebration of Fenway Park by taking part in a Turn Back the Clock game.

The Athletics' gray knit uniforms were made by Majestic and have simple navy-blue block numbers on the back. The front 'A' is navy with a white outline.

Left: *#36 jersey is actually a sample made up in advance of the game. It is also discussed in the "Prototypes and Oddballs" section of this chapter.*

Original
1943

© GameWornGuides.com

2012 Turn Back the Clock to 1955 PCL Oakland Oaks

On July 8, 2012, the A's faced the Seattle Mariners, who also wore PCL throwbacks. The A's had last worn this style in 1994, when the set was produced by Ebbets Field Flannels and constructed from flannel fabric.

These are full-weight knits made by Majestic. A one-color red Varsity variant was used for the front numbers, while Varsity Bold was used for the back—differing from the pattern used in 1994.

1955

Read the full story on MLB's Memorial Day Jerseys in Chapter 5.

2013-2015 Memorial Day

Major League Baseball required all teams to wear camouflage-lettered jerseys for Memorial Day games in 2013 (May 27), 2014 (May 26), and 2015 (May 25).

In all three years, the A's were the home team and wore white uniforms with camouflage-style wordmarks, player names, and numbers—outlined in gold. This combination resulted in poor visibility from the stands.

In 2015, the MLB Silhouetted Batter logo at the back of the neck was updated to a dark green/khaki/white version, replacing the standard color scheme used 2013–2014.

© GameWornGuides.com

2013 Turn Back the Clock to 1969

On July 27, 2013, the A's invited the Angels to participate in a Turn Back the Clock game commemorating 1969. The A's wore Majestic-made replicas of their all-gold "mix and match" uniforms, rendered beautifully in knit fabric. The ensemble featured gold vests and pants with green/white/green narrow-knit trim on the neck and sleeve openings.The MLB 100th Anniversary patch—unique to 1969—was sewn on the left chest below the team insignia. Players gamely wore white shoes and green/gold/white boldly striped stirrups. The Angels also wore replica 1969 road grays, produced by Majestic.

Left: *Original 1969 jersey worn by pitcher Rollie Fingers*

© GameWornGuides.com

2014 Turn Back the Clock to 1914 Philadelphia Athletics

Steve Kraljic Collection

Above: *Original 1914 A's home jersey. Note the sleeve length—modern players would never tolerate this touch of realism.*

August 16, 2014–The Braves hosted a Turn Back the Clock game commemorating the 100th anniversary of 1914, with both teams wearing replica uniforms from that year. The A's had been based in Philadelphia in 1914, and the Braves in Boston. Both clubs wore solid gray, blouse-like pullover jerseys with 4-button necks, navy insignias, and plain numbers on the back—though players did not wear numbers in 1914. The long sleeves typical of 1914 jerseys were omitted for this game.

© GameWornGuides.com

2015 Turn Back the Clock to 1965 Kansas City Athletics

Game-worn 1965 example has reversed front colors.

The A's wore these knit Majestic vests in a June 27 game against the Kansas City Royals—the current residents of their former home. The Royals did not participate in the throwback and wore their standard uniforms. The jerseys featured a gold/green "A" logo and player number in McAuliffe font on the front, with green/gold McAuliffe numbers on the back. Gold/green/gold braid encircled the sleeve openings and neck.

Though the team claimed these to be 1965 jerseys, the A's actually wore green/gold lettering on both the front and back of the home vests that year. It appears they followed the uniform drawings from the Baseball Hall of Fame's "Dressed to the Nines" exhibit, based on the work of Marc Okkonen. That illustration depicts gold/green for the front, but game-worn jerseys from 1965 show the colors reversed (Left: Actual game-worn 1965 jersey). Nevertheless, the classic baseball vest design—combined with the A's bold (especially for the mid-60s) color scheme—makes for a very attractive throwback entry.

2015 Independence Day

Read the full story on MLB's Independence Day Jerseys in Chapter 5.

For Independence Day 2015, all 29 U.S.-based teams adopt patriotic "Stars and Stripes" uniforms for the first time. For this day, all uniforms are re-lettered in a combination of red, white, and blue, regardless of what the team's normal color palette might be. Jersey trim and patches remain the same as the team's regular jerseys, which makes the A's green elephant sleeve patch look very out of place. All teams sport a stars and stripes version of the MLB Silhouetted Batter logo on the back collar.

The Athletics wear their home white jerseys with the blue-background version of the starred twill, which features large white stars. All lettering—including the front logo and the front and back numbers—is outlined in red. Player names on back are in red. An American flag patch is sewn on the right sleeve.

© GameWornGuides.com

2016-2017 Mother's Day

Read the full story on MLB's Mother's Day Jerseys in Chapter 5.

For the first time in 2016, all teams wear special pink-trimmed uniforms Mother's Day, Sunday, May 8. All jerseys are of Flex Base construction with the rubberized tag applied to the front left tail. Every team also features the pink MLB Mother's Day ribbon on left chest (a carryover from past Mother's Days), while the Majestic sleeve logo is rendered in pink and the back of the collar MLB Silhouetted Batter patch is colored in dark pink/light pink/white.

The Athletics wear their road gray jerseys with the front logo lettering in pink with dark gray outlines. The player names on back are rendered in single-color dark gray, while front and back numbers are pink/dark gray. The team's sleeve patches are also changed to shades of pink, gray, and white. The style returns, unchanged, for May 13–14, 2017.

© GameWornGuides.com

2016 Memorial Day

MLB's 2016 Memorial Day jerseys are constructed in the Flex Base style for the first time, and the ChromaFlex MLB logo at the back neck becomes black and dark gold for all teams. The new, league-wide template—with higher-visibility woodland camo lettering and black outlines—makes this set more legible than in prior years.

The Athletics apply the camouflage trimmings to their home white jerseys for the game on May 30. The front lettering and front and back numbers are rendered in woodland camo with a black outline, and player names appear in single-color black. Like other teams, their sleeve patches are reduced to shades of green, gray, and black

© GameWornGuides.com

2016-2017 Father's Day

Read the full story on MLB's Father's Day Jerseys in Chapter 5.

For the first time in 2016, all teams wear special light blue-trimmed uniforms for Father's Day, Sunday, June 19. All jerseys are of Flex Base construction, with a rubberized manufacturer's tag applied to the front left tail. Every team also features the light blue MLB Father's Day ribbon on the left chest (a carryover from past Father's Days), while the back-of-collar MLB Silhouetted Batter patch appears in dark royal blue/light blue/white.

The Athletics wear their home white jerseys, with the front logo lettering in light blue with dark gray outlines. The player names on back are rendered in single-color dark gray, while the front and back numbers are rendered in light blue/dark gray. The team's sleeve patches are also simplified to shades of light blue, gray, and white. This style returns unchanged in 2017.

© GameWornGuides.com

2016 Independence Day

MLB creates a new Independence Day jersey template for the 2016 iteration, now built on Majestic's new Flex Base jersey construction. Each Independence Day jersey has a ChromaFlex rubberized "stars and stripes" pattern MLB appliqué sewn on the back of the neck. The Athletics are on the road and wear their road jersey. All clubs have a choice of two styles of star-spangled lettering twill. The Athletics select the blue twill version with red outlines for their front lettering and for their front and back numbers. Player names on back are rendered in red. Every jersey has an American flag patch sewn on the right sleeve. New for 2016, team sleeve patches are now embroidered in red, white, and blue, replacing team colors. The resulting jersey looks quite a bit like the special July 4 jerseys the Athletics wore in 2001, but this version uses a gray jersey base instead of white. instead of white.

© GameWornGuides.com

2016 Turn Back the Clock to 1981

On August 6, the A's pay tribute to their 1981 team, which reached the ALCS in a strike-split season. The gold Majestic knit pullovers feature the team name on front in green/white, with green/white Block-style back numbers. The single-color green names, directly sewn with no arch, are also era-accurate, though the font is slightly different from the originals. Not only did the visiting Cubs wear their powder blue, pinstriped 1981 road uniforms, but the A's broadcast joined in, using retro graphics and dressing the announcers in gold sport coats.

2017 Special Batting Practice — Warriors NBA Tribute

Throughout 2017, the A's pay tribute to their local pro sports neighbors with a series of crossover jerseys used only during pre-game activities. The April 21 edition honors the Golden State Warriors by adapting the A's existing gold alternate, with the addition of a Warriors logo patch on the right chest and a change in the player name and number lettering on back to blue/white in deference to the Warriors' color scheme.

2017 Special Batting Practice — Sharks NHL Tribute

Throughout 2017, the A's pay tribute to their local pro sports neighbors with a series of crossover jerseys used only during pre-game activities. The May 18 edition honors the San Jose Sharks by adapting the A's existing dark green alternate, with the addition of a Sharks logo patch on the right chest and a change in the player name and number lettering on back to teal/white in deference to the Sharks' color scheme.

© GameWornGuides.com

2017 Memorial Day (Road)

The next incarnation of Memorial Day jerseys replaces the previous camo twill pattern with a new style that uses team fonts in dark olive green with black outlines. The two dark colors are difficult to distinguish, especially from a distance. All player names on back are now single-color black, while the back-of-collar MLB logo and team patches are rendered in olive green and black. A green bar patch with five black stars, representing the five branches of the U.S. military, appears on the right sleeve, and all trim elements are simplified to single-color black. The Athletics apply this style to their road gray jerseys as worn on May 27–29, 2017.

© GameWornGuides.com

2017 Special Batting Practice — Quakes MLS Tribute

Throughout 2017, the A's pay tribute to their local pro sports neighbors with a series of crossover jerseys used only during pre-game activities. The June 15 edition honors the San Jose Earthquakes of Major League Soccer by adapting the A's existing dark green alternate, with the addition of a Quakes logo patch on the right chest and a change in the player name and number lettering on back to royal blue/white in deference to the Quakes' color scheme.

2017 Turn Back the Clock to 2000

Steve Kraljic Collection

More than 70 years (and two franchise moves) passed before the A's reintroduced black as a primary color in the early 2000s, when many other teams were doing the same. All the more mysterious, then, is the choice to resurrect this one-year style from 2000 for a throwback game on July 1, 2017. That said, these full-knit recreations are reasonably accurate to the originals, then made by Rawlings.

These jerseys feature all lettering in green/white, with names properly applied to nameplates. For some reason, this throwback lacked the "Century of A's Baseball" commemorative patch that appeared on the 2000 version, and the front numbers are positioned slightly lower than on the original.

***Above**: An original from 2000, with the tail cut off by the player.*

2017-2018 Independence Day (Home)

The 2017 version of MLB's Independence Day jerseys introduces a new patterned twill, featuring a slightly less busy pattern of stars and the addition of stripes suggesting a waving American flag. Teams again have a choice of two different color options for the new twill—appropriately in red/blue or blue/red. The jerseys themselves are Flex Base, with standard manufacturer and set tagging. A ChromaFlex rubberized "stars and stripes" pattern MLB appliqué patch is sewn on the back of the neck.

On July 2–4, 2017 and July 2–4, 2018, the Athletics wear their home white jersey with front logo lettering and front and back numbers in red patterned twill with blue outlines. Player names on back are in single-color blue. Every jersey has an American flag patch sewn on the right sleeve. Once again, team sleeve patches are embroidered in red, white, and blue.

© GameWornGuides.com

2017-2018 Players Weekend

To highlight players' personalities and to appeal to younger fans, MLB introduces the colorful Players Weekend promotion. In addition to relaxed regulations on team-standard color and design of cleats, bats, and other equipment, MLB encourages players to wear nicknames on the backs of a new set of very colorful jerseys. Meant to evoke the look of youth league designs, the two-toned Cool Base pullovers feature bright and contrasting body and sleeve colors and include a patch on the right sleeve where players could write handwritten messages of appreciation in black marker. Both the patch and the back-of-collar logo feature a variant of the MLB logo showing the growth of a ballplayer from childhood to adulthood.

Heat-pressed Majestic manufacturer and set tags are applied on the front left hem, and the Majestic logo is embroidered on the left sleeve. All numbers on back are in single-color Varsity, and the player names are in 2¾″ single-color Block Condensed, regardless of the team's usual font.

On August 25–27, 2017 and August 24–26, 2018, the Athletics wear these jerseys with dark green bodies and gold sleeves, with white nicknames and gold numbers on the back. Sleeves and the V-neck opening are lined with wide gold/white/gold trim. The front features their home jersey lettering, here rendered in gold/white kiss-cut lightweight twill.

© GameWornGuides.com

2017-2019 Hispanic Heritage

After a five-year hiatus, the A's resume the use of a special *Atléticos* home jersey to honor Hispanic Heritage Day. These games were held on September 24, 2017; September 9, 2018 (with the team's anniversary patch on the right sleeve); and September 16, 2019 (without the MLB150 patch on the right sleeve). Now Flex Base jerseys, they feature the Spanish version of the team's name on the front, with all other elements identical to the regular home set. In an unusual move, the 2019 jersey features a light gray version of the Majestic logo on the left sleeve, making it nearly impossible to see.

© GameWornGuides.com

2018 Turn Back the Clock to 1968

For a third time, the A's throw back to 1968, their inaugural year in Oakland, with these beautiful vests, originally made by McAuliffe in flannel. This full-knit version features a more authentic and exaggerated vest cut compared to the previous two throwbacks, which were more "sleeveless" than "vest," with squared-off sleeve openings. Aside from the front lettering being done in green/gold/green twill—rather than the combination of embroidery and twill used in 1968—these sharp throwbacks duplicate the originals nicely. The outline layers on the McAuliffe-style green/gold/green back numbers are slightly thicker than on the 1968 set, but this does not detract from the overall aesthetic on the field.

© GameWornGuides.com

2018 Memorial Day

The 2018 Memorial Day jerseys repeat the pattern of 2017, with dark olive green/black front lettering and numbers, and feature solid-color black player names on back. The outlines are nearly invisible due to the similarity of the two colors. The back-of-collar MLB logo and team-specific sleeve patches are also repeated from 2017 with an olive green and black treatment. Trim elements are again simplified to single-color black, and a green bar patch with five black stars, representing the five branches of the U.S. military, is stitched to the right sleeve. The Athletics apply this style to their home white jerseys on May 26–28, 2018.

© GameWornGuides.com

2019 Players Weekend

The third incarnation of Players Weekend turns the colorful jersey concept on its ear, reducing all teams to monochromatic designs in either black or white, with all team sleeve patches and trim removed, leaving a clean but stark template. Gone are the contrasting sleeves and special patches with messages of inspiration.

MLB says that this new approach is to emphasize the colorful, personalized cleats, bats, and other gear the players choose for the promotion, which spans August 23–25, 2019. Jerseys are now button-front Flex Base, with appropriate Majestic manufacturer and set tagging. Back-of-collar CFX MLB logo is now silver and black. All teams also wear a memorial patch for Angels pitcher Tyler Skaggs, a white “45” in a black circle, on the left sleeve. Most teams removed this patch before auctioning off the jerseys. The Athletics wear a white version of their home jersey with the front lettering and back varsity numbers rendered in white/gray with gray nickname on back.

Prototypes and Oddballs

1972 Prototype Home

Discovered at an online auction and apparently signed by Reggie Jackson, this appears to be a prototype 1972 home jersey for the A's, made by McAuliffe but never selected for use. It features "Oakland" arched on the front in the same "Tiffany" style font used by the Red Sox, Mets, and 1960s Angels on their uniforms. The center-sewn number is extra large—probably 5½″—and its placement appears unusual, though the 1972 Cubs road uniforms used a similar format, with a player number centered on the front.

© GameWornGuides.com

1972 Prototype Alternate Gold

Stephen Kraljic Collection

A companion piece—or perhaps a long-lost brother—to the page above, here's what appears to be a prototype for a 1972 A's gold jersey. Made by McAuliffe, this one also features "Oakland" arched on the front in the same "Tiffany" style font used by the Red Sox, Mets, and 1960s Angels on their uniforms. Again, the center-sewn number is extra large—probably 5½″—and its placement seems unusual, though there was precedent for this style in baseball. It's clear the A's and McAuliffe were experimenting with bold design ideas during this Technicolor era. Detail photos of this example show the wide knit trim sewn on top of the sleeve ends. The white example likely used the same construction. Ultimately, the A's 1972 switch to double knits made an unforgettable statement—just not this particular one, which was ultimately forgotten to time.

© GameWornGuides.com

1972 Jerseys in the 1974 World Series?

Reader Curtis Peddle writes to say:

"I am attaching two photos of Sal Bando and Ken Holtzman that I took while watching a DVD of Game Four of the 1974 World Series. I noticed a number of the A's players are wearing the two-serif A instead of the three-serif version, introduced in 1973. Proof (*perhaps? -.ed*) that the 1972 jerseys were not only recycled into 1973, but into 1974 as well."

Right: *A sewing error places the 1976 patch on this pitcher's right sleeve, rather than the left, where the rest of his teammates have it.*

© GameWornGuides.com

1974 Claudell Washington — “Tiny First Name on Back”

In 1974, Claudell Washington was spotted with this odd feature—a very tiny first name above the standard last name on his jersey. That year, sprinter Herb Washington—used as a pinch-running specialist (!!!)—was also on the A’s roster. Photos and video of Herb Washington do not show any first name on his jerseys.

(Thank you to collector Stephen Kraljic for submitting this item).

1980 “OAKLAND” Gold Rawlings — What Is It?

Occasionally, we come across an item that defies explanation. The A’s did not begin wearing jerseys with the “OAKLAND” crest on the front until 1981, and Rawlings did not start producing the team’s jerseys until that same year. Bob Owchinko only played for the A’s in 1981–1982. So, what is the story with this jersey?

It is a gold Rawlings jersey with Kelly green lettering, as used only in 1981. Yet it is tagged as 1980. Examination shows that no changes were made to the jersey lettering.

One might guess this was a 1980 sample jersey made to propose the new style—but that seems unlikely, as it bears the name and number of a player who had not been with the team in 1980. Nor was he the kind of “famous name” typically used on manufacturer’s samples.

Our only logical conclusion is that this was simply a tagging error at the Rawlings factory. It’s likely that a stray “1980 SET 1” tag was accidentally mixed in with the 1981 batch and went unnoticed. This is the kind of anomaly that drives authenticators crazy.

© GameWornGuides.com

April 1990 “Too High” Front Wordmark on Home Jerseys

Whether by team order or Rawlings’ manufacturer error, the home jerseys worn by the Athletics to start the 1990 season had the front wordmark sewn very high on the shirt—with the top of the central “I” touching the shirt’s top button.

After the first home series (or two) these jerseys were replaced by a new Rawlings set with the wordmark lowered by one button. Every once in a while we see jerseys from this set come up for sale, typically advertised as “game used” but showing almost no wear.

Notably, the placement of this particular wordmark is often problematic because the letters interfere with the buttons, especially on smaller jerseys. On some team-issue jerseys we have seen, the third button from the top is eliminated and replaced with a Velcro closure so the wordmark can be lowered slightly and stitched over top of the former buttonhole location.

In the top row of photos, one jersey from this set is shown, along with Dennis Eckersley wearing the style on April 10, 1990. The bottom row shows a later-season game-used jersey with the wordmark in its traditional position. Dave Henderson’s photo, dated May 1, 1990, shows the lower-placed wordmark.

Revisiting the "Phantom" Athletics 1987-1988 Alternate Pullover Jerseys

As noted several times in this chapter, my research into which jerseys the Athletics wore in various years does not always align with the information presented in the Baseball Hall of Fame's Dressed to the Nines website, itself based on the work of author and historian Mark Okkonen. This is another such example.

I had long doubted the existence of A's alternate pullover game jerseys for the 1987 and 1988 seasons as listed in that database, but included them as fact through the Third Edition in 2005. Eventually, my editor convinced me to abandon the idea, as in many years of searching we had never seen a single example—nor even a photo of one being worn. We subsequently removed all mention of these jerseys from this publication.

Yet even now, a new reader will occasionally send a letter saying, "Hey—you missed one!" and point to these jerseys still listed in Dressed to the Nines as fact for 1987–1988.

So I've reproduced this long-discarded page from an earlier edition to illustrate the "phantoms" once more. If anyone has any evidence that they ever existed, I'd like to know.

1987-88 Alternate Pullover Jerseys (2 styles)

Home White "Athletics" and Road Green "Oakland"

- I have yet been unable to locate any real examples – or even period photographs of the two styles circled in the illustration to the right.
- Both jerseys are pullover style. Sleeve end trim disappears but collar trim remains.
- 2 color numbers on front and back, white/ yellow on green jersey, green/yellow on home jersey
- Names on back- I assume also 2 color, same as numbers
- Maybe someday I'll locate real examples- or at least photos of a real ones. More research required.

1996-1999 Prototype Royal Blue

The Athletics wore red, white, and blue–themed uniforms for Fourth of July home games during the 2000 and 2001 seasons. This shocking bright royal blue jersey with 1995–2000 Russell tagging is very likely a prototype for a special game, rather than an indication that the A's were considering changing their team colors. A couple of other details suggest this is a prototype. One is the frequent use of the numeral "5" on prototype jerseys. The other is the use of a different outline color on the back number compared to the front design—something often seen on experimental or sample pieces.This gem was found on eBay by a reader.

© GameWornGuides.com

2012 Prototype Turn Back the Clock to 1936

Shown here is a sample of the Turn Back the Clock jersey worn by the A's during a 2012 game against the Red Sox. Note the typical sample size of 46 and the back number 36, indicating this is a 1936 throwback. The sample tagging, "ATH-RJ-TBTC-D1-1-1936," stands for Athletics road jersey Turn Back the Clock, version 1, 1936.

Made by Majestic, the full-weight knit gray jersey loosely copies the team's 1930s-era road uniform. The back numbers do not match the distinctive MacGregor number pattern used at the time, and the original jerseys featured blue trim on the sleeve ends but none at the neck opening. Despite its historical inaccuracies, this style was ultimately approved and used on-field.

1943 Original

© GameWornGuides.com

2014 Prototype Alternate Greens

Presented here are two jerseys that offer a glimpse into the creative process teams use when designing or updating uniform options. These are prototypes for the dark green alternate jersey the A's introduced in 2014.

Majestic provided the A's with at least two options, differing only in the twill color arrangement used on the front and back lettering. One version features white/gold lettering, the other gold/white. Like most other Majestic samples of this era, these jerseys use "Player" as the placeholder name on back and the year—14—as the uniform number.

Both jerseys include internal sample tagging: one reads ATH-AJ-D1-1-2014 and the other ATH-AJ-D1-2-2014. Aside from the D1-1 vs. D1-2 distinction (marking the two variations), the rest of the code indicates "Athletics alternate jersey, 2014." The A's ultimately selected the white/gold version, which debuted that season as intended.

2018 50th Anniversary In Oakland Honorary 50th Anniversary Team Jerseys

Tim Koberg Collection

On multiple home dates during the 2018 season, in special pregame ceremonies, the A's celebrated the 50th anniversary of the Athletics in Oakland. Before each game, players from a special 50th Anniversary All-A's Team were introduced, and each was presented with a new-style Kelly green game jersey featuring metallic gold lettering front and back, outlined in white. The largest gathering of players occurred on Opening Day, March 30, but other events were held on April 17, May 7, May 25, July 3, and July 20. In total, 50 players were honored in this way.

As attractive as they were, these special jerseys were never worn during a game by the team, nor does it appear that this style was ever offered for sale to fans. I was informed by readers who tried to acquire one of these for their collections that the only ones made were one for each of the players to whom they were presented. I have little doubt that some of these will appear at auction in the future. In the meantime, I share a singular exact replica I was commissioned to make for a reader who simply had to have one.

2023-2025 Athletics Advertising Patches

With the start of the 2023 season, teams were permitted to sell an advertising patch, up to four inches square, to appear on one of their jersey sleeves. The sleeve on which the patch appeared could change from player to player, and each team that sold a patch handled the placement differently.

The Athletics struck a sponsorship deal with the Las Vegas Convention and Visitors Authority (LVCVA), the official tourism marketing organization for Las Vegas. The patch features the LVCVA logo in green on a white background shaped to match the contours of the logo. The patches first appeared on March 27, 2025. The agreement spans three years, coinciding with the period the team is playing home games in Sacramento, California, while its new stadium in Las Vegas is under construction..

In 2023 and 2024, the Athletics had not yet reached a deal for a jersey patch sponsor. However, in anticipation of a future ad patch, the team began alternating the placement of the “Elephant-on-Ball” patch based on each player’s handedness, leaving the opposite sleeve available. The elephant patch was removed in 2025 to make room for both the new ad patch and a patch honoring Sacramento, the club’s temporary home.

Document of Restoration

Oakland Athletics 1970 Home Jersey- BANDO

This is not a letter of authenticity. Its purpose is to document the history of an alteration of a jersey in our shop.

As Received: 1970 tagged Oakland A's white road vest #6, with name on back removed. Ghosts and small holes remain and are visible on the light table.

Work Performed: The light table examination clearly showed that the name "Bando" had been removed, which left both shadows and a few small holes at the edges of the letters, admittedly difficult to see on these small photos. I restored the name on back using media-blasted twill and bleached colored thread to make a more harmonious match. I removed 1" pleats from both of the side seams, as this jersey had been taken in to make it a smaller size for its post-MLB use.

Letter of Restoration/Professional Opinion

Jim Roland 1971 Oakland Athletics Game Used Home Jersey

Examination Date: January 12, 2025 **Certification Number**: 25-0112J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Oakland Athletics seven-button home cream colored flannel size 44 (marked and measured) vest jersey, McAuliffe 1971 manufacturer and team tagging. Kelly Green over gold "A's" on the left chest, #33 on the right chest and again on the back in the A's McAuliffe style font. Gold/Kelly/gold uniform braid rings the neck opening and the two vest armholes. The original buttons are intact; they are the correct small, white four-hole style used by McAuliffe. Size 44 is appropriate for Roland, who was 6' 3" and 190 lbs. A's jerseys of that time were almost always relegated to the minor leagues for reissue, with some or all lettering stripped. As received, a light table examination revealed that this one still had its original team crest and numbers on both front and back, but that the name on back had been removed. The impression of the removed name was easily seen without use of the light table, with crisp outlines and indents in the cloth, This tells me that while it was stripped, it was never re-issued, because being washed just once would have obliterated these imprints substantially. In 1971 Roland appeared in 31 games for the Athletics, all in relief, compiling a 1-3-1 record in 45.2 innings with a 3.15 ERA.

Manufacturer and Team Tagging: White, red and blue McAuliffe tagging on the outside left tail with blue "44" size tag and red "71" year tag, the set of three tightly spaced and stitched tags in a cluster are comparable to other exemplars. A's jerseys in 1971 were not team-tagged with player names/numbers. The tagging is appropriately slightly edge-frayed.

Restoration/Wear & Repairs: This jersey body shows appropriate wear for a single season of use by a relief pitcher and all the stitching remans reasonably tight, and the original green/gold/green braid on the neck and arm openings shows light wear but is without damage. The lettering shows some puckering from hot water washing but is all still firmly attached and is shiny and bright. There are no team alterations and repairs, save the removal of the player name on back. This jersey seems to have avoided reuse in the minor leagues or spring training, an uncommon occurrence for period A's jerseys that were almost universally shown no mercy. One can only speculate how this came to be, but I have found that jerseys issued to larger players like Roland were more likely to be spared because they were not a good fit for the younger minor league players. There are no signs that any other number than 33 had been on this jersey. I was charged with restoring the name on back to its original appearance and recreated it using the team font of 1971, and placed it using the clear ghosts as my guide. The letters in the name are not in a perfectly straight line probably due to stretching distortion of the original fabric.

Continued on the next page

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

Here, the jersey as received. Below, light table photo of the name on back shadow, just slightly enhanced to show it more clearly. The slight misalignment of the lettering is probably caused by stretching distortion of the fabric that occurred during use and subsequent washings.

Conclusion: This jersey is in very good used, mostly original condition with only the player name on back professionally restored. It is properly lettered and tagged without contrivance. It is my considered opinion that this jersey was made to team specifications and worn by pitcher Jim Roland of the 1971 Oakland Athletics.

Back

Document of Restoration

Oakland Athletics 1970 Road Jersey- BLUE and OSTEEN

This is not a letter of authenticity. Its purpose is to document the history of an alteration of a jersey in our shop.

As Received: 1970 tagged Oakland A's heather gray/green road vest #35, with name on back removed. Ghosts and small holes remain and are visible on the light table.

Work Performed: The light table examination showed that two names had been on this jersey, "Osteen" and "Blue". The Osteen name had been removed more roughly and left more marks. I restored the name on back "BLUE" at the client's request, using media-blasted twill and bleached colored thread to make a more harmonious match.

Letter of Professional Opinion/Letter of Restoration

1971 Oakland Athletics #12 Tommy Davis Road Game Used Jersey

Examination Date: July 29, 2021; *Revised* Feb 2, 2025 **Certification Number**: 21-0729J05

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Oakland Athletics, seven-button sea-mist green (road gray) size 40 jersey, McAuliffe 1971 manufacturer and team tagging. #12 on the front right chest and on the back in the A's McAuliffe style font, in Kelly Green over light gold. A's team crest in the same colors on the left chest. Gold/Kelly/gold uniform braid rings the neck opening and the two vest armholes. The original buttons are intact; they are the correct small, tan four-hole style used by McAuliffe.

Infielder Tommy Davis (6' 2" and 190 lbs) was acquired midseason from the Astros and had played on the Athletics June 23-September 15, then was traded to the Cubs where he played in only 11 games to end the season He then returned to the A's as a free agent to start the 1971 season. The A's were a notoriously frugal organization, and this jersey has one remarkable characteristic: both sides of the jersey have been professionally tailored to **add** an extra three inches to the chest. I have included a photo of the tailoring, because this is not an amateur job. Someone with a great deal of skill perfectly spliced in identical hemmed fabric to make a size 40 jersey fit the larger player. Other Davis jerseys from this period in our exemplar library are size 42 and 44. It is possible that given its very good current condition, Davis used this as his set 2/alternate road jersey. Davis had an outstanding year in 1971, batting .324, He had previously twice won the NL batting title with the Dodgers, in both 1962-1963.

Manufacturer and Team Tagging: McAuliffe tagging on the outside left tail with "40" size tag and "71" year tag, the set of three tightly spaced and stitched tags in a cluster are comparable to other exemplars. The presence of its 1971 tag is all the more odd, as it indicates that this is most likely not Davis's 1970 jersey reissued, which is what one might expect the organization would have done. Any explanation of why the team began in 1971 with a size 40 jersey for Davis and then proceeded to make it two sizes bigger would be purely speculation.

Wear & Repairs: This jersey shows light to moderate wear, all the stitching remans tight and there is no damage or repairs. It shows some puckering of the twill numbers and team crest on both front and back, as well as light piling and pulls to the flannel fabric, but it is still bright and evenly hued throughout, in much better condition than many other A's jerseys of this vintage, ones that were used again and again in spring training and in the minor leagues. A light table examination shows that the sewn elements are original and without contrivance, The faint ghost image of former name on back "DAVIS" is evident.

Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

Above left: the jersey back prior to restoration. Above right: Enhanced contrast light table photo showing the ghost of the removed name on back. The circles mark the spots where fraying or small holes give been created from the removal that match points of intersection with the edges of the old lettering. At left: photo showing the professionally tailored side panel inserts on both sides; very uncommon to see a jersey made bigger; generally jerseys are tailored to make them smaller!

Additional restoration documented: February, 2025 the jersey's owner asked that the player name on back be restored to original specifications. The jersey was put on the light table and the ghosts of the removed name on back became apparent, both with shadows from the slightly thicker fabric that had been protected beneath the old now-removed lettering and a couple of small holes that were strategically caused along the stitched edges from the lettering removal of many years ago. The ghosts were matched to the patterns of the Athletics' player name font as used in 1971, the Kelly Green fabric cut and then media blasted to better match the patina of the other aged fabric on the shirt. It was stitched in place with a similar, matching green zig-zag stitch as the rest of the lettering. With the lettering now sewn exactly over the original ghosts, they are completely invisible when the restored jersey is placed on the light table. The photo below documents the restoration.

Conclusion: This jersey is in very good used condition, is all original and properly lettered without contrivance. It has the proper tagging. The unique tailoring would have made it the proper size for Davis to have worn. It is my considered opinion that this jersey was made to team specifications and worn by Tommy Davis of the 1971 Oakland Athletics.

Letter of Professional Opinion/Document of Restoration

Angel Mangual 1971 Oakland Athletics Game Used Road Jersey

Examination Date: May 31, 2022 **Certification Number**: 22-0531J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Oakland Athletics, sea-mist green (off-gray) road jersey, #2, McAuliffe 1971 manufacturer and team tagging. Outfielder Angel Manual wore #2 for the A's in 1971. Gold/Kelly/gold knit ribbon trim banding the arm and neck openings. "A's" wordmark in green outlined with yellow on the left chest, and similarly two-color #2 on back and right chest in the distinctive A's/McAuliffe font. McAuliffe tagging on the front center tail with "42" size tag and "71" year tag, all comparable to other examples. A size 42, it is a reasonable size for a 5' 10", 180 lbs. player (as Mangual is listed in Baseball Almanac). This green/gray jersey was one of three styles (the others are white and yellow) issued to A's players in 1971. This style was the standard road jersey.

Wear & Repairs: Notable on this jersey is some puckering of the original lettering. Caused by hot water washing, the twill shrunk less than the jersey did, causing the characteristic puckering. The jersey shows wear which is consistent with a jersey that has been worn by a player throughout the season, and then possibly by another player in either Spring Training or the minor leagues for another season. Jersey has reasonable level of thread pulls, loose threads, and shows wash wear, with significant puckering of the back numbers.

Restoration Performed: When I received this jersey for evaluation, it was missing its original name on back, and the ghosts were easily visible on the light table. As was customary for the team and the time, after a year or so in MLB service, game jerseys had their player names removed from the back, and the equipment was sent to Spring Training or to the minor leagues for reuse. The ghost of the removed NOB showed that it was the correct team name on back NOB font as used by the 1971 Athletics. I was asked to perform NOB restoration on this jersey. The name on back has now been restored with appropriately aged Kelly green twill covering the old NOB ghosts perfectly in both size and position, and photo evidence of the restoration was recorded.

Continued, overleaf

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

As restored, the player name letters were placed exactly over the old marks, and distortion to the fabric over the the years and many washings means that the name is not perfectly straight. This is expected.

In a 1971 team photo of Mangual shown here, notice the stitching detail of the side trim under the armhole opening. I would judge this as a likely photo-match and plausible evidence that this is the same jersey as the player is shown wearing in the team photo.

Conclusion: The jersey in review is in good condition: the trim, team crest and numbers are all original, and the name on back is properly restored with lettering near-identical to original. The jersey has no alterations or contrivances of of any kind. It has a team-issue tagging. It is my considered opinion that this is the original and genuine Oakland A's road jersey issued to and worn by outfielder Angel Mangual during the 1971 season.

Letter of Professional Opinion/Document of Restoration

Bert Campaneris 1970 Oakland Athletics Game Used Gold Jersey

Examination Date: February 21, 2025 **Certification Number**: 25-0221J02

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Oakland Athletics gold alternate jersey, #19, McAuliffe 1970 manufacturer and team tagging. Shortstop Bert Campaneris wore #19 for the A's in 1970. White/Kelly/white knit ribbon trim banding the arm and neck openings. "A's" wordmark in green outlined with yellow on the left chest, and similarly two-color #19 on back and right chest in the distinctive A's/McAuliffe font. A size 40, it matches multiple exemplars of other Campaneris jerseys in our archives and is reasonable for a man of his stature. Original set of seven thick yellow plastic buttons as used by McAuliffe are still intact. This gold jersey was one of three styles (the others are white and sea mist green/gray) issued to A's players in 1970. This style was an alternate and was worn both at home and on the road. As received the name on back had been removed, which was standard procedure by the A's at the time; team jerseys were stripped and were prepared for use either the in next year's spring training or for reassignment to the minor leagues. The A's had four minor league squads in 1971, with two of them being named "A's". The original MLB A's crest remains intact on this one, so if reused in the minors it was sent to either Birmingham (AA) or Coos Bay (A-). Since Campaneris was on the 1971 A's squad, he probably wore this jersey with his name on back still intact in 1971 spring training before it was stripped and demoted.

Manufacturer/Team Tagging: McAuliffe cluster of three tags is stitched on the front left tail with "40" size tag (both marked and as measured) and "70" year tag, all comparable to other examples. The A's did not player-tag jerseys in 1970. The tagging is original and with contrivance.

Wear & Repairs: The light table and an examination of the stitching shows that both the A's crest and the player numbers sewn to this jersey are original. Notable on this jersey is puckering of the original lettering, caused by hot water washing. While both fabrics shrunk, the twill shrunk more than the jersey did, causing the characteristic puckering beneath. The jersey shows wear which is consistent with a one that has been worn by a player throughout the season, and then again in Spring Training and/or the minor leagues for at least another season. Jersey has reasonable level of thread pulls, loose threads, and shows wash wear, with significant puckering of the back numbers. The original trim around the neck and sleeve openings is worn but still solid, complete and intact, not shredded as is often the case when these jerseys were over-used in the minors.

Restoration Performed: When I received this jersey for evaluation, it was missing its original name on back, and the ghosts were easily visible on the light table. The ghost of the removed NOB showed that it was the correct name on back NOB font as used by the 1971 Athletics. I was asked to perform NOB restoration on this jersey. The name on back has now been restored with appropriately media-blasted aged Kelly green twill covering the old NOB ghosts perfectly in both size and position, and photo evidence of the restoration was recorded. As restored, the player name letters were placed exactly over the old marks, and distortion to the fabric over the the years and many washings means that the restored name is not perfectly straight. This is expected.

Conclusion: The jersey in review is in good condition: the trim, team crest and numbers are all original, and the name on back is properly restored with lettering near-identical to original. The jersey has no alterations or contrivances of of any kind. It has a team-issue tagging. It is my considered opinion that this is the original and genuine Oakland A's road jersey issued to and worn by shortstop Bert Campaneris during the 1970 season.

Above: as received, prior to restoration. Light table image of ghosting of name on back; red circles show small holes and points of distress from the removal of the original lettering.

Letter of Restoration / Letter of Opinion

Oakland Athletics 1976-1977 Team Issued and Game Worn Jersey

Examination Date: July 8, 2023 **Certification Number**: 23-0708J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: "Wedding Gown White" heavyweight knit pullover jersey, size 44 by McAuliffe. 2 1/2" wide green and gold banded sleeve end trim, and 1" green/gold/green V-Neck trim. Kelly Green over white, A's wordmark crest on the left chest in gold over Kelly Green.

Manufacturer and Team Tagging: The correct set of four clustered tags are sewn at the bottom outside center if the shirt tail. They include the McAuliffe manufacturer tag in the center, surrounded by the blue-bordered white year tag "1976" embroidered in red; red-embroidered washing instructions, and the size tag embroidered in blue on a white tag, "44". These tags were always clustered arbitrarily by the stitcher, and their placement matches exemplars. The tags show extreme wear, the final digit of the "1976" tag is discernible only under very close scrutiny.

Wear & Repairs: As received, the jersey had been stripped clean of all back lettering and was remarkably white and clean despite the wear evident by the worn tagging and the burnishing of the front team crest. A light table evaluation of the stripped jersey showed the placement of more than one set of original numbers, "60" being discernible with the remnants of glue around the edges, but it is clear another set of two numbers had been on the back before, from the presence of some non-aligned shadows and small pulls/cuts in the jersey fabric where the other set of numbers had once been. On back, there are competing sets of ghosts of two prior names on back, though the only one I can make out aligns with the name on back Dick Allen wore in 1977, WAMPUM, the name of his high school and the 60 signifying his year of graduation. In the attached enhanced light table image, I have highlighted the ghosts and the points of intersection with the team's player lettering fonts and Allen's name and number.

Thoughts and Observations: Allen appeared in only 54 games for the 1977 A's, April through mid-June, collecting 171 at bats with 5 home runs and hitting .240, before leaving the team abruptly after the doubleheader on June 19, a day in which he had two hits. He never played on a MLB roster after that day.

The A's were notoriously cheap, and the white jerseys were alternates, worn only for Sunday games at home, of which there were 13 in 1977; and Allen was on the roster for only six of them. Keep in mind that players were typically issued two jerseys in every style. It is possible that Allen was re-issued this previously-used 1976 jersey with his name and number added since this jersey was the least-used in the team's wardrobe. The size of the jersey is consistent with those Allen wore throughout the second half of his career. 1977 photos show him very lean and trim, even at this point so late in his career. But reissuing a 1976 jersey for the star-player who joined the team for only the 1977 season is mind-boggling to me. Then, to have it stripped so cleanly after he used it in what was his final MLB season adds to the oddity.

Lettering ghosts left behind on jerseys are intensified with the amount of time they were worn and washed with names and numbers in place. It would be pure speculation, but the ghosts could be so faint because the jersey was washed only a few times, depending on how offen it was worn, which, owing the presence of two sets, may well have been only three times. It is *possible* the team stripped this jersey of Allen's name and number after his departure mid-season, perhaps planning on re-issuing it again to another call-up player.

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDreamShop

Restoration performed: The A's jerseys of the 1970s had player names and numbers hand-cut from twill using rough paper patterns. Thus there are many small variations from jersey to jersey. Over the years I have handled enough original jerseys that I have amassed a quite sizable collection of scans of game-used number and alphabet fonts. Using standard patterns from this collection, as well as game photos of Allen in 1977, I recreated the player name and number lettering and overlaid them onto the light table image of this jersey back, and there are significant points of match of many ghost-mark strokes. The complete outlines of the "60" are visible, as are many individual strokes from the player name on back, though not enough to say 100% without question that the word WAMPUM was present. I will let the collector be the judge if the evidence I have uncovered is convincing enough. I will also note that there are other faint ghost marks that DO NOT match 60 WAMPUM that I will assume are from the 1976 use of this jersey. I was not able to determine who might have worn this jersey in 1976.

At the top, jersey as received. Without the aid of the light table the back is completely clean and blank. Here, Allen in 1977 game photos. Bottom right, an example of an Allen 1977 jersey said to be game worn that I can not personally validate, but I offer it for consideration.

Top left, multiple strokes of the outline of the "60" on back are fairly clear, emphasized here with red lines. The small red ovals at the top are points of distress that indicate the edge of a letter of the name on back. Top right, the template of the player's name and number are overlaid showing many points of possible intersection. Bottom left, the blue rectangles show points of fabric distress that are not consistent with Allen's name and number, and may have been from the prior year's use of this same shirt, as it is year tagged for 1976.

Conclusion: This is a team issued and game used 1976 white alternate jersey of the Oakland Athletics. It shows heavy wear, yet is clean and without contrivance. I have re-lettered it with the name and number used by Dick Allen in 1977 at the request of its owner, and can say that there is a body of evidence that it had originally been lettered this way, as well as probably having been lettered for a different player who wore it in 1976.

Letter of Authenticity

Oakland Athletics 1976 Mike Torrez Green Game Jersey

Examination Date: December 24, 2018 **Certification Number 181226-1**

Description: Oakland Athletics, green road/alternate jersey, #24, McAuliffe 1976 manufacturer and team tagging. (From Wikipedia) "Torrez was traded (*to the Athletics*) along with Don Baylor and Paul Mitchell by the Orioles to the Oakland Athletics for Reggie Jackson, Ken Holtzman and pitcher Bill Van Bommel on April 2, 1976.[2] Pitching with the Athletics, Torrez had another fine season in 1976 as he went 16–12 with a career low 2.50 ERA. He was traded to Yankees early the next season.."

Design & Tagging: Dark Kelly Green pullover jersey with three yellow banded knit trim stripes at the end of each sleeve. Knit V-Neck trim is yellow-white-yellow. "A's" wordmark in white outlined with yellow on the left chest, and similarly two-color #24 on back in the distinctive A's/McAuliffe font. McAuliffe tagging on the front center tail with "46" size tag and "76" year tag, all comparable to other examples. When I received this jersey for evaluation, it was missing its original name on back and its left sleeve patch, and the ghosts of both were visible on the light table. I restored both to original, and documentation of that process is included in this letter.

Wear & Repairs: The jersey shows wear which is consistent with a jersey that has been worn by a pitcher throughout the season, and then possibly by another player in either Spring Training or the minor leagues for another season. Jersey has reasonable level of thread pulls, loose threads, and shows wash wear, especially in the puckering of the back numbers.

Comments: A size 46, it is a reasonable size for a 6; 5" pitcher, 220 lbs. (as Torrez is listed in Baseball Almanac). The green jersey was one of three styles (the others are white and yellow) issued to A's players in 1976. Green jerseys were worn both at home and on the road.

Jerseys issued to pitchers typically show less wear than those issued to position players, because pitchers don't play in every game. They also rarely damage their jerseys with hard slides and other activities more common to position players. This jersey shows low wear typical to a pitcher-issued jersey, and it did not suffer much undue wear in post-MLB use, if it was in fact used again at all. As was customary for the team and the time, player name on back had been removed after his jersey's MLB service had finished. This evaluator was asked to perform a name on back (NOB) restoration on this jersey as well as sewing a reproduction 1976 team patch on the left sleeve. The name on back has been restored with appropriately aged, yellowed white twill covering the old NOB ghosts perfectly in both size and position, and photo evidence of the restoration was recorded.

Notable on this jersey is rather extreme puckering of the original back numbers indicating that this jersey shrunk somewhat during what were probably many hot-water washings. The twill shrunk less than the jersey did causing the characteristic puckering. This puckering is not so evident on the front "A's" wordmark. This puckering is a common characteristic of these team used Athletics jerseys.

Conclusion: The jersey in review is properly tagged, lettered, and numbered. It is my considered opinion that this jersey is genuine and was worn by Mike Torrez in the 1976 season.

Document of Restoration

Oakland Athletics 1977 Green Jersey -#24 Torrez

This is not a letter of authenticity. Its purpose is to document the history of an alteration of a jersey in our shop.

As Received: 1977 year tagged Oakland A's green road jersey, #24 with name on back removed. Careful examination on the light table, then enhancing photos using color and contrast tools allowed us to uncover the original name on back, TORREZ, in the correct font style and sizes as used by McAuliffe on the 1977 A's jerseys. There was no evidence of any other name having been sewn there.

Work Performed: Replaced name on back using the team template from our archives, exactly matching the shadows now clearly visible on the jersey fabric. Twill lettering was media blasted and organically dyed prior to stitching to jersey to tint the color and reduce the sheen for a better match to the original lettering, and all was sewn with off-white thread for a better match.

Letter of Professional Opinion

Gene Tenace 1975 Oakland Athletics Gold Game Worn Jersey

Examination Date: December 7, 2022 **Certification Number**: 22-1207J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: 1975 Oakland Athletics gold alternate pullover jersey, McAuliffe size 42, (marked and measured) as issued to #18 infielder and catcher Gene Tenace. This is the proper size for the player, (6' 0" 190 lbs) compared to exemplars. McAuliffe 1975 manufacturer and team tagging (set of 4 clustered individually sewn tags) in sewn to the outside center bottom of the front tail. Solid bright gold pullover jersey with 3" knit, five-striped green/gold trim at the end of each sleeve. Knit V-Neck trim is green/white/gelly. "A's" wordmark in Kelly Green outlined with white on the left chest, and similarly two-color #18 on back in the proper A's/McAuliffe font. "TENACE" in tall, narrow single-color Kelly letters that are correct to the team, player and year. Notably, the numbers and the team wordmark on front is sewn with a typical and characteristic rather wide zig-zag stitch. Matching other examples. When examined on the light table, all elements and stitching appear original and without alteration.

Tenace enjoyed a 15 year MLB career, spending his first eight seasons (1969-1976) with the A's. In 1975 he played in 158 games hitting .255 with 29 home runs. He was selected to the AL All Star team in 1975. He was on four World Series winning teams as a player.

Manufacturer and Team Tagging: Typical 4-separate piece McAuliffe tagging on the front outside center tail with "42" size tag and blue-bordered McAuliffe tag, blue bordered "1975" year tag, and seven-line wash tag; all comparable to other game worn examples.

Wear & Repairs: The jersey shows wear which is consistent with a full season's worth of use. Jersey has reasonable level of thread pulls, loose threads, wash wear, especially in the puckering of the tagging and burnishing of all sewn elements. There are two significant areas of staining: rows of horizontal dark yellow scuffs on the upper chest and the lower back tail that appear to be paint or rust, but because the jersey is gold they are not very noticeable. Because this jersey wears its original numbers and player name on back, it somehow was spared reissue to the minor leagues, and therefore shows less wear than those examples we have seen that did not escape this fate. Most Oakland A's jerseys of this vintage in the hobby are in far worse condition from multiple reissues.

Conclusion: The jersey in review is properly tagged and lettered. It is consistent with known exemplars. It exhibits game use and wash wear, and appears to have no alterations of any kind. Therefore, it is my considered opinion that this jersey is genuine and was worn by Gene Tenace of the Oakland Athletics during the 1975 season.

Letter of Professional Opinion

Mike Davis 1980 Oakland Athletics Gold Rookie Game Worn Jersey

Examination Date: March 10, 2023 **Certification Number**: 23-0310J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Gold heavyweight knit pullover jersey, size 44 by McAuliffe. 2 1/2" wide green and gold banded sleeve end trim, and 1" green/white/green V-Neck trim. Kelly Green over white, A's wordmark crest on the left chest.

Manufacturer and Team Tagging: The correct set of four clustered tags are sewn at the bottom outside center if the shirt tail. They include the McAuliffe manufacturer tag in the center, surrounded by the blue-bordered white year tag "1980" embroidered in red; red-embroidered washing instructions, and the size tag embroidered in blue on a white tag, "44". These tags were always clustered arbitrarily by the stitcher, and their placement matches exemplars.

Wear & Repairs: As received, the jersey previously had the numbers 31 on the back and the name UNDERWOOD. The jersey owner had stripped these off anticipating returning the jersey to its original DAVIS. A light table evaluation of the stripped jersey showed the placement of the original numbers "16" and the faint ghost of several strokes in the DAVIS NOB. Unfortunately, the UNDERWOOD name had been applied with too much heat, burning the green dye into the fabric. Unsatisfied with its restored appearance, the jersey owner opted to have it again stripped and re-lettered as HENDERSON #35 simply to make it more presentable for dimply.

It is a mystery as to why a year-tagged 1980 jersey had Underwood on it. He did not join the Athletics until mid-season 1981 (when he did wear #31) and by 1981 the team was no longer wearing this style of jersey. (1980 was its final year). Had Underwood played for the A's in 1981 spring training, that might explain it, but he was with the Yankees then.

1980 was outfielder Mike Davis' rookie year. He platooned during 1980, and was on the A's roster the full year. He appeared in 51 games, batting .211 with 51 at -bats and a single home run. He went on to a ten year career, eight with the Athletics and the final two with the Dodgers. The size of this jersey is reasonable for a man of Davis' height and weight.

Photos of the jersey attached show it 1) as it was originally correctly restored for Mike Davis but then changed again. 2) as received 3) As it exists today, lettered for Henderson #35.

These photos show the jersey in its "restored to original" condition. It has since been re-lettered as shown, overleaf.

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

Above, as received from its owner. At left, the burned in stains of the later player lettering. At bottom, as it has been lettered today. It could easily be changed back to Davis 16.

Conclusion: In my opinion, the is the 1980 Oakland Athletics rookie jersey of Mike Davis. While it now wears a different name and number, it began life lettered for that player. It was re-lettered to Henderson only because of the permanent stains where the player name is sewn are better covered by the long name.

Letter of Restoration/Professional Opinion

Reggie Jackson 1967 Kansas City Athletics Game Used - His First Home Jersey

Examination Date: June 28, 2024 **Certification Number**: 24-0628J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Kansas City Athletics seven-button home cream colored flannel size 44 home vest jersey, McAuliffe 1967 manufacturer and team tagging. Kelly Green over gold "A" on the left chest, #31 on the right chest and again on the back in the A's McAuliffe style font. Gold/Kelly/gold uniform braid rings the neck opening and the two vest armholes. The original buttons are intact; they are the correct small, white four-hole style used by McAuliffe. This jersey body shows heavy but not excessive wear, with the original gold/green/gold braid on the neck and arm openings showing moderate wear but is without separation, fraying or missing sections as so often happens. The jersey body is evenly discolored from much washing and reuse and has weathered almost to an ivory-tan color. No names on back were used in 1967. Size 44 is appropriate for Jackson at the start of his career and matches other examples. A's jerseys of that time were almost always relegated to the minor leagues for reissue, with some or all lettering stripped. Inside the button placket at the very bottom is the word "BUD" written in faded black marker, and a similarly marked and faded "X" is penned inside the back of the neck, both doubtlessly from minor league service.

As received, a light table examination revealed that this one still had its original numbers on both front and back, but that the front "A", even though worn and weathered, was not original to the garment; while close in design, was from 1965 and its shape was not identical to the crest style used in 1967.

There is a long inscription on the front of this jersey on the left side above the tagging, in black felt tip pen. It reads, "My first rookie 'gamer' jersey from Kansas City June 1967" and it signed *Reggie Jackson*. I have no professional opinion on the autograph.

Continued on the next page

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDreamShop

Manufacture and Team Tagging: White and blue McAuliffe tagging with no colored border on the outside left tail with blue "42" size tag and green with white "'67" year tag, the set of three tightly spaced and stitched tags in a cluster are comparable to other exemplars. A's jerseys in 1967 were not team-tagged with player names/numbers. Matches exemplars.

Notes and Restoration Performed: Researching this jersey's history: it was offered at auction in May 2011 by Gray Flannel, and the auction listing contained this line: *"This shirt originates from a lot of 150 A's flannel jerseys the team still retained that were purchased from a warehouse in the late 1970's"* While I can not personally validate that statement, I have located other jerseys in my research that likely were part of that find, including a gray road jersey of Jackson's autographed with similar front inscription.

Continued on the next page

At top, the front autograph and inscription; inside view of tagging shows original stitching. June 11, 1967 Kansas City Star photo showing Jackson wearing home #31. At bottom, the light table evaluation of the numbers, front and back showing that they are original. At bottom, the inside showing characteristic puckering from washing. Bottom left, black marker inside the front button flap, an artifact of minor league use.

Light table evaluation of the jersey stripped of its crest shows evidence of three prior crests having been stitched in place. The image shown here is presented as a negative to make it more clear. The large white spot at the bottom left is a Team repair, darned fabric which is very thick caused when the original lettering was removed. The ghost of the Gothic B is clearly visible so it has not been highlighted. The ghost of the replacement and incorrect 1965 letter A is highly visible in white so it has also not been highlighted. In the center photo you can see the pink outline of the 1967 crest superimposed over the ghosts. While it is very close in shape there are clear points of difference which I have highlighted with yellow circles showing the points of mismatch. As restored, the replacement 1967 crest exactly covers the pink lines. At left, Burlington Bees showing what are surely repurposed KC A's jerseys. Below, examplars of 1967 jerseys showing the year-correct front crest.

21-year old Reggie Jackson was called up by the Kansas City Athletics in June 1967 and made his first MLB appearance in a double header June 9 at home, where he had his first MLB hit in the second game, a triple. (*Baseball Almanac*, *Wikipedia*). Jackson was issued #31, a number worn briefly at the start of the season by pitcher Bob Duliba (5' 10" 185 lbs.) who had been released by the team a month prior. Jackson (6' 0" 200 lbs) was roughly the same size and would have fit into Duliba's jersey; it was common for call-ups to be given any available jersey and in my judgement Jackson was re-issued Duliba's barely-used uniform sets as a matter of practical course. Jackson played in games with the A's from June 9 through July 2, 1967, when he was sent back to the minor leagues (Birmingham) after hitting only .178. He was called up again and resumed the Athletics' MLB roster in mid September 1967. (SABR) No other player wore #31 during 1967.

As auctioned in 2011 by Gray Flannel and as delivered to its buyer, he reports that the front A's crest had been replaced with a crisp and shiny brand new one in seven green over gold tackle twill. After acquisition, the owner sent it out to be restored, and a replacement A's crest from an original, 1960s-vintage weathered jersey replaced the new crest that had been on it. A light table evaluation shows that a large gothic "B" logo had been sewn on the front of this jersey and from the difference in thickness of fabric beneath it, likely been stitched there for multiple seasons of minor-league use, with the Class A Burlington Bees who used this front crest.

The light table shows that the numbers on this jersey are unchanged. The patina of the burnished and puckered numbers on both front and back indicates that they are original. All of the stitching on the numbers, back and front, were touched up Typically, tackle twill lettering shrinks more than the flannel fabric beneath it. This causes a characteristic puckering behind the original numbers. It appears (wisely) that the inner (green) layer was simply overstitched with the numbers left in place, while the gold outer layer attaching thread was stripped and re-sewn. The numbers don't seem to have been completely taken off the shirt because the puckering of the flannel underneath them is still visible. If the numbers had been completely removed and reattached, there would have been a mismatch in the outlines because the puckered flannel would have expanded, causing the outlines to expand and no longer match the shrunken numbers.

While the front crest have been replaced with a vintage original, it was not exactly like the style of the crest used in 1967. The jersey's owner commissioned me to properly restore the front crest using one from another 1967 Athletics jersey he had procured; this one all original.

Carefully removing the front crest, the jersey was again returned to the light table. The large "B" that had been there was clearly visible as a darker area, as the fabric in that area was thicker having been protected in the washing machine for probably multiple seasons it was used with that logo in place. Placing the 1967 vintage "A" crest over the stitched outline reveals a ghost and the overlap of a team repair that match its shape.

Conclusion: This jersey is in very good used, mostly original condition with only the front "A" professionally restored with as period original. The numbers have been reinforced with new stitching that conserves the original. It is properly lettered and tagged without commivance. It is my considered opinion that this jersey was made to team specifications and worn by Reggie Jackson of the 1967 Kansas City Athletics, his first MLB jersey.

Letter of Professional Opinion

Art Fowler 1982 Oakland Athletics Alternate Home Game Jersey

Examination Date: June 3, 2022 **Certification Number**: 22-0602J03

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: White Wilson seven-button size 46 alternate home white jersey with raglan-style sleeves, issued to pitching coach Art Fowler for the 1982 season. Heavy white double knit jersey body with sewn-in knit sleeve end trim, 1 1/2" dark green/gold/dark green. The placket is trimmed with dark green soutache. Matching dark green outline with gold "A's" crest on the left chest. Number 42 on back in the same colors, his name, FOWLER above in one color dark green, sewn in the characteristic straight line of these A's jerseys. The inside of the placket is lined with linen for player comfort as is typical with Wilson-made jerseys of the period.

As a player, Fowler toiled in the minor leagues for ten years, finally reaching the majors in 1954 at age 31. He played for the Reds, Dodgers and Angels during parts of nine of the next eleven seasons, as a starter 1953-1956, and after that mostly as a reliever. After his playing career ended, Fowler hooked up with Billy Martin, and served as his pitching coach for five different teams, including three separate stints with the Yankees.

Manufacturer and Team Tagging: Small Wilson manufacturer tag in the correct style for 1982 is stitched to the outside of the left tail. Beneath it is a 1" x 2.5" rectangle of white knit fabric, hand chain-stitched embroidered "42 82" in the familiar hand of the Wilson factory stitcher, matching exemplars.

Wear & Repairs: The jersey is in very good condition and shows definite signs of being worn and washed multiple times. The wear is what would be expected of a jersey issued to a coach, with minor light stains, but without hard game wear. The lettering is clean and crisp with some loose threads. The linen lining of the inside of the placket is yellowed from use bit fully intact.

Conclusion: The jersey in review is properly tagged, and lettered. It is all original and lacks contrivances of any kind. It is my considered opinion that this jersey is genuine and was issued to and worn by coach Art Fowler of the 1982 Oakland Athletics.

Letter of Professional Opinion

Dave Lopes 1982 Oakland Athletics Gray Game Worn Jersey

Examination Date: June 3, 2022 **Certification Number**: 22-0603J02

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Oakland Athletics, road gray pullover jersey, size 40, #15, Sand Knit manufacturer and team tagging, issued to infielder Dave Lopes. Heavyweight gray jersey body with three-banded dark green/gold/green knit trim at the sleeve ends and the V-Neck. "OAKLAND " vertically arched wordmark in dark green outlined with gold across the chest. Similarly two-color 8 1/8" tall #15 on back in the correct A's block font, LOPES ached above in dark green in the Sand-Knit font. Lopes was the 1982 A's starting second baseman, playing 128 games, his first season in Oakland after ten as a Dodger. He hit .242 in 450 at bats.

Manufacturer and team Tagging: The customary set of two side-by-side Medalist Sand-Knit locker tags are on the outside left tail; the left one is the "Exclusively tailored for the Oakland Athletics" that appeared on all team issued jerseys, and the right one has the maker's Medalist Sand-Knit logo and the garment size of 40 on it. Inside the back of the tail is a Sand-Knit machine printed outline hollow-black-letter printed white knit strip tag that matches exemplars. It reads 82 LOPES 40S. (Size 40- the "S" on Sand Knit jerseys indicates special tailoring, usually extra length which this has.) These tags all match exemplars for 1982. Size 40 is appropriate for Lopes to have worn based on his size- 5' 9", 170 lbs., and is the same as other period jerseys attributed to him. Sand Knit exclusively provided the team's gray "OAKLAND" lettered jerseys in 1982.

Wear & Repairs: This jersey is in excellent original condition, with very little evidence of use. The twill lettering is unpuckered and crisp. A light table evaluation shows that all lettering is original and without contrivance. Multiple game photos from the 1982 season show Lopes wearing a gray jersey in this style with his name sewn in a straight line, unlike this one that is arched. Given its pristine condition, yet the fact that it is specially tailored with extra length, it is likely that this jersey was a "set 2" that received less use.

Conclusion: The jersey in review is properly tagged, and lettered. It is all original and lacks contrivances of any kind. It is my considered opinion that this jersey is genuine and was issued to and worn by Dave Lopes of the 1982 Oakland Athletics.

Letter of Professional Opinion

Jose Canseco Oakland Athletics 1990 Home Game Jersey

Examination Date: July 16, 2022 **Certification Number**: 22-0716J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Home white six-button Rawlings-made Oakland Athletics road jersey of #33 Jose Canseco. "Athletics" scripted on a slant across both front panels with underline, in the proper style for 1990, dark green over gold. Player number 33 below on the left chest in the correct style unique to to the Athletics, in the same colors as the wordmark above, with wide outlines and with the numbers spaced widely apart, typical for the team and the year. On back, "CANSECO" name is arched properly and in the correct font in dark green on a perfectly matching white nameplate with a single-needle serged edge. The nameplate is a specific style used by the A's with uniquely angled ends. Below the player number 33 in green over gold in the correct font for the team. Green elephant on a ball patch is stitched to the left sleeve, it is the correct patch— with the elephant's gold saddle and a green A embroidered in the center. There is correctly no patch on the right sleeve. It is autographed on the left front below the numbers in blue marker. I have no professional opinion on the authenticity of the signature.

In 1990 Canseco hit .274 with 37 home runs and won his second Silver Slugger Award. *(From Wikipedia)* In 1988 Canseco became the first player to hit 40 home runs and steal 40 bases in one season. He won the Silver Slugger award four times: three as an AL outfielder (1988, 1990, 1991), and once as a designated hitter (1998). He ranks 4th all time in A's history with 254 home runs and is one of 14 players in MLB history with 400 home runs and 200 stolen bases. Despite his many injuries during the later part of his career, Canseco averaged 40 home runs, 120 RBIs and 102 runs scored every 162 games, playing a total of 1887 games in 17 seasons with seven different teams.

Manufacturer and Team Tagging: Rawlings script logo is correctly direct embroidered in dark green to the end of the right sleeve. The Rawlings white locker tag is stitched inside the front left tail is the correct style for 1990. A white twill 1" x .5" rectangular tag is pinch-sewn under the right side of the Rawlings tag, with "2 90" machine embroidered in green thread. (1990 Set 2) Credible exemplars in our library show that while he wore size 46 jerseys, many with tapered tailoring immediately prior to 1990, all claimed game worn examples in our library show that he was suddenly wearing exclusively size 50 come 1990.

Wear & Repairs: This jersey presents as nearly new with very light use. All sewn elements are crisp and bright and all twill is un-burnished, unpuckered lacking evidence of repeated washing. A major star and celebrity figure who that same year had signed the largest contract to date in MLB history, there are multiple examples of 1990 jerseys tagged identically to this one, more than just the typical two commonly issued sets. It is likely, anticipating demand, the team or the player had multiple sets issued to him for the purpose of offering them as game used memorabilia.

Conclusion: A careful examination shows that this jersey is authentic in every way to those made by Rawlings for use on the field. It is consistently sized with exemplars and has correct team tagging. It shows very light use. I would conclude that this jersey was made to exacting team specifications and for issue to Jose Canseco in the 1990 season.

Letter of Professional Opinion

Tony Philips 1986 Oakland Athletics Gold Game Worn Jersey

Examination Date: June 3, 2022 **Certification Number**: 22-0603J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Oakland Athletics, size 42 gold alternate pullover jersey, #18, Tony Philips. Sand Knit manufacturer and team tagging. Heavyweight bright gold jersey body with three-banded dark green/gold/green knit trim at the sleeve ends and the V-Neck. "OAKLAND " vertically arched wordmark in dark green outlined with white across the chest. Similarly two-color 8 1/2" tall #18 on back in the specific A's/Sand-Knit font, PHILLIPS above in dark green sewn in a straight line in the Sand-Knit font,

Recognized as being one of the first "super-utility players" in major league baseball, Phillips had an 18-year Major League Baseball (MLB) career from 1982 to 1999. He played regularly at second base, but also had significant time as a shortstop and at third base. In addition, Phillips showed his versatility with over 100 game appearances in the outfield corners and as a designated hitter. *(Wikipedia, Baseball Almanac)*

Manufacturer and team Tagging: The customary set of two side-by-side Sand-Knit locker tags are on the outside left tail; the left one is the "Exclusively Tailored for the Oakland Athletics" that appeared on all team issued jerseys, and the right one has the maker's logo and the garment size of 42 on it. Inside the back of the tail is a set of Sand-Knit machine embroidered white knit strip tags that match exemplars. The left one says 86-42, the right one PHILLIPS. These tags all match exemplars for 1986. Size 42 is appropriate for Phillips to have worn in 1986 he listed at 5' 10" and 175 lbs. My research says that Sand Knit provided only a single set of the team's gold jerseys in 1986, all other jerseys (white, green, gray) were made by Rawlings, and an additional set of gold jerseys was made by Rawlings.

Wear & Repairs: This jersey is in excellent original condition, with very little evidence of use. The twill lettering is unpuckered and crisp. A light table evaluation shows that stitching is original and without contrivance. Notably Phillips is listed as having started the season wearing #18 (as he had on the A's since 1982) and then switched to #2, the number he wore through the rest of his tenure with the team in 1989. While I do not have an exact date of the switch, Phillips was wearing #2 on May 16 when he hit for the cycle. Notably, the Athletics had four jerseys to choose from in their 1986 set, and likely two sets of each style, so the lack of use on this specimen is understandable.

Conclusion: The jersey in review is properly tagged, and lettered. It is all original and lacks contrivances of any kind. It is my considered opinion that this jersey is genuine and was issued to and worn by Tony Phillips of the 1986 Oakland Athletics.

Letter of Professional Opinion

Jose Canseco Oakland Athletics 1989 Road Game Jersey

Examination Date: April 2, 2022 **Certification Number**: 22-0402J03

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Road gray six button Rawlings-made Oakland Athletics road jersey of #33 Jose Canseco. Oakland scripted on a slant across both front panels with underline, in the proper style for 1989, dark green over gold. Player number 33 below on the left chest in the correct style unique to to the Athletics, and in the same colors as the wordmark above. On back, "CANSECO" name is arched properly and in the correct font in dark green on a perfectly matching gray nameplate with a single-needle serged edge. The nameplate is a specific style used by the A's with uniquely angled ends and without serging on either end. Below the player number 33 in green over gold in the correct font for the team. Green elephant on a ball patch is stitched to the left sleeve, it is the correct patch— with the elephant's gold saddle and a green A embroidered in the center. There is no patch on the right sleeve. The A's were in the 1989 World Series, in which they wore a sleeve patch and a black armband, and this has neither.

(From Wikipedia) In 1989, Canseco missed 97 games of the regular season, most of them because of a broken wrist during the preseason. Despite not playing a single game in the first half of the year, he was voted as one of the starting outfielders for the American League All-Star squad, He managed to hit 17 home runs with 57 RBIs in barely 65 games played (a pace equal to 40+ home runs and 130+ RBIs had he played a full season) as the Athletics won the AL West and their first World Series since 1974, beating the San Francisco Giants in four games. Canseco had a solid postseason, batting .323 and hitting 2 home runs

Manufacturer and Team Tagging: Rawlings script logo is correctly direct embroidered in dark green to the end of the right sleeve. The Rawlings white locker tag is stitched inside the front left tail is the correct style for 1989. A white flag tab is pinch-sewn under the right side of the Rawlings tag, "SET 1 1989". Credible exemplars in our library show that while he wore larger jerseys as his career went on, he was wearing size 46 at that time, although reliably authenticated examples show special tailoring indicated of both 1" and 2" extra length. This one lacks the player's typical special tailoring.

Wear & Repairs: This jersey presents as new and likely unused. All sewn elements are crisp and bright and all twill is un-burnished, unpuckered and appears new. There are a few stray pulls in the gray fabric above the N in Oakland that appear to be accidental.

Conclusion: A careful examination shows that this jersey is authentic in every way to those made by Rawlings for use on the field. It has team tagging but lacks the special tailoring generally found on other Canseco exemplars. It does not show signs of use. I would judge this to be a team issue style jersey that was likely a sample or a spare, and an outstanding example of a star player jersey from a World Series championship year.

Letter of Professional Opinion

Mark McGwire Oakland Athletics 1994 Home Game Used Jersey

Examination Date: November 12, 2024 **Certification Number**: 24-1112J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Home white, six-button Russell-made Oakland Athletics road jersey of #25 Mark McGwire, marked and measured as a size 48. Tagged as 2" extra length, jersey measures 34" in length which is actually around 1" extra length (reasonable). "Athletics" scripted on a slant across both front panels with underline, in the proper style for 1994, in the proper Forest Green (blue-green used only 1993-1994) over Oakland Gold. Player number 25 below on the left chest in the correct style unique to to the Athletics, in the same colors as the wordmark above, with wide outlines typical for the team and the year. On back, "McGWIRE" name is arched properly and in the correct font in the same green over gold on a perfectly matching white nameplate zig-zag stitched to the jersey directly with an un-serged edge. Below the player number 25 in the same colors and in the correct font for the team. 1993-1994 style left sleeve patch, elephant head with crossed bats. MLB 125th patch on the right sleeve as used only in 1994. Size 48 is reasonable for McGwire, he was wearing size 50 Rawlings jerseys prior to 1992, but the Russell jerseys are slightly more roomy. His jerseys often included special tailoring

Manufacturer and Team Tagging: Russell R is correctly direct embroidered in dark green to the end of the right sleeve. The Russell Diamond Collection white locker tag is stitched outside the front left tail in the correct style for 1994. Pinch-sewn under the bottom edge is a small 100% Polyester tag, typical of team-issue, along with the aforementioned 2" extra length tailoring tag. The A's did not team tag jerseys in 1994, but the characteristics of the jersey's construction indicate that it is team issued.

Wear & Repairs: The jersey was presented without provenance. A light table evaluation shows that the jersey is without any changes from original and is without contrivance. This jersey shows evidence of moderate use, All sewn elements are still tightly sewn and undamaged, but there is some softening of the twill, minor puckering and some light fraying of the edges from wash wear.

Conclusion: A careful examination shows that this jersey is consistent in every way with exemplars of other 1994 Oakland Athletics home game jerseys. It is the proper size with team tailoring, and shows appropriate use I would conclude that this jersey was made to exacting team specifications as used by Mark McGwire in the 1994 season.

Letter of Professional Opinion

Barry Zito 2003 Oakland Athletics Home Game Worn Jersey

Examination Date: June 3, 2022 **Certification Number**: 22-0603J04

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Majestic full-weight six button white Oakland Athletics home jersey of #75 pitcher Barry Zito. Size 48, which is the same as multiple other, similar era jerseys authenticated for this player. "Athletics" script with underline slanted across both panels of the jersey front, in Packer Green outlined with Oakland Gold. The player's #75 is below in the proper font with the team's characteristic wide outlines. The number is repeated on back, and the player name ZITO is stitched in the same color onto a knit, serged edge nameplate sewn above. All lettering is layer-cut as is correct for 2003. The jersey body is without trim, the team's green elephant standing on a ball patch is stitched to the left sleeve. The MLB Silhouetted Batter patch in green-white-gold is stitched to the back of the neck. This jersey is autographed by Zito between the back numbers. I have no professional opinion on the autograph.

Zito played 15 seasons in MLB for the Oakland Athletics and San Francisco Giants. In 2002, he won 23 games (while only losing five) and won the Cy Young Award. His record was only 14–12 in 2003, but he still made the All-Star team for the second year in a row.

Manufacturer and Team Tagging: Athletics on-field jerseys were made exclusively by Majestic in 2003. The Majestic "M" logo is direct embroidered to the end of the left sleeve. Majestic's locker tag is stitched to the outline of the front left tail. Centered beneath it is a white flag tag noting its size, "48". Pinch-sewn under the right bottom side of the same tag is a flag tab with the printed designation "2003", matching other team issues in our exemplar library. 2003 A's jerseys did not receive more extensive player tagging. On the inside left side seam of the jersey is a cloth majestic style tag that has the code "0062" printed on it, the style designation for on-field spec jerseys as issued to the team, vs. the code 6200 that was used for retail-spec Authentic Jerseys. While the MLB authentication/hologram program had begun in 2000, in 2003, it was still used then only for significant events. The A's were among the early marketers of their game worn gear in these pre-hologram and database days. So, while this jersey is offered without provenance, it is very reasonable that this jersey was indeed game worn.

Provenance: When reviewed , this jersey was accompanied by a notarized letter of provenance signed by Donald Allgrove which explains how he came into original possession of this jersey.

Wear & Repairs: This jersey shows signs of game use and remains dirty with brownish dirt stains up the front and sides and a number of darker brown spots and stains on the front below the numbers, with mud splatters up the back left side. A light table evaluation shows that there are no alterations or repairs to the jersey.

Conclusion: This jersey is properly tagged and lettered and is the correct style for a game worn jersey. It is reasonable to assume that this jersey was made for and worn by Pitcher Barry Zito of the Oakland Athletics in the 2003 season.

Chapter 12

Toronto Blue Jays

Game Worn Guide to MLB Jerseys 1970-2025, Tenth Edition

William F. Henderson

Blue Jays Uniform History Notes

- The Blue Jays were born in the double knit era, so they have no history in flannels. Their early uniform design is notable, as they were the first club to use a centered team logo on their pullover jersey. Most teams that used pullovers designed them to mimic button-front styles, with a bisected lettering design spelled out broadly across the chest —like the Pirates—or with logos and numbers placed on opposite sides of the chest, as seen on Reds uniforms. The Jays displayed their large stylized Blue Jays logo directly in the middle of the chest.
- The team has usually used a highly recognizable and attractive stylized font for numbers from the beginning. Versions of the "split numbers" had been a Blue Jays hallmark from 1977 through 2003 and returned for 2012.
- It is often repeated that period players did not like the Blue Jays pullover uniform set, especially the road powder blues. They were referred to derisively by players as pajamas. The button-front changeover in 1989 maintained the team identity but gave the Blue Jays a more professional look that was widely preferred.
- In 1994, a solid royal blue button-down was introduced as the team's first alternate jersey, a time when many other teams began experimenting with solid color alternates.
- Starting in 1997, design-wise the team appeared to lose its way. Every year they seemed to be changing something, including which logos were used. In 2001–2003 they even used two different team patch logos on the *same* jersey.
- An alternate home vest was rolled out in 1999, worn for two years, and then the look was converted to a "faux vest" (with sleeves attached) for 2001–2003. The faux vest style was applied to the road jerseys full time while oddly maintaining only alternate status at home.
- The total redesign of 2004 was a bit of a mishmash as well. The word "Blue" was dropped from the team designation and the team began to refer to itself as the "Jays" on all its uniforms. Name and number fonts were large, bulbous and fussy, colors muted and seemingly washed out. Combinations of different shades of gray were used on lettering, and the alternate uniform was charcoal in color, which resembled a black jersey faded by over-washing or exposure to bleach.
- Finally, a completely different font was selected for use for player numbers, but on ONLY the team's road uniforms 2008–2011. Multi-colored names on back were constructed of letters so enormous that any name more than seven letters required exaggerated and unnatural arching to fit.
- In 2008–2010, the once unloved powder blue road uniforms of the team's first decade were reintroduced, but oddly used this time as an alternate home uniform.
- Yet another complete team redesign for 2012 brings back elements of the team's first basic design theme while providing the traditional elements of button-front jerseys, including restrained use of trim and the return of split lettering. These were applied to new alternates—a red jersey introduced in 2017 and a powder blue uniform in 2020.
- Through the end of 2015, the Jays specified that their jerseys be made of full-weight knit fabric only; no Cool Base jerseys were worn by the team. In 2016, they switched to Flex Base jerseys with the rest of the teams in MLB.
- As mentioned earlier, in 2020 the Blue Jays get nostalgic and return powder blue to their uniform options for the first time since the 2010 alternate retros, adding an alternate powder blue jersey to the lineup.
- In 2024, the team's "Night Mode" City Connect jerseys debut, featuring a black base with a vivid electric-blue Toronto skyline across the chest, bold red "TORONTO" lettering, stylized striping on the sleeves, and a glowing blue hem, trying to capture the city's energy after dark.
- For collectors and restorers, names are always sewn directly to the game jersey; no game-worn examples I have seen use nameplates. Some late 1990s and early 2000s BP jerseys use nameplates.
- During the 1970s–1980s especially (and also in the 2010s), the Blue Jays' minor league teams had often used similar/identical uniforms to the parent club. Look out for minor league uniforms being misidentified as MLB game jerseys. Ways to tell include the manufacturer being different and lack of presence of a NOB.
- Many game-worn Blue Jays jerseys were made by Wilson from 1977–1996. However, the Wilson manufacturer tagging in many of these years is different than other teams', as the Wilson logo is printed on the tag instead of embroidered, and this writing often wore off after many washings, frequently leaving these tags nearly blank.

I am always looking for new information and better photographs. * There are a fair number of Jays minor league jerseys in the hobby being passed off as MLB jerseys. These are often made by Rawlings in the 70's and 80's or Russell in the 90's. While they often look identical to the parent team's uniforms, including having team tagging sewn in them, there are sometimes subtle clues that they are not from the majors; such as the fact that they are missing a player name on back, or the gray road jerseys say "Blue Jays" in the years that the MLB jerseys said "Toronto."

Team identities over the years: Between their inception in 1977 and 2024, the Blue Jays have gone through six primary team logo changes. All six versions shown below.

1977-1996 | 1997-2003 | 2000-2003 (overlapping) | 2004-2011 | 2012-2017 | 2020-

Home, Road and Alternate Jerseys

1977-1988 Home

1977

Bill Henderson Collection

1977

Pullover with large Blue Jays logo centered on the front. White body with royal/white/light blue sleeve and V-neck trim.

Distinctive “split-letter” font used for back numbers.

No names on back 1977–1979. Unique stylized vertically arched NOB font used in 1980, then Block font used 1981–1988, directly sewn to jersey with no nameplate.

1980

Original examples of 1980 jerseys are rare, as are period news photographs of the Blue Jays at home. These are believed to be accurate representations.

1980

1986

© GameWornGuides.com

1977 Road

For 1977 only, the road jersey features solid royal blue "TORONTO" lettering across the front. Back numbers use a Blue Jays-specific "split-letter" style: royal blue with a white split in the center, with no white outline used that season.

See the following pages for more detail on how these numbers were sewn.

Manufacturer's and team tagging are sewn inside the front shirttail.

© GameWornGuides.com

1978 Road

Nicjk Vescio Collection

After only a single year of use, the “TORONTO” lettering and back numbers were changed. A white outline was added to the numbers on the back and to the team lettering on the front. This is the only Blue Jays jersey in the 1977–2003 period that does not use the characteristic split numbers. No names on back.

© GameWornGuides.com

1979-1988 Road

In 1979, the Blue Jays switch to this powder blue pullover road jersey with the team's logo patch sewn in the center of the front. The team used this style for the next ten seasons, with a few lettering variations:

- 1979, there is no player name on back.
- 1980 only, a stylized two-color Blue Jays-specific font is used for the name on back. It is different from the special font on the 1980 Wilson home jerseys. It more closely resembles the Phillies' 1992–2024 name on back font.
- 1981–1988, there are no names on back of road jerseys.

1977-1996 Sewing Detail: Split Lettering

Bottom left: On early home jerseys, when the split color matches the jersey fabric, the numbers are actually only one color. The twill is sewn on top, allowing the jersey fabric to show through the "splits." This is the case on white home jerseys and blue batting practice jerseys.Each digit is cut into segments and sewn directly to the jersey back. The "splits" are simply the white jersey material showing through.

Below, center: Over time, this process changes. Leaving the fabric exposed led to issues as the material shrank. By the late 1980s, a solid layer of white twill was placed underneath the blue layer to help the lettering maintain its shape.

Below, right: Finally, by the early 1990s, the team began stitching a narrow white split on top of the blue twill—an early version of what would later be called "lightweight twill" in the Flex Base era beginning in 2016.

1977

1985

1995

1977 to at least 1988

1986

1995

On road jerseys, a double layer of twill is always used to achieve the split-letter effect. Prior to 1989, the split appears by revealing the bottom layer. After that, the pattern is reversed and the narrow split is stitched on top.

1994

1977-1990: Variations to Blue Jays Wordmark

1980s Wilson home jersey
with squared-off lettering.

Not surprisingly, Wilson batting practice jerseys use that same squared-off lettering for the wordmark (1986 shown).

However, Rawlings-made road jerseys use more softly rounded lettering (1983 shown). Unsurprisingly, when the Jays switched to Rawlings-made batting practice jerseys in 1988, those also adopt the rounded wordmark style.

The custom split-letter Blue Jays wordmark varied on early jerseys, depending on whether they were made by Wilson or Rawlings.

- The letters on Wilson jerseys from 1977–1989 are formed with sharper angles, most noticeable on the letters U, E and J.
- A careful eye notices that Rawlings jerseys (used from 1979–1983, and again in 1986) feature more gently curved lettering.
- Wilson-made batting practice jerseys use the squared lettering style, and these are used by the team 1977–1987. When Rawlings takes over as jersey supplier in 1988, BP jerseys have rounded lettering.

Starting in 1990, the lettering is standardized to the rounded style on all jerseys, regardless of the manufacturer.

1990 and onward, all jerseys convert to use the same rounded lettering regardless of manufacturer. ***Above left:*** 1990 Wilson game jersey. ***Above right:*** 1990 Wilson batting practice jersey.

Blue Jays Jerseys Sent to the Minor Leagues

It was common practice in MLB to recycle year-old uniforms for use by minor league affiliates. While home jerseys featuring the team name could often be used without alteration, road jerseys displaying the MLB city name typically had to be stripped—or in some cases, simply covered up—before they could be repurposed for the minors.This practice helps explain both the scarcity of original road jerseys in the hobby and the heavily worn condition of many pre-1995 game-used MLB jerseys.

© GameWornGuides.com

1989-1996 Home

The 1989–1996 home jersey is a button-front style. The knit sleeve trim remains, but the old pullover V-neck trim is removed. The Blue Jays logo is moved from the center to the left chest to make room for the buttons.

Back numbers are the same royal blue split-letter style. Names are added to the back during this style period, in one-color royal blue block font, sewn directly without nameplates.

Left: *Simple two-digit date coding sometimes indicates an extra jersey—one not issued to a specific player at the start of the season—later pressed into use during the year.*

This jersey features a flat-hemmed tail, custom-tailored to a player's specifications.

© GameWornGuides.com

1989-1996 Road

1994

Bill Henderson Collection

Click here for a detailed letter of opinion document

In 1989, the road jersey shifts from a powder blue pullover to a traditional gray button-front design. The Blue Jays logo is moved from center to left chest to accommodate the button placket. “TORONTO” replaces “BLUE JAYS” on the front of road jerseys.

Back numbers are now royal blue with a white center split and no outline. Names are added to the back during this style run in one-color royal blue block font, sewn directly to the fabric without nameplates The version of the NOB Block font used by the Jays is a unique variation.

1990

© GameWornGuides.com

1994-1996 Alternate

Bill Henderson Collection

Back numbers follow the same style as the Blue Jays wordmark on the front. Names on back in white standard Block, sewn directly to fabric, no nameplate. Game-worn versions of this style are made by Wilson. Authentic retail versions made by Russell, which used different sleeve-end trim ***(right)***.

More on tagging: Notice the tags at the left. The one at the far left, marked "94," is from a spare jersey—initially made without a player name or number and converted during the season for on-field use. The tag in the center is from the Leyva jersey pictured. Consider this: in the case of the Alomar jersey shown below, is it likely that a high-profile player, with the team from the start of the year, was issued a spare? It's possible—players sometimes request a larger jersey later in the season, or an extra jersey to give to a friend. But as always, buyer beware!

© GameWornGuides.com

1977-1996 Blue Jays Team Tagging

Blue Jays standard collar strip tags: The Blue Jays used standard collar strip tags with a three-part code: *player number, two-digit year, and set number.* This format was used on jerseys made for players at the start of the season.

However, not all jerseys were numbered at the beginning of the year. Each season, the team ordered an additional quantity of blank, year-tagged jerseys to handle midseason call-ups, player requests for different sizes, trades, and replacements for damaged or lost uniforms.

Jerseys labeled with only a two-digit year (such as “94”) or a year and set number (such as “88-1”) were most likely extras at the start of the season that were later issued during the year.

© GameWornGuides.com

1997-2000 Home

1999

The team's first major redesign since 1977 introduces a new font for lettering, names, and numbers. Player names appear in split-letter style for the first time, sewn directly without nameplates.

Two-color lettering features royal blue with a light blue split highlight centered within each letter. Number also appears on the left front.

Sleeve ends are finished with red/light blue/royal blue knit trim. A maple leaf logo is sewn on the left sleeve.

1998

1999 jersey used in 2000; note added MLB Silhouetted Batter patch on back of neck.

1997

Click here for a detailed letter of opinion document

© GameWornGuides.com

1997-2000 Road

Steve Kraljic collection

2000

When Majestic took over from Wilson in 2000, its sleeve logo was not embroidered as with other teams—it was instead a small stitched-on patch. Perhaps there was a licensing issue that required a last-minute solution?

Made by Wilson, 1997–1999, Majestic takes over in 2000. While the lettering was redesigned, it retains the signature split-lettering style. For the first time, player names also appear in split-letter style, no nameplates used. Three-color lettering is royal blue and white, with red split highlights centered in each letter. Player numbers appear on the left front. Sleeve ends feature red/light blue/royal blue knit trim, and a maple leaf logo is sewn on the left sleeve.

© GameWornGuides.com

1997-2000 Alternate Blue

Three-color lettering consists of red and white, with royal blue split highlights centered within each letter. Player numbers appear on the left front. Sleeve ends are finished with red/light blue/royal blue elastic trim, and a maple leaf logo is sewn on the left sleeve. All lettering is layered twill, with the blue "split" stitched on top.

1999-2000 Alternate Home Vest

For 1999–2000, the Blue Jays introduced an alternate vest style, worn with a blue undershirt. There is no front number; instead, the team's maple leaf logo appears on the left chest.

The lettering colors are the reverse of the home jersey—light blue with a royal blue split highlight. The 1999 version was made by Wilson; in 2000, production shifted exclusively to Majestic. The MLB "Silhouetted Batter" logo patch is added to the back of the collar on all 2000 MLB jerseys.

Notice the lettering detail. On the Wilson jersey ***(near right)***, all lettering on both front and back is solid Process Blue with an embroidered split applied on top of each letter before being sewn to the jersey. The Majestic version ***(far right)*** uses the traditional two-layer stitched twill technique, with the darker blue split sewn on top.

2001-2003 Alternate Home Faux Vest

2001

Click here for a detailed letter of opinion document

2003 sleeve patch

Though it appears to be a vest, the blue sleeves are sewn onto the body, making it a "faux vest." While the basic jersey remained the same all three years, the front numbers and patches were applied differently each season.

Oddly, in 2001 and 2002, two different depictions of the Blue Jay character were used simultaneously—one on the front and a different one on the sleeve—suggesting the team had not settled on a final version.

- **2001**: "T-Bird" patch on the front in place of numbers; 25th Season patch and American League 100th Anniversary patch on the sleeves.
- **2002**: "T-Bird" patch on the front; Blue Jay head/maple leaf patch on the sleeve.
- **2003**: Numbers on front; "T-Bird" patch moves to the sleeve. The earlier Blue Jay patch is no longer used.

1997-2003 Sewing Detail: Split Lettering

The front lettering close-up above is from a store-bought Russell authentic jersey from around 1997. Note how the light blue is laid down first, with the royal blue sewn on top.

1999 Wilson jersey has blue twill lettering with the light blue split embroidered on top of each letter.

2003 Majestic jersey features two-layer twill lettering, with a thin light blue split cut from twill and sewn on top of each solid letter. Player names on the back are applied using the same method.

The 1999 Wilson jersey uses player-name lettering identical in style to the front wordmark ***(top center)***. These letters are clearly pre-fabricated and sewn to the jersey only around the edges. This was certainly automated and done for speed in lettering player and retail sale jerseys. Properly aligning and hand-sewing the split highlights onto each letter was a time-consuming process.

1999 Majestic batting practice jersey has red twill lettering with the royal blue "split" stitched on top of each letter.

2004-2007 Road

For a complete explanation of how this troubled road jersey "came to be", see the pages on the *2004 Abandoned Road Charcoal* in the "Prototypes and Oddballs" section.

Back numbers are rendered in a three-color custom Blue Jays font: charcoal gray/ metallic silver/turquoise blue. Player names appear in a two-color version of the same font, in dark gray/turquoise blue.

The wordmark is an elaborate embroidered patch featuring textured silver/gray beveling and *three* layers of outlining.

While the rest of the team's visual identity continues after 2007, this road jersey style is replaced by a new design in 2008.

© GameWornGuides.com

2004-2011 Alternate Black

This jersey features a solid black base.

The back numbers use a three-color version of the custom Blue Jays font in metallic silver/turquoise blue/light gray. Player names appear in a two-color version of the font, in light gray/turquoise blue.

A maple leaf patch is added to the right sleeve beginning in 2009.

© GameWornGuides.com

2008-2010 Alternate Home Retro

- To the casual observer, the new retro jersey appears to be an exact replica of the 1979–1988 powder blue road jersey. But to the detail-obsessed, there is one key difference. All of the original jerseys were made by Wilson and featured squared-off lettering in the Blue Jays wordmark. The new retro jerseys use rounded lettering—something never found on a Wilson road jersey from that era.
- The return of the old-school pullover road uniform—worn at home on Friday nights—was not universally embraced by players and coaches.

"There was a classic moment during yesterday's press conference to unveil the Blue Jays' new road and alternate uniforms. It came when they trotted out old-timers Lloyd Moseby and John Mayberry to model the team's new 1979 powder blue throwbacks, which will be worn for Friday home games. At one point Moseby was asked what it felt like when he first wore that uniform back in the day. The prop boy must not have been holding the cue cards high enough for Moseby to see, because instead of giving a scripted reply, he chose to ad lib: "The uniform sucked, okay? So we ain't gonna go there." After a moment of nervous laughter from the audience, followed by a beat or two of silence, Moseby added, "'Course, it was big to put on any uniform," but it was too late — his point had been made..."

—Quoted from Paul Lukas's *Uni Watch* (December 4, 2007)

© GameWornGuides.com

2008-2011 Road

In 2008, the Jays introduced a new road jersey that, while visually appealing, diverges sharply from the design of the home and alternate styles. The front wordmark is bold and angular, and the player numbers are presented in a modern, blocky style used exclusively on the gray road jersey—distinctly contrasting with the softer, curved elements on the other uniforms. It marks the only time a team has intentionally used *different* custom font styles for home and road jerseys in the same season. The player name font matches that of the other jerseys, but its three-color design proves unwieldy for names longer than seven letters. The Blue Jay head logo, also seen on the black caps, appears on the left sleeve. A red maple leaf patch is added to the right sleeve in 2009.

Photos here show that any name longer than seven letters requires sewing gymnastics to "make it fit."

2012-2023 Home

After years of tinkering and over-embellishing the original design—followed by a complete stylistic departure in 2004—the Blue Jays introduced a new uniform set for 2012 that returned directly to the club's most successful era: the early to mid–1990s.

The 2012 uniform is a modernized version of the 1989–1996 classic design. Clean, simple, and understated, it features minimal trim and reintroduces the familiar "split-letter" style that debuted in 1977. The lettering font is slightly updated but remains tasteful. A refreshed version of the classic Blue Jay logo returns to the left chest. Player names on back are direct-sewn in a one-color block font

Through the 2015 season, the Blue Jays used full-weight knit jerseys, avoiding the lighter Cool Base material. In 2016, they transitioned to Flex Base along with the rest of Major League Baseball. Majestic manufactured this jersey from 2012–2019, Nike takes over for 2020–2024.

Blue Jays unveil new logo for 2012 season/Club undergoes third major redesign in its 35-year history

By Gregor Chisholm/MLB.com 11/18/2011

TORONTO — The Blue Jays dipped into their past when looking for inspiration for the club's new logo that was revealed at Rogers Centre on Friday afternoon.

The new look is a modernized version of the franchise's first logo that was used from 1977–1997. It features a sleeker-looking Blue Jay bird head with a prominent red maple leaf to showcase Toronto's standing as the only Major League Baseball team in Canada.

The design also marks the return of "Blue" in Blue Jays for the first time in almost 10 years and will be reflected on two of the three uniforms.

"I always thought of it as the Blue Jays," team president and CEO Paul Beeston said. "I know Jays was kind of a nickname for it, but we were the Blue Jays, and it was on all our material.

"At the end of the day, we went right back to where we were and we upgraded it. It has been energized, it has been modernized, and I think when you started looking at it, the players wanted the same thing."

The primary logo has the sharp-featured bird head imposed on top of a baseball and a red maple leaf. An arched solid blue font "Toronto" is above the baseball with "Blue Jays" located below, and the entire logo is fully encased in a blue and white split-line circle.

The new look was more than 18 months in the making. It was created by the Blue Jays with assistance from the Design Services division of Major League Baseball, in conjunction with members of Toronto's staff, manager John Farrell and several players.

The secondary club logo will be the focus of the cap and helmet. It features the bird head with a blue crown, navy blue beak and neck accompanied by the red maple leaf. That look will be used for all home, away and alternate uniforms.

"It's exciting, because we're going back to the 1992–1993 look," third baseman Brett Lawrie said. "It's good in that aspect and it's good to bring blue back to the city of Toronto.

"I think it looks good, a mix of old-school and new-school."

The Blue Jays also will return to a double-knit polyester fabric for all of their uniforms. The switch from the previous Climate Base material was made at the request of the players during the consultation process.

The Climate Base material is lighter in nature, but players thought it became too heavy once they started to sweat, and the polyester is expected to breathe a bit more naturally.

Toronto's home white uniforms will have "Blue Jays," while the traditional grey road uniforms have "Toronto" across the front in blue and white split-lettering font.

Royal blue will be the main colour scheme for Toronto's alternate uniform. It has arched "Blue Jays" lettering across the chest and two white stripes at the bottom of each sleeve. The jersey can be worn with either the home white or road grey pants, and all three uniforms will have the secondary logo located on the left side of the player's chest.

"We were all part of the development and the design of these new uniforms," slugger Jose Bautista said. "Our input was asked for by the management, the front office, and I think it was very nice of them to do that.

"We're going to enjoy playing in these uniforms, just like we have in the past, but this is going to mark a change of culture in this organization, and hopefully moving forward, we'll be in the playoffs on a yearly basis."

The logo is the seventh in Toronto's 35-year history and its third major redesign. The first logo was introduced in 1976 and spanned 20 seasons before a change was implemented in 1997.

The second logo, which was designed by the Design Services division of Major League Baseball, put more of an emphasis on Canada's national colour, as the red maple leaf served as the backdrop for the bird head.

In 2002, the club went through its second major rebranding process. The Toronto-based firm Brandid opted to focus on "Jays" and used traditional baseball script with three-dimensional metallic letters with an emphasis on a black and silver colour scheme.

Toronto's latest version once again embraces the full Blue Jays name, which was an important initiative for Beeston, who was hired as the club's first employee in 1976. Beeston departed the Blue Jays in '97, but he returned again in 2009 to become the club's president and CEO.

"I really believed that we should go back to the blue," Beeston said. "The black wasn't for me. It wasn't for me when I was in New York or heard about what they were going to do. But I wasn't in charge, so they could do what they wanted to do.

"We knew that we had two or three years where we could have a look at it, we could examine it. ... To be quite honest with you, when you start looking at it and you come back with what you had before, it just proves that's probably what you should have had before, because everybody agreed with it."

For a perspective on the earlier 2004 rebranding and a glimpse into what went wrong, this article In Sports Business Daily, titled "Franchise Rebranding Case Study- The Blue Jays" offers a wider perspective.

2012-2023 Road

The road gray suit is the perfect complement to the home uniform. It also represents a return to the 1989–1996 button-front look, with “Toronto” spelled out in split-lettering across the front. Note the inset color detail, which includes a fine black outline. Two-color split numbers appear on the back only, while player names are rendered in single-color blue Block font, direct sewn to the shirt.

Through the 2015 season, the Blue Jays stayed with full-weight knit jerseys only, avoiding Cool Base. In 2016, they moved to Flex Base along with the rest of Major League Baseball. Majestic manufactures this jersey from 2012–2019; Nike takes over for 2020–2024.

2012-2023 Alternate Dark Blue

Just like the home and road uniforms, the royal blue alternate jersey is a restrained, modern recreation of the 1989–1996 alternate jersey.

A minimum of trim is used—only narrow white/blue/white knit on the ends of the sleeves.

Split-letter numbers appear on the back in white and blue, and single-color white names are direct sewn.

Through the 2015 season, the Blue Jays stayed with full-weight knit jerseys only, avoiding Cool Base. In 2016, they moved to Flex Base with the rest of Major League Baseball. Majestic manufactures this jersey from 2012–2019; Nike takes over for 2020–2023.

Read the full story on MLB's adoption of Flex Base jerseys for 2016 in Chapter 2.

2016: Flex Base Jersey Construction and Branding

In 2016, all teams—including the Blue Jays, who had resisted Cool Base jerseys—adopt Majestic's new "Flex Base" on-field game jerseys. These are made of Cool Base fabric, but with several new elements designed to make them lighter and more breathable. The new jerseys have mesh side panels that run the length of the jersey, and one on the back tail called the "Air Belt." They also use "Kiss Cut" layering for front decorations, names, and numbers, which Majestic says is 10-20% lighter than traditional layered twill. Finally, the MLB logo on the back neck is now a rubberized patch, called CFX by Majestic, and the heat-pressed tag on the front tail differs from Cool Base jerseys of old.

© GameWornGuides.com

2017 Alternate Home Red

The Blue Jays add a red jersey as an alternate in 2017, similar in spirit to previous red Canada Day jerseys. The Majestic Flex Base jersey is nearly an exact red copy of their blue alternate, but where the blue version has the full-color Blue Jay logo on front, the Blue Jay patch on the new red entry is rendered in red and white only. A textured, deeply embroidered red Canadian maple leaf adorns the left sleeve. All front and back lettering and numbers are white with red inner lines. This jersey is used not only for Canada Day 2017 but also for several Sunday home games. As such, the jersey is changed from a “special” to an official “alternate.”

**This same style is worn again on Canada Day 2018–2019 and 2021–2024 (and occasionally at other times as well), but it is no longer listed as a team alternate in the style guide. This is a clerical/administrative distinction only.*

© GameWornGuides.com

2020-2023 Alternate Powder Blue

Like a few other teams in recent years, the Blue Jays look back to their history and reintroduce a powder blue uniform set. The new Nike button-front jersey, based largely on Majestic's former Flex Base template, replicates the team's existing home jersey in all ways except for the powder blue base color.

Front lettering and back numbers on this jersey are navy, not royal, blue, with white inner lines, while names on back are solid blue. Sleeve ends are encircled with blue/white/blue trim, and the Swiss-embroidered, textured Blue Jay logo patch adorns the front left under the wordmark. Powder blue pants complete the look, creating a fully matching uniform rather than just an alternate jersey to be worn with regular home or away pants.

2024 Nike “Vapor Premiere Elite” Jersey Template

Nike Flex Base 2020-2023

Nike Vapor Premier Elite 2024

Following league-wide sweeping changes to MLB jerseys with all teams switching from Nike’s 2020–2023 continuation of the Majestic Flex Base jersey shell to its new Vapor Premier Elite (VPE) template, the jerseys of the 2024 season become an anomaly—a “one and done” season of changes that brought intense scrutiny from players and fans alike. Based on the negative feedback, especially from MLB players, Nike rolled back some but not all of the 2024 changes in time for the 2025 season.

The full rundown of the changes is outlined earlier in “The Basics” chapter, but generally speaking, 2024’s crop of jerseys had changed from earlier versions in several key ways.

- VPE home jerseys are off-white, or light cream color. The earlier Flex Base white jerseys are a bright, purer white. Grays are standardized.
- The front placket is narrower on VPE, which often causes team wordmark lettering that crosses the placket to break differently.
- Neck and sleeve trim elements (when used) are no longer sewn on top of the jersey material, but are now “sewn-in” to the jersey at the seams. Placket trim adornment remains the same, though the trim is now spaced closer together with the narrowing in placket size.
- For improved visibility, the MLB logo on the back of the jersey is moved several inches lower onto the back, down from the collar placket area where it had been since 2000.
- VPE loses the integrated mesh side and back tail panels that had been part of the Flex Base jersey template.
- Player names on VPE are much smaller, and for many teams are done in a standardized block font, all using a much steeper, nearly semi-circular arch.
- For teams with front numbers, the new 2024 font is simply always a reduced size of the back numbers. This was not the way it had been in the past for most teams, with front numbers being a font variant (smaller but usually wider and bolder) than the back font.
- Team logo sleeve patches, and in some cases sponsor sleeve patches change from traditional raised embroidery to flat printed plastic or to sublimated cloth/twill
- All lettering is done using a new more lightweight (thinner) kind of matte-finished twill (commonly called “Nike Twill”). Most, but not all jerseys incorporate barely visible micro-perforation on the numbers, front and back.
- Universally, nameplates are no longer used.

© GameWornGuides.com

2024 Home

The switch to Nike's Vapor Premier Elite (VPE) results in a handful of changes to the Blue Jays' modern-classic home jersey. Most visible are the league-wide rescaling of the back names and numbers, making them smaller, and arching the name lettering more prominently. The front Blue Jay head logo and team script are also made smaller. Most unfortunately, the Blue Jay head is embroidered flat on to lightweight twill, rather than the raised, textured, Swiss-embroidered patch of years past. It is unclear if the team opts for perforated numbering, more research is required. Sleeve-end trim is also now sewn into the end of the sleeves rather than sewn on top of it.

Right: *Note the loss of depth and detail in the Blue Jays patch embroidery with VPE (2024) vs. Nike Flex Base (2020–2023).*

2024-2025 City Connect

The Blue Jays and Nike put a lot of storytelling into the team's City Connect identity, nicknamed "Night Mode." And we mean a LOT. Rather than explain it ourselves, let's hear what they had to say about this new style in their joint press release:

Illuminated Skyline – The rhythmic skyline graphic, proudly displayed across the uniform chest, portrays the pulse of Toronto's Night Mode and the vibrant lights that reflect off the pitch blue of Lake Ontario. The iconic dome of Rogers Centre – home of the Blue Jays – sits at the core beneath the imposing CN Tower.

Landmark Toronto Sign – For the first time since 2003, the chest of a home Blue Jays uniform dons our city's name. The new font is inspired by the vibrant landmark TORONTO sign at Nathan Phillips Square, with modern details reminiscent of the beloved Blue Jays split font. In addition, this is the first time since 2003 that a home uniform features a number on the front.

Pitch Blue, Speed Red, & Hyper Royal – A Night Mode version of the core Blue Jays colours, the bold new combination brings a dark base colour back for the first time since 2011. The "pitch blue" is inspired by the hue of Lake Ontario at night, while Speed Red and Hyper Royal add energetic accents while maintaining a distinctly Canadian identity. The shoulder of the jersey features a "hyperized" bird head – a modern version of the logo that has been core to the Blue Jays brand for nearly 50 years.

Diversity Our Strength – Written across the uniform neckline, the phrase is intentionally placed as the closest feature to the wearer, representing who we are at our core as a city and country. It comes from the Toronto Coat of Arms, reflecting the city's multicultural identity and belief that our diversity – in neighbourhoods, traditions, ethnicities, cultures, social backgrounds, and so much more – is what makes Toronto thrive.

City Flag Double Stripe – A look that is quintessentially Blue Jays, double stripes have been fundamental to the team's uniform since 1977. The Hyper Blue pant stripes line up with the "T" on the jersey sleeve.

Carryover City Connect jerseys are not updated in 2025, despite the updates to the team's other jerseys for the 2025 season.

© GameWornGuides.com

2025 Home

The 2025 season brings minor modifications to elements of the VPE template across all teams' non-gray jerseys, a step toward more comprehensive changes to come for the 2026 season. Among them, back name and numbers are enlarged, in most cases, back to 2023 sizes, and perforated numbers are gone. Sleeve patches also revert to full embroidery, back from printed or lightweight embroidered patches. Also, the home jersey now has the new-for-2025 white Nike jock tag (see above), which has been used on a handful of jerseys around the league.

© GameWornGuides.com

2025 Road

The 2025 season brings many changes to road gray jerseys across MLB. The 2024 VPE gray jerseys were prone to significant sweat staining during games, so 2025 gray jerseys revert back to the same base fabric used for Flex Base, but applied to the VPE template (no mesh side panels or “Air Belt” back panel). Other pre-2024 elements return, including neck and sleeve trim being sewn on to jerseys again rather than sewn in. The redundant, jersey-colored band of trim around the neck opening is also deleted. Back name and numbers are enlarged, in most cases, back to 2023 sizes, and perforated numbers are gone. VPE’s placket remains narrow, so the “Toronto” script breaks in the same place as in 2024. Sleeve patches also revert to full embroidery, back from printed or lightweight embroidered patches.

© GameWornGuides.com

2025 Alternate Dark Blue

The 2025 season brings minor modifications to elements of the VPE template across all teams' non-gray jerseys—a step toward more comprehensive changes planned for the 2026 season. Among them, back names and numbers are enlarged—typically back to 2023 sizes—and perforated numbers are eliminated. Sleeve patches also revert to full embroidery, replacing the printed or lightweight embroidered patches used in 2024.

© GameWornGuides.com

2025 Alternate Powder Blue

The 2025 season brings minor modifications to elements of the VPE template across all teams' non-gray jerseys—a step toward more comprehensive changes planned for the 2026 season. Among them, back names and numbers are enlarged—typically back to 2023 sizes—and perforated numbers are removed. Sleeve patches also revert to full embroidery, replacing the printed or lightweight embroidered patches used in 2024..

© GameWornGuides.com

2025 Alternate Red

After becoming an official alternate in the MLB Style Guide for just one year in 2017, the Blue Jays' red jersey re-appears as an alternate in 2025. This means that the Blue Jays are one of the few teams allowed to break Nike's "4+1 Rule," which allows a team four primary jerseys and a City Connect. It is likely done for inventory or manufacturing purposes, as other teams have had to add unique Spring Training or regular-season one-day-only jerseys to the guide in order to be able to continue to wear them.

This is the first time this jersey has appeared in Nike's Vapor Premier Elite (VPE) template, as the 2024 entry was still Nike's version of Flex Base. As such, it features some of the minor modifications to the template that were made in 2025 as a precursor to more extensive changes planned for 2026. Among them, back name and numbers are enlarged, in most cases, back to 2023 sizes, and perforated numbers are gone. Sleeve patches also revert to full embroidery, back from printed or lightweight embroidered patches. However, since the 2024 version was actually the same as 2023 to begin with (being Flex Base) the 2025 look is almost identical to the prior year.

© GameWornGuides.com

Batting Practice and Spring Training Jerseys

1982-1996 Batting Practice

This jersey style uses early-style split-letter numbers. No NOB on BP jerseys through 1992. Split numbers on mesh BP jerseys are sewn in two layers: a white split number over a solid royal blue bottom layer. Names on back, rendered in white, first appeared in 1993 and remained through 1996.

As is typical, multiple manufacturers supplied the team in different years. Some jerseys from 1983–1993 were made by Wilson; those from 1994–1996 were made by Majestic and feature the Majestic logo on the sleeve end. Rawlings jerseys appear by 1988, with Rawlings' script logo on the sleeve end.Rawlings script on the sleeve end.

Danny Hartnett collection

© GameWornGuides.com

1990-1995 Alternate Batting Practice Zip-Neck

As with several other MLB teams, Majestic supplied the Blue Jays with an alternate set of warmup jerseys used over several years. Use of this jersey was optional for players; there appears to have been no formal requirement for all players to wear the same warmup style.

This jersey features nylon mesh construction, color-striped elastic knit cuffs and collars, a short zipper at the neck, and elastic at the waistband. Shallow slash pockets on both sides of the front are deep enough only to hold small items like batting gloves. The Majestic logo is heat-pressed onto the edge of the right-side pocket.

Back lettering consists of solid white characters with a blue split overlay. These jerseys tend to run small and are notably short at the waist.

Close examination reveals that the jersey above differs from the one at left; the neck trim is three-striped on one and five-striped on the other.

© GameWornGuides.com

1997 Batting Practice

With the team's change of branding for 1997, the BP jersey was changed along with all the team uniforms.

It is a simple blue mesh, one-button pullover with the new Blue Jays logo embroidered as a patch on the left chest. The jersey features new-style split-letter numbers on the back, joined by a brand-new player-name font also in split-letter style. All lettering is three-color. Names are applied both on nameplates and as direct-sewn lettering, with the latter more commonly seen.

© GameWornGuides.com

1998-2000 Batting Practice

2000 with Spring Training patch

This mesh batting practice jersey features the Blue Jays maple leaf logo on the left chest and uses the alternate game jersey lettering on the back. The knit sleeve ends feature a three-color pattern: red/light blue/royal blue. Team-issued batting practice jerseys of this style often display player names on nameplates.

© GameWornGuides.com

2001-2002 Batting Practice

Steve Kraljic Collection

2001: with 25th Anniversary Spring Training-only patch and NOB

This mesh batting practice jersey features the cartoon “T Bird” logo on the left chest. Back numbers use the alternate jersey lettering colors. On team-issued batting practice jerseys, player names appeared on nameplates in 2001 only.

2002: No sleeve patch, no NOB

© GameWornGuides.com

2003 Batting Practice

2003 BP jerseys are made of new first-generation moisture-wicking knit fabric by Majestic. These are non-mesh jerseys, identifiable by their gray sleeve inserts.

These jerseys were prone to significant fading, especially when exposed to sunlight. The fabric was fragile and could easily snag, even from a fingernail. Used examples often show noticeable wear and deterioration as a result. Back numbers are three-color: red/white with blue split insert. Player names not used in 2003.

© GameWornGuides.com

2004-2006 Batting Practice

This is a black, full-button jersey made of early technical fabric, with the team logo on the left chest. The back features three-color custom Blue Jays numbers, rendered in a new-for-2004 font: light gray/turquoise blue/dark gray. A bead of gray piping runs from the shoulder to the sleeve end.

Generally seen without names on the back. However, a trusted dealer has recently listed some with NOB ***(bottom center)*** on nameplates. It is assumed that jerseys with NOB were issued for regular season use, while those without were used in Spring Training.

© GameWornGuides.com

2007 Home/Road Batting Practice

Home version with white side panel

Road version with gray side panel

In 2007, all MLB teams switched to Cool Base pullover batting practice jerseys with a one-button neck. The Blue Jays' version is black, with a contrasting white or gray panel sewn into the sides. Like the Yankees, the Jays issued two distinct warm-up jerseys so that the side panels would match the team's home white or road gray uniform pants.

There are TWO distinctly different jersey styles highlighted on this page: one with white side panels for home use ***(top row)***, and one with gray side panels for road use ***(bottom row)***.

All adornments on these jerseys—including team designs, manufacturer logos, names, and numbers—are heat-pressed appliqués, not sewn-on tackle twill as used in prior years. The back numbers are updated to a two-color design with a much narrower outline than the 2006 version.

© GameWornGuides.com

2008-2010 Home/Road Batting Practice

These jerseys are identical to the team's 2007 BP versions, apart from a change in the team logo applied to the left chest. Notice the change in the word "Toronto" to a stylized set of blocky capital letters, replacing the prior script used 2004–2007. Both home (white side panels) and road (gray side panels) versions were issued, as the team felt that the white side panels clashed with the gray road pants.

2008–2010 team crest

Player numbers are not stitched; they are two-color flock appliqués. The front team crest is also an appliqué, rendered in gray, white, blue, and black, and incorporates metallic-patterned insets.

© GameWornGuides.com

2011 Home/Road Batting Practice

Home and road versions are nearly identical except for the color of the side insert panels and back numbers. Home version has bright white panels with three-color numbers, road version has pale gray.

This button-front Cool Base design features an understated logo and the word “Toronto” on the left chest in block capital lettering. Both home and road versions use three-color numbers on the back, different once again from 2010. Player names are still not used.

As in previous years, subtly different Home and Road versions are used: the home version has white side panels, while the road version uses gray side panels to better match the uniform pants.

© GameWornGuides.com

2012-2013 Batting Practice

The 2012–2013 Cool Base batting practice jersey is a button-front design in royal blue with navy side panels that extend to the underside of each sleeve. An embroidered Blue Jays crest appears on the left chest. Single-color split numbers in tackle twill are featured on the back. No player names are used.

© GameWornGuides.com

2014-2016 Batting Practice

MLB refreshed all teams' batting practice jerseys for 2014, and the Blue Jays' version includes several subtle but interesting refinements. First, while the jersey design allows for two-tone styling, with provisions for contrasting side or even side-and-back panels, the Jays opt for an almost entirely monochromatic blue look. Second, although the new knit trim around the sleeve ends and neck opening is designed to allow contrasting color bands (used by every other team to create at least a stripe of contrast), the Blue Jays again choose solid blue.

In the right lighting (as shown in the accompanying photos), the side panel appears slightly darker than the rest of the jersey—likely due to its different fabric and texture, which reflect light differently.

The back features white twill numbers with no player names. The embroidered Blue Jay head patch remains on the left chest, consistent with the prior design.

© GameWornGuides.com

Read the full story on MLB's new for 2016 Spring Training Jerseys in Chapter 8.

2016 Spring Training

For the first time in 2016, MLB introduced a Spring Training–specific jersey intended to be worn for workouts and games during the preseason. The jersey is based on the Flex Base game jersey template and features a special printed twill, decorated with "2016" and Spring Training symbols, as the top twill layer used by every team.

The Blue Jays use their regular season dark blue alternate as the base, omitting the player name from the back. The back numbers are white patterned twill with blue inner lines. The jersey also features a rubberized CFX patch on the right sleeve in the style of an Interstate highway sign, reading "2016" and "FL" to represent the Blue Jays' Spring Training home.

© GameWornGuides.com

2017-2019 Batting Practice

With many players opting for lightweight cage jackets, which are devoid of player identification, instead of traditional BP jerseys with player names and numbers, Majestic introduces a replacement product that may be an attempt to gain acceptance by the pros on field while being more attractive to fans at retail. New for 2017, official team batting practice jerseys are replaced with what Majestic calls a 3/4 Sleeve BP Trainer. The new hybrid is cut in a pullover jacket silhouette, including a short zipper at the neck, but made of Cool Base jersey material. The underarm and back panels are of Cool Base mesh, like the sides and tail of Flex Base jerseys. Team logos and other lettering is in what Majestic calls “lightweight twill” (as described in Chapter 8). The Majestic logo is applied to the middle of the left sleeve, and a new, heat-pressed Cool Base tag adorns the left front tail.

The Blue Jays jersey is royal blue with navy blue back and underarm gussets. The Blue Jay head logo, also seen on their caps, appears on the front left chest. The back of the jersey is blank. Player number in white with blue inner line in Blue Jays special font on the left sleeve.

© GameWornGuides.com

2017 Spring Training

Spring Training–only jerseys returned for all teams in 2017, with minor design modifications. As in 2016, the jersey was based on the Flex Base game jersey template and featured special printed twill, this year decorated with “2017” and Spring Training symbols. However, all teams now used the same base twill design: a single-color white twill with gray printing, replacing the varied team-specific styles from the previous year.

The Blue Jays again based their Spring Training jersey on their regular season dark blue alternate, omitting the player name from the back. The back numbers are made of white patterned twill but omit the team’s familiar trademark “split” style. A recolored version of the rubberized CFX patch appears on the right sleeve, shaped like an Interstate highway sign and reading “2017” and “FL,” representing their Spring Training home.

© GameWornGuides.com

2018 Spring Training

The 2018 Spring Training jerseys continued the previous year's design, featuring player name and number lettering in each team's regular fonts, rendered in a single layer of twill printed with Spring Training and 2018-specific patterns. The Blue Jays again used their regular season dark blue alternate as the base, omitting the player name from the back.

The bold back numbers—minus their trademark "split" style—are sewn in white patterned twill. A new CFX patch, shaped like home plate, is stitched to the right sleeve and features "2018" and "FL," representing their Spring Training home.

© GameWornGuides.com

2019 Spring Training

The 2019 Spring Training jersey represents another iteration of the theme used over the previous three years. This time, jersey backs abandon the single-color printed twill treatment of recent seasons and return to the regular season's multi-layered, team-color twill used in 2016—but without the printed patterns seen that year.

The Blue Jays again use their regular season dark blue alternate as the base, omitting the player name from the back and featuring white back numbers with blue inner lines. A new CFX patch on the right sleeve reads "2019" and "FLA," referencing their Spring Training home.

© GameWornGuides.com

2020 White Spring Training

Spring Training jerseys were simplified league-wide in 2020. For the first time since 2016, teams eliminated the special sleeve patch indicating the year and location of their Spring Training home. Lettering now matched the non-patterned, multi-layered twill used during the regular season, making many Spring Training jerseys virtually identical to their teams' regular season alternates.

For 2020, the Blue Jays used their regular season home white jersey, omitting the player name on the back. The back numbers were blue with white inner lines. These jerseys were worn during the team's intrasquad scrimmages in 2020 "Summer Camp," the modified preseason period following the COVID-19 shutdown. We have not seen any examples enter the hobby.

© GameWornGuides.com

2020-2023 Dark Blue Spring Training

Spring Training jerseys were simplified league-wide in 2020. For the first time since 2016, teams eliminated the special sleeve patch indicating the year and location of their Spring Training home. Lettering matched the non-patterned, multi-layered twill used in regular season jerseys, making many Spring Training designs nearly identical to regular alternates.

From 2020 through 2023, the Blue Jays used their regular season dark blue alternate as their Spring Training jersey, omitting the player name from the back. The jersey featured white back numbers with blue inner lines.

Special Events Jerseys

1996 Canada Day

Danny Harnett Collection

The Blue Jays began a new tradition in 1996: celebrating Canada Day with special jerseys on July 1, at least when the team is playing at home. This marked the first Canada Day jersey.

The design was a red-fabric rendition of the team's blue alternate jersey from that year. Player names were omitted and replaced by the word "CANADA" on all jerseys

© GameWornGuides.com

1997 Canada Day

Would you believe that the Blue Jays wore replica, department store fan-shop style jerseys on the field for the 1997 Canada Day game? While I don't have a definite confirmation of the story I'm about to tell, my research leads me to believe that the data points align to make this story rooted in fact.

Early in the season, the Jays would have ordered from Russell these one-game special jerseys for the July 1 game. It was only the second such Canada Day game, and with red as the theme, the jerseys specified were to be red-bodied with red, white and blue lettering. But when the Diamond Collection, team-tagged jerseys arrived, we suspect someone in the Blue Jays organization likely objected to them strongly enough to insist that they order up a different set. You see, the main color of the lettering on these red jersey was also red—with minimal blue and white outlining, and that made them hard to see on the field.

Again, speculating: there was not enough time to get a new customer tailored and player-lettered set of red vests made, so the manufacturer was forced to substitute blue-lettered retail-spec "Authentic Merchandise" jerseys instead. These were sized generically (M, L, XL) rather than numerically, as is typical, and the original red-on-red sets were banished to the minor leagues.

To back up this story, one the years I have found multiple examples of the team tagged red-on-red vests, all with the CANADA name-on-back stripped off. And, I have found almost a dozen examples of "Authentic Merchandise" retail style red vest jerseys with uncustomary-for-replicas complex layered twill lettering, various player numbers—including those of non-stars—and even autographs. Some have been auctioned as "game-used."

Game photos from the event clearly show the players wearing the blue-lettered uniforms, though so far we have been unable to confirm definitively that these were the retail-tagged replicas.

© GameWornGuides.com

1997 Canada Day, continued

1997 Canada Day jerseys are red Russell vests worn with special royal blue undershirts. The undershirt has the Canadian flag patch sewn on one sleeve and the Blue Jays maple leaf logo patch on the other. The word "CANADA" replaces player names on all jerseys. Store-bought versions of this jersey had heat-transfer sleeve patches on the sleeves instead of the customary embroidered ones.

In 1997 game action photos, are these players wearing Authentics or replicas? Perhaps, on this one day, they were one and the same.

Below are the probable "error jerseys" made but never used for the 1997 game. See the page dedicated to this style in the "Oddballs" section of this chapter.

© GameWornGuides.com

1998 Canada Day

Left: *Replica jersey courtesy of Jeff Brown. We continue to search for a game-worn example.*

1998 Canada Day jerseys are a rendition of the team's alternate vest, only with red replacing the light blue trim in the lettering.

It is worn with a special red undershirt that has a maple leaf team patch on the left sleeve and a Canadian flag on the right.

Player names were replaced with the word "CANADA," rendered in a slight vertical arch.

© GameWornGuides.com

1999 Canada Day

Jeff Brown Collection

Jerseys shown are retail replicas. We are still searching for a game-worn example.

The 1999 Canada Day jerseys were nearly identical to the team's standard home jerseys for that season, with the knit trim changed to red for this single-day event and a small Canadian flag patch added to the left chest. No numbers appeared on the front.

As per tradition, player names were replaced with the word "CANADA," which was once again vertically arched.

© GameWornGuides.com

2000 Turn Back the Clock to the 1970s

Jeff Brown Collection

On August 11, 2000, the Blue Jays wore 1977-style powder blue road uniforms while visiting the Twins for a “Turn Back the Clock to the 1970s Night” in Minnesota. 1977 was the only year the team featured a solid blue “Toronto” wordmark on the front. Aside from being a shade too dark, the uniforms were a nearly perfect reproduction.

Left: *Original 1977 Blue Jays road jersey for comparison.*

© GameWornGuides.com

2001 Canada Day

- The game was played on July 2, 2001 vs. the Boston Red Sox.
- The 2001 Canada Day jersey was solid red with white knit trim at the sleeve ends and along the placket.
- The large maple leaf crest from that year's alternate vest replaced the usual front player numbers.
- The left sleeve featured a Blue Jays 25th anniversary (25 seasons) patch, while the right sleeve had the American League 100th anniversary patch.
- The back featured three-color numbers, and all player names were replaced with the word "CANADA."
- The Space Shuttle crew were featured guests at the game. One might wonder who wore the most red—the Red Sox, the astronauts, or the Blue Jays?

© GameWornGuides.com

2001 Turn Back the Clock to 1977

On May 21, 2001, the Blue Jays hosted a Turn Back the Clock game against the Chicago White Sox. (The White Sox' throwback uniforms were delivered but reportedly did not fit properly, so they were not worn. I wonder what happened to these?)

The Blue Jays wore jerseys designed to replicate their 1977–1988 home pullover uniforms—presumably modeled after the 1977–1979 style, which did not feature player names on the back. Contemporary photo captions identify 1977 as the intended reference year. The jerseys do not include the MLB Silhouetted Batter logo on the back of the neck, which is accurate for a 1977 reproduction.

The cringe factor for me is the back numbers used the then-current 1998–2003 split style, which is anachronistic for a proper 1977 recreation.

© GameWornGuides.com

2001 Negro Leagues Tribute (Chatham All-Stars)

Todd Bargman/Gameusedonly.com

Todd Bargman/Gameusedonly.com

Todd Bargman/Gameusedonly.com

On July 15, 2001, the Blue Jays played in New York vs. the Mets, who dressed as the 1947 New York Cubans. This is the Blue Jays' first participation in a Negro League tribute game.

To honor the historic Canadian team, the Blue Jays wore uniforms styled after the Chatham All-Stars of Ontario. The design featured the team's contemporary sleeve patch placed low on the left sleeve. Back numbers one-color navy blue, Block with Serifs Bold. The uniforms were made by Rawlings using double knit fabric.

© GameWornGuides.com

2002 Canada Day

The game was played at home on Sunday, June 30, 2002, against the Montreal Expos.

The jersey design was nearly identical to that of 2001, with two key differences: the 2002 version included year-specific sleeve patches and added a front player number, which was absent in 2001. Player names were replaced with “CANADA” on the back.

© GameWornGuides.com

2002 Negro Leagues Tribute (Chatham All-Stars)

Bill Henderson Collection

This was the Blue Jays' first home Negro League tribute game. The team wore uniforms honoring the Black Canadian Chatham All-Stars and debuted them on July 13, 2002, in a home game against Boston.

Back numbers were one-color navy blue in Block Bold. The uniforms were made by Rawlings in double knit fabric. The Red Sox wore uniforms styled after the 1948 Boston Royal Giants.

© GameWornGuides.com

2003 St. Patrick's Day

So far as I can determine, 2003 marked the first time the Blue Jays participated in the lightheart-ed—and commercially savvy—tradition of wearing green jerseys for the mid-Spring Training holiday.

Their jersey is green mesh, and features the same left-chest patch as found on their regular batting practice jerseys in 2001–2003. Heat-pressed white Varsity numbers onto the back.

© GameWornGuides.com

2005-2006 St. Patrick's Day

For St. Patrick's Day 2006, the Blue Jays wore green mesh, button-front versions of their then-current batting practice jersey. The front logo matched the regular version, and the back numbers were metallic silver/turquoise blue/gray.

Oddly, the game-worn jersey photos in my archives do not show a Silhouetted Batter patch sewn on the back of the neck. Retail versions do include the patch, suggesting it may have been unintentionally omitted from the team-issued set.

© GameWornGuides.com

2006 Canada Day

- The 2006 Canada Day jersey is constructed and tagged by Majestic like a batting practice jersey, rather than a standard game jersey.
- This version is unusual, made of black lightweight batting-practice jersey fabric, with red and white player numbers and special red/white/blue front lettering.

Left: *I do not believe there was a Canada Day game in 2007, as the Jays were on the road for the entirety of that week. In 2008, the Jays were again on the road and wore only a special hat. However, at retail, Majestic offered thiis version of the 2006 special jersey, featuring updated back lettering.*

© GameWornGuides.com

2008 Turn Back the Clock to 1979

The Blue Jays visited the Baltimore Orioles on July 23, 2008, for a Turn Back the Clock game themed to 1983.

The Orioles dressed in 1983 uniforms. The Blue Jays wore their throwback alternates, which were technically part of their regular uniform set in 2008. However, since the home team billed the game as a Turn Back the Clock contest, we include it here.

© GameWornGuides.com

2009 Turn Back the Clock to 1992-1993

- On August 7, 2009, the Blue Jays hosted a Turn Back the Clock game celebrating the 1992–1993 Blue Jays World Series teams. The Orioles wore their regular black jerseys, opting not to participate in the theme.
- Majestic made the Blue Jays' throwback uniforms, which were good copies despite being excessively baggy—a frequent issue with modern reproductions.
- The Jays wore a 1994 "1992–1993 World Series Champions" patch on the left sleeve, which is odd only because, though this design was used for stadium artwork (painted on the outfield wall, for example) in 1994, it was never actually used as a sleeve patch at the time.

© GameWornGuides.com

2009 Canada Day

The game was played on July 1, 2009, against the Tampa Bay Rays.The jerseys are Cool Base button-front batting practice jerseys. Player names on back were replaced by the word “CANADA,” and back player numbers used the team’s current fonts in two-color white/turquoise blue.

A Canadian flag patch is sewn to the right sleeve, and the 2009 memorial “TED” patch is sewn to the left sleeve of game-worn models. The TED patch is not present on retail-sourced jerseys, like the one pictured inset at right.

Retail jerseys were often lettered with star player names, presumably to make them more appealing to buyers.

© GameWornGuides.com

2011 Canada Day

July 1, 2011: The jersey is a repeat of the one used in 2009, except the Canadian flag is now sewn on the opposite (left) sleeve,and the under-sleeve panels are white instead of red, as used previously. Their opponents were the Phillies, who wore their regular road grays.

Left: 2010? *Canada Day was marked on the road, with special caps only—no fancy uniforms.*

© GameWornGuides.com

2012 Canada Day

Left: *This jersey is a retail authentic; note the absence of a set tag in the neck.*

Far left: *Game-worn example with set tag.*

July 1, 2012: This was the first year the team wore their new retro-style jerseys, which resembled the design worn in 1996. A Canadian flag patch appears on the left sleeve, and all players had the word "CANADA" in place of their usual name on the back.

© GameWornGuides.com

Read the full story on MLB's Memorial Day Jerseys in Chapter 5.

2013 Memorial Day (USA)

May 27, 2013: MLB had all teams wear camouflage-lettered jerseys for the U.S. Memorial Day holiday. Despite being a Canadian team, the Jays were included in the promotion. At home that day against the Braves, they played along.

© GameWornGuides.com

2013 Canada Day/Canada Baseball Day

Worn twice in 2013: July 1 (Canada Day) and **August 11** (Canada Baseball Day). For the first time since the Blue Jays started the tradition of wearing red for Canada Day, the players' actual names—and not the word "CANADA"—appeared on the back.

This may have been done because the jerseys were intended to be worn on two occasions instead of just one, or possibly to increase their appeal to collectors—and selling prices—when they were auctioned off. These jerseys are essentially the same as those used in 2012.

© GameWornGuides.com

2014 Canada Military Day/Memorial Day (USA)

Worn twice in 2014: May 9 (honoring Canadian military) and **May 26** (USA Memorial Day). While all other MLB teams used the prescribed USMC desert-sand twill, the Jays substituted the prescribed twill with a greener Canadian military pattern, which helped to make the writing on the jerseys more legible from the stands.

This substitution improved visibility, as desert camouflage is nearly impossible to distinguish from a distance.

© GameWornGuides.com

2014 Canada Day/Canada Baseball Day

Worn twice in 2014: July 1 (Canada Day) and **August 10** (Canada Baseball Day). The 2014 version is based on the new 2014 batting practice jersey, which features lighter-weight fabric and white inset side panels.

For the second year in a row, player names appear on the back, continuing the shift away from the earlier tradition of using the word “CANADA.” The Canadian flag continues to appear on the left sleeve.

© GameWornGuides.com

2015 Memorial Day (USA)

The Blue Jays marked the observance of U.S. Memorial Day on May 25, 2015, wearing a style very similar to their 2014 jerseys, which used the greener Canadian military camouflage pattern instead of the desert pattern worn by U.S. teams.

In 2015, however, the Blue Jays logo on the front of the jersey also received the camouflage treatment—whereas in the previous two years, it had appeared in standard team colors. The Jays used a unique darker green camouflage pattern preferred by the Canadian military, as opposed to the browner camouflage worn by U.S. teams.

Jerseys were once again Majestic knits, as were all Blue Jays jerseys through 2015.

© GameWornGuides.com

2015 Canada Day/Canada Baseball Day

Worn twice in 2015: July 1 (Canada Day) and **August 30** (Canada Baseball Day). After several years of wearing red jerseys for Canada Day and Canada Baseball Day, the Blue Jays mix it up—returning to a white jersey for the first time since 1999.

This is essentially a Jays home jersey with all the blue twill changed to red, and a Canadian flag on the left sleeve.

For the first time, the visiting team—the Red Sox in 2015—also wear a Canadian flag on their road jerseys to mark Canada Day.

© GameWornGuides.com

2015 Independence Day (USA)

The Blue Jays were in Detroit on July 4, 2015, and, like the Red Sox—who wore Canadian flag sleeve patches for Canada Day in Toronto—the Blue Jays repay the favor by wearing an American flag on the right sleeve during the July 4 game. The jersey is otherwise identical to their standard road uniform.

© GameWornGuides.com

2016-2017 Mother's Day

Read the full story on MLB's Mother's Day Jerseys in Chapter 5.

For the first time in 2016, all teams wear special pink-trimmed uniforms for Mother's Day, Sunday, May 8. All jerseys are of Flex Base construction, featuring a rubberized tag on the front left tail. Every team also features the pink MLB Mother's Day ribbon on the left chest—a carryover from previous seasons—while the Majestic sleeve logo is rendered in pink, and the back-of-collar MLB Silhouetted Batter patch appears in dark pink/light pink/white. The Blue Jays wear their home white jerseys with the front logo lettering in pink with gray inner lines (replacing the usual white). Player names on the back are sewn in single-color dark gray, while back numbers are pink with gray inner lines. All jersey trim, normally blue/white/blue, becomes dark gray. The jersey does not have the 40th season patch that their standard jerseys include. The style returns in 2017.

© GameWornGuides.com

2016 Memorial Day (USA)

The 2016 Memorial Day jerseys are constructed in the Flex Base style for the first time, and the ChromaFlex MLB logo at the back of the neck is rendered in black and dark gold for all teams. The Blue Jays use their own unique version of camouflage trim on their home white jerseys for the game on May 30. All lettering—including numbers and player names—is rendered in a version of Canadian CANPAT camo. As with other teams, the Blue Jays simplify their trim elements to single-color black. This special jersey omits the 40th season patch found on their standard uniforms.

© GameWornGuides.com

Read the full story on MLB's Father's Day Jerseys in Chapter 5.

2016 Father's Day

For the first time in 2016, all teams wear special light blue–trimmed uniforms for Father's Day, Sunday, June 19. All jerseys use Flex Base construction with a rubberized tag on the front left tail. Each team also features the light blue MLB Father's Day ribbon on the left chest—a carryover from past seasons—while the MLB Silhouetted Batter patch on the back of the collar appears in dark royal blue/light blue/white. The Blue Jays wear their road gray jerseys, with front logo lettering in light blue with dark gray inner lines and white outlines. This creates a rare three-layer design, making the Blue Jays one of the few teams with more than two colors on their jersey fronts. The added white layer significantly improves legibility on the small "Toronto" lettering and arguably should have been carried over to the back numbers, which are light blue with dark gray inner lines—a combination that reduces legibility on a gray jersey. Player names on the back are rendered in single-color dark gray. All jersey trim, normally blue/white/blue, becomes dark gray. This version omits the 40th season patch found on their standard jerseys.

© GameWornGuides.com

2016 Canada Day/Canada Baseball Day

Worn twice in 2016: July 1 (Canada Day) and **August 28** (Canada Baseball Day). Red returns to Canada Day/ Canada Baseball Day in 2016 after a brief one-year hiatus.

Built on a Flex Base template for the first time, this jersey features white knit trim on the sleeve ends and around the neck and placket. Front and back lettering are all white with red inner lines, and the Canadian flag patch once again appears on the left sleeve.

This version omits the 40th season patch found on their standard jerseys.

© GameWornGuides.com

2016-2018 Independence Day (USA)

Read the full story on MLB's Independence Day Jerseys in Chapter 5.

As in previous years, the Blue Jays do not receive the Stars and Stripes treatment given to the rest of the league. Instead, they wear their standard blue alternate jersey with a Canadian flag on the left sleeve and a U.S. flag on the right. All lettering and trim on the jersey remain unchanged. The jersey omits the 40th season patch that appears on their standard 2016 uniforms when worn on July 4. The same treatment returns for both 2017 (July 3–4) and 2018 (July 4).

© GameWornGuides.com

2017 Memorial Day (USA)

The next incarnation of Memorial Day jerseys replaces the previous camo twill pattern with a new style that uses the team fonts in dark olive green with white center line for the Blue Jays. The back-of-collar MLB logo and team patches switch to an olive green and black treatment. While U.S. teams wear a green bar patch bearing five black stars—representing the five branches of the U.S. military—the Blue Jays do not use this patch, given their home in Canada. All trim elements are simplified to solid black. The Blue Jays wear this style on their home white jerseys for the May 29, 2017 game only.

© GameWornGuides.com

2017 Father's Day

Light blue–trimmed Father's Day jerseys return on June 17–18, 2017. Flex Base jerseys feature the usual Majestic tagging on the front left tail and set tagging inside the bottom of the placket. Also returning are the light blue MLB Father's Day ribbon applied to the left chest, the light blue embroidered Majestic sleeve logo, and the dark royal blue/light blue/white ChromaFlex MLB Silhouetted Batter patch on the back collar.

The Blue Jays wear their home white jerseys with front logo lettering in light blue with dark gray interior lines. Player names on the back are rendered in single-color dark gray, while back numbers are light blue with dark gray inner lines. All jersey trim, normally blue/white/blue, becomes dark gray.

2017-2018 Players Weekend

To highlight players' personalities and to appeal to younger fans, MLB introduces the colorful Players Weekend promotion. In addition to relaxed regulations on team-standard color and design of cleats, bats, and other equipment, MLB encourages players to wear nicknames on the backs of a new set of very colorful jerseys. Meant to evoke the look of youth league designs, the two-toned Cool Base pullovers feature bright and contrasting body and sleeve colors and include a patch on the right sleeve with space for players to show their appreciation to special people in their lives with handwritten black marker messages. Both the patch, and the back-of collar logo, feature a variant of the MLB logo showing the growth of a ballplayer from childhood to adulthood. Heat-pressed Majestic manufacturer and set tags are applied on the front left hem, and the Majestic logo is embroidered on the left sleeve. Back numbers are rendered in single-color Varsity, and player names appear in 2¾″ single-color Block Condensed, regardless of the team's usual font.

On August 25–27, 2017, and August 24–26, 2018, the Blue Jays wear jerseys with royal blue bodies and powder blue sleeves, featuring white nicknames and powder blue numbers on the back. Sleeves and V-neck openings are trimmed in wide powder blue/white/powder blue. The front lettering is rendered in a straight-across style—rather than the usual arch—and appears in white with powder blue inner lines in kiss-cut lightweight twill.

2018 Memorial Day (USA)

The 2018 Memorial Day jerseys follow the same pattern as 2017, with dark olive green lettering and numbers featuring white inner lines, and solid-color dark olive player names on the back. The back-of-collar MLB logo and team-specific sleeve patches also carry over from 2017, rendered in olive green and black. Trim elements are once again simplified to solid black.

The Canada-based Blue Jays do not wear the green bar patch with five black stars, which represents the five branches of the U.S. military and is worn by all other teams. The Blue Jays wear this style on their road gray jerseys from May 26–28, 2018.

© GameWornGuides.com

2018-2019 Canada Day

The team wears the red jersey style that appears in the MLB Style Guide as an official team alternate jersey in 2017 and is worn on Canada Day that year. In 2018, it reverts to special event status and no longer appears as an alternate. While the distinction is purely clerical, we include it here for consistency.

The 2018 version includes the Roy Halladay memorial patch on the right sleeve, while the 2019 version features the MLB 150 patch in that same location.

© GameWornGuides.com

2019 Players Weekend

The third incarnation of Players Weekend turns the colorful jersey concept on its ear, reducing all teams to monochromatic designs in either black or white, with all team sleeve patches and trim removed, leaving a clean but stark template. Gone are the contrasting sleeves and special patches with messages of inspiration. MLB says that this new approach is to emphasize the colorful, personalized cleats, bats, and other gear the players choose for the promotion, which spans August 23-25, 2019. Jerseys are now button-front Flex Base, with appropriate Majestic manufacturer and set tagging. Back-of-collar CFX MLB logo is now silver and black. All teams also wear a memorial patch for Angels pitcher Tyler Skaggs, a white “45” in a black circle, on the left sleeve. Most teams removed this patch before auctioning off the jerseys. The Blue Jays wear a white version of their home jersey, omitting the Blue Jays logo. Front lettering appears in gray with white inner lines, while varsity-style back numbers are rendered in white with gray inner lines. Nicknames on the back appear in gray.

2021-2024 Canada Day

Looking for the Blue Jays' 2025 red Canada Day jersey? For that season, it appears as an official alternate in the MLB Style Guide and is therefore listed in the "Home, Road, and Alternate Jerseys" section.

After a one-year hiatus due to the COVID-shortened 2020 season, the Blue Jays bring their familiar red Canada Day jersey back to the field in 2021. Now produced by Nike using their version of the Majestic Flex Base template, the jersey is once again worn on Canada Day (July 1) and on other select dates throughout the year. The jersey design remains unchanged from prior years through 2022, including the maple leaf patch on the left sleeve. On July 1, 2023, the maple leaf patch is removed, and when the jersey is worn again on July 31, the team's advertising patch takes its place on the left sleeve. Despite the league-wide switch to Nike's Vapor Premier Elite template in 2024, the Blue Jays continue wearing this Nike Flex Base version of the Canada Day jersey, now featuring larger player names on the back. Interestingly, the style code for both the Majestic and Nike versions remains the same: TOAB. It is rare for a style code to stay unchanged after a manufacturer transition.

Prototypes and Oddballs

Wilson Cryptic Date Codes Decoded?

This white mesh jersey may be a spring training issue. It has screen-printed graphics and a high number on the back. It might also be a minor league jersey. The most interesting feature is a small tag sewn into the collar that simply reads “EP.”

We are aware that Wilson uses similar date tagging on NFL jerseys. There, they use two alpha characters to indicate the year and month of manufacture. The first letter uses A through K to designate the year—using an unusual scheme in which A means a year ending in 8, B a year ending in 9, and so on, repeating every ten years. The second letter represents the month, with O meaning January, P for February, and continuing alphabetically through Z for December.

When single characters are used, it indicates the year only, with no specific month designated.

This jersey is coded as “EP,” which corresponds to February 1992—a dating that aligns with the jersey style and the Wilson tag used in the collar.

Year Code		Month Code			
A =	1988				
B =	1989	O =	Jan	U =	Jul
C =	1990	P =	Feb	V =	Aug
D =	1991	Q =	Mar	W =	Sep
E =	1992	R =	Apr	X =	Oct
F =	1993	S =	May	Y =	Nov
G =	1994	T =	Jun	Z =	Dec
H =	1995

Pre-1977 Prototype Home?

Above: *An actual 1977 Blue Jays home jersey for comparison.*

The unspectacular looking plain white home jersey shown above has a Wilson manufacturer tag in the collar, using a tag style discontinued after 1977. Beneath the Wilson tag is a square of white twill containing a printed set of specifications and production codes. This type of tag is typically found on sample jerseys submitted for team approval.This may be a pre-inaugural Blue Jays jersey used to finalize the on-field uniform design.

© GameWornGuides.com

Trainer's Dugout Jersey

This white polyester collared shirt with three buttons at the neck and knit tri-tone sleeve-end trim—matching the player jerseys—is reportedly worn by the team's trainer in the dugout. The Rawlings tag style suggests a production date between 1977 and 1984. The small arched "Toronto" wordmark on the left chest is formed from tiny sewn twill letters. The heavy wear on the Rawlings tag's white embroidery suggests the garment has been washed dozens of times.

1981 Bat Boy "Tailoring"

Special tailoring for MLB player jerseys is nothing new, but the tailoring on this Blue Jays bat boy jersey is far from special. In 1981, the Blue Jays' bat boy receives his own home jersey—just like a big leaguer. Given the size 40, the wearer is likely younger and smaller than the players, which is to be expected. But instead of properly resizing the garment, the jersey is "tailored" by crudely cutting off several inches from the bottom—without even sewing a new hem. At least he gets his "name" written on the inside tag to avoid having it mistaken for a player jersey in the wash!

1992-1993 Diamond Collection Team Undershirts

Marketed as “Diamond Collection” on-field apparel, these compression mock-turtle neck shirts were made by Amapro, and presumably supplied to players if they wanted to wear them. The MLB silhouetted batter logo is stitched to the front of the collar, and the Blue Jays primary logo is embroidered directly on the left chest. Amapro was contractually permitted to show its logo on the sleeve. The top part of the jersey was royal blue knit fabric, and from the chest down a gray ribbed compression-type of knit fabric was used. We have seen these for a few other teams. In the time period they were made, the distribution network for MLB authentic apparel was in its infancy. I do not ever recall seeing these items for sale in any of the outlets I visited back in those days.

© GameWornGuides.com

1993-1995 Prototype Canada Day

This jersey, found for sale on an auction site, is said to be a prototype for the team's first Canada Day commemoration. It features three-color red/white/blue lettering on the front and back, along with red/blue/red sleeve end trim.

We cannot confirm the exact year, as Joe Carter played for the team from 1991–1997, and this jersey style was in use by the team from 1990–1996. The design replaces the Blue Jay crest seen on other team jerseys with a front number. The tagging in the neck is appropriate for the period. The first officially documented Canada Day jersey was introduced in 1996.

© GameWornGuides.com

1996-1999 Prototype Canada Day?

Here's another possible prototype for the Canada Day jerseys that the Blue Jays introduced in 1996. This one features a red, full-knit body with navy knit trim above each sleeve end. There is no lettering on the back, and the only front design is the team's "Blue Jay-in-ball" logo, which appeared on team jerseys through 1996. The Russell jock tag also dates this to the 1996–1999 era. Given the logo, it is possible this jersey was produced in advance of the 1996 season as an option for the very first Canada Day red jersey. If that is the case, the team opted for a more ornate version to launch this longstanding tradition, leaving this comparatively simple iteration behind.

1997 Prototype Vest

Bill Henderson Collection

Above: *I recently found this jersey for sale on eBay. It has Russell Diamond Collection tagging, oddly using the 1992 –1993 version of the locker tag.*

This alternate royal blue vest was shown in the MLB Style Guide as part of the 1997 uniform redesign. However, it was never worn by the team. Note the graphic above left, from the official *MLB Style Guide*, showing the jersey without a number on the front. It is intended to be worn with a light blue undershirt.

This prototype jersey from my collection, pictured above-center, is made by Wilson. As is common with many prototypes, the number used is 5, and the name on the back is "Player." Lettering is in three-color layered tackle twill: light blue/white with a royal blue split sewn on top. This design apparently progressed far enough that, in addition to being listed in the official 1997 MLB internal Style Guide, some Diamond Collection replica vests were produced for retail sale by Russell, the company licensed to make them for the public. The example at right was listed for sale on eBay. Note the 1997 Jackie Robinson patch, and the retail-only Russell "R" logo on the sleeve of what is likely an original Russell-logoed undershirt.

1997 Prototype or “Error Run” Canada Day

Bill Henderson Collection

(Above) 1997’s actual Canada Day Jerseys, “as used.” Were they actually gift shop “replicas” worn on the field in an emergency?

In my research, I have come across several of these jerseys and personally own one of them. They are all set/year tagged for 1997 in the collar, and they show some use. So, are they the team’s 1997 Canada Day jerseys? Decidedly not. Look back at that page and you will see that the lettering on both front and back of these jerseys is REVERSED in color from what was used on the field. On game worn jerseys, the main color of all lettering is blue, with a red split.

I have made an educated, businessperson’s guess at what happened, and I would bet 100 Canadian dollars that I am correct. I suggest that Russell made a production error (read as: “screw up”) and cut the twill from the wrong colors and sewed them that way. The error was not noticed until after the team received the uniforms, and they rejected them and had Russell remake them to proper specs for the Canada Day game.

If prototypes, they would not be team tagged and there likely would not be more than one of them floating around. Several of the examples I have seen (including my own #38 jersey) have had the “CANADA” stripped off the back. I suggest the team simply kept the defective set and sent them to the minor leagues to be used there.

2004 Prototypes

The gray jersey with blue sleeves is likely a design study for what became the 2004 road jersey. The silver/blue/white number scheme was ultimately replaced with the charcoal/gray/turquoise pattern used on the final version. On the final jersey, player names are also sewn using charcoal as the primary color.

Note that the numbers on the back of the prototype each have different outline widths—likely an attempt to compare options and determine which was most visually effective.

The black jersey, which resembles what was eventually approved as the team's batting practice jersey, is full weight, button-front, and features sewn-on charcoal and sparkle-silver trim on the sleeve tops. Lettering is in three colors, likely sparkle silver, medium blue, and gray.

Top right: *The strip tag stitched inside the button flap of the black jersey translates to "Blue Jays 2004 Alternate," with an added set code "J-S2" to distinguish it from other proposals submitted by Majestic.*

© GameWornGuides.com

Another 2004 Prototype

Quote from Sports Business Daily, regarding the nearly-used graphite jersey on the previous pages:

"The Blue Jays unveiled their new logo and uniforms on Sept. 2, 2003. The plan was for them to wear the graphite road away jersey with graphite pants and a graphite hat the following season. The video game MVP Baseball 2004 showed the solid graphite design as the team's road uniform. Apparently these jerseys were nixed by the MLB because they were too dark (imagine playing a day game in Arlington in those!). But the Jays already had the insignia production finalized, and a ton of graphite replica jerseys had been made. The team's solution was to take the existing insignia wordmarks—which had a graphite outline, to blend in with the graphite jersey—and place them on regular gray jerseys. This created a contrasting graphite outline that's still visible on the team's road grays to this day. I'm surprised they haven't changed it, because the original version was such a rush job."

Here is another Blue Jays prototype that did not make the cut for 2004. The body of the jersey is graphite in color rather than black. The design has a resemblance to a nightshirt to me.

© GameWornGuides.com

2004 Prototype Batting Practice

Here's what appears to be a prototype for the Blue Jays' 2004–2006 batting practice jersey. Note the sample tagging on the inside of the placket that reads "TOR-BP-04-FS," meaning Toronto BP 2004. The "FS" likely stands for "Fabric Sample," a designation seen on several other prototypes from this period. This was during the early stages of Majestic's knit performance fabric development, and fabric samples were created for teams to evaluate the new material. The use of the number "34" on the back is also unusual—Majestic samples typically featured "5," "05," or the corresponding year. Other Blue Jays samples from this era—shown on previous and following pages—also feature 34 and 43, suggesting there was a specific reason Majestic used those numbers for this team at the time.

© GameWornGuides.com

2004 Abandoned Road Charcoal

Here's a rather strange tale of market research and a team uniform redesign made by committee.

In 2000, Rogers Communications bought an 80% share in the Blue Jays, and immediately began to consider a team rebranding. They polled fans on the team's current (2000) logos and uniforms, and decided that they were "tired" and had little loyalty attached to them.

Sports Business Daily reported that designing the new look took about two years, consulting many stakeholders: ownership, senior management, players, fans, non-fans– "a cast of thousands," as characterized by team SVP Business Affairs and Administration Lisa Novak.

The branding firm chosen was Toronto-based Brandid, Inc., which had no prior experience designing for sports teams—a choice the Blue Jays viewed as a potential strength, bringing a fresh perspective.

The logos were done first, and then the team worked on the uniforms that would bear them. Again, there were many parties consulted and a lot of disagreement. Finally, the jersey style shown on this page was debuted as the team's new road uniform. They were a charcoal color, called "graphite"—neither gray, nor black, but somewhere in between.

The new design was certainly not traditional: The Blue Jay head was hidden like a cryptogram in the primary logo design. Colors included black, dark gray, metallic silver, white, and only minimal use of medium blue, which—according to some observers, including your author—resembled chlorine-bleached fabric.

Bill Henderson Collection

There was no red, no trim, and no maple leaf insignia, which had previously appeared on every team design. The word "Blue" was dropped entirely, with the team referring to itself simply as the "Jays." And, while the Jays aimed to position themselves as "Canada's team," their marketing strategy sought to avoid overly nationalistic imagery that might limit their appeal to fans in the northern United States.

The Jays unveiled the new look on September 2, 2003—which in itself was very odd, as the current season was still ongoing. But team officials felt they needed feedback before Toronto's attention shifted entirely to hockey.

So, they immediately went to market with the jerseys shown on the store display photo (next page) and even released the designs to the makers of video games, as *MVP Baseball 2004* featured the unreleased graphite uniforms.

But MLB, objecting to the team having **two** black jerseys (well, one graphite and one black), insisted that a lighter road option be used.

The problem was, the fancy embroidered team insignias were all approved, and being produced by the thousands. Even after making thousands of graphite jerseys for retail sale, the team adopted an on-field light gray jersey, and simply slapped the existing graphite-bordered wordmark on the front; a "look" of additional contrasting outlining that had never been intended!

© GameWornGuides.com

In the end, this last-minute rush-job result was used as the team's road jersey for the next four seasons before being replaced by a new design—one that bore no resemblance to the team's other uniforms and featured completely different fonts for the wordmark and player numbers.

The much-hyped, expensive, and entirely new identity was ultimately abandoned after the 2011 season. In 2012, a refreshed version of the original "split-letter" design and familiar Blue Jay head returned.

In hindsight, it is easy to sound wise when reviewing this situation, but since marketing is my profession, allow me to offer some observations. First, choosing a branding company without experience with sports teams would be an easy target, and I would reject that. Any professional firm of stature will have the proper methodologies in place to do this job, though one with sports-team experience may have relevant experience to draw upon that the new entrant might not. My observation is that, from what I have read, there were too many people involved in the design approval process."Design by committee" has become a cliché for a reason—when too many stakeholders are included in the approval process, the result is often muddled. Worse still, MLB's objection to the near-black road jersey came after production had already begun, suggesting the consultation process was mismanaged or poorly sequenced.

The design itself leaned too heavily on artistic subtlety—more fitting for a concept board than for athletic competition. One might even describe it as overly delicate, with soft curves and overly fussy detailing. And the color scheme was, quite literally, nonexistent. Unlike teams such as the Yankees, whose colorless palette is rooted in tradition, the Jays' design omitted even a simple red maple leaf or contrasting trim, making the uniform unappealing.

So—this is why the road jersey's wordmark features an extra outline. The wordmarks were originally designed to be sewn onto graphite-colored jerseys, not light gray ones. When MLB rejected the nearly-black road jersey, the team simply applied the existing wordmarks to the new gray version—creating an unintended contrast that lives on in uniform history/infamy.

Right: *Photo dates from the first week following the release of the Blue Jays' new uniforms in the fall of 2003. It shows a merchandise display at a team-sponsored store. Compare it to the darker alternate jersey beside it with "Jays" across the front. Also note the front numbers, which were never used in-game. A few of these jerseys, typically with blank backs, have occasionally surfaced on eBay. We are told thousands exist from that aborted retail run.*

Left: *Jersey offered by a private seller. It lacks the front numbers that are present on the prototype above. The player name appears slightly undersized and was likely added after purchase.*

© GameWornGuides.com

2004 Unused St. Patrick's Day Green

There is no photo evidence that the Blue Jays commemorated St. Patrick's Day on-field in 2004, but green mesh jerseys from that year have surfaced from time to time. Most of the known examples feature Roy Halladay's number 32 and carry the black-paper MLB "Players" tag, indicating a portion of proceeds went to the players' union.

Further suggesting they are retail-issued items is the Majestic logo—heat-pressed rather than embroidered—on the sleeve end. Based on these characteristics, it is likely these jerseys were produced solely for fan sale and never intended for on-field use.

© GameWornGuides.com

2005 Prototype Road

After the fiasco that was the Blue Jays' 2004 road jerseys, this sample suggests the team was still looking to improve upon the last-minute design they adopted that season.

The front features the same "Toronto" script originally intended for the graphite 2004 road jerseys—complete with a graphite outline that would have blended into the darker jersey fabric. However, instead of modifying the outline for better contrast on gray, this prototype seems focused on experimenting with player name and number treatments.

It is unclear what the original name and number looked like, but ghost outlines of "Player" and "05" remain visible on the back. We date the jersey to 2005 based on the "05" player number. A sample tag reading "BJ ROAD – 2 CLR name" suggests that the player name on back was sewn in two colors. The jerseys worn on-field from 2004 and 2005 did as well, but they were a combination of dark gray and light blue that that blended together, often appearing like single-color lettering from a distance. It's possible this sample tested alternate color schemes to improve legibility. Considering the Blue Jays kept the same treatment they had in 2004 for 2005–2007, it must not have turned heads in the front office.

We also don't know if the uniform numbers originally present had a different color combination, but we do know that this jersey featured a front number on left chest, under the "Toronto" logo. A ghostly "05" can be seen there, suggesting that the team was at least considering adding front numbers to this set, something they did not do, but returned to from 2008–2011, when the next iteration of their road jerseys did feature numbers on front.

Of note, the Majestic logo on the left sleeve appears to be either white or light gray, rather than the more common high-contrast embroidery. This detail may be another vestige of the failed graphite uniform experiment.

© GameWornGuides.com

2006 Prototype Red Canada Day

This Majestic prototype design for the 2006 Canada Day jersey is made of regular, heavyweight double-knit fabric. Interestingly, the “red-on-red” design is the same one previously rejected for the 1997 Canada Day jerseys (see earlier pages).

This design was not used; the actual 2006 Canada Day jersey appears in the Special Events section of this chapter.

© GameWornGuides.com

2006 Prototype Black Canada Day

his is an unused design for a Canada Day jersey. It is based on the team's 2006 black batting practice jersey. It may have been intended as a game jersey, or possibly as that day's batting practice jersey.

This design was not used; the actual 2006 Canada Day jersey appears in the Special Events section of this chapter.

2007 Prototype Road

To have been a fly on the wall...prior to the introduction of the “one of these things is not like the others” road jersey of 2008, with its completely different and set-mismatched front wordmark and player numbers, it looks like this jersey was also submitted for team consideration. Tagged as 2007 (and with an 0062 garment code, indicating that it was a shell made for team issue) it features a rather unimaginative application of player NOB lettering spelling out the city name on front in a shallow and wide-letter-spaced clunky arc. The best thing we can say about this effort is that it was not chosen for use. Lettering appears to be charcoal and blue outlines over a gray jersey body, a combination that doesn’t display well.

© GameWornGuides.com

More Oddballs

Getty Images

In this 1995 photo, Roberto Alomar is seen wearing a zip-neck warm-up jersey unlike those worn by the rest of the team, as it was custom made for him. It was also customized with his name and number on the back.

This 2007 photo shows a subtle variation in jersey lettering—note that the center of the “R” is filled in on one jersey, but not on the other.

The Blue Jays’ player name font from 2008–2011 posed challenges when applied to longer names—especially when multiple outlines were added, as on this gray jersey. There was no condensed version of the font, which is typically available for stylized display fonts. As a result, the team tailor or seamstress had to do their best to fit the full name within the available space.

© GameWornGuides.com

2008 Oddball – Mixed Up Alternate

Credit to Paul Lukas' of Uni Watch for this eagle-eyed catch.

These 2008 game photos (above) show a black jersey featuring the incorrect version of the front script logo. Note the white outline, which does not belong, in contrast to the correctly lettered on-field version shown at right. It appears the Majestic factory mistakenly applied the white-outlined script intended for the team's home white jersey.

2018: An Incredibly Small Mistake

South African shortstop Gift Ngoepe was the first continental African player—and the first from an independent African nation—to reach the Major Leagues. During his stint with the Blue Jays in 2018, he wore this jersey. So, why is it listed here under the oddball section?

From an on-field perspective, the jersey appears entirely standard and indistinguishable from any other Blue Jays home jersey worn that year. The difference lies in the tagging. This home white jersey carries the style code TOAA—Majestic's code for the Blue Jays' dark blue alternate jersey.

Despite the mislabeling, all other details of the jersey appear to be correct, and Ngoepe wore it like any other during his brief MLB tenure. It remains unclear whether this occurred with any other Blue Jays jerseys that year, but it stands as a curious and admittedly minor footnote.

2023 Prototype Road

RGVDEAL on eBay

Soon after Nike took over MLB jersey manufacturing in 2020, they had intended to release their Nike Vapor Premier Elite (VPE) template as early as 2022. However, a source told Uni-Watch in 2022 that the plans were "pushed back at least to 2023, and possibly even 2024." Ultimately, the new template was in fact delayed to 2024, but here we have evidence that prototypes were made up in advance of the 2023 season, if not earlier.

At first glance, this jersey closely resembles what the Blue Jays wore both before and after the template transition. Upon closer inspection, however, it reveals the key elements of the VPE design: a lower-back MLB logo, smaller player name lettering, a fabric band around the neck opening, sewn-in sleeve-end trim, a lightweight team patch, and perforated back numbers. The tell-tale "Player" and "23" on the back reinforce this as a pre-production sample..

Notably, the sleeve-end trim features colors not used in the Jays' final 2024 uniforms, and the dark gray neck trim is also atypical. Perhaps this trim was simply what was available at the time—or the team was briefly considering a different look that was ultimately rejected.

The heat-pressed inventory tag provides some information, though it also raises questions. It reads: "DH0497 TOR 2023 CONV. JERSEY ROAD P2." A small, handwritten "3" appears in the lower corner. The meaning of "DH0497" is unclear, but it may be an internal model code. "Conv. Jersey" could refer to a "conversion" from the Flex Base template, and "P2" might indicate a second iteration of the sample.

Above left: *This sample jersey had gray trim around the neck that was not used on the final jersey.* ***Above right:*** *Note the perforations on the back numbers on the sample. The Blue Jays opted not to use perforated numbers on their 2024 road jerseys..*

© GameWornGuides.com

2024 Prototype Road

RGVDEAL on eBay

In advance of the switch to the Nike Vapor Premier Elite (VPE) template for the 2024 season, Nike produced prototypes for team review. By the time these samples were created, teams had already seen earlier drafts that omitted or misrepresented various details, designed primarily to evaluate materials and construction. Later samples—such as the one shown here—more closely resembled the jerseys that would appear on-field in 2024. This Blue Jays road prototype replicates much of the team's previous road jersey, now adapted to the VPE template. For example, the sleeve-end trim is integrated into the sleeve edge rather than stitched onto it, and the Blue Jay head patch is lighter in weight with less intricate embroidery. The back numbers are perforated—a feature not carried over to the final 2024 road jerseys.

Note the sample information that is on the Nike tag, which reads "BLUE JAYS ROAD JERSEY 44 REGULAR FIT", with 44 being the size, which was not typical in earlier Nike samples, which were usually size 46. Also, the designation of "regular fit" was something not commonly seen on jersey tags, so it may have indicated the intent to use "bucket sizing" on jerseys, where there were a handful of standard cuts in different proportions available to players rather than the specific customizations of years past. Nike's 2024 pants were also done in bucket sizing, which was very unpopular with players. The meaning of the "DH0497-074" text on the front tag is unclear; it is likely an internal production code. All 2024 samples seen to date include similar numeric codes, the purposes of which have yet to be decoded.

Above: *Note the perforations on the back numbers on the sample. The Blue Jays opted not to use perforated numbers on their road jerseys in 2024.*

2024 Prototype City Connect

The Blue Jays debuted their entry in MLB's City Connect uniform series during the 2024 season, and this prototype differs slightly from the version ultimately worn on the field. Most details are consistent with the final product, including the body color, "TORONTO" lettering with skyline, front and back numbers, sleeve-end trim, and recolored Blue Jay head patch. Even the small, heat-pressed "Toronto Blue Jays" wordmark—redundant and virtually invisible during gameplay—above the jock tag is present. This prototype omits two features, one obvious and one subtle. First, it has no player name on the back, and based on the position of the back numbers, it's clear this omission was intentional in the design stage. On the final jersey, player names were added in royal blue. Second, the "Diversity Our Strength" tagline, which appeared inside the collar on the final version, is also missing here. The Nike tag on this sample reads: "BLUE JAYS CC JERSEY 44 REGULAR FIT." The use of size 44 was not typical of earlier Nike samples, which were usually size 46. The "regular fit" designation suggests an intent to use "bucket sizing" for jerseys—offering a limited set of standardized cuts instead of custom, player-specific tailoring. Nike's 2024 pants also used bucket sizing, a decision that proved unpopular among players. It is unclear what the "FQ4067-462" code on the front tag means. Most 2024 samples use codes beginning with a "D," making this an outlier. A small, handwritten "2" also appears in the lower-left corner of the tag, possibly indicating that this was a second version. If so, the first version—if it still exists—may include the missing name on back.

2024-2025 Spring Training Fantasy Football Follies

Blue Jays pitcher Tim Mayza had a rough 2023—not on the baseball field, but in the team's fantasy football league. As the league's least successful participant, he was forced to wear an embarrassing jersey during the Blue Jays' 2024 spring opener, which advertised his 4–10 record on the back. The Jays do not normally wear player names on the backs of their spring training jerseys. Mayza's name, however, was added—appearing in a font that seems larger than what was used during the regular season—just to make sure there was no doubt about who had "earned" the honor. To top it off, Mayza also served as bat boy for part of the game, ensuring his fantasy football struggles were clearly visible to fans and teammates alike. Notably, the numbers on the back of his Nike Vapor Elite jersey were perforated, though it is unclear whether the name and numbers were pressed on or sewn; available photos do not provide a definitive answer.

A year later, on February 22, 2025, pitcher Tim Bassett suffered the same fate. He, too, posted a dismal 4–10 record in fantasy football and paid the price in the same manner. His 2025 jersey did not feature perforated numbers, which aligns with changes made that year. But his tiny name-on-back lettering much have been leftover from 2024. I suppose the team had to find some way to use it up after it was decommissioned for 2025.

2024 Team Giveaway Jersey Used for BP

We've seen teams produce hockey-style jerseys for use in batting practice—such as the Angels and Cardinals—but this appears to be the first documented case of players actually wearing their team's hockey-themed giveaway jersey during batting practice. It happened in Toronto, as one might expect. On August 7, 2024, the Blue Jays distributed replica George Springer hockey jerseys as a fan giveaway. Several players liked them so much that they obtained their own jerseys before the gates opened and wore them during batting practice and pregame warmups.Since official batting practice uniforms are no longer consistently worn by teams, this represented a rare moment of uniformity in modern pregame attire. While not an official team-issued jersey, it was a fun and memorable occurrence—worthy of inclusion here.

2024: How's That for an Introduction?

When the Blue Jays announced that they'd called up outfielder Jonatan Clase from Triple-A, it should have been a happy moment. They'd acquired the prospect from Seattle a few months earlier, and he was to make his debut with his new club on September 20. But the photo they put with their social media posts was a little disconcerting. A careful observer will notice that Clase's "8" was sewn upside-down on his jersey. Even closer inspection shows how rough the sewing job was, too. It is very possible the announcement was rushed, given the circumstances. And with the team on the road, they may have relied on an outside sewer to make up the jersey—someone who wasn't familiar with how to orient the digit properly. Fortunately for Clase, the error was quickly corrected. In both of his 2024 appearances wearing the royal blue jersey—on September 20 and September 29—the number "8" was properly sewn, back to its intended orientation.

Above: *A close-up of Clase's upside-down and poorly sewn "8".* ***Right:*** *The number was correctly sewn for both games in which he wore this style in 2024—September 20 (top) and September 29 (bottom). The team appears to have corrected the error swiftly.*

2023-2025 Blue Jays Advertising Patches

With the start of the 2023 season, teams were permitted to sell an advertising patch, up to four inches square, to appear on one of their jersey sleeves. The sleeve on which the patch appeared could change from player to player, and each team that sold a patch handled the placement differently.

The Blue Jays struck a sponsor patch deal with TD Bank. The patches first appeared on July 14, 2023.

The patch is a green square with the “TD” logo in white and a white border. It appears on the left sleeve on each of the team’s jerseys.

Letter of Professional Opinion

Paul Molitor 1994 Toronto Blue Jays Game Worn Road Jersey

Examination Date: February 6, 2021 **Certification Number**: 21-0201J22

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Gray full-weight knit, size 44, seven-button Wilson-made road jersey of Paul Molitor. Blue/white/blue 1 1/2" sewn-in knit sleeve trim. "TORONTO" arched across both front panels in the team's distinctive split-letter font. The team crest patch, a blue jay's head in profile embroidered over a baseball with a red maple leaf, is stitched to the left panel below the wordmark. On back, the player's number, 19, in the team splits-letter font, white over Royal Blue. "MOLITOR" is arched above the number in the block font specific to the Blue Jays. The 1994 MLB 125th Anniversary patch is stitched to the right sleeve. All lettering and ornamentation is to team specifications. Because the Jays' on-field uniforms were made by Wilson, there is properly no visible branding on the sleeves; this right was contractually exclusive to Russell Athletic in 1994. The inside of the placket is fully lined with with linen for player comfort, a hallmark of Wilson on-field jerseys of the time. Molitor notably wore size 44 jerseys at this point of his career. It is signed in black marker by the player on the right side above the wordmark, and while I have no opinion on the autograph, it is accompanied by a Beckett Letter of Authenticity.

Manufacturer and Team Tagging: The black on white printed Wilson tag inside the back of the neck notes the size "44" in red. Notably, the Blue Jays exclusively used printed style (instead of embroidered) Wilson tagging on their jerseys unlike most other teams with Wilson uniforms which used the embroidered tags.. Sewn inside the neck below the Wilson tag is a 1" x 3" piece of gray cloth the same as the jersey's construction, with the code "**19 94 1**" in italic Royal Blue machine embroidery (Player 19, 1994, set 1). Wilson-made jerseys were exclusively supplied to the team; retail sale Authentics were made by Russell carried the Diamond Collection tag on their tail.

Wear & Repairs: A light table examination shows that all elements of the jersey are original without alteration or contrivance. The jersey shows signs of light to moderate wear, with characteristic wash-fading of the sleeve ends that is typical in Blue jays jerseys of this vintage, a faded stain above the left side of the name, as well as some yellowing and wash-wear showing to the linen placket lining.

Conclusion: The jersey in review is in very good used condition, is properly lettered and numbered, and has no alterations of any kind. It has a team-issue style tagging. It is my considered opinion that this jersey was made to team specifications, issued to and worn by Paul Molitor of the Toronto Blue Jays in 1994.

Letter of Professional Opinion

Raul Mondesi Toronto Blue Jays 2001 Game Worn Alternate Home Jersey

Examination Date: March 5, 2021 **Certification Number**: 21-0305J02

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Toronto Blue Jays six-button, size 48 white with Royal Blue sleeves, alternate home jersey of #43 Raul Mondesi. Solid white body faux vest with blue sleeves. Royal blue soutache bands the placket. Red-white-blue Silhouetted Batter patch on the back of the neck in its first year of use by all teams in MLB. Two color lettering throughout; Dark Royal topped with a bright Process Blue "split", a hallmark of the Blue Jays. BLUE JAYS arched on front across both panels with the team alternate logo "T-Bird" on the left chest, MONDESI and "43" centered on the back, all in the proper fonts and sizes for the 2001 Blue Jays. The Majestic twin-peaks logo is direct embroidered in white on the left sleeve above the trim band. Above it is stitched the 2001-specific Jays 25th Season patch. On the right sleeve is sewn the 2001-only American League 100 Seasons patch. Size 48 is appropriate to have been worn by Mondesi. Both sleeve ends have been specially tailored for the player, with extended length and the last two inches of each sleeve split open and hemmed. Mondesi played for the Blue Jays 2000-2002 in the middle of his 13-year MLB career. He appeared in 149 games that year, batting .252 with 27 home runs.

Manufacturer and Team Tagging: Majestic Authentic Collection locker tag is stitched to the bottom of the front left tail, a small flag tab stitched below notes the size of the jersey as 48. There is no USA flag stitched to the back of the neck of this jersey, indicating that it was not worn after the events of 9/11/2001 when this flag was applied to every MLB jersey. This jersey has a machine-embroidered strip-tag stitched into the back of the neck with machine embroidery of "43 01 S3" indicating player number 43, 2001, set 3. Majestic's manufacturing style tag is pinch-sewn into the inside side seam, in the correct style for 2001, and designates this jersey with the code 0062, correct for a team-issued jersey.

Wear & Repairs: A light table examination shows that all lettering is original and without alteration. This jersey shows definite signs of honest game wear, including scuffs, loose threads, small pulls and softening of all the fabric and lettering from washing.

Conclusion: The jersey in review is in very good used condition, is properly lettered, and numbered, is free of contrivance and appears to have no alterations of any kind. It matches other team exemplars in our database. It is my considered opinion that this jersey was made to team specifications and worn by Raul Mondesi of the 2001 Toronto Blue Jays.

Letter of Professional Opinion

Roger Clemens Toronto Blue Jays 1997 Cy Young Auto'ed Home Game Jersey

Examination Date: July 18, 2022 **Certification Number**: 22-0718J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Toronto Blue Jays Wilson six-button, size 52 heavyweight knit home white jersey of #21 Roger Clemens. White body with stretchy red, Royal and turquoise/medium blue stretchy sleeve ends. The inside of the placket is lined with linen for player comfort as is typical with Wilson jerseys. Two color lettering throughout; New York Blue (Dark Royal) solid letters with a Process Blue (Medium bright blue) "split", a hallmark of the team. "Blue Jays" arched on front across both panels with smaller "21" on the left chest, CLEMENS and "21" centered on the back, all in the proper fonts and sizes for the 1997 Blue Jays. On the left sleeve is stitched the team Maple Leaf patch with Blue Jay head over a baseball, on right the 1997-specific Jackie Robinson patch. Clemens' jersey size was steadily increasing between 1996 and 1998. Most of his 1997 jerseys of record were size 50, and most of his 1998 ones were size 52. It is reasonable that he would have been issued a one-size-larger jersey for use in the colder months when a player typically wears more layers underneath. The jersey is autographed in Sharpie on the right chest "Rocket" Roger Clemens CY5," Referring to the five Cy Young Awards he had won to date, which would mean this was signed following the 1998 season. By the time his career ended he had won seven of them.

(*Wikipedia*) Clemens was dominant in his two seasons with the Blue Jays, winning the pitching Triple Crown and the Cy Young Award in both seasons (1997: 21–7 record, 2.05 ERA, and 292 strikeouts; 1998: 20–6 record, 2.65 ERA, and 271 strikeouts).

Manufacturer and Team Tagging: Wilson was the designated maker of the Blue Jays home white uniforms in 1997, but MLB contractual rules did not allow the Wilson logo to be displayed on the sleeve of the jersey. Team tagging is machine embroidered in red on a .5" x 2.5" piece of jersey white knit fabric, "21 97 1" (player 21, 1997, set 1) This specific tagging matches other jerseys in our exemplar library that were known to be issued at the beginning of the season. It seems that many jerseys issued later in the season simply had a "97" embroidered on the tag. Layered beneath the neck tag the jersey are two additional fabric tags, noting 2" extra length and "tapered". The extra length is certainly apparent, and the tapering appears to be present as well.

Continued, overleaf

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

Wear & Repairs: A light table examination shows that all lettering is original and without alteration. Clemens was very aware of the marketability/collectability of his game worn gear, and examining photos of him pitching in 1997 clearly wearing several different jerseys, I note the varying placement of the front numbers. This jersey shows very light use with minimal signs of washing. The tagging is still crisp, but is slightly curled from washing. There is some light red scuff-staining on the left front if the jersey in the waist area, its origin is unclear.

Additional Comments: For a star player like Clemens who was highly aware of the collector value of his gear, I find it useful to review as many game photos as I can find to look for similarities and differences and to guess at how many jerseys the player might have worn during the season. I found this photo on Getty Images that, while it should not be considered a conclusive photo match, dates from the very start of the season (April 2) in Toronto when colder weather may have dictated a larger jersey being worn. I have also located a start-of-season game-worn example for another much less famous player when this specific style of *Set 1* tagging found on this jersey was observed. In the photo, compare the spacing and placement of the front numbers compared to the team wordmark, the placket seams and the button locations are all seemingly match to the jersey in review. Some loose threads that were left unclipped are present on the wordmark and could be useful in a photo matching exercise; pursuing a conclusive photo match might prove to be a valuable exercise.

Left, while it should not be considered a conclusive photo match, the overlay photo from Clemens' first outing, April 2, 1997 is a compelling one. Game photos from 1997 show a wide array of front numbers placement, confirming that the player wore multiple jerseys throughout the season. Below left, tagging on this jersey matches tagging at right, from an authenticated jersey worn in April by another player.

Conclusion: The jersey in review is in excellent lightly used condition, is properly lettered, is free of contrivance and has no alterations of any kind. It matches other exemplars in our database. It is my considered opinion that this jersey was made to team specifications and worn by Roger Clemens of the 1997 Toronto Blue Jays.

Letter of Professional Opinion

Jose Cruz Jr. Toronto Blue Jays 2001 Game Worn Alternate Blue Jersey

Examination Date: March 5, 2021 **Certification Number**: 21-0305J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Toronto Blue Jays six-button, size 48 Royal Blue alternate jersey of #23 Jose Cruz Jr.. Solid Royal Blue body with red soutache trim on the sleeve ends and circling the placket. Red-white-blue Silhouetted Batter patch on the back of the neck in its first year of use by all teams in MLB. Three color lettering throughout; red, outlined with white and topped with a Royal blue "split", a hallmark of the Blue Jays. "Toronto" arched on front across both panels with smaller "23 " on the left chest, CRUZ and "23" centered on the back, all in the proper fonts and sizes for the 2001 Blue Jays. The Majestic twin-peaks logo is direct embroidered in white on the left sleeve above the trim band. Above it is stitched the 2001-specific team 25th Season patch. On the right sleeve is sewn the 2001-only American League 100th Anniversary patch. Size 48 is appropriate to have been worn by Cruz. Cruz played for the Blue Jays 1997-2002 early in his twelve-year MLB career. He played in 146 games that year, batting .274 with 34 home runs. He was named team MVP by the Blue Jays in 2001.

Manufacturer and Team Tagging: Majestic Authentic Collection locker tag is stitched to the bottom of the front left tail, a small flag tab stitched below notes the size of the jersey as 48. There is no USA flag stitched to the back of the neck of this jersey, indicating that it was not worn after the events of 9/11/2001 when this flag was applied to every MLB jersey. While most Blue Jays team issued jerseys have a machine-embroidered strip-tag stitched into the back of the neck specifying player data and set number, this one does not. However, it is not the only such 2001 team spec and likely game-worn jersey in our exemplar library without such a tag. Majestic's manufacturing style data tag is pinch-sewn into the inside side seam, in the correct style for 2001, and designates this jersey with the code 0062, correct for a team-issued jersey.

Wear & Repairs: A light table examination shows that all lettering is original and without alteration. This jersey shows definite signs of honest game wear, including scuffs, fabric piling, loose threads, small pulls and softening of all the fabric and lettering from washing. It has significant fabric piling underneath both arms from use.

Conclusion: The jersey in review is in very good used condition, is properly lettered, and numbered, is free of contrivance and has no alterations of any kind. While it lacks the more commonly seen Blue Jays 2001 team neck tagging, it matches other exemplars in our database. It is my considered opinion that this jersey was made to team specifications and worn by Jose Cruz Jr. of the 2001 Toronto Blue Jays.

Chapter 13

Atlanta Braves

Game Worn Guide to MLB Jerseys

1970-2025, Tenth Edition

William F. Henderson

Braves Uniform History Notes

- The Braves migrated to Atlanta from Milwaukee for the 1966 season, bringing their old-fashioned flannel uniforms with them. The Braves' uniforms were decidedly not flashy, and the prior elimination of tomahawk and trim meant that by 1970 they had become downright dull.
- The shock value of seeing the Braves new-for-1972 white and blue pullover uniform jerseys with the large flowery-feather depiction on its sleeves must have been intense. They featured ornate, almost embellished psychedelic player numbers (which if one looks closely one can tell that these same numbers were adapted for use on the Astros wild 1975 rainbow uniforms).
- These early knits were made by Sand-Knit, and they were not very sturdy in construction. They began to shrink rapidly with the first washing, until after a few washings they had become unwearable. The team ordered another set and the same thing happened. Finally, the Braves resorted to having the uniforms dry cleaned after each game. Surviving examples are shrunken and puckered, many are stained, reported to be the result of a fire in the dry cleaning plant where they were being stored.
- The Feather style was refined and improved for 1974–1975. This is perhaps the most famous style of Braves uniform, as it was the home jersey of this set that Hank Aaron was wearing when he broke Babe Ruth's lifetime home run record in 1974.
- 1976 brought red pinstripes at home, and another wild version of the feather uniform on the road, both used through 1979. The '70s were a time like no other!
- Player nicknames on home jerseys are used for a short time in 1976, an infamous PR stunt by new team owner Ted Turner to drum up interest in a lousy team with poor attendance. The gimmick is dropped after two months and the Braves return to being NOB-less until 1979.
- For 1980–1986, the home jersey is reborn as a clean white shirt with restrained red/white/blue trim. The road uniform is a rather garish (but typical for the time) powder blue with large graphics, but loses the feathers from the sleeves.
- From 1972–1986 (1972–1979 on road jerseys), the Braves use a unique style of sewing on both their team name and numbers. On light-colored jerseys, they make the lettering and numbers out of two layers of tackle twill, then sew it to the garment with a thick embroidery edging in a contrasting color. Dark-color jerseys get three layers of tackle twill, but the edge treatment is still the same. Look for this lettering detail on game worn jerseys. Its absence probably indicates at least a number change.
- In 1987, the Braves adopt new button-up uniforms for both home and road that hearken back to their classic look of 1957, with only a few minor changes to that design. This uniform design is beautifully traditional, and has remained in use as of this writing as the current longest-running uniform design without modification in the National League.
- In 2006, the Braves, the last holdout to use vertically arched style player names, finally relent to changing times and move to radial arching for names, hence ending a decades-long MLB tradition.
- In recent years, the team has added alternate jerseys in red and blue, and for 2012 adds a 1966 nostalgia-style cream colored jersey for use on weekends at home, and a military-tribute red jersey in 2014.
- The team freshens its jersey wordmarks for 2016, concurrent with the change to Flex Base construction. The road wordmark is updated again in 2019, along with a change to the player name font on jersey backs.
- The Braves introduce a City Connect uniform in 2023. The white jersey, with blue raglan sleeves, is a tribute to Hank Aaron and the 1974 uniform he wore when breaking Babe Ruth's all-time home run record. The left chest features "The A"—a red script "The" paired with a blue-and-red capital "A"—a nod to both the city and the classic Braves font. The design incorporates a stylized feather graphic on the sleeves inspired by the team's 1970s uniforms.
- The Braves continue to embrace the team's (and city's) rich baseball history, participating in nearly 30 throwback games since 1997, including eight dressed in the 1972–1975 Feather style pullover tops.
- Notable to mention is the Braves mascot, the laughing (or screaming) brave, depicted on the sleeve patches of the Braves' uniforms through 1971. The laughing brave was requested to be removed by The Cherokee Nation, and the Braves complied. He was eventually banished from all team artwork by the mid 1990s. While he has occasionally reappeared on the sleeve patch of Turn Back the Clock uniforms in recent years, it is notable that the 2012 nostalgia uniform omits him, instead using a more generic and totally inoffensive team patch on the sleeve.
- Over the decades, the Braves have balanced modern updates with a deep respect for their visual traditions—most notably the script "Braves" and tomahawk—creating one of the most consistent and recognizable uniform identities in Major League Baseball.

•While most jerseys have Vertical Arch style names on back, it is not uncommon to find game worn jerseys (usually mid-season call-ups) with standard Block names on them instead.

** Braves collectors report that several extra sets of Braves home jerseys were made in 2000, the year the Braves hosted the All-Star game. Sets 1-2 are tagged by Wilson, with sets 3-4-5 tagged by Russell. All have the All-Star patch affixed. I do not have independent verification of this claim.

Home, Road and Alternate Jerseys

1970-1971 Home

1971

After embroidery, the artist's detailed and handsome painting of the "Laughing Brave" did not come out looking quite so handsome. As a small child, I found him to be a terrifying visage.

- 1971 was the final year of flannels for the Braves. Their last flannels were as traditional as they came in 1971: pinstripes on their home jerseys, plain gray road jerseys, all devoid of trim.
- Player names on back were still years away, and the uniform numbers were plain one-color Varsity style. 1971's flannels marked the final time that the "Laughing Brave" adorned the jersey sleeve. Considered offensive to Native Americans, he began to be slowly phased out of use by the team entirely in the years thereafter, though did not disappear entirely until the 1990s.
- Braves 1970–1971 flannel uniforms were recycled to the minors and many were quite simply used to death.

© GameWornGuides.com

1970-1971 Road

- The Braves 1970–1971 road jersey was even plainer than the home one. Solid gray and devoid of any trim at all, the navy blue script on front and block numbers on back are edged with red.
- The “Laughing Brave” sleeve patch provides the only color at all on this somber costume.
- Final-year road flannels are made by Spalding, which explains the different number font from the Wilson home jerseys. In those days, mismatched numbers between home and road uniforms were quite common because different companies usually used different patterns.
- Like the home jerseys, these were sent to live a second life in the minors and many were worn until they fell apart. There are few pristine survivors.

© GameWornGuides.com

1972 Home

The Braves entered the double knit era in style. Their new home uniforms were completely restyled from the conservative, pinstriped, home wool-flannels worn up to 1971. However, as fancy as they are, the lettering and numbers have a freehand, less-than-perfectly-professional look about them.

Two button Henley neck. Front and back, three-color numbers in royal blue/white/red. Unique “Feather Style” fancy numbers used in 1972–1973 only, and probably a Sand-Knit pattern. On the home jersey, these numbers and the team lettering are two layers of twill, blue and white, then thick red embroidery stitching is used around the edges to sew them to the fabric.

From an inside source, we learn: The Braves had so much trouble with Sand-Knit knits in 1972 and 1973, and this is the reason they switched to Wilson. The first couple of sets shrank so much when they came out of the dryer that they would not fit the players. In 1972, the Braves had at least 7-8 sets of homes and roads. Also, instead of washing at the clubhouse, they sent them out to be dry cleaned, then they had a fire at the cleaners and most of the shirts had fire/smoke/water damage. That is why you see some home jerseys with brown staining down one side or the other.

*Much puckering exists around the embroidery on surviving game jerseys. These are surprisingly thin garments, feeling like heavy t-shirts in construction. **Above**: Notice the brown stain on the bottom back of this jersey, most likely from the cleaning plant accident explained in the text.*

© GameWornGuides.com

1972 Road

Bill Henderson Collection

Along with their white home counterparts, these blue road jerseys are known as the Early Feather Style jerseys. No names on back. Bright blue pullover, two-button Henley neck, with white sleeves with large stylized "feather" designs sewn on them. Two-button Henley style neck. Front lettering and numbers are three-color Feather Style—white/red/white. Bottom layer of red twill is bound to the jersey with a thick border of white embroidery. Fabric is very lightweight and there is usually a lot of puckering where the twill is sewn to the garment. These shrunk badly in use, as many as three sizes smaller. They were somewhat of a disaster, and extra sets were made during the season as the old ones became all but useless.

"The Atlanta Braves introduced blue jerseys with tiled art flowers on the sleeves, prompting Astros third baseman Doug Rader to heckle them,'What'll it be tonight, boys? Fast pitch or slow pitch?'" (Bob Hulsey, Astrosdaily.com)

© GameWornGuides.com

1973 Road

***Above**: Hank Aaron at the 1973 All-Star Game in Kansas City.*

Except for the change to a V-Neck from the 1972 two-button Henley, the Sand-Knit made 1973 blue road jersey is identical looking to the prior year's model. Some changes must have been made to the polyester fabric used though, as surviving examples are not as ridiculously shrunken. Two layer white lettering with red satin-stitch embroidery providing separation and contrast between the layers. These jerseys were cycled to the minor leagues and used mercilessly there. But because of the method of sewing the numbers in place, changing numbers on them was very difficult. The team had switched to Wilson home jerseys in 1973, then abandoned Sand-Knit for Wilson entirely starting in 1974. Funky number font continues on road jerseys alone in 1973, as home jerseys use Wilson Varsity house font.

1973-1975 Home

1973

Stung by their problems with the first year knits provided by Sand-Knit, the Braves switched their home jersey provider to Wilson for 1973. Wilson jerseys were made of durable warp-knit polyester and had longer, rounded tails. The childish freehand Braves script as seen on the Sand-Knit jerseys was replaced by a more elegant, professional and flowing script likely penned by the Wilson art department. Lettering remained two color twill, dark Royal Blue over white, then bound to the jersey body with a tight, satin-stitch or red thread. Player numbers changed to Wilson's own house font, Varsity in the same three colors, front and back. The red stitching shrunk badly after many washings becoming badly puckered. These original jerseys were sent to the minor leagues where they were used excessively. Finding one in good original condition today is a rarity.

1973

1973

© GameWornGuides.com

1973-1975 Home, continued

1975

1974

These "feather style" jerseys have a special place in Braves history because it was this style jersey that Hank Aaron was wearing when he broke Babe Ruth's lifetime home run record in 1974. *Note that on Braves jerseys of these years, the second number on the tag refers to the SIZE of the shirt and not the player number. I have seen several claimed to be Hank Aaron's because he wore #44... and they are not!*

1975

Above and top right: *These close-up photos show the tight-spaced "Satin Stitch" in red that is used to bind the blue/white twill elements to the jersey. Normal hot water washing is unkind to these, as everything shrinks at different rates: twill, thread and jersey fabric, making a puckered mess.*

© GameWornGuides.com

1974-1975 Road

1974

Bob Case Collection

Also known as the *Later Feather Style* jerseys.

Front and back, three-color Varsity numbers — white/red/white. No names on back. Lettering and numbers are now two layers of twill, bound to the garment with thick, looped red embroidery stitching holding it in place.

Right: *Notice the heavy "satin stitch" edge embroidery that holds the back number in place.*

© GameWornGuides.com

April 1976/then July 1976-1979 Home

1978

1977

The Braves started out the 1976 season with this new red-pinstriped home set, before the infamous "player nickname" jerseys, discussed on the next few pages, were introduced on May 1, 1976.

The fronts of both sets are identical, but these have no names on back and the back numbers are smaller, the same style as the 1975 Wilson set, whereby the nickname jersey back numbers were a giant 10 ½ inches tall.

Front and back, three-color Varsity Standard numbers royal blue/white/red. The lettering and numbers are sewn on the same way as they have been since 1972—they are actually two-color, blue/white, then bound to the jersey with a thick edging of satin stitch red thread. Note wide spacing of numbers, front and back.

This style was worn at home throughout April 1976, then reintroduced in July and remained the home jersey through 1979 season.

The standard 1976 home jerseys properly carried the NL Centennial patch on the right sleeve, where the nickname set, discussed on the following pages, did not.

May-June 1976 Home "Player Nicknames"

Thanks to collector Tony Ciocci and Sam Wallace, an avid Braves historian, for sharing their research here for us to enjoy. The link provided here will take you to a great story posted on espn.com on their research in conjunction with the Atlanta Braves Museum, so I will not retell the whole tale here. I'll give you the short version:

Until 1976, the Braves had always been a "no name on back" team. However, after acquiring several players from the Dodgers—where names on back were standard—the idea of adding them began to circulate. Around three weeks into the season, with the team off to a poor start and struggling to generate fan interest, maverick owner Ted Turner-looked for any promotional angle they could find. Rather than simply placing players' last names on the back, the Braves opted for a bold twist: they would use player nicknames instead, turning their home uniforms into a quirky and attention-grabbing novelty.

http://www.espn.com/mlb/story/_/id/15507790/uni-watch-friday-flashback-braves-keep-informal

Pitcher Andy Messersmith, who wore #17, agreed to wear "CHANNEL" above his number in a tongue-in-cheek nod to owner Ted Turner's TV station. The ruse lasted from May 1 until May 21, when the league intervened and forced the team to change it, ruling it as impermissible free advertising. After May 21, Messersmith switched to the NOB "Bluto" (top right), which he wore until the team abandoned the nickname experiment altogether after June 24. The team reverted to their standard home jerseys beginning with their July 5, 1976 game, following a road trip from June 25 to July 4.

© GameWornGuides.com

The concept wasn't entirely original—both the Kansas City and Oakland A's had allowed a handful of players to wear nicknames on their jerseys during the 1960s and 1970s.

The Braves' version of the idea debuted on May 1 and lasted through June 24, covering a span of 28 home games, during which the team went 10–18. These jerseys were also notable for their enormous back numbers, which measured 10½ inches tall.

So what happened to them? After the Braves were cautioned by the league on their irreverence, management quietly pulled the plug on the nickname experiment. Based on our research, rather than attempting to salvage or rework the existing jerseys, the team simply produced two fresh sets of standard jerseys for the players. The original nickname uniforms were likely bundled up and sent down to the minors, never to be worn by the big-league club again.

Even though it was 1976, these jerseys had no NL Centennial patch on the sleeve..

© GameWornGuides.com

May-June 1976 Home “Player Nicknames”, continued

This jersey came to me from a collector friend, stained and filthy as shown at the bottom left of this page. “What is it?” he asked. Turns out it was indeed one of these elusive, early season 1976 jerseys, this one belonging to pitcher Carl Morton (above), that had been sent to the minors and was re-purposed. I restored it; the full story is here.

The fantastic thing about MLB in the pre-2000 era is you never know what you might find. Teams wasted nothing, re-using their uniforms in the minor leagues. Uncovering this relic was a shock to me, and an honor to restore it to original. The numbers on the restoration are crooked—because they weren’t perfectly aligned originally, and because the jersey is somewhat distorted by stretching and wear.! The ghosts don’t lie.

1976-1979 Road

1976

Barely visible 1979 armband, after 5/5

Steve Kraljic collection

1979

1976 sleeve emblem & patch details

1979

Front and back, three-color numbers—royal blue/white/red. The lettering and numbers are actually only two colors of tackle twill, blue and white, and then a thick ”satin” embroidery stitch in bright red attaches them to the garment. No names on back in 1976–1978, names appear for the first time in 1979, and use nameplates. “Feather” decoration now appears on the left sleeve only. “Atlanta” front wordmark has a quaint hand-drawn quality about it that will become but a memory in the increasingly professional world of MLB in a very short time.

© GameWornGuides.com

1980-1986 Home

1981

1980

After a four-year run, the white with red pinstripe uniforms were replaced with a more conservative solid white look with red/white/blue sleeve end and V-neck trim. The wordmark and the player numbers stay basically the same. Front and back, three-color numbers—royal blue/white/red. Braves home jersey lettering and numbers are sewn to the jersey as in prior years, with a thick red embroidery stitch. However, this technique is discontinued on road jerseys starting in 1980. Names on back are adopted at home for 1980, and used going forward. They are one-color royal-blue vertical arch; nameplates are used. Original player names on back have usually been replaced as many (or most) of these jerseys were recycled to minor league Greenville.

© GameWornGuides.com

1980 Road

Steve Kraljic collection

The Braves switch to a powder blue road jersey to start the new decade. In 1980 only, the “Atlanta” script uses a tall lower-case cursive “A” at its start. The wordmark is, to be kind, rustically drawn and hand cut. It is among the last of its kind, artwork done without the aid of computer drafting and cutting tools. Outlines are hand cut; no two jerseys are precisely the same.

Numbers on front and back, two-color Varsity, royal blue/white. Lettering and numbers are standard, two-layer tackle twill on the road jerseys, the fancy embroidered edges used since 1972 are discontinued.

Names on back, vertical arch one-color royal blue, on nameplates. The nameplates are not backed with any sort of fabric interfacing, and the edges are left raw and not serged, so puckering around the perimeter is typical.

This style jersey is extremely rare to find in the hobby; besides the fact this style was used for only a single year, nearly all of these were sent to the minors where the front “Atlanta” was stripped off and replaced with “Braves”. Look for Richmond Braves jerseys in this jersey body style that may have been repurposed MLB issue.

Braves Jerseys Demoted to the Minor Leagues

With a half dozen farm clubs, and nearly all of them named “Braves”, there were plenty of homes for the MLB Braves uniforms to land after their season of use in the majors.

While home jerseys with the “Braves” script may have only suffered number changes, road jerseys with “Atlanta” on the front needed to gave their word-marks stripped as well.

Here are several examples. While not all minor league Braves jerseys started life in the majors, look for signs of conversion.

2013

2013

2015

1987–2015, the Atlanta Braves changed very little on their home jersey. For 2016, they would tweak the wordmark and alter the jersey construction to the new-for-2016 Flex Base template, but only those obsessed with detail might notice. In these 28 years, while manufacturers of the jersey would change, The front script was constant, as was the trim and the player number font on back. Through the years as detailed on prior pages, jersey construction evolved from full weight knit to Cool Base tech fabric, player names would change from vertical arch to radial arch, and would be direct sewn instead of on nameplates. 2016 and after jerseys are detailed several pages ahead.

1987-1997: Braves Random Road Jersey Wordmark Pattern Variation

1999

1991

1995

1995

1997

1995

1993

A reader wrote and asked me, “Did you ever notice that some Braves’ road jerseys have the front lettering split in a different place?” I admitted that I had not. I went looking through my collection, and indeed I found that perhaps just under 10% of my photos of Braves’ road jerseys from the pre-Majestic 2005 era had the center “A” un-split, while 90% had the “A” split in the middle. I checked Getty Images for game action photos and verified this trend on the field, finding photos of game worn examples from as early as 1993 and as late as 1997. When I asked other collectors, some told me “It’s the Russell jerseys only that are that way." My research shows that Russell jerseys indeed came both ways, and I found photo evidence of players on the field at the same time with both variants in use. Finally, the photo below shows a Rawlings 1988–1991 (retail sale) jersey with the un-split “A." Since Majestic took over as the exclusive maker of Braves jerseys in 2005, all of them seem to have the “split A."

Does anyone know the origin of the two different patterns? Any reasons why both might be used in the same year, and continuing for multiple years? When it started and when it ended?

1988–1991

© GameWornGuides.com

2005-2007 Alternate Red/2008-2011 Alternate Home/ 2012-2013 Alternate Home Red

2005 issue, with NOB in vertical arched style; jerseys issued mid-season did not have this feature. All jerseys switch to non-vertical arched NOB for 2006.

The Braves add a red alternate home jersey in 2005. White/blue/white knit trim adorns the sleeve ends and jersey front and collar. Numbers on back are two-color Varsity Standard, navy blue/ white, player names on back are white vertical arched type and sewn to a nameplate. 2005 jerseys sewn mid-season often had non-vertically arched names. In 2006, all names switch to Block, non-vertical arched style.

2008-2015 Alternate Road

2008

This style jersey is made in Cool Base only. It is a very dark navy color, darker blue than the batting practice jersey. Player names are white block on nameplates through 2013. Starting 2014, no nameplates are used. Player numbers are navy/white two-color Varsity style.

© GameWornGuides.com

2012-2021 Alternate Home Nostalgia

2017

Above: *Note tag coding. Though the style updates from 2018 to 2019 are small (added sleeve trim and new NOB font) Majestic still changes the style code of the jersey from AWAI to AWAC. The Nike tag, with code AW3I, is shown from the 2020 example at right.*

2020

Above: *Nike made at least one 2020 set of these jerseys for the team, but they were not worn during the season.*

Left: *In the 2019 MLB Style Guide, the Braves changed the team's founding date on the crossed tomahawk patch from 1876 to 1871. The change did not actually appear on the field until the final season for this jersey in 2021.*

When the Braves came to Atlanta in 1966, their uniforms were rather simple. Still flannel, for 1963, they had dropped the large tomahawk that had been a central feature of the front design since 1946. For 2012, they introduce a replica of this design as an alternate cream-colored Cool Base uniform. The design closely resembles the home uniform worn by the Hank Aaron-led Braves during their first two seasons in Atlanta in 1966–1967, featuring the player number instead of a tomahawk beneath the "Braves" script on front of the jersey.

The Laughing Brave patch that had been used on the 1966–1967 uniform sleeve is noticeably absent. While he has been brought back in the past for use on Turn Back the Clock jerseys, he is now considered too politically incorrect for a larger role. Instead, the sleeve patch features two crossed tomahawks and the date "1876," the year when the franchise debuted as the Boston Red Caps. Though the date on the patch is changed in the team's style guide to "1871" in 2019, that date only appears on the patch in the 2021 season.

Player names and back numbers are identical to the regular home jersey, Varsity numbers in red/navy, names in one-color navy Block. Nameplates are used 2012–2013, then not afterwards. For 2019, NOB changes to a new bolder font (described several pages ahead in this chapter) and a thin band of navy trim is added to the sleeve ends. Nike becomes the manufacturer for 2020, and though at least one set was made for the team, it was not worn that year. The style is discontinued after 2021.

2012–2020

2021

2014-2018 Alternate Home Red Military Appreciation

2014

For 2014, the Braves modify their red alternate home jersey, turning it into an officially named “Military Appreciation” uniform. While the back lettering remains unchanged from before, the front loses the tomahawk, and gains a star-spangled blue wordmark outlined with white/navy and an American Flag patch on the left sleeve. Names are also no longer on nameplates. It is worn a half-dozen times in 2014 on dates honoring each of the branches of the armed services, military family night, plus Independence Day. We don’t have confirmation that this jersey was used at all in 2018 although it is listed as a valid team choice for that year.

2016: Braves Home/Road Team Script Changes

1987–2015

Starting 2016

"Print" wordmark in the team's official art pack

In 2016, without making any mention at all, the Braves modified the script on their primary home jersey, changing it from the way it had appeared since 1987. The top photo is of a game worn 1997 jersey, the middle is of a 2016 jersey. At bottom is the "official" braves logo art as it has long appeared in the team's official style guide, and as it appears everywhere in print. We can see that the team simply decided to standardize on the official wordmark. The Phillies did the same thing with their jersey art in 2016 as well.

What changed? Many things… first the word splits at a different place than before. Previously the break was between the "A" and the "V", now it is in the middle of the letter "A". The slant of the wordmark is significantly less than previous. Note that in the earlier application, the vertical stroke of the "A" is nearly parallel with the placket trim. Now, it is tilted by some 30 degrees. The shape of the lower tail and the top point on the leading letter "B" is different, as is the new rounded top point of the final "s". The white space is much less in the final "VES" letters. And the yellow stripe on the tomahawk handle now aligns with the placket trim instead of being offset to the left.

The script from the team's alternate nostalgia jersey is shown at bottom right, Introduced in 2012. It presaged the change in the team's home jersey lettering by several years, as it mirrors the official team wordmark art. Because it lacks the tomahawk, the word is centered differently on the jersey front and therefore the word splits at a different place, between the "R" and the "A".

2012–2020

© GameWornGuides.com

2016: Braves Home/Road Team Script Changes, continued

The road "Atlanta" script changes as well in 2016, as used on both gray and blue jerseys. In these photos you can see that it is bolder, less italic, not as tall and perhaps more graphically correct (although not as charmingly quirky) as before. Compare the shapes of the inside of the last "A", the slightly different place that the word splits in the center "A", the height difference of the "T" and where the tomahawk yellow stripe crosses the placket trim. No mention at all is made in the team style guide of the change.

2016: Flex Base Jersey Construction and Branding

Read the full story on MLB's adoption of Flex Base jerseys for 2016 in Chapter 2.

Rick Ogata collection

In 2016, all teams adopt Majestic's new "Flex Base" on-field game jerseys, which are made of Cool Base fabric, but with several new elements designed to make them lighter and more breathable. The new jerseys have mesh side panels that run the length of the jersey, and one on the back tail called the "Air Belt." They also use "Kiss Cut" layering for front decorations, names, and numbers, which Majestic says is 10-20% lighter than traditional layered twill. Finally, the MLB logo on the back neck is now a rubberized patch, called CFX by Majestic, and the heat-pressed tag on the front tail differs from Cool Base jerseys of old.

2016-2018 Road

Concurrent with their change to Flex Base jerseys in 2016, the Braves subtly update the script on their road jerseys, reducing the angle of the lettering and tomahawk, and adjusting its position on the jersey. The changes are described in more detail several pages ahead in this chapter. Otherwise, the rest of the jersey stays the same in design, now applied to the Majestic Flex Base template. Back numbers are red/navy Varsity, player names in navy. Blue/red/blue braiding is sewn close to both sleeve ends and around the neck and placket.

© GameWornGuides.com

2016-2018 Alternate Road

The Braves update their blue alternate jerseys in 2016, adjusting the front logo to bring it in line with the other jerseys in their lineup, as described several pages ahead in this chapter. Aside from the script, and the switch to Flex Base in 2016, the jerseys are otherwise unchanged. Names on back in white, back numbers in blue/white.

© GameWornGuides.com

2019-2023 Road

Above: *The small tweaks to front and back lettering change Majestic's style code for this jersey from AWRR in 2017 to AWR2 for 2019. Nike changes it again to AW2R in 2020.*

The Braves update the "Atlanta" script on their road blue and gray jerseys again in 2019, just three years after the last change. 2016's flatter angle of the lettering and tomahawk remain, but the lettering itself is made less bold, and slightly more elegant. Notice the new position of the "T" and "L" relative to each other; the new point at which the letter "A" breaks over the placket, and the more consistent spacing between the letters overall. Note also the use of the new name-on-back font highlighted on the next page. Nike takes over production in 2020.

Logo Photos UniWatch/Paul Lukas

2019: Player Name Lettering Font Change

2018

2019

In 2019, the Braves make very subtle changes to their player name-on-back lettering, making it bolder than before, and using a different font with slightly different letter forms. Notice the alphabet displays above from the 2018 and 2019 MLB Style Guides. Among other changes, the sharp points in the ”M” and “W” are squared off in 2019, while the “A” is made more triangular. The middle crossbars of the “E” and “F” are extended in 2019, and the tail on the “Q” is forced downward. The letter “S” has pronounced long end strokes. The difference in the “A” is also noticeable in the examples of the name “MARKAKIS” between 2018 and 2019 as well.

© GameWornGuides.com

2019-2021 Alternate Home Red/2022-2023 Alternate Home

The Braves revise their alternate home red jersey again in 2019. The dark tomahawk of the 2005–2013 red alternate returns, below a blue/white version of the Braves' new home script on a red Flex Base template. Blue knit trim runs around collar and placket and appears at both sleeve ends. Player names are white, and back numbers are sewn in lightweight twill in navy blue/white varsity. The 2019 version of the jersey features the MLB150 patch. Also, note the use of a new unique font for player name on back, which begins with the debut of this jersey in 2019. Nike takes over production in 2020, and the style code changes from Majestic's AWA3 to AW3B for Nike, This jersey become the only Braves alternate home jersey starting in 2022 when the alternate nostalgia jersey is officially dropped.

© GameWornGuides.com

2019-2023 Alternate Road

The Braves update their alternate road jersey again in 2019. While the old was a rather monochromatic blue on blue, front and back, the latest version changes the primary color to red in the front script, tomahawk, and back numbers, all of which retain their white outlines. Player names on back remain in single-color white. White knit trim now appears around the neck and placket, as well as slightly above the sleeve ends, bringing this alternate into alignment with the trim placement on the team's red and cream alternate jerseys. The 2019 version of the jersey features the MLB150 patch on its right sleeve end. Also, note the use of a new team-unique font for player name on back. Nike takes over production in 2020, and the style code changes from Majestic's AWAY to Nike's AW3Z.

© GameWornGuides.com

2023 City Connect

The Braves look to their past to form their City Connect uniforms, leaning heavily on a tribute to Hank Aaron and the style he wore in 1974 when he broke Babe Ruth's all-time home run record. The white jersey by Nike has blue raglan sleeves with a stylized version of the feather graphic used by the Braves in the 1970s, which here represents "the peak of the crown [that pays] homage to the Home Run King" according to the team. The left front insignia reads "The A" ("The" is embroidered in red script while the "A" is in blue/white/red twill)—a reference to the city that the team claims is familiar to all its residents. Front and back numbers are in the same colors, while the player name on back is in red. The tributes to Aaron continue with his motto and number, "Keep Swinging #44" heat pressed in gold above the jock tag, and "715" in a pattern similar to how the number was displayed on the Atlanta scoreboard when Aaron hit is famous home run, is inside the collar—both details not visible on the field, but desirable at retail.

Above: *The "715" on the jersey's inner collar is a nod to the scoreboard at Atlanta stadium on April 8, 1974, when Aaron broke Babe Ruth's lifetime home run record* ***(below).***

2024 Nike “Vapor Premiere Elite” Jersey Template

Nike Flex Base 2020–2023

Nike Vapor Premier Elite 2024

Following league-wide sweeping changes to MLB jerseys with all teams switching from Nike’s 2020–2023 continuation of the Majestic Flex Base jersey shell to its new Vapor Premier Elite (VPE) template, the jerseys of the 2024 season become an anomaly - a “one and done” season of changes that brought intense scrutiny from players and fans alike. Based on the negative feedback, especially from MLB players, Nike rolled back some but not all of the 2024 changes in time for the 2025 season.

The full rundown of the changes is outlined earlier in “The Basics” chapter, but generally speaking, 2024’s crop of jerseys had changed from earlier versions in several key ways.

- VPE home jerseys are off-white, or light cream color. The earlier Flex Base white jerseys are a bright, purer white. Grays are standardized.
- The front placket is narrower on VPE, which often causes team wordmark lettering that crosses the placket to break differently.
- Neck and sleeve trim elements (when used) are no longer sewn on top of the jersey material, but are now “sewn-in” to the jersey at the seams. Placket trim adornment remains the same, though the trim is now spaced closer together with the narrowing in placket size.
- For improved visibility, the MLB logo on the back of the jersey is moved several inches lower onto the back, down from the collar placket area where it had been since 2000.
- VPE loses the integrated mesh side and back tail panels that had been part of the Flex Base jersey template.
- Player names on VPE are much smaller, and for many teams are done in a standardized block font, all using a much steeper, nearly semi-circular arch.
- For teams with front numbers, the new 2024 font is simply always a reduced size of the back numbers. This was not the way it had been in the past for most teams, with front numbers being a font variant (smaller but usually wider and bolder) than the back font.
- Team logo sleeve patches, and in some cases sponsor sleeve patches change from traditional raised embroidery to flat printed plastic or to sublimated cloth/twill
- All lettering is done using a new more lightweight (thinner) kind of matte-finished twill (commonly called “Nike Twill”). Most, but not all jerseys incorporate barely visible micro-perforation on the numbers, front and back.
- Universally, nameplates are no longer used.

© GameWornGuides.com

2024 Home

The switch to Nike's Vapor Premier Elite (VPE) results in a handful of changes to the Braves' classic home jersey. Most visible are the league-wide rescaling of the back names and numbers, making them smaller, and arching the name lettering more prominently. Sleeve-end trim is also now sewn in to the end of the sleeves rather than sewn on top of it. VPE has a narrower placket than Flex Base, so placket trim appears closer together than before, and the Braves' crest now breaks in a different place upon crossing the placket. It is unclear if the team opts for perforated numbering, more research is required.

© GameWornGuides.com

2024 Alternate Road

The switch to Nike's Vapor Premier Elite (VPE) results in a handful of changes to the Braves' alternate road blue jersey. It appears that the shade of blue used for the base fabric lighter than in years past. It is possible that this is actually an intended color change, or that the change in jersey material makes the color appear lighter than on the Flex Base template. Aside from the color, also visible are the league-wide rescaling of the back names and numbers, making them smaller, and arching the name lettering more prominently. Sleeve-end trim is also now sewn in to the end of the sleeves rather than sewn on top of it. VPE has a narrower placket than Flex Base, so placket trim appears closer together than before, and the Braves' crest now breaks in a different place upon crossing the placket. Sleeve and placket trim also change from white to red for 2024. The team opts for perforated numbering on this style.

© GameWornGuides.com

2024-2025 City Connect

Contrary to most updates from Nike Flex Base to Nike Vapor Premier Elite (VPE), the Braves' City Connect jersey has comparatively few visible changes from the 2023 version. All of the storytelling elements outlined on the 2023 version return. Back names and numbers are smaller, as is expected, and numbers are also perforated. The MLB logo on back moves down with the smaller placket (see the difference compared to the page above). Oddly, the style code remains the same on both versions, 01O2, even with the clear, if subtle template change. Carryover City Connect jerseys are not updated in 2025, despite the updates to the team's other jerseys for the 2025 season.

© GameWornGuides.com

2025 Home

The 2025 season brings minor modifications to elements of the VPE template across all teams' non-gray jerseys, a step toward more comprehensive changes to come for the 2026 season. Among them, back name and numbers are enlarged, in most cases, back to 2023 sizes, and perforated numbers are gone. Sleeve patches also revert to full embroidery, back from printed or lightweight embroidered patches.

© GameWornGuides.com

2025 Road

The 2025 season brings many changes to road gray jerseys across MLB. The 2024 VPE gray jerseys suffered from significant sweat-staining issues during games, so 2025 gray jerseys revert back to the same base fabric used for Flex Base, but applied to the VPE template (no mesh side panels or “Air Belt” back panel). Other pre-2024 elements return, including neck and sleeve trim being sewn on to jerseys again rather than sewn in. The redundant, jersey-colored band of trim around the neck opening is also deleted. Back name and numbers are enlarged, in most cases, back to 2023 sizes, and perforated numbers are gone. VPE’s placket remains narrow, so the “Atlanta” script breaks in the same place as in 2024. Sleeve patches also revert to full embroidery, back from printed or lightweight embroidered patches.

Batting Practice and Spring Training Jerseys

1979-1980 Batting Practice

Steve Kraljic collection

The Braves were among the first teams to wear mesh batting practice jerseys.

Note that front lettering is screen printed, Back numbers are heat pressed, seen sometimes in the early years of team batting practice jerseys. Note heat pressed vinyl letters for the name, applied to a nameplate then sewn to the jersey, surely to make the jerseys easier to reissue to new players.

© GameWornGuides.com

1981-1983 Batting Practice

Approximate dates of use are estimated from various photos and baseball cards. A few examples are year tagged. Pullover royal blue mesh jersey with white/royal/white knit stripes on collar and sleeve-end trim. All lettering and numbers are screened on, not sewn. Notice that the thickness of the wordmark stroke is slightly different on each example above. Numbers on back are one-color white Varsity style, one-color white player names used, lettering is heat press vinyl, usually on nameplates for ease in re-issuing to new players..

1983-1986 Batting Practice/Spring Training

Jimmie Boulware Collection

Coach Joe Pignatano at Spring Training, 1983

One of my favorite things is hearing from readers, correcting mistakes or making clarifications. Collector Jimmie Boulware of Hiram, GA submits these photos and writes: *"This is my 1983 Bob Horner blue Spring Training/batting practice jersey. It is a V-neck knit jersey (not mesh) with (team) name and back & sleeve numbers screened on. NOB appears to be screened on a nameplate and then sewn to the jersey. It is manufactured by Rawlings and has a Rawlings tag with Set/Year flag tag sewn to the inside front tail. I know these were worn at Spring Training in 1983 because I've seen Spring Training photos from 1983. Actually the 1983 Braves yearbook contains a three page pull-out poster with a posed photo taken at Spring Training (the guys are all wearing their meshed-back Spring Training caps) of Chambliss/Murphy/Horner/Washington wearing this jersey with numbers on the sleeve.*

I'm not sure if these jerseys were worn during the regular season or not, but if you haven't figured it out yet you'll realize the low-budget America's Team of the 1980s used, re-used & recycled just about every type of jersey imaginable. Few have dates or year tags leaving Braves collectors with quite a puzzle to try to piece together. Dated pieces and dated film/photos sometimes help, but it is not a rare occurrence to see different style jerseys on the field at the same time during this period as long as they were the same color and similar, just about anything was fair game. I've got several undated blue spring/batting jerseys that were used, I just haven't nailed down when yet."

© GameWornGuides.com

1983-1986 Batting Practice/Spring Training, continued

Bill Henderson Collection

Majestic jerseys have all sewn on lettering

Royal blue, solid fabric, no collar trim, Varsity numbers, names on back usually without nameplates, though some examples we have seen have nameplates, probably an artifact of reuse. Majestic uses all sewn-on lettering, Wilson has screened-on team name and numbers, sewn-on names.

- 1983–1984 is a V-neck and has number on back AND on left sleeve
- 1984–1985 is a V-neck, and has number on back only
- 1986 (and maybe 1985) Spring Training issue has a 2-button Henley collar (see next page)
- 1986 regular season BPs seem to have had V-necks

From the examples I have seen, Wilson-lettered jerseys seem to have vertical arched NOB, Majestic jerseys have non-vertical arched names. But as always, determining firm rules for early batting practice jerseys is difficult.

1985

Wilson pullovers all have screened on front crests and back numbers, twill sewn player names.

© GameWornGuides.com

1983-1984 Alternate Batting Practice Zip-Neck

This short-sleeved zip-neck pullover was likely provided to players who wanted them. Interesting that the three examples of players wearing them below were all pitchers.

1985-1986 Alternate Spring Training

These baseball cards all show two-button Henley style neck, which appear to have been worn (interchangeably?) in Spring Training 1985–1986

© GameWornGuides.com

1986 Batting Practice

Above: *Tag is representative of the style seen on the jersey here but is not a photo of the actual tag from this jersey.*

These jerseys with all screened-on lettering and numbers front and back were worn in the 1986 regular season only. A mystery in earlier editions of this Guide, collectors have confirmed its use.

Tommy Harper was a member of the Braves organization 1980–1986, and this blue batting practice jersey features his autograph on what appears to be heat-pressed (screened on) numbers.

The high placement of the back numbers indicates that no NOB has ever intended to be used.

© GameWornGuides.com

1987 Spring Training

Collector Ben Farlow who followed the Braves closely in Spring Training in the 1980s writes: *"The Braves used three different workout jerseys in 1987. In the overwhelming majority of preseason games they wore V-necks similar to 1984–1986 except the number was moved from the sleeve to the front like the 1980–1986 (game) uniform."* All white lettering is sewn on.

The other two 1987 batting practice/spring training jerseys are shown on the following two pages.

© GameWornGuides.com

1987 Spring Training "Transitional"

Ben Farlow Photos

Jimmie Boulware Collection

Notice Dale Murphy in these photos wearing the 1986 issue cap and wide-elastic waist pants, which both were abandoned at the start of the 1987 regular season. Only 40-man roster players had their names vertically arched on the jerseys. Players like #61 had no names on their jerseys.

The Braves adopted their long-running "Tomahawk Jersey" starting with the 1987 season. However, these photos, taken in 1987 Spring Training, show a "transitional" jersey that was worn for part of that spring.

This jersey is a button-front design and made of solid (not mesh) fabric. The Rawlings script is embroidered on the right sleeve end.

The Braves script and the tomahawk design are sewn on. The front script, as well as the extra large player numbers on the back are in simple one-color (red) twill.

Braves aficionado Jason Taylor who supplied these photos writes to tell us to notice that the tomahawk has one fewer blue hash mark on the business end of the weapon than game jerseys did at the start of the 1987 season, and then had from then on. He notes that early production retail-sale jerseys also had only seven hash marks, but soon switched to have eight (on the bottom right photo I have drawn a small yellow circle where the "missing" hash mark belongs).

Collectors have suggested that players on the 40-man roster got their names on back, while non-roster players did without.

Baseball card evidence suggest that these jersey were sent to minor league Pulaski where they were used for an additional two seasons.

© GameWornGuides.com

1987-2000 Batting Practice

1996

1992–1993 with vertical arched name

1994

1987

Button-front, non-mesh, lightweight solid fabric; no numbers on front, back numbers Varsity style, two-color red/white.

These jerseys are made by Russell, Majestic, and Rawlings in various years, and with a long style run and general inconsistencies permitted by the team, the use of vertical arch names and nameplates is hard to pin down as a constant. Generally vertical arch and nameplates is the standard 1987–1998. Mid-season call-ups may have non-VA names.

1999–2000 One-color bold white names, usually non-vertical arched names, but not universally. 2000 adds silhouetted batter patch to the back of the neck.

The Braves usually wear their game jersey memorial patches on their batting practice jerseys as well.

1999-only fat font NOB font, not vertical arched

1998

© GameWornGuides.com

Late 1980s-Mid 1990s Alternate Batting Practice Zip-Neck

- Majestic made an alternate style batting practice jersey used occasionally most teams at some point in the late 1980s into the mid-1990s. This is the Braves' version.
- It features the 1987 and later style team lettering embroidered on the front and large Majestic Varsity numbers. I am told by Braves collectors that these were often worn by players without any names or numbers on back. There is a short zipper at the neck and elastic trim at the neck and on the sleeve ends. Team spec versions will have an embroidered Majestic logo on the sleeve end, retail ones might have a decal instead.
- Two vertical slash trim pieces resembling pockets are on the front, and one has the Majestic logo printed on its edge. They are not usually actually pocket openings though.

© GameWornGuides.com

2001 Batting Practice

Button-front design, now made by Majestic, the MLB Silhouetted Batter logo patch is added to the back of the neck.

Jersey is made of the earliest "tech fabric," a roughly woven patterned fabric that fades and pulls easily.

There are blue inserts under the arms made of a different, smoother fabric (these inserts will reappear and be changed to red in 2003).

NOB is on a nameplate and is not vertically arched. The font used is a variant of Block that is unlike other teams'. Varsity numbers on back are red over white.

Below: *Notice the rough, woven texture of the early tech fabric*

© GameWornGuides.com

2002 Batting Practice

The 2001 style jerseys are unpopular as they fade badly, and the fabric is easily damaged. Bucking the MLB-standard, for 2002, players are issued a navy pullover batting practice jersey with a two-button Henley neck. The fabric goes back to the shiny, sheer type solid fabric used before 2001.

2002 Spring Training photos reveal some players still wearing the 2001 style jerseys. Name on back is on a nameplate and is not vertical arched.

© GameWornGuides.com

2003-2006 Batting Practice

Two-button neck Henley pullover. Loose weave "tech fabric" similar to 2001 issue, very susceptible to fading and pulls. Identify by red underarm trim, fabric is non-mesh solid dark blue. No numbers on front.

Back numbers Varsity style, two-color Red/ white.

One-color Block white names, no vertical arch, Braves continue the tradition of using names on nameplates.

© GameWornGuides.com

2007-2010 Batting Practice

Bill Henderson Collection

The Braves new Cool Base batting practice jerseys for 2007 feature two-color red and white inserts in the sides. It is a pullover style featuring a one-button neck.

All lettering, numbers, and names are appliqués, not sewn on or embroidered as in the past. No nameplates. Player names are in regular Block font, not vertical arch. Numbers are a version of Varsity, although they seem narrower and less bold than the Varsity numbers sewn on game uniforms.

© GameWornGuides.com

2011-2013 Batting Practice

All teams in MLB switch to button-front batting practice jerseys in 2011. The Braves' jersey looks very much like the 2010 version minus the two-tone side panels. The sides are solid red now. Two-color Varsity numbers on back as always, one-color white NOB in regular Block lettering.

© GameWornGuides.com

2014-2016 Batting Practice

The Batting Practice jersey is remodeled for 2014, and gains a bright red back panel. While player names on back stay white-only, the player numbers switch colors and become blue outlined with white. The jock tag on the front tail is a new vertical rectangle with the team's hat mark on it. Red side panels are slightly smaller than the prior design.

© GameWornGuides.com

Read the full story on MLB's new for 2016 Spring Training Jerseys in Chapter 8.

2016 Spring Training

Jeffrey Frye Collection

For the first time in 2016, MLB introduces a Spring Training-specific jersey intended to be worn for workouts and games in Florida. The jersey is based on the Flex Base game jersey template and features a special printed twill, decorated with "2016" and Spring Training symbols, as the main twill layer for every team.. The Braves use their regular season alternate road blue jersey, now with "Braves" on front instead of "Atlanta", as a basis for their Spring Training jersey. The back numbers are blue patterned twill/white. The name on back is white patterned twill. The team's "Dewsy" memorial patch is on the left sleeve, and a rubberized, CFX patch is on the right sleeve in the style of an Interstate highway sign, reading "2016" and "FL" representing where the Braves spend Spring Training.

© GameWornGuides.com

2017 Spring Training

Spring Training-only jerseys return for all teams in 2017 with some minor design modifications. Just as in 2016, the jersey is based on the Flex Base game jersey template and features special printed twill, this year decorated with “2017” and Spring Training symbols. However, all teams now use the same patterned twill, in single-color white with gray printing, replacing the many team-specific combinations from the year before. The Braves again use their regular season alternate road blue jersey, though with "Braves" on front instead of "Atlanta", as a basis for their Spring Training jersey. The name and back numbers are white patterned twill. The jersey features a recolored version of the rubberized CFX patch on the right sleeve in the style of an Interstate highway sign, reading “2017” and “FL” representing where the Braves spend Spring Training.

© GameWornGuides.com

2017-2019 Batting Practice

With many players opting for lightweight cage jackets, which are devoid of player identification, instead of traditional BP jerseys with player names and numbers, Majestic introduces a replacement product that may be an attempt to gain acceptance by the pros on field while being more attractive to fans at retail. New for 2017, official team batting practice jerseys are replaced with what Majestic calls a 3/4 Sleeve BP Trainer. The new hybrid is cut in a pullover jacket silhouette, including a short zipper at the neck, but made of Cool Base jersey material. The underarm and back panels are of Cool Base mesh, like the sides and tail of Flex Base jerseys. Team logos and other lettering is in what Majestic calls “lightweight twill” (as described in Chapter 8). The Majestic logo is applied to the middle of the left sleeve, and a new, heat-pressed Cool Base tag adorns the left front tail. The Braves jersey is blue with red back and underarm gussets. The Braves' "A" logo, also seen on their caps, appears on the front left chest in white. Player name in white Block and player number in navy/white Varsity on back. In 2019, the back was blank and player number in blue/white moved to right chest, opposite the team logo.

© GameWornGuides.com

2018 Spring Training

The 2018 Spring Training jerseys continue the general design of the previous year, again featuring all player name and number lettering using each team's regular fonts, but now simplified using only one layer of twill printed with special Spring Training and 2018-year-specific patterns. The Braves again use their regular-season alternate road blue jersey, now with "Braves" on front instead of "Atlanta" as their base. The name and back numbers are sewn on in white patterned twill. A new CFX patch, shaped like home plate, is stitched to the right sleeve, featuring "2018" and "FL" representing their Spring Training home.

© GameWornGuides.com

2019 Spring Training

The 2019 Spring Training jersey evolves to create yet another iteration of the theme of the last three years. This time, jersey backs abandon the single-color printed twill treatment of past years and return to regular-season multi-layered team-color twill without printed patterns. The Braves' Spring Training jersey is unique carryover from previous Spring Training seasons; a design separate from their regular season standard set, similar to their alternate road blue jersey, but with "Braves" on front instead of "Atlanta" and without trim on sleeve ends or placket. A new CFX patch on the right sleeve, featuring "2019" and "FLA," referencing their Spring Training home. The back numbers are red/white twill. The name on back is white and uses a new, team-unique font..

© GameWornGuides.com

2020-2023 Spring Training

Spring training is simplified by Nike for 2020, league-wide. For the first time since 2016, Spring Training jerseys eliminate the special sleeve patch indicating the year and location of a team's Spring Training home, and now the lettering is the same non-patterned, multi-layered twill as the teams would wear in the regular season. For 2020–2023, the Braves use a design separate from their regular-season standard set, similar to their alternate road blue jersey, but with "Braves" on front instead of "Atlanta" and no trim on sleeve ends or placket, with red/white back numbers and white name on back. The 2021 version has the teams 150th anniversary patch on the left sleeve and the 2021 All-Star Game patch on the right.

© GameWornGuides.com

Special Events Jerseys

1997 Negro Leagues Tribute (1938 Atlanta Black Crackers)

- The Braves played as the 1938 Atlanta Black Crackers on June 28, 1997 at home vs. the visiting Philadelphia Phillies.
- Cream-colored knit uniforms made by Mitchell & Ness, who received design help from Ebbets Field Flannels. Lettering is felt.
- Note the use of the 1997 Jackie Robinson Breaking Barriers patch.

© GameWornGuides.com

1997 Turn Back the Clock to 1912 Boston Braves

Steve Kraljic collection

In 1997, the Braves returned to Boston for the first time since the team left for Milwaukee in the 1950s, playing the 1908 Boston Red Sox in an interleague series, August 29 and 30. For both games, both teams wore the uniforms from the first year that they took on their current team nicknames, with the Braves wearing Mitchell & Ness twill-lettered knit replicas of their 1912 road uniforms. Of course, the originals would have had no numbers on the back, as player numbers were not used in 1912. Interesting that the numbers they chose for the replicas are the 1980s Cincinnati Reds style.

© GameWornGuides.com

1998 Turn Back the Clock to 1958 Milwaukee Braves

News reports indicated that this was a matchup of the 1958 Braves vs. the 1958 Braves. Though these jerseys are close to accurate for 1958, the caps and helmets, with a "B" for Boston, don't match at all! The Braves left Boston after the 1952 season, and never wore a uniform with front numbers nor this sleeve patch. Both were introduced after the move to Milwaukee.

In a rather novel idea, the Milwaukee Brewers invited the Atlanta Braves to a Turn Back the Clock game on June 2, 1998 in Milwaukee. Milwaukee had, of course, been home to the Braves prior to 1966, and the Brewers first year as a franchise was 1970. The Brewers proposed that for the Braves first return to Milwaukee, BOTH teams dress in 1958 Braves uniforms, with the Brewers being the HOME braves, and the Atlanta team being the 1958 AWAY Braves. (Though, for some reason, the Braves had caps and helmets with a "B" logo, throwing back to their days in Boston—despite the sleeve patch on this uniform being introduced four years after the team moved from Boston to Milwaukee.) I don't know if it was "a first" but seeing both teams on the field wearing the same team's uniforms just in different colors was rather unusual!

The uniforms for the contest were made by Rawlings. They are zipper front, which is correct. The front script is not quite right, the sleeve patch is rather accurate. The player numbers are Block when they should be Varsity. But oddly, the sleeves are very long, almost like the style worn in the early 1930s. Uniform sleeves were actually very short in 1958.

In both 2004 and 2005, the Brewers reprise this idea, dressing as the 1957–1958 Braves for a single game each season when the Atlanta Braves were visiting town. On neither of these occasions did the real Braves participate in the fun, choosing to wear their regular road uniforms both times.

© GameWornGuides.com

1998 Negro Leagues Tribute (1940 Black Crackers)

For two games, on August 1–2 1998, the Braves dressed as the Atlanta Black Crackers of the Negro Leagues. Uniforms were made of knit by Mitchell & Ness. Their opponent was the Cardinals dressed as the 1928 St. Louis Stars. Player numbers were in a variant of Varsity, but is not the same as any regular font currently used in MLB. Notice the diagonal stroke on the “2."

© GameWornGuides.com

1999 Turn Ahead The Clock

Bill Henderson Collection

August 18, 1999. The Braves' uniforms for this admittedly silly promotion actually look very similar to the team's normal batting practice jerseys and they do not look too bad at all. Front lettering is sublimated into the fabric; on back, name and numbers are sewn on, two-color tackle twill, red and white.

© GameWornGuides.com

2002 Turn Back the Clock to 1974 (Road)

- On July 19–21, 2002, the Braves played three consecutive road games against the Phillies. Both teams wore throwback uniforms.
- Then the Braves went on to Miami to play another TBTC series against the Marlins on July 22–24, and wore these same uniforms. The Marlins dressed as the 1982 Miami Marlins of the Florida State League.
- Note use of regular team pants (see two pages ahead for explanation).

In Philadelphia July 19–21

In Miami, July 22–24

© GameWornGuides.com

2002 Turn Back the Clock to 1974 (Home)

Steve Kraljic collection

July 26–28, 2002, the Braves and Phillies played an entire three-game weekend series dressed in 1974 throw-back attire. The Phillies road uniforms were also 1970s-1980s vintage in styling.

The Mitchell & Ness jersey reproductions are almost indistinguish-able from the 1974 originals. They repro-duced the embroidery--stitched numbers and front wordmark like the originals. The era of baggy uniforms was starting by 2002, and most players wore these uniforms in a peri-od-incorrect loose-fitting style. Players in 1974 wore their uniforms skin tight.

© GameWornGuides.com

2004 Turn Back the Clock to 1974

Worn April 8, 2004 at home vs. the New York Mets (who wore regular uniforms), only the third game of the season, and the 30th anniversary of Aaron breaking Babe Ruth's career home run record. Mitchell & Ness uniforms visually identical to those worn in past years.

In 2002, 2004 and 2006, the Braves appeared as the 1974 "Hank Aaron Era" Braves, wearing that era's bright Feather Style uniforms, in both home white and road blue. The Mitchell & Ness reproductions are almost indistinguishable from the 1974 originals.

But...what is wrong with those pants? Notice that they are the current style pants with belts and zippers, as the Braves agreed to participate in Turn Back the Clock games so long as they could wear their regular tailored pants. The Braves told Mitchell & Ness that the TBTC pants never fit properly, causing a distraction to the players.

© GameWornGuides.com

2004 Turn Back the Clock to 1968

June 26–27, 2004, the Braves appeared as the 1968 Atlanta Braves. The TBTC uniforms are rendered by Majestic in double knit, and they are fairly close copies of the originals.

You will notice on the real 1968 uniform (shown inset) that the wordmark lettering is a little thinner, smaller, and more angular. The original uses Block style numbers, while the replica uses Varsity Standard. However Braves uniforms of mid-1960s vintage show much variety year to year in number styles.

1968 Original

© GameWornGuides.com

2006 Turn Back The Clock to 1966

Steve Kraljic collection

The Braves turned back the clock to 1966 on April 12, 2006 against the Phillies, reprising the Braves first home opener in Atlanta in 1966.

The Phillies wore their normal road uniforms.

The AIS uniforms are nice copies, right down to the thin number font used for the player numbers. An original 1966 jersey is shown, inset left.

© GameWornGuides.com

2006 Turn Back the Clock to 1975

Steve Kraljic collection

June 24, 2006: Braves vs. Rays (who played as the minor league Tampa Tarpons) in Tampa Bay. The Braves dressed in 1975 road uniforms. This is the first time Majestic has made this style uniform; as all previous ones were made by Mitchell & Ness.

Notice this version has the MLB logo on back, the only blue "Feather" Turn Back the Clock version of it the Braves have worn with it included. Note the Majestic logo on the left sleeve, stuck in beside the base of the feather.

Again, notice some players' use of current-year 2006 pants, worn for player comfort, while others appear to be wearing plain white pants that match the jersey.

© GameWornGuides.com

2008 Turn Back the Clock to 1948 Boston Braves

Retail authentic version of the jersey

The Atlanta Braves returned to 1948 to become the Boston Braves, playing the 1948 Cubs at Wrigley Field, June 12, 2008.

The Braves uniforms are made of double knit by Majestic. They are button front, but should have a zipper to be closer to correct.

© GameWornGuides.com

2009 Negro Leagues Tribute (1938 Atlanta Black Crackers)

July 25, 2009: The Brewers host the Braves in a Negro Leagues tribute game. The Brewers wore the 1923 uniforms of the Milwaukee Bears and Atlanta wore the 1938 uniforms of the Atlanta Black Crackers. The Black Crackers' uniforms were the same as the home versions of these uniforms previously worn by the club in a game during 1997, with the exception that the fabric is gray instead of cream colored. Red/black/red knit trim and "Atlanta" vertically arched in a slight arc across the front in red/black. Block with Serifs numbers on back, red/black 3D drop shadow. No player names on back used.

© GameWornGuides.com

2010 Turn Back the Clock to 1984

- The Braves joined the Padres in San Diego for a Turn Back the Clock day on April 15, 2010, which was also Jackie Robinson Day.
- Both teams wore their uniforms from 1984.
- The Braves road uniforms were the wide-waistband 1984 pullover V-neck powder blues.
- Because it was Jackie Robinson Day, all players on both teams wore Robinson's retired #42.
- These are full-weight knit jerseys, not Cool Base.
- As far as reproductions go, these are pretty darn good. Sure, the players wore them baggier than they would have in 1984, but we are sadly expecting nothing more these days.

© GameWornGuides.com

2011 Turn Back the Clock to 1944 Boston Braves

When the Braves visited Los Angeles on April 21, 2011, the Dodgers were hosting the first of many Turn Back the Clock games that year. The Braves joined the Dodgers by wearing the uniforms of 1944 from when the team was the Boston Braves, in road gray.

The uniforms for both teams in that game were made by Bobcat Athletic, and therefore there was no manufacturer logo on the sleeve (by licensing rights, only Majestic's logo can appear in view on a 2011 game jersey).

© GameWornGuides.com

2011 Negro Leagues Tribute (1938 Atlanta Black Crackers)

In their 2011 Negro Leagues tribute game, the Braves hosted the Phillies on May 14 in Atlanta, part of the Civil Rights weekend. The Phillies dressed as the Philadelphia Stars; the Braves as the 1938 Atlanta Black Crackers. Notice 3D drop shadowed block numbers on back. Most likely made by AIS, though the tag is hidden on the inside of the back tail.

© GameWornGuides.com

2011 Civil Rights Game (1974 Home)

The Civil Rights game of 2011 was played in Atlanta between the Phillies and the Braves on May 15. Both teams wore Majestic replicas of their 1974 uniforms, and the celebration honored Hank Aaron's 715th home run in 1974 that surpassed Babe Ruth's record for lifetime home runs.

The Braves' uniforms were quite good, made of full-weight knit, not Cool Base. The large "feather" design on the sleeve required the obligatory Majestic logo to be embroidered far off of center, toward the front of the sleeve. Player numbers front and back are Varsity style as the originals were, no NOB used.

© GameWornGuides.com

2013 Negro Leagues Tribute (1938 Atlanta Black Crackers)

April 27, 2013 at Detroit: The Braves were the guest at the Tigers' annual Negro Leagues Salute Weekend, and dressed in the road gray versions of the 1938 Atlanta Black Crackers uniforms, made in knit fabric by AIS, and last worn at home on May 14, 2011. The road grays look like the home versions except for the change in the color of the fabric. Back numbers are Block with a thick 3D drop shadow. No player names are used.

© GameWornGuides.com

Read the full story on MLB's Memorial Day Jerseys in Chapter 5.

2013 Memorial Day

All MLB teams mark Memorial Day, May 27, 2013, by wearing camouflage-lettered uniforms. The Braves were on the road in Toronto, and so their gray road uniforms receive the desert-camo treatment. Since the "Atlanta" wordmark, the tomahawk, and the back numbers are outlined with navy blue, they are at least visible to fans. Player names on back are not outlined, and are sewn on plates. They just as well could have been omitted as their color makes them invisible from a distance any further than a few feet.

© GameWornGuides.com

2013-2014 Negro Leagues Tributes (1938 Atlanta Black Crackers)

Steve Kraljic collection

June 1, 2013 vs. Washington Nationals; May 3, 2014 vs. San Francisco Giants. In both years, the Braves wore similar 1938 Atlanta Black Crackers uniforms as they had for their Negro Leagues tribute games in 2011 and 1997 (they skipped their home tribute game in 2012 as they played host that year to the Civil Rights Game instead). Uniforms made by AIS, and the manufacturer's tag returns to the outside left shirttail. No special year or set tagging.

© GameWornGuides.com

2014 Turn Back the Clock to 1974

The Braves opened their home season in 2014 on April 8 with “Turn Back the Clock to 1974." The entire year was to be dedicated to the anniversary of Hank Aaron breaking Babe Ruth’s lifetime home run record exactly forty years ago that day—April 8, 1974. There were ceremonies before the game and Hank Aaron was the guest of honor. The Braves wore near-perfect replicas of their 1974 home white uniforms made by Majestic. Like the originals from decades prior, the lettering for wordmark and numbers both front and back were two colors of twill, blue outlined with white, and then a wide embroidery stitch in red was used to attach all the adornment to the jerseys. These uniforms are made of full-weight polyester knit. All uniforms were auctioned on MLB.com.

© GameWornGuides.com

2014 Memorial Day

The Braves played at home on May 26, 2014, Memorial Day, against the Boston Red Sox. Once again, MLB had decreed that all teams should make the main color in their uniforms camouflage in salute to the military. The Braves' home uniforms had the benefit of all designs and lettering (except for player names) outlined in navy blue, therefore most of it was visible to fans. Player names were direct sewn, no nameplates.

© GameWornGuides.com

2014 Turn Back the Clock to 1969

Steve Kraljic collection

July 13, 2014: The Braves visited the Chicago Cubs for a Turn Back the Clock to 1969 game, and Majestic made a beautiful set of 1969 road gray uniforms for the Braves to wear, complete with the laughing brave patch on the left sleeve. However, the Braves jersey is missing the 1969 100th MLB Anniversary patch on the right sleeve, odd because it is present on the Cubs' uniforms for the game. I will assume ant oversight on some-one's part.

2014 Turn Back the Clock to 1914 Boston Braves

August 16, 2014: The Braves played the A's at home in a recreation of the 1914 World Series, and the "Miracle Braves" of 1914 who went from last place to first between July 4th and the end of the season, finally winning the pennant by 10 ½ games over the second place Giants, and won the World Series in a sweep.

The cream-colored knit uniforms were made by Majestic, with numbers added to the back in an accepted modern touch. But two other items were modified that many noticed. First, the Brave patch on the sleeve was omitted. I am certain some were afraid it would offend. Odd considering that just a month prior the Braves wore the laughing Brave on their 1969 throwbacks in Chicago. Second, most (all?) of the players wore low cuffed "pajama" pants, while the visiting A's wore their uniforms high cuffed as was appropriate. These early uniforms have almost no adornment, and the socks were one of the only item of color in the suit.

Left: *A modern replica of the missing 1914 sleeve patch by Mitchell & Ness.*

2015 Memorial Day

The Braves are back on the road for Memorial Day on May 25, 2015, and their gray uniforms again get the camo treatment. The fronts are identical to the 2013 road version, as are the back numbers. Since both are outlined in blue, there are fairly visible from a distance. The team wisely did not repeat the single-color camo twill for the names on back, however, opting for navy blue this time, a marked improvement. In 2015, the MLB Silhouetted Batter neck tag is changed to dark green/khaki/white rather than its typical colors from previous years.

© GameWornGuides.com

2015 Negro Leagues Tribute (1938 Atlanta Black Crackers)

The Braves bring back their oft-used 1938 Atlanta Black Crackers home jersey for a fifth time in a game against the Mets, who wore Brooklyn Royal Giants jerseys. These knit jerseys by AIS are identical to the versions from past years, except the braid around the neck opening is omitted. Back numbers are Block with a thick 3D drop shadow. No player names are used. AIS tagging on inside, back hem.

2015 Independence Day

Read the full story on MLB's Independence Day Jerseys in Chapter 5.

For Independence Day 2015, all 29 U.S.-based teams adopt patriotic "Stars and Stripes" uniforms for the first time. For this day, all uniforms are re-lettered in a combination of red, white, and blue, regardless of what the team's normal color palate might be. Jersey trim and patches remain the same as the team's regular jerseys. All teams sport a stars and stripes version of the MLB Silhouetted Batter logo on the back collar. Though the Braves already have a patriotic-themed jersey, they forego that alternate to conform to the rest of the teams taking part in this promotion. The Braves wear their home white jerseys, minus the tomahawk, with the blue-background version of the starred twill, which features large white stars; all lettering outlined in red, including their front logo as well as back numbers. Player names on back are in red. An American flag patch is sewn on the right sleeve.

© GameWornGuides.com

2016 St. Patrick's Day

The Braves go green for St. Patrick's Day 2016 in a Spring Training game held March 17. This Flex Base jersey is in solid green, with front logo and back numbers in white/gray and player name in white. The layer of gray is thin and light enough that it disappears from a distance. The right sleeve sports a white shamrock, a feature shared by many teams for the 2016 St. Patrick's Day promotion, while the left has the "Dewsy" memorial patch worn during Spring Training. White knit trim encircles both sleeves.

© GameWornGuides.com

2016 Mother's Day

Read the full story on MLB's Mother's Day Jerseys in Chapter 5.

For the first time in 2016, all teams wear special pink-trimmed uniforms Mother's Day, Sunday, May 8. All jerseys are of Flex Base construction with the rubberized tag applied to the front left tail. Every team also features the pink MLB Mother's Day ribbon on left chest (a carryover from past Mother's Days), while the Majestic sleeve logo is rendered in pink and the back of the collar MLB Silhouetted Batter patch appears in dark pink/light pink/white. The Braves wear their alternate home retro jerseys, here in white instead of the usual cream, with the front logo lettering in pink with dark gray outlines. The player names on back are rendered in single-color dark gray, while back numbers are pink/dark gray. Unlike other teams that recolor their sleeve patches to match the other jersey changes, the Braves choose to remove the crossed tomahawks patch that normally appears on their alternate home jersey. All jersey trim, normally blue, becomes dark gray.

2016 Negro Leagues Tribute (1938 Atlanta Black Crackers road)

Steve Kraljic collection

May 15, 2016: Facing the Royals on the road, who wear Kansas City Monarchs jerseys, the Braves return to the Atlanta Black Crackers road jersey for a fourth time. For the first time, Majestic creates this set, which is full knit. Otherwise, all elements look very similar to previous incarnations, including Block back numbers with a navy 3D drop shadow. No player names are used.

© GameWornGuides.com

2016 Memorial Day

The 2016 Memorial Day jerseys are constructed in the Flex Base style for the first time, and the ChromaFlex MLB logo at back neck becomes black and dark gold for all teams. The new, league-wide template, with higher-visibility woodland camo lettering and black outlines, makes this set more legible than in prior years. The Braves apply the camouflage trimmings to their home white jerseys – minus the tomahawk – for the game on May 30. It had been suggested in sports media that perhaps the tomahawk removal is out of deference to recent controversies surrounding Native American imagery in sports and the intersection of the use of military camo. Regardless, without the tomahawk, the jersey is reminiscent of their alternate home retro jerseys. However, that version is on a cream base and has a sleeve patch and no sleeve trim, unlike the white, patch-free, sleeve-trimmed version used here. The front lettering and back numbers are rendered in woodland camo with a black outline, and player names appear in single-color black.

© GameWornGuides.com

2016 Father's Day

Read the full story on MLB's Father's Day Jerseys in Chapter 5.

For the first time in 2016, all teams wear special light blue-trimmed uniforms Father's Day, Sunday, June 19. All jerseys are of Flex Base construction with the rubberized front tag applied to the front left tail. Every team also features the light blue MLB Father's Day ribbon on left chest (a carryover from past Father's Days), while the back of the collar MLB Silhouetted Batter patch appears in dark royal blue/light blue/white. The Braves wear their road gray jerseys (without tomahawks) with the front logo lettering in light blue with dark gray outlines. The player names on back are rendered in single-color dark gray, while back numbers are light blue/dark gray. All jersey trim, normally red/blue/red, becomes dark gray.

© GameWornGuides.com

2016 Negro Leagues Tribute (1938 Atlanta Black Crackers home)

Derek Damian collection

In a rematch of their 2015 Negro League matchup, including identical uniforms for both teams, the Mets visit the Braves on June 25. The Braves once again wear the 1938 Atlanta Black Crackers home jersey, here made up by Majestic for the first time. The full-weight knit jerseys have the braid on the neck opening back again (it was omitted by AIS in 2015), and as usual, back numbers are Block with a thick 3D drop shadow with no names on back.

© GameWornGuides.com

2016 Fort Bragg Game

On July 3, the Marlins and Braves met for the first professional sporting contest at an active military base. The two teams faced off at Ft. Bragg in North Carolina, and each wore that's years Independence Day uniforms, with a special patch (that either fell off or was not applied to several of the jerseys). The Marlins played the July 4 game on the road, and were the road team here, so they used the same uniforms.

However, the Braves were the home team at Ft. Bragg and the road team the following day, so they used a special white Stars and Stripes jerseys for this one day only. The Braves wear their home jersey, *minus the tomahawk*, with the red twill version of the star-spangled twill with blue outlines for their front lettering and for their back numbers, with a blue player name on back. Every jersey has an American flag patch sewn on the right sleeve. All jersey trim, normally red/blue/red, becomes single-color red.

© GameWornGuides.com

2016 Independence Day

MLB creates yet another new Independence Day jersey template for the 2016 iteration, now built on Majestic's new Flex Base jersey construction. Each Independence Day jersey has a ChromaFlex rubberized "stars and stripes" pattern MLB appliqué sewn on the back of the neck. The Braves are on the road and wear their road jersey, minus the tomahawk. Like the Memorial Day jerseys, the missing tomahawk *may be* a result of controversy regarding Native American imagery in sports, especially in light of the "stars and stripes" pattern the design element would have received. All clubs have a choice of two styles of star spangled lettering twill and the Braves select the red twill version with blue outlines for their front lettering and for their back numbers, with a blue player name on back. Every jersey has an American flag patch sewn on the right sleeve. All jersey trim, normally red/blue/red, becomes single-color red.

© GameWornGuides.com

2016 Turn Back the Clock to 1968-1971

As one of eight MLB teams wearing throwbacks for games on July 20, the Braves revisit their 1968–1971 road uniforms at the Reds, who wear their "Griffey Era" 1999–2006 home vests. The Braves' entry is not particularly accurate. The original front wordmark script was more angled and slightly less bold. Back numbers in navy/red Varsity should be in Block instead. The now controversial "Laughing Brave" sleeve patch is also omitted entirely, contrary to the last time these were worn in 2014.

© GameWornGuides.com

2017 Mother's Day

Pink-trimmed Mother's Day jerseys return on May 13–14, 2017. Once again, the Flex Base jerseys have the usual front left tail Majestic heat applied vinyl locker tag and team inventory tag inside the bottom of the placket. Returning as well is the pink MLB Mother's Day ribbon glued on left chest; the pink Majestic sleeve logo; and the dark pink/light pink/white ChromaFlex MLB Silhouetted Batter applique stitched on the back of the collar. All multi-colored lettering is done in the lightweight-twill style. The Braves wear their road gray jerseys with the front logo lettering in pink/dark gray. The player names on back are rendered in single-color dark gray, while back numbers are pink/dark gray. The Braves also remove the tomahawk from the front of the jersey, leaving the "Atlanta" script. All jersey trim, normally blue/red/blue, becomes dark gray.

© GameWornGuides.com

2017-2018 Memorial Day (Road)

The next incarnation of Memorial Day jerseys replaces the previous camo twill pattern with a new style that uses the team fonts in dark olive green with black outlines. The two adjacent dark colors are very difficult to tell apart, especially at a distance. The Braves again remove the tomahawk from the front of the jersey, leaving the “Atlanta” script. All player names on back are now single-color black, while the back-of-collar MLB logo and team patches switch to an olive green and black treatment. A green bar patch with five black stars, representing the five branches of the U.S. military, appears on the right sleeve, and all trim elements are also simplified to single-color black. The Braves apply this style to their road gray jerseys, minus the tomahawk, as worn on May 27–29, 2017 and May 26–27, 2018.

© GameWornGuides.com

2017 Father's Day

Light blue-trimmed Father's Day jerseys return on June 17–18, 2017. Once again, the Flex Base jerseys have the usual front left tail Majestic tagging and set tagging at the inside bottom of the placket. Returning as well is the light blue MLB Father's Day ribbon glued on left chest, the light blue Majestic embroidered sleeve logo, and the dark royal blue/light blue/white back collar ChromaFlex MLB Silhouetted Batter patch. The Braves wear home white, notably without the tomahawk with the front logo lettering in light blue/dark gray. The player names on back are rendered in single-color dark gray, while back numbers are light blue/dark gray. All jersey trim, normally blue/red/blue, becomes dark gray.

© GameWornGuides.com

2017-2018 Independence Day (Road)

The 2017 version of MLB's Independence Day jerseys introduces a new patterned twill, one with a slightly less-busy pattern of stars and the addition of stripes suggesting a waving American flag. Teams again have a choice of two different color options for the new twill—appropriately in red/blue or blue/red. The jerseys themselves are again Flex Base with typical manufacturer and set tagging. A ChromaFlex rubberized "stars and stripes" pattern MLB applique patch is sewn on the back of the neck. On July 2, 2017 and July 2–4, 2018, the Braves wear their road gray jersey (without the tomahawk) with red patterned twill/blue front logo lettering and back numbers. Player names on back are in single-color blue. Every jersey has an American flag patch sewn on the right sleeve. All jersey trim is single-color red.

© GameWornGuides.com

2017 Independence Day (Home)

The 2017 version of MLB's Independence Day jerseys introduces a new patterned twill, one with a slightly less-busy pattern of stars and the addition of stripes suggesting a waving American flag. Teams again have a choice of two different color options for the new twill – appropriately in red/blue or blue/red. The jerseys themselves are again Flex Base with typical manufacturer and set tagging. A ChromaFlex rubberized "stars and stripes" pattern MLB applique patch is sewn on the back of the neck. On July 4, 2017, the Braves wear their home white jersey (without the tomahawk) with red patterned twill/blue front logo lettering and back numbers. Player names on back are in single-color blue. Every jersey has an American flag patch sewn on the right sleeve. All jersey trim is single-color red.

2017-2019 Turn Back the Clock to 1974

2017

Rick Ogata Collection

For a three years straight, the Braves relish their mid-70's uniform glory by reintroducing these 1974 throwback home jerseys. Worn on August 18–19, 2017; June 22–24, 2018; and August 2–4, 2019; these feather-sleeved, V-neck pullovers, made in Cool Base fabric by Majestic, very convincingly capture the look and feel of the originals. Player numbers front and back are blue/white/red Varsity style as the originals were, with no NOB used. Unlike the real set from decades prior, and recent throwbacks, the lettering the for wordmark and front and back numbers are all twill rather than two colors of twill, outlined with a wide embroidery stitch in red.

© GameWornGuides.com

2017-2018 Players Weekend

To highlight players' personalities and to appeal to younger fans, MLB introduces the colorful Players Weekend promotion. In addition to relaxed regulations on team-standard color and design of cleats, bats, and other equipment, MLB encourages players to wear nicknames on the backs of a new set of very colorful jerseys. Meant to evoke the look of youth league designs, the two-toned Cool Base pullovers feature bright and contrasting body and sleeve colors and include a patch on the right sleeve with space for players to show their appreciation to special people in their lives with handwritten black marker messages. Both the patch, and the back-of-collar logo, feature a variant of the MLB logo showing the growth of a ballplayer from childhood to adulthood. Heat-pressed Majestic manufacturer and set tags are applied on the front left hem, and the Majestic logo is embroidered on the left sleeve. All numbers on back are in single color Varsity, and the player names in 2 ¾" single color Block Condensed, regardless of the team's usual font. On August 25–27, 2017 and August 24–26, 2018, the Braves wear jerseys with navy blue bodies and red sleeves with white nicknames and red numbers on back. Sleeves and V-neck opening are lined with wide red/white/red trim. The front features their home jersey script without the tomahawk, here rendered in red/white kiss cut lightweight twill.

© GameWornGuides.com

2017-2018 Hispanic Heritage

In 2017–2018, the Braves honor Atlanta's Latino community with this Los Bravos version of their Flex Base home jersey. Aside from the wordmark, the jersey is identical to the usual home set. It is worn on September 17, 2017 with the SunTrust Park Inaugural Season patch on the right sleeve, and on September 16, 2018 with no sleeve patches.

© GameWornGuides.com

2018 Memorial Day (Home)

The 2018 Memorial Day jerseys repeat the pattern of 2017, with dark olive green/black front lettering and numbers joined by solid-color black player names on back. The outlines are nearly impossible to see as the two colors are so close in hue to each other. The back-of-collar MLB logo and team-specific sleeve patches also are repeated from 2017 with an olive green and black treatment. Trim elements are again simplified to single-color black, and a green bar patch with five black stars, representing the five branches of the US military, is stitched to the right sleeve. The Braves apply this style to their home white jerseys, again notably without the tomahawk, for the day game of a doubleheader on May 28, 2018.

© GameWornGuides.com

2019 Turn Back the Clock to 1979

Steve Kraljic collection

The Braves liked their recent 1974 home throwbacks enough to wear them three years in a row, so why not bring back this classic 1979 road version 40 years later to counter their hosts, the Phillies, who wore their all-maroon 1979 throwback "Saturday Night Specials" on July 27. The game recalled the final year for this Braves classic (and for the Phillies, the only year for the maroon set, which was dropped after only one game).

Reproduced by Majestic in Cool Base, the feather-sleeved, V-neck pullovers very accurately recall the 1979 originals. Player numbers on front and back are blue/white/red Varsity style as the originals were, with blue name on back. Unlike the real set from decades prior, the back names are not vertically arched here, and the lettering for the wordmark and front and back numbers are all three-color twill, rather than 1979's two colors of twill, outlined with a wide embroidery stitch in red.

© GameWornGuides.com

2019 Players Weekend

The third incarnation of Players Weekend turns the colorful jersey concept on its ear, reducing all teams to monochromatic designs in either black or white, with all team sleeve patches and trim removed, leaving a clean but stark template. Gone are the contrasting sleeves and special patches with messages of inspiration. MLB says that this new approach is to emphasize the colorful, personalized cleats, bats, and other gear the players choose for the promotion, which spans August 23–25, 2019. Jerseys are now button-front Flex Base, with appropriate Majestic manufacturer and set tagging. Back-of-collar CFX MLB logo is now silver and black. All teams also wear a memorial patch for Angels pitcher Tyler Skaggs, a white “45” in a black circle, on the left sleeve. Most teams removed this patch before auctioning off the jerseys. The Braves wear a black version of their alternate home jersey (without the tomahawk) with the front lettering and back varsity numbers rendered in black/gray with gray nickname on back.

© GameWornGuides.com

2019, 2021-2023 Los Bravos Red

The Braves alternate home red jersey gets the "Los Bravos" treatment in 2019. Like the home version of years past, apart from the wordmark, the jersey is identical to the red alternate. It is worn on September 6, 2019 but does not carry the MLB150 patch on the right sleeve that other jerseys do that year. After the shortened 2020 season, the jersey returns, now made by Nike, on September 10, 2021 (with the team's 150th Anniversary patch on the left sleeve), September 16, 2022, and September 21, 2023.

© GameWornGuides.com

2021-2022 Turn Back the Clock to 1974

After a COVID-induced hiatus in 2020, the Braves bring back their beloved 1974 home throwbacks in 2021–2022, now made by Nike, and bearing the Nike logo on front right chest. Like their Majestic predecessors, these feather-sleeved, V-neck pull-overs very convincingly capture the look and feel of the originals. Player numbers front and back are blue/white/red Varsity style as the originals were, with no NOB used. Unlike the real set from decades prior, the lettering the for wordmark and numbers are all twill rather than two colors of twill, outlined with a wide embroidery stitch in red. The team wore these in honor of two franchise legends who passed away in 2021, Hank Aaron and Phil Niekro, on April 9–14, and July 30–August 1. The jerseys returned to the field in 2022 on May 6–7.

© GameWornGuides.com

2022 World Series “Gold Program”

Like many teams before them, the Braves boasted gold-trimmed jerseys to celebrate their 2021 World Series championship, dubbed “Gold Program” jerseys by Nike. Based on their normal home jerseys, these special Nike Flex Base tops add a layer of gold outline to the front logo and player numbers on back. Unlike previous teams, the gold twill is not metallic. The effect is very subtle and is very difficult to see on the field. The left sleeve has the embroidered, gold Roman numeral “IV” over an embroidered blue star to represent the team’s total number of World Series titles, while the right sleeve carries a special World Series Champions patch. The team wore these several times throughout the 2022 season: April 7–13, May 23, June 8, and July 11.

2025 Speedway Classic

Braves, Reds to sport NASCAR-inspired uniforms in Speedway Classic

July 21, 2025
By Jason Foster
(Excerpted from mlb.com)

When the Braves and Reds take the field on Aug. 2 for the 2025 Speedway Classic, the night's distinct NASCAR vibe will extend to racing-themed uniforms for the players.

The special Nike jerseys unveiled on Monday stay true to the usual looks of the two teams, but also feature nods to the racing world. These flashes include custom numbers on the backs designed after the numbers on race cars, with outlines, shadowing and italicized "movement" to represent a race car's forward motion.

The inaugural Speedway Classic represents the first AL/NL game to be played in Tennessee.

Ed. note: The Braves use their blue alternate jersey as the base for this modified style. Each team also wears a special "Speedway Classic" sleeve patch. The patch location varies based on player handedness, and appears opposite the team's ad patch.

© GameWornGuides.com

Prototypes and Oddballs

1971 Prototypes for 1972

In earlier editions of this book we had offered that the knits were worn occasionally at home during 1971, and had found a couple of 1971 year tagged examples to use as proof.

Braves collector Tony Ciocci wrote to say, *"The Braves definitely did not wear the knits in 1971. They debuted the new knits on opening day of 1972.* (On the jersey pictured, top of the next page) *the "Aaron 71 Set 1" was most likely done for team owner Bill Bartholomew to give to his insurance clients. I have learned this from Bill Acree and John Holland from the Braves. I have always lived in Atlanta and followed the Braves daily. As a matter of fact the Braves were considering new knit unis and they considered a red based feather-sleeve jersey just like the blue ones. Hank Aaron vetoed it and they went with the blue. A local sportscaster has the red salesman sample of Eddie Matthews (#41)…very cool looking."*

In the last edition of this book we asked if maybe we could persuade Tony to get us photos of all of these jerseys, and he came through for us! Here for the first time is the complete set of Braves 1971 samples for the 1972 season.

© GameWornGuides.com

1971 Prototype Tagged Knits

This 1972 All-Star patch was intended for, but never worn on Braves uniforms.

This 1971 tagged blue road jersey is almost certainly a prototype that was created for photo sessions to evaluate the new designs being finalized for use in the upcoming 1972 season, and may have been given as a gift to a friend of the Braves owner. Both Hank Aaron and Eddie Matthews were involved in the new uniform selection process, and they are both seen here in pre-season photos modeling the new looks. Bottom right, one of the color photos of Aaron from this session was used on the cover of the 1972 Braves scorecard.

© GameWornGuides.com

1972 Prototype Home

Stephen Kraljic Collection

This is almost certainly a Wilson-submitted prototype to the Braves to consider for their 1972 uniforms; it was little more than a polyester pullover rendition of their oh-so-boring 1971 road grays. Though this looks more like what the team wore from 1980–1986 at home, the date of this sample is taken from the Wilson size tag, which was used through 1973 only. Braves script in navy/red twill on front, crew-neck and wide sleeve end knit trim in red, white and navy blue. The Braves were having none of this, as will be seen on the following pages. It was the 1970s and time to get bold and mod.

(Thanks to collector Steve Kraljic for sharing this find with us)

© GameWornGuides.com

1972-1975 Sample Road

Presented by an auction house as a salesman's sample, this 1972–1975 style Braves road jersey has a major difference from what was worn on-field. While the on-field version used white/red twill attached with a thick, white embroidery stitch to create the three-color lettering. According to the auction house, and verified by photos; this version has "'Braves' in white and red vinyl on white tackle twill [while]...the player number "44" appears below and on the back...in white vinyl on red tackle twill. This style is like some of the Sand-Knit basketball jerseys of the time. Also, front and back numbers here are only two color vs. three. The tagging on the jersey matches Sand-Knit's 1974–1975 style, but Sand-Knit tagging was also somewhat inconsistent during this era. It is possible this was made as a sample for the team, with the vinyl/twill combo letters an example of what the manufacturer could produce. Or, Sand-Knit may have been making a last ditch effort to keep the team's business before the Braves switched to Wilson in 1974. Either way, the auction house noted that the Aaron signature on the jersey could not be authenticated, which adds another layer of mystery (and more questions) about what this is and where it came from.

Above: *A detail of the vinyl-twill combination lettering on the example shown at left.*

Below: *Another example of this type of jersey, with the combination lettering but without Aaron's signature, came to auction after the one at left (based on the stitching around the two tags, these appear to be two different jerseys). This version included a note, dated 1987, from a Sand-Knit employee saying that this style was produced for the team, but does not specify if it was a prototype. It does little to clear up the mystery of these jerseys, or how many others may exist.*

NOTE:
THE ROYAL BRAVES JERSEY SIZE 42 AND NUMBER 44 WAS MANUFACTURED FOR THE ATLANTA BRAVES BY SAND-KNIT FOR THE TEAM.

1972 Braves Game Worn Jersey for $20

Collector's bargains exist out there. This well-worn Sand-Knit 1972–1973 Braves jersey with "Made Exclusively for the Braves" tagging appeared on eBay in late 2011, with a $20 opening bid. I didn't bid as I have one already.

A week later it had sold–for $20. While in heavily-worn condition and shrunken as many of these are, nevertheless–if you were the winner, you got quite a deal and congratulations to you!

© GameWornGuides.com

1976 Protype Home Bicentennial-Themed

This red-white-and-blue jersey was suggested as a possible home or alternate jersey to be worn by the Braves during the 1976 season to commemorate the nation's 200th birthday. Flashy businessman Ted Turner was the new owner of the team and he was not opposed to shaking things up. Based on the color of the Wilson tag in the neck, I suspect that this jersey which at first appeared to me to be red-gold-blue, was either photographed in odd light or was possibly somehow stained turning the white elements a shade of tan. I color corrected the tan to white, but in case I am mistaken, I have offered both versions here.

© GameWornGuides.com

1976 Prototype Road?

Both of these are claimed to be Wilson prototypes for the 1976 Braves road jersey, we cannot verify their authenticity but present them here for your consideration.

On the three-color lettering version, the front wordmark is different from the one the team used in 1976, more squat with rounder letters. The wordmark and player numbers appear to be sewn to the jersey with a wide red embroidery stitch (instead of a third color of twill). This is the same method as used for Braves' home jerseys 1972–1986 and road jerseys through 1979 (design as used on the field pictured bottom right). There are feather emblems on both sleeves. In production, the feather was used on the left sleeve only.

On the two color version, the wordmark is very close to the actual 1976 on-field jersey but without the third color, red, outlining the lettering. There is no "feather" adornment on the sleeve. The actual 1976 Braves road jersey is shown below for comparison.

© GameWornGuides.com

Early 1987: Tomahawk Hashmark Variation

An obsessively small detail, maybe, but the very first jerseys—home, road and batting practice—made in the new 1987 “tomahawk style” had one fewer hashmark on the tomahawk head. The hashmark was added during the 1987 season and has remained unchanged since. This detail is the same as found on the 1987 Spring Training “transitional” jersey shown earlier in this chapter.

Ben Farlow photo

© GameWornGuides.com

Mid-1990s Prototype Alternate?

It's entirely possible that this is a homemade creation. The back certainly looks that way, with non-spec team lettering. It is a retail model jersey, not a team issue as is usually the canvas for manufacturer prototypes. The Atlanta front wordmark overlapping the red trim is another clue that this may not be a professional job. But if it is an artistic exercise, someone went to a lot of trouble. Russell tail tag dates it to 1994–1999. Very similar to the 2019–2020 alternate road blue issued by the team. You be the judge.

Oddballs

Bill Henderson Collection

Bill Henderson Collection

Left: **Mixed Name Styles:** During the 1990s and 2000s, the Braves used Vertical Arch for player names on their jerseys as their standard. However, more than every once in a while, one sneaks in with a non-vertical arch name font. I have seen team pictures where most of the players had Vertical Arch, and one or two had "regular" Block type names (*see Maddux and Jones example* ***top left****).* At bottom left is a game worn example of a 1990 jersey that does not use Vertical arch. When players were called up mid-season or acquired through trades, the Braves had to make jerseys for them at local shops. That did not have the special vertical arch lettering. Jerseys with the special lettering had to be ordered from the team's official suppliers. Tired of the extra trouble required, and of having players on the field in non-matching jerseys, finally in 2006, the Braves threw in the towel and converted ALL team jerseys' player names to the more plain and simple block type style. It is a shame– the old style looked so much more classy!

Above: **A Coach's Reading Glasses Pocket:** Above, this 1981 road jersey was issued to coach Al Monchak. This cotton pouch pocket is sewn inside, tacked with stitching in three places to the jersey. I would bet money it was to hold his reading glasses.

2005 Unworn Negro Leagues Tribute (1938 Atlanta Black Crackers)

Some previous editions of this book listed these as "game worn"

While these uniforms were readied for a game on September 2, 2005, they were never worn by the team. The Braves did have a pregame ceremony honoring Negro League players on this date, but all game photos from this series vs. the Reds show normal uniforms. The press release from the day (and press clips after) also do not mention special uniforms.

Auctions for these jerseys also state that they were unworn.

2021 Two-Patch Samples

These two jerseys carry the hallmarks of prototypes - with “Player 21” on back (where “21” represents the year for which the jersey will be used), and long codes on each heat-pressed inventory tag. In this case, the blue Spring Training jersey reads AW-STJ-D1-1-2021. AW is Nike’s team code for the Braves, “STJ” is “Spring Training Jersey,” “D1-1” likely indicates it is sample #1 of this style, and “2021” is the year. Likewise, the red alternate has AW-AJ1-D1-1-2021, with all the same indicators as the blue jersey, except for “AJ1” which means “Alternate Jersey 1.

What is most puzzling about these samples is that they are both prototypes of jerseys that already existed for the team, and that were used, without change, in 2021. It is possible that these samples were made so the team could see what they looked like with both the 2021 All-Star Game patch on the right sleeve and the team’s 150th anniversary patch on the left. The laundry tags, shown below, also have handwritten numbers 2 and 3 respectively, which suggests that there was at least one more of these made. Perhaps the team made one of each style jersey they planned to wear to see the patches, in the cloth, for all of them.

Ironically, these two patches only made the field together on the Spring Training jersey for the whole preseason, and on the team’s alternate road jersey for only one game (see next page for more details).

The interior wash tag of each jersey, with handwritten numbers, suggesting at least one more style of jersey had been made, if not one of each of the styles the Braves wore in 2021.

2021 All-Star Patch Cover-Up

MLB Release April 2, 2021: *Major League Baseball commissioner Robert Manfred announced Friday that the 2021 All-Star Game will no longer be held in Atlanta.*

The decision follows an election bill signed on Wednesday by Georgia Gov. Brian Kemp, which opponents say disproportionately disenfranchises people of color. It's one of the first tangible responses to the law, which was denounced by business executives across the United States earlier this week....

..."Just as elections have consequences, so do the actions of those who are elected," Atlanta mayor Keisha Lance Bottoms said on Twitter of MLB's decision. "Unfortunately, the removal of the @MLB All Star game from GA is likely the 1st of many dominoes to fall, until the unnecessary barriers put in place to restrict access to the ballot box are removed."

PRESS RELEASE

The Atlanta Braves are deeply disappointed by the decision of Major League Baseball to move its' 2021 All Star Game.

This was neither our decision, nor our recommendation and we are saddened that fans will not be able to see this event in our city. The Braves organization will continue to stress the importance of equal voting opportunities and we had hoped our city could use this event as a platform to enhance the discussion. Our city has always been known as a uniter in divided times and we will miss the opportunity to address issues that are important to our community.

Unfortunately, businesses, employees, and fans in Georgia are the victims of this decision.

We will continue to support the community legacy projects which have been planned and are in process.

April 1 in Philadelphia...

April 5 in Washington.

April 3 in Philadelphia...

Photo credit: Paul Lukas, Uni-Watch

The Braves opened the season on April 1 in Philadelphia, wearing their new alternate blue jerseys with the All-Star patch on the right sleeve. However, for their second game on April 3 their gray jerseys the All-Star patch hastily covered up by a rectangle of matching jersey fabric. By the time the team went to Washington on April 5, they wore their blue alternates again, with the patch now covered on them as well.

The Braves returned home for their opening series starting April 9, and wore throwback uniforms through April 14. They wore red jerseys on April 15–16 that had the Jackie Robinson "42" patch on the sleeve. By April 17 they were back on the road again, in Chicago, and wore the road alternate blues, with no sign of All-Star sleeve patch or a cover-up of one. The road grays were worn again on April 20, without any evidence of the All-Star patch. Home whites never had the patch in view. Knowing how lead-times work, it is a certainty that full sets of all uniforms were made with the All-Star patches sewn on. If this were 1970, or even 1990, there is little question in my mind that the jerseys would have been sent to the local team tailor who would have ripped that patches off of each and every sleeve... but, this was 2021, and everything seems disposable... or collectible. I don't have an answer, but I wonder if the patched and patch-cover-up jerseys were sold as souvenirs and new sets made by Nike? I would probably bet on it.

Atlanta Braves to celebrate the life of Pete Van Wieren this weekend

Press Release | August 8, 2014

The Atlanta Braves will celebrate the life of their longtime broadcaster Pete Van Wieren this weekend, which will also feature many of the players he covered because of Braves Alumni Weekend.

The Braves will don a ***"Pete"*** patch on the left chest of their jerseys starting tonight through the remainder of the season.

The team will also observe a moment of silence for their beloved Professor prior to game one of the Braves series versus the Washington Nationals.

On Saturday, the Braves will have a pregame ceremony with the Van Wieren family, John Schuerholz and Joe Simpson.

Van Wieren spent 33 years as a Braves broadcaster, many of those years with his fellow Braves Hall of Fame members Ernie Johnson, Sr. and Skip Caray. He passed away last Saturday after a long battle with cancer.

2014, after August 8

- 2014: All season, 40th Anniversary of Hank Aaron's record breaking 715th home run in 1974, on the right sleeve of all game uniforms except red alternate.
- 2014: After August 8, "Pete" patch on left chest for broadcaster Pete Van Wieren.

2023-2025 Braves Advertising Patches

With the start of the 2023 season, teams were permitted to sell an advertising patch, up to four inches square, to appear on one of their jersey sleeves. The sleeve on which the patch appeared could change from player to player, and each team that sold a patch handled the placement differently.

The Braves struck a sponsor patch deal with Quikrete, a building materials company. The patches first appeared on May 19, 2023.

The patch is yellow with "QUIKRETE" in black letters with a black border, made to look like a bag of concrete mix. The placement of the patch varies depending on the handedness of each player.

Letter of Professional Opinion/Document of Restoration

Atlanta Braves 1976 Carl Morton "MO" #49 Home Nickname jersey

Examination Date: August 30, 2021 **Certification Number**: 21-0830J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: In 1976, new Braves team owner media-mogul Ted Turner decided to have some fun with his new teams uniforms. On back, instead of player last names, he added a nickname for every player. Huge, nearly 11" tall football style numbers were added to the back in three colors topped by three-color nicknames. All lettering front and back was Royal Blue over white twill, secured by a red satin embroidery stitch. By the All-Star break, the team abandoned the nicknames and returned to their traditional sized numbers with no names on back.

A frugal organization, the Braves let nothing go to waste. But since these jerseys have mostly disappeared, we suspect they were probably sent to the minor leagues, stripped and reissued, or were perhaps re-numbered and reused in spring training in later years. This particular jersey was discovered as a reissue with a new number, but the ghosts that remained on its back eventually gave away its history as one of the infamous 1976 first-half nickname jerseys.

As received: Wilson size 44 red pinstriped white pullover jersey with red sleeve end and V-neck trim. Inside the neck is Braves hand-chain stitched strip tagging " 76 44" indicating only the year and the jersey size. It is done in the unmistakable hand of the Wilson factory stitcher. On front and back were the late 1976-1977 Braves team specification numerals "46" in blue and white secured by a red embroidery stitch. The jersey displayed ample use and was very dirty, almost beige colored with many extraneous glue stains on the back in odd places far below the bottoms of the current numbers.

A light table examination revealed that the glue marks were actually from much larger numbers that had been on this jersey previously, and knowing the history of the nickname jerseys, we decided to strip the back to try to ascertain who may have originally worn it.

That effort proved successful, and the outline of number 49 emerged, with the faint outline of only the letters "MO" centered above, which we initially assumed were part of a longer name. But researching the 1976 Braves first half roster, we were able to determine that the jersey was worn by pitcher Carl Morton, with the nickname "MO" on back. We located a photo of Morton, and because of the fact that the jersey has pinstripes that serve as a fingerprint of sorts, were able to positively identify that the placement of the back numbers and name were the same, and that this was in fact Carl Morton's first half 1976 Braves jersey.

As restored, and being worn by the player in 1976

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

We then also removed the front "6" and quite positively could see where the digit had been flipped over 180 degrees from its original orientation as a "9", then re-sewn. We were initially puzzled by the fact that both front numbers had identically matching red embroidery stitching securing them in place. Generally when one number is replaced, there is a distinguishable difference observed in the stitching between the two numbers, in stitch size, color or frequency, But we also noticed from glue marks on the jersey front that the BRAVES wordmark looked to have been removed and repositioned very slightly then re-sewn on. My only explanation for the restitching of all red elements, front and back, is that after much use and washing in detergent, the red embroidery thread holding the elements on place tended to become so bleached out that perhaps it was unsightly and mis-matched enough that they decided to replace it all so the the jersey looked presentable for game use.

Restoration Performed: With the back lettering removed, we gave the jersey a long presoak and then a good scrubbing followed by machine wash which evened the color and brightened it considerably. Using the ghosts of the original letters combined with historic photos, I was able to recreate the replacement lettering to exactly match the original. To create harmony between old and new elements, the new lettering was both media blasted and organically dyed before being stitched with bleached thread to match the patina of the existing lettering. We stitched the new lettering back with red embroidery thread as closely matching the original as possible.

You will notice that, as restored, the back numbers are not stitched at the same height; this is correct, They were originally sewn crooked and misaligned as evidenced both by their ghosts on the garment and as seen in the historic photo. There is some minor fabric puckering under the numbers that replicates the original.

Top, as received. Below, evidence that the front wordmark was restitched at some point in its life. This was not touched in the restoration. At right, ghost evidence beneath the front "6" shows the stitching lines from that digit flipped 180 degrees from its original "9".

Continued, overleaf

Light table view of the jersey as originally stripped with ghost lines of the original lettering highlighted in blue. You can see how dirty it was. At right is the player photo blow-up showing the alignment of the pinstripes with the ghosts.

Conclusion: The jersey in review is in good, restored condition: The front has a previous team repair to the Braves script, and I have restored the configuration of the front numbers. I have restored the back to look exactly as it did when pitcher Carl Morton wore it the first half of 1976. It has its original team-issue tagging and is free of contrivance. It is my considered opinion that this jersey was made to team specifications and worn by Carl Morton of the 1976 Atlanta Braves.

Letter of Professional Opinion

1980 Bobby Cox Atlanta Braves Home Game Used Jersey

Examination Date: September 6, 2020 **Certification Number**: 21-0617J03

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: 1980 Wilson size 44 pullover full-weight Atlanta Braves knit jersey of #6, team manager Bobby Cox. The size is appropriate for Cox in 1980. Blue-white-red sewn-in knit trim at each sleeve end and around the V-neck. Team wordmark "Braves" scripted at an angle on the front in blue, outlined with white and then finished with a red satin stitch edging. Front number 4 1/2" Varsity font "6" in the left chest below in the same style. On back, similar blue-white-red 8 3/8" tall numeral. . Above, "COX" in Royal Blue vertically arched and stitched to a white knit nameplate that is un-backed and without a serged edge, zig zag stitched tightly and directly to the jersey (notably slightly crooked). All of these characteristics are typical of Wilson jerseys worn by the early 1980s Braves. Fairly uniquely, the Braves made player jerseys available for purchase by fans in the 1980s, well before the jersey collecting hobby had become popular. 1980 was Cox's third year managing the Braves and the very first time he managed the club where their record was above .500.

Manufacturer and Team Tagging: Wilson 1980-correct style rectangular Wilson tag showing the size, 44, is stitched inside the back of the neck. On the left lower tail is a 3/4" double-knit square of the same knit material, zig zag stitched to the jersey with an "80" hand embroidered on it in the familiar style of the Wilson factory stitcher. The Braves did not player-tag or set-tag jerseys in 1980. All of these observations exactly match other examples in our archives.

Wear & Repairs: A light table examination shows that all tagging, lettering, and stitching on the jersey is unaltered. It is in very good condition but shows heavy wash wear, with some puckering of the twill lettering, very typical on these with the unusual embroidered edges of the letters. The thread holding the blue layer of lettering in place shows fading from detergents /bleach. There is some typical puckering around the edges of the unbacked, un-edged nameplate where it is sewn to the jersey with a zig zag stitch, which is typical of the sewing method and also wash and wear. The jersey body is evenly clean but with some surface dirty spots on back that are probably from improper storage, but no ground in dirt, as would be expected for the uniform of a non-playing coach. All of the durable twill lettering is bright but the stitching is slightly faded and some fraying of the edges of the twill layers of the lettering is evidence of repeated wash wear. There are no signs of any repairs.

Conclusion: The jersey in review is properly tagged and lettered. It is consistent with known exemplars. It exhibits appropriate use and wash wear, and has no alterations of any kind. Therefore, it is my considered opinion that this jersey is genuine team issue and worn by manager Bobby Cox of the Atlanta Braves during the 1980 season.

Letter of Professional Opinion

1981 Dale Murphy Atlanta Braves Home Game Used Jersey

Examination Date: September 6, 2020 **Certification Number**: 20-0905J1

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: 1981 Wilson size 44 pullover full-weight Atlanta Braves knit jersey of #3, Dale Murphy. Blue-white-red sewn in knit trim at each sleeve end and around the V-neck. Team wordmark "Braves" scripted at an angle on the front in blue, outlined with white and then finished with a red satin stitch edging. Front number 4 1/4" Varsity font "3" in the left chest below in the same style. On back, similar blue-white-red 8" tall "3". Above, "Murphy" in Royal Blue vertically arched and stitched to a white knit nameplate that is un-backed and without a surged edge, zig zag stitched directly to the jersey. All of these characteristics are typical to the early 1980s Braves. Jersey is autographed on the bottom of the front left tail "Dale Murphy" in black Sharpie. (We have no professional opinion on the signature).
Provenance: A letter of attestation from former owner and respected authenticator Dave Grob is included attesting to its originality.

Manufacturer and Team Labeling: Wilson 1981-correct style rectangular Wilson tag showing the size, 44, is stitched inside the back of the neck. It has come loose on one side. On the left lower tail is a 3/4" double-knit square of the same knit material, zig zag stitched to the jersey with an "81" hand embroidered on it in the familiar style of the Wilson factory stitcher. The Braves did not player-tag or set-tag jerseys in 1981. All of these observations exactly match other examples in our archives.

Wear & Repairs: A light table examination shows that all tagging, lettering, and stitching on the jersey is unaltered. It shows moderate wash wear, with little to some puckering of the twill lettering, very typical on these with the unusual embroidered edges of the letters. Compared to other unwashed exemplars the jersey is slightly grayed from washing, and experience tells us this jersey looks like it has been used/washed many times. There is some typical puckering around the ends of the unbacked, un-edged nameplate where it is sewn to the jersey with a zig zag stitch, which is typical of the sewing method and also wash and wear. There are various dirt stains and darker areas of the fabric from ground in dirt. The underarms are stained darker than the rest of the fabric. All of the durable twill lettering is bright but the stitching is slightly faded and some fraying of the edges of the twill layers of the lettering is evidence of repeated wash wear. There are no signs of any repairs.

My Observations: In 1981, Braves players were issued two sets of home and road uniforms to be used all year. This jersey dates from early in Murphy's 18-year career when he was a rising star. Murphy was a size 44 throughout much of his career. In 1981, on-field specification player jerseys were not made or marketed to the public, and while the factory could have been commissioned to make "extras" by the team to use as gifts for important people, the practice was not common. In my estimation, this jersey is lettered at the same place and by the same people who made all the Braves 1981 game jerseys, it is not a one-off. It shows signs of what I would consider honest game use, and has not been abused. The nameplate remains original, somewhat uncommon with MLB Jerseys of the era, when nameplates were routinely stripped to be re-used the next year, and to prepare jerseys to be sent to the minor leagues where they were to be reissued. This jersey was spared that indignity. Also, fairly uniquely, the Braves made player jerseys available for purchase by fans in the 1980s, well before the jersey collecting hobby had become popular.

Conclusion: The jersey in review is properly tagged, lettered, and numbered. It is consistent with known exemplars. It exhibits use and wash wear, and has no alterations of any kind. Therefore, it is my considered opinion that this jersey is genuine team issue and was almost certainly worn by Dale Murphy of the Atlanta Braves during the 1981 season.

Letter of Opinion

Dale Murphy Atlanta Braves 1980 Road Game Jersey

Description: 1980 Atlanta Braves road jersey of #3, Dale Murphy. Wilson size 44 pullover, light blue, full weight polyester warp-knit. "Atlanta" scripted in the team style in royal blue outlined with white. Wilson Varsity numeral "3" on the front left and the back. "MURPHY" name on back properly vertically arched and sewn on a non-hemmed edge nameplate, as is typical with Braves jerseys of this time period. The nameplate is direct-sewn with blue zag stitch to the back of the jersey. Blue-white blue knit trim is sewn-in to the ends of the sleeves and the v-neck. The size is appropriate for Murphy to have worn in 1980.

Team and Manufacturer Tagging: Wilson tag in 1978-1985 style, as correct, sewn inside the center of the back of the neck. Small square of jersey fabric in the same light blue with "80" hand-chain stitched on it, correct for 1980 Braves team jerseys.

Wear and Repairs: Light table evaluation shows that all stitching is original and unaltered. There is clear evidence of a full season's hard use with fading of fabric, stitching and lettering. The thread holding all the adornments on the jersey is exceptionally worn and loose.

Conclusion: The item under in my opinion is an original and unaltered game worn team jersey by Dale Murphy of the Atlanta Braves from the 1980 season. This is a beautiful original example of a MLB road jersey in a desirable style from a star player.

Letter of Professional Opinion

Dale Murphy 1985 Atlanta Braves Game Used Road Jersey

Examination Date: November 25. 2020 **Certification Number**: 20-1125J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Columbia Blue, Wilson-made pullover size 44 Atlanta Braves jersey, #3 Dale Murphy. 2" wide Royal/white/Royal sewn-in knit sleeve end trim, 1 1/4" similarly striped V-Neck trim. Dual-layer tackle twill Royal Blue outlined with white "Atlanta" in stylized team script across the front, with player number "3" on the left side below the script, and on the back. "Murphy" in team-specification single color Royal Blue vertical arch stitched to a non-surged edge nameplate. All elements exactly match the Braves 1985 road jersey template in terms of size, color, placement, outline widths, name arch and nameplate style.

This jersey is autographed in blue Sharpie on the inside of the garment, on the fabric directly behind the back number. A prior owner of the jersey supplied photos of him having Murphy sign it on July 31, 2010, and this jersey is now accompanied by an independent certificate of the signature's authenticity by PSA/DNA. (I have no opinion on the autograph.)

Manufacturer and Team Tagging: Wilson size 44 locker tag is stitched into the back of the neck in the proper style as used in 1978-1985. A one-inch square of the same blue knit fabric as the jersey is zig-zag stitched to the outside front left tail, with the number "85" properly hand-chain stitched on it, in the familiar hand of the Wilson factory stitcher. The tagging authentically matches exemplars in style and placement for 1985 Braves jerseys.

(Continued, overleaf)

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

Wear & Repairs: The jersey shows signs of minimal use: minor soil darkening of the fabric on the raised edges of the seams, a few small fabric pulls, and some fuzz that has adhered to the sharp edges of the cut twill lettering, typically picked up when a relatively newly lettered jersey is machine washed with other fabrics. Viewed on a light table, all of the sewn elements are clearly original, and all the twill lettering is crisp and unblemished without puckering; all stitching remains tight.

Provenance: Following the 1985 season, The Braves offered to a small group of interested people the opportunity to buy players' jerseys that had been used in the prior season. Tracing the ownership of this jersey back in time, a prior owner recalls purchasing it with the letter (shown below) accompanying it, and was told that the jersey was purchased at this sale from the team. A statement from him accompanies this letter. We were not able to locate the person who was the original purchaser of the jersey from the team, nor do we have proof positive that this jersey was purchased in that sale, but it seems reasonable.

Notably, during the 1980s, the Braves generally issued players only two sets each of home and road uniforms. I have professionally examined other Dale Murphy 1980s game worn Braves jerseys. I will comment that the ones that show use, indeed show very heavy use and major loose stitching on the inside of the back numbers indicative of an intense full season's wear. I would observe that he was a player who, at least early in his career, seems to have tended to prefer to wear the same jersey all season. Murphy played in all 162 games of the 1985 season, and there were exactly two dates in 1985 that the Braves played double headers as the road team, Murphy playing in both games: June 21 at Reds, August 18 at Padres. While it is purely speculation, it is reasonable that the jersey under examination may have been Murphy's second jersey, and that it could logically been worn these two games out of necessity before he reverted to wearing his primary jersey the next day.

Conclusion: The jersey in review is in excellent lightly used condition, is properly lettered and numbered, and appears to have no alterations of any kind. It has a team-issue style tagging. It is my considered opinion that this jersey was made for and worn by Dale Murphy of the Atlanta Braves in 1985.

Braves NEWS RELEASE

ROYTHE MONKEY!

GENUINE GAME-WORN UNIFORM SHIRTS FOR SALE

We are now offering the 1985 Atlanta Braves jerseys for sale and auction. Both sets (home and road) are listed below and are in perfect condition with player names on back. All home uniforms for 1985 are unique in that they have a special patch on the left sleeve to commemorate the 25th season of Braves baseball in Atlanta. They are for sale as listed below except for Murphy, Horner and Sutter, which are for auction only. Bids will be accepted by mail or phone and will close at midnight Wednesday, Nov. 20. Phone bids are $4 over next highest bidder.

This list is being sent out as a special mailing to over 400 people who have an interest in baseball uniforms and is being mailed to everyone on the same day, so please contact as immediately should you wish to hold a shirt of one or more of the most popular players. Fill per jersey for mailing costs and make checks payable to: To make bids or for more information, call: (

Note: Because the special patch appeared only on the home jerseys, all road jerseys are $5.00 LESS than the price listed below.

NUMBER	NAME	Home or Road Available	SIZE	PRICE
3	Dale Murphy	Road TOO SO FAR	44	(Make Bid)
11	Bob Horner	235 H & R 175	46	(Make Bid)
40	Bruce Sutter	235 H & R SOLD	44	(Make Bid)
2	Albert Hall	H & R	40	$ 180
5	Rick Cerone	H & R	42	$ 140
7	Bobby Wise (Manager)	H & R	44	$ 115
		H & R	44	$ 150
		H & R	44	$ 150

Letter of Authenticity

Thursday, October 08, 2020

Certification Number: A5H6485

To Whom It May Concern:

PSA/DNA Authentication Services has examined this Dale Murphy signed jersey. In our opinion, the aforementioned signature(s) is/are authentic.

The signature(s) is/are consistent considering slant, flow, pen pressure, letter size, and other characteristics that are typical of the other exemplars that we have examined in our hobby and professional career.

As part of the authentication process, the item has been permanently marked with proprietary invisible ink that contains a patterned strand of synthetic DNA, which will fluoresce under a calibrated laser. In addition, a tamper-evident label containing a unique alphanumeric certification number has been placed on the item or on this Letter of Authenticity.

Verify the validity of the certification number and exact image at PSAcard.com/DNAcert.

My name is Chris Davis and I owned the 1985 Road Dale Murphy Atlanta Braves jersey from 2004 until I just sold it. The jersey was obtained from long time Braves collector and Atlanta resident Mike Luck via Ebay in the fall of 2004. Mike has owned several Murphy game used jerseys. Included directly from the team included with the purchase was the original price sheet of every game worn jersey sold by the Braves at the end of the 1985 season to the season ticket holders. The Murphy jerseys (both home and away) were priced at $180, the highest for any jersey offered by the team at the end of the season. I have misplaced this original sheet from the Braves but did have it at one time. Mike was also an avid collector of Atlanta Flames and other vintage Braves jerseys. I also obtained one Flames jersey from him along with a Bob Horner home jersey that I later sold to a collector in Arizona. His reputation in the hobby speaks for itself. I hope this helps!

Thanks,

Chris Davis

Letter of Professional Opinion

1976 Phil Niekro Atlanta Braves Road Game Used Jersey

Examination Date: November 28, 2021 **Certification Number**: 21-1128J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: 1976 Atlanta Braves #35 Phil Niekro Wilson pullover full-weight knit size 44 jersey, appropriate size for the player to have worn in that period. Gray body with royal blue raglan sleeves with white knit sewn-in sleeve ends. The Braves ornate "feather" patch is prominently sewn onto the left sleeve; the right sleeve is plain. The player's now retired number 35 in three color in the Braves distinctive variant of the Varsity font. The blue and white layers are twill, and then the numbers are affixed to the jersey with a tight red satin embroidery stitch. There is no name on back as is correct with 1976-issue Braves jerseys.

On the front the team road "Atlanta" wordmark has been replaced with a similarly colored and stitched "Braves" one, as this jersey was surely relegated to use in the Braves' minor league system. In the late 1970s, there were six minor league Braves affiliates all named after the parent club, and the organization commonly recycled its gear, even the uniforms of star players. The old Atlanta script shadows are clearly visible on the light table There is also a clear impression left on the right sleeve where the 1976 National League Centennial disk patch was removed (photos on reverse). Niekro has signed the lower front of the jersey with the inscription: "1976 Game Used H.O.F.- 97". I have no professional opinion on the authenticity of the autograph.

Manufacturer and Team Tagging: 1976-correct small rectangular Wilson size 44 locker tag is stitched into the center back of the neck. Beneath that is a same-as-jersey gray knit rectangular 1"x 2" swatch of fabric with "76 44" hand chain stitched in blue in the familiar handwriting of the Wilson factory stitcher. The tagging matches exemplars for 1976 Atlanta Braves jerseys, and there are no signs of contrivance.

Wear & Repairs: The jersey shows good even wear consistent with a season of use in the majors and then subsequent use in the minor leagues. There are no holes or major stains, the white areas of the fabric are muted from many washings. All stitching is tight and complete, including the red embroidery stitch that surrounds the player numbers, though all thread is slightly bleached. The "Braves" replacement wordmark on front is obviously newer than the numbers, with brighter colors of both fabric and thread, as one would expect given its relative age compared to the rest of the jersey. There is some dirt on the lower half of the back of the jersey, likely from storage.

Continued on reverse.

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

Conclusion: The jersey in review is properly tagged and numbered. The minor league alteration of the front wordmark is noted and is consistent with what often happened to jerseys of the period. It exhibits strong use and wash wear, and has no contrivances Therefore, it is my considered opinion that this jersey is genuine and was worn by Phil Niekro of the Atlanta Braves during the 1976 season.

Letter of Professional Opinion/Document of Restoration

Atlanta Braves Rick Camp 1982 Road Game Worn Jersey

Examination Date: April 6, 2022 **Certification Number**: 22-0406J02

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Atlanta Braves size 44 Wilson made Columbia Blue pullover jersey, blue/white/blue knit sleeve end and V-Neck trim. Blue outlined with white "Altanta" on the front, similarly colored player number 37 on the front left and on back. "CAMP" on a nameplate on back, vertically arched. The jersey remains in very good bright, unfaded original condition, and has not been overused and abused.

Restoration Performed: As received, this jersey had the script "Braves" across the chest and was missing its nameplate. A light table examination clearly showed that the MLB "Atlanta" script had once been stitched to the front. The missing player nameplate also had left a clear ghost impression where it had been removed. Throughout the 1970s and 1980s, the Braves regularly sent their used MLB uniforms to the minor leagues Braves teams where they might have been used for several more seasons. Road Jerseys which bore the MLB city name "Atlanta" needed to be modified with a different script to be useful. Number 37 on the 1982 Braves was pitcher Rick Camp, who would have reasonably fit into this shirt. The length of the removed nameplate was also the proper length for his four-letter last name.

I carefully removed the front replacement Braves script, and recreated the Atlanta script using team pattern from my archives. I matched it to the ghost on the shirt and stitched it back in the original style. Using a pair of well-used vintage MLB pants, I cut a nameplate to match the ghost and stitched the player name onto it in the original Braves' vertical arched style. Following the team method, the plate was left un-backed and the edge was left plain and un-serged, then applied to the jersey with a zig-zag stitch.

Manufacturer and Team Tagging: "82" is hand chain stitched in blue onto a small square of knit fabric, then zig zag stitched to the outer left front tail, matches exemplars for 1982 Braves jerseys. The Wilson tag is the correct style for 1982.

Conclusion: The jersey in review is in good restored condition: properly done with lettering near-identical to original. The jersey has no alterations or contrivances of of any kind. It has a team-issue tagging. It is my considered opinion that this jersey was made to team specifications and worn by Rick Camp of the 1982 Atlanta Braves.

Continued, overleaf

Letter of Professional Opinion

Lonnie Smith 1990 Atlanta Braves Game Worn Home Jersey

Examination Date: October 30, 2021 **Certification Number**: 21-1030J03

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Outfielder Lonnie Smith's 1990 Atlanta Braves, Wilson-made seven-button full weight white knit jersey. 3/8" Navy/red/Navy knit trim sewn on the placket and one half inch from each sleeve end. Size 42, which is consistent with other jerseys worn by the player at this stage of his career. "Braves" in red and Navy tackle twill scripted across the front and underlined, with a tomahawk below which includes gold and Navy embroidery. On back, player number "27" in the proper Wilson Varsity font in the same colors. Name on back above, sewn in one color, Navy blue widely-spaced vertical arched, and on a non-serged-edge nameplate that is simply zig-zag stitched to the jersey, typical of the 1990 Braves. Colorful Braves 25th Anniversary patch is sewn to the left sleeve. The inside of the placket is lined with linen for player comfort. All these characteristics match other 1990 Braves jerseys in our photo archive. The lettering matches our templates in terms of style, colors, placement, and outline-widths.

Manufacturer and Team Tagging: Wilson "Prestige Team" style locker tag is sewn on the outer, lower left shirt tail. The manufacturer tag style is correct for 1990. Centered and pinch-sewn under the right of the locker tag is a small cloth flag size tag. Centered beneath the Wilson locker tag is a 1" square of the same knit material with an "90" machine-embroidered on it in the correct style for 1990. All of these observations match other examples in our archives.

Wear & Repairs: A light table examination shows that all tagging, lettering, and stitching on the jersey is unaltered. It shows moderate to heavy wash wear, with some yellowing of the fabric and lining and and notable sweat staining of the linen lining inside, all indicative of long regular use. There is notable puckering around the ends of the unbacked, un-edged nameplate where it is sewn to the jersey with a zig zag stitch, which is typical of the sewing method more so than from wash and wear. All twill lettering is unfaded but slightly puckered and dulled with mildly softened edges from washing. There are no signs of any repairs.

Conclusion: The jersey in review is in good and appropriately used condition, is properly lettered, and appears to have no alterations of any kind. It has a team-issue style tagging. It is my considered opinion that this jersey was made to team specifications and worn by Lonnie Smith of the 1990 Atlanta Braves.

Letter of Professional Opinion

1993 Fred McGriff Atlanta Braves Home Game Jersey

Examination Date: August 4, 2020 **Certification Number**: 200805JH1

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: 1993 tagged Wilson seven-button full weight home white knit Atlanta Braves #27 home jersey of Fred McGriff. 3/8" Navy/red/Navy knit trim sewn on the placket and 1/2 inch from each sleeve end. Size 44 with extra length, which is consistent with other jerseys worn by the player throughout most of his playing career. "Braves" in red and Navy tackle twill scripted across the front and underlined, with a tomahawk below embellished with gold and Navy embroidery. On back, red outlined with Navy player number "27" in the proper Wilson Varsity font, stitched on with both colors of thread showing on the inside of the garment. Name on back above, "McGriff" sewn in one color, Navy blue and vertical arched, and on a non-backed and non-serged-edge double-knit nameplate that is simply zig zag stitched to the jersey, typical of the method used by the 1993 Braves. The inside of the placket is lined with linen for player comfort. All these characteristics match other 1993 Braves jerseys in our photo archive. The lettering matches our templates in terms of style, colors, placement and outline-widths. Jersey is autographed on the back number "7" "Fred McGriff" and the signature is noted with a PSA/DNA serialized sticker also affixed to the number 7. (We have no professional opinion on the signature). There are no sleeve patches, correct for 1993.

Manufacturer and Team Labeling: Wilson 1993-correct style rectangular Wilson locker tag with their "Tailored Exclusively for Prestige Teams" tagline is sewn on the outer, lower left shirt tail. There is no size flag tag in the neck as is correct with team issues. Centered below the Wilson tail tag are three layered small cloth size flag tags that reads "44", 2" X Length and "F R" (unknown meaning). Centered beneath the Wilson locker tag is a 3/4" double-knit square of the same knit material, zig zag stitched to the jersey with an italic font "93" machine-embroidered on it. The Braves did not player-tag or set-tag jerseys in 1993. All of these observations exactly match other examples in our archives.

Wear & Repairs: Jersey: A light table examination shows that all tagging, lettering, and stitching on the jersey is unaltered. It shows light wash wear, with little to no puckering of the twill lettering, and some minor evidence of wash and wear on the linen lining inside, especially at the beck of the neck where it contacted the players skin. This lining typically grows more and more yellowed with use, and this is fairly clean indicating that it did not see a full season of use. Compared to other unwashed exemplars the jersey is slightly grayed from washing, and experience tells us this jersey looks like it has been used/washed at least a dozen times. There is some typical puckering around the ends of the unbacked, un-edged nameplate where it is sewn to the jersey with a zig zag stitch, which is typical of the sewing method more-than from wash and wear. All of the durable twill lettering is bright and shows the slightest evidence of wash wear through very minor fraying of the edges. There is some typical puckering of the jersey placket on both edges where the knit trim is sewn, caused by hot water washing. There are no signs of any repairs.

Conclusion: The jersey in review is properly tagged, lettered, and numbered. It is consistent with known exemplars. It exhibits some use and wash wear, and appears to have no alterations of any kind. Therefore, it is my considered opinion that this jersey is genuine team issue and was very likely worn by Fred McGriff of the Atlanta Braves during the 1993 season.

Letter of Professional Opinion

1995 Pedro Borbon Atlanta Braves Home Game Used Jersey

Examination Date: September 8,2020 **Certification Number**: 200908J1

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: 1995 Atlanta Braves Wilson seven-button full weight white knit jersey issued to #51, Pedro Borbon. ⅜" Navy/red/Navy knit trim sewn on the placket and one half inch from each sleeve end. Size 48, which is certainly reasonable for a player 6' 1" and 205 lbs. (In our archives we record him wearing a size 46 in 1993.) "Braves" in red and Navy tackle twill scripted across the front and underlined with a tomahawk which includes gold and Navy embroidery. On back, player number "51" in the proper Wilson Varsity font in the same colors. Name on back above, "BORBON" sewn in one color, Navy blue and vertical arched, on a non-serged-edge nameplate that is simply zig zag stitched to the jersey, typical of the 1995 Braves. The inside of the placket is lined with linen for player comfort. All these characteristics match other 1995 Braves jerseys in our reference archive. The lettering matches our templates in terms of style, colors, placement, and outline-widths. The 1995 30th Season in Atlanta patch is properly stitched to the right sleeve. The 1995 World Series patch is sewn to the left sleeve, attached with a straight stitch.

Manufacturer and Team Labeling: Wilson "Prestige Team" style locker tag is sewn on the outer, left shirt tail. The manufacturer tag style is correct for 1995. There is no size flag tag in the neck as is correct with team issues. Centered on the bottom edge is a small cloth flag tab that says "48". Centered beneath the Wilson locker tag is a 1" square of the same knit material with a "95" machine-embroidered on it. All of these characteristics match other examples in our archives.

Wear & Repairs: The jersey shows signs of what I would estimate as a full season's use, with sweat stains, scuffs and a general graying of the fabric that comes from many washings. A light table examination shows that all tagging, lettering, and stitching on the jersey is unaltered. It shows moderate wash wear. There is light puckering of the twill lettering, with sweat staining/discoloration of the linen lining inside. There is some puckering of the jersey placket where the knit trim is sewn on either side, caused by hot water washing. There are no signs of any repairs.

Observations: Though typically teams made up a complete new set of uniforms for players for the postseason, this one clearly shows a season of use. It was not uncommon for a jersey from the regular-season set to have postseason patches added and kept as a backup jersey if it was needed. Borbon pitched one inning of Game 4 in the 1995 Series at Cleveland's Jacobs Field and received a save for his efforts. As that was a road game, he would not have been wearing this jersey.

Conclusion: The jersey in review is properly tagged, lettered, and numbered. It is consistent with known exemplars. It exhibits some use and wash wear, and appears to have no alterations of any kind. Therefore, it is my considered opinion that this jersey is genuine team issue and almost certainly worn by Pedro Borbon of the Atlanta Braves during the 1995 season.

Letter of Professional Opinion

1991 David Justice Atlanta Braves Road Game Jersey

Examination Date: September 8, 2020 **Certification Number**: 200908J2

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: 1991 Atlanta Braves David Justice Wilson seven-button full weight gray knit jersey. 3/8" Navy/red/Navy knit trim sewn on the placket and one half inch from each sleeve end. Size 44, which is consistent with other jerseys worn by the player at this stage of his career. "Atlanta" in red and Navy tackle twill scripted across the front and underlined, with a tomahawk below which includes gold and Navy embroidery. On back, player number "23" in the proper Wilson Varsity font in the same colors. Name on back above, sewn in one color, Navy blue widely-spaced vertical arched, and on a perfectly-fabric-matched non-serged-edge nameplate that is simply zig zag stitched to the jersey, typical of the 1991 Braves. The inside of the placket is lined with linen for player comfort. All these characteristics match other 1991 Braves jerseys in our photo archive. The lettering matches our templates in terms of style, colors, placement, and outline-widths. 1991-only "JWM" Navy memorial lettering is stitched to the left sleeve end (for J. W. Mullen, Braves VP)

Manufacturer and Team Labeling: Wilson "Prestige Team" style locker tag is sewn on the outer, lower left shirt tail. The manufacturer tag style is correct for 1991. There is no size flag tag in the neck as is correct with team issues. Centered beneath are two small cloth flags overlaid on top of one another that say "44" and "FX". Centered beneath the Wilson locker tag is a 1" square of the same knit material with an italic "91" machine-embroidered on it. All of these observations match other examples in our archives.

Wear & Repairs: A light table examination shows that all tagging, lettering, and stitching on the jersey is unaltered. It shows extremely light wash wear, with only minor wrinkling and minimal discernible discoloration of the linen lining inside. There is some typical puckering around the ends of the unbacked, un-edged nameplate where it is sewn to the jersey with a zig zag stitch, which is typical of the sewing method mores than from wash and wear. All twill lettering is bright and un-puckered without signs of much wear or washing. The white size tabs, usually the first place to show wash wear, are still crisp and new. There are no signs of any repairs.

Observations: The lack of very much visible wash/use wear on this jersey indicates it was either a backup or an extra jersey. Notably, in that time period, it was not at all uncommon for a player to wear the same primary road jersey all year long, wearing the backup only for the second game of a double header. And because it is far more typical for "extra" non-issued jerseys to be in the home style, I would lean towards this one being Justice's backup road jersey for the season.

Conclusion: The jersey in review is properly tagged, lettered, and numbered. It is consistent with known exemplars. It exhibits some use and wash wear, and appears to have no alterations of any kind. Therefore, it is my considered opinion that this jersey is genuine team issue to David Justice of the Atlanta Braves during the 1991 season.

Letter of Professional Opinion

Andruw Jones Atlanta Braves 1996 Game Used Road Jersey

Examination Date: September 12, 2020 **Certification Number:** 200912J1

This letter will serve as the opinion of William Henderson regarding the item in review.

Description: Atlanta Braves Russell-made six button, size 42, full weight knit road jersey of #25 "Andruw Jones. "Atlanta" script in red over navy sewn diagonally on front with tomahawk below. Navy/red/navy knit trim on the placket and the sleeve ends. On reverse, "A. JONES" sewn in navy vertical arch on a perfectly fabric-matching hand-serged-edge knit plate that is very tightly zig-zag stitched to the jersey. The player number "25" is sewn below in the proper Braves font and size in red over Navy. There are no sleeve patches. It is autographed on the numeral 5. No attempt has been made to authenticate this autograph.

Manufacturer and Team Tagging: Russell did not year or player-tag Braves road jerseys they made for the team in the late 1990s. Russell Diamond Collection tag in the correct style for 1993-1998 is sewn to the outer front left tail. Beneath this is sewn a small "100% Polyester" flag tag, found only on team-issued jerseys. It is un-frayed from washing. As is correct with team-issued spec authentic Russell jerseys there is no size tag flag sewn in the neck. The Russell "R" is embroidered into the end of the right sleeve in red and blue.

Wear & Repairs: A light table evaluation shows that all stitching is original and unaltered. The jersey is in very good condition and shows signs of wash wear in softening or fraying of the twill edges, and puckering of the twill lettering and curling of the flag-tagging.

Observations: Andruw Jones was called up by the MLB Braves in mid-August, 1996 and played in Atlanta through 2004. The specific Russell tagging style on this jersey was used during Jones' tenure 1996-1998. But since Russell did not player/year tag Braves jerseys 1996-1998, the only way to date the jersey is through its details. There are no commemorative patches on the sleeves, which narrows the jersey' issue to either 1996 or 1998. In our observation this 4-line wash instruction-tag-style is very uncommon to find on a 1998-issued jersey, though I have seen a few (fewer than 5% of all observed). Therefore, most likely this jersey was issued in 1996. Jones was a mid-August call-up in 1996, and the wear on this jersey is appropriate for having been used and washed a dozen or so times. I have examined a large number of Braves game jerseys from the 1990s, and I will note that the nameplate has been made and stitched differently from those created at the start of the season for opening-roster players. For example, traces of red ink that were used to mark its edges to be cut from raw cloth by the stitcher are evident around its perimeter. Additionally, the plate has been hand-surged around its edge with a simple, tight zig zag stitch from a regular sewing machine, and then the plate is straight stitched to the jersey. This the method of edging and attachment of the nameplate is uncharacteristic for other team-issued and Russell factory-made jerseys that used a much looser, wider-spaced stitch. To me, this is reasonable evidence that the nameplate was sewn on remotely from Russell's factory, and possibly by a local supplier or the clubhouse manager, at the time of the player's August call-up.

Conclusion: The jersey in review is properly tagged, lettered, and numbered. It is consistent with known exemplars. It exhibits no discernible use and wash wear, and appears to have no alterations of any kind. Therefore, it is my considered opinion that this jersey is genuine team issue and likely game worn by Andruw Jones of the Atlanta Braves during the 1996 season.

Letter of Professional Opinion

Atlanta Braves 2012 Chipper Jones Game Worn Road Jersey

Examination Date: October 6, 2020 **Certification Number**: 20-1006J1

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: 2012 Atlanta Braves #10 Chipper Jones Majestic six-button Cool Base gray knit jersey. 3/8" Navy/red/Navy knit trim sewn on the placket and one inch from each sleeve end. Jersey is size 48, which is a consistent size with other jerseys worn by Jones during the later part of his career. "Atlanta" in red and Navy-outlined tackle twill, scripted across the front and underlined with a red tomahawk which includes gold and blue embroidery. On back, MLB silhouetted batter patch sewn on the back of the neck, player number "10" in the proper Wilson Varsity font in red outlined in Navy. Name on back above, sewn in one color, Navy blue radial arched, stitched on a serged-edge nameplate. The name is sewn with a rather flat arc, typical of the 2012 Braves. The back number is a 9" from the collar. The lettering matches our templates in terms of style, colors, placement and outline-widths. All characteristics match other 2012 Braves jerseys in our exemplar archive. The player's autograph is on the "0" on back in silver Sharpie adding,"2012 Game Worn Final Season". It is affixed with a serialized PSA/DNA sticker certifying the autograph. I offer no opinion on the autograph.

Manufacturer and Team Tagging: Majestic Authentic Collection locker tag is heat pressed on the outer, lower left shirt tail. The manufacturer tag style is correct for 2012. Beneath the locker tag is sewn a 1"x3" rectangular fabric strip with a surged edge that that is machine embroidered with **48 '12 S20**. During his final season, Jones had multiple sets of each style jersey made that were set numbered; this one is road jersey "set 20". We have seen other sets in all styles with set numbers lower than S20. The Majestic logo is embroidered into the end of the left sleeve above the knit trim, in Navy blue. All of these observations match other examples in our archives. On the inside side seam of the jersey is a white fabric tag that displays the code "0630", the Majestic designator for Cool Base game jerseys made to team spec, rather than for retail sale.

Wear & Repairs: A light table examination shows that all tagging, lettering and stitching on this jersey is original and unaltered. It shows light wash wear, mostly in the fading/curling of the inside seam tag which has lost its inspection stickers to the wash water. All twill lettering is crisp and unblemished. In the final year of his Hall of Fame career, it is clear that Jones wore each game jersey only a few times so that they could be sold as collectables.

Conclusion: The jersey in review is properly tagged, lettered, and numbered. It is consistent with known exemplars, and appears to have no alterations of any kind It exhibits wear consistent with use in a few games, is inscribed as "Game Used Final Season". Therefore, it is my considered opinion that this jersey is genuine and was issued to and was game worn by Chipper Jones of the Atlanta Braves during the 2012 season.

Letter of Professional Opinion

Ozzie Albies 2017 Atlanta Braves Home Alternate Jersey - 2nd Career Hit

Examination Date: June 16, 2021 **Certification Number**: 21-0616J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Atlanta Braves size 40 home alternate, cream colored FlexBase jersey with vented tail and side panels, six button front. "Braves" is scripted on front in lightweight twill Navy outlining red. A line of 1/4" Navy knit trim borders the placket. The team patch with crossed tomahawks is sewn to the left sleeve; the 2017 stadium Inaugural Season patch is sewn to the right sleeve.

Player number "1" in sewn in lightweight twill and centered on the back in the same Navy outlining red. The player name "ALBIES" is slightly arched above the back number in Navy in the proper team font for 2017. The red/white/blue MLB silhouetted batter patch in Chromaflex is stitched to the center of the back collar.

Manufacturer and Team Tagging: The Majestic logo is direct embroidered in Navy to the end of the left sleeve in the correct style for 2017. Majestic's FlexBase tag is heat-applied to the outside left tail showing the size as 40, reasonable for this player. On the inside side seam is the manufacturer's white style flag tag showing the style number as 0780, a team issued specification designation. Someone has written 8-6-17 on this tag in black marker. There is a white mylar team/Majestic heat pressed label on the bottom button flap, noting the jersey as 2017 40 Set 1. An MLB-applied hologram is applied above the front locker tag, with the authentication code of JC 051904. Referencing the code back to the database, it lists the jersey as used on August 6, 2017 vs. the Miami Marlins.

Photo-matching and Provenance: Albies was called up by the team on August 1. This jersey has been positively photo matched to the game of Saturday, August 5th, a game in which Albies had his second major league hit. It is not uncommon for jerseys to be authenticated by MLB with a single game's date when it was actually used longer. It is probable that the jersey was removed from use after the game of 08/06; that is generally when the authentication date is registered. This jersey style is generally only worn for weekend games at home.

A photo matching document is attached to this authentication, showing points of positive reference between the item under evaluation and game action on 08/05/2017.

Wear & Repairs: A light table evaluation shows that all lettering is original without contrivance. As appropriate for a weekend-alternate home jersey from a late season call-up player, The jersey shows signs of very light use, with no obvious dirt, scuffs or pulls. The lettering is all still crisp and unblemished. However, the inside tagging shows definite signs of wash and wear, as it is softened, curled and frayed.

ITEM

Game-Used Jersey

Hologram number **JC051904**

JERSEY

Player Name	Ozzie Albies
Number	1
Color	Creme
Type	Home

EVENTS

Event	Miami Marlins at Atlanta Braves
Date	Aug 06, 2017

Conclusion: The jersey in review is in excellent appropriately used condition, is properly lettered, and numbered, and appears to have no alterations of any kind. It has a team-issue style tagging. It is my considered opinion that this jersey was made to team specifications and worn by Ozzie Albies of the 2017 Atlanta Braves.

Letter of Professional Opinion

"Chipper" Jones Atlanta Braves 2003-2006 Spring Training/BP Jersey

Examination Date: November 4. 2020 **Certification Number**: 20-1104J06

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Atlanta Braves #10 "Chipper" Jones Majestic, Navy Blue 2-button Henley-neck batting practice/Spring Training jersey in the style worn 2003-2006. (It is not likely from 2004 as these jerseys had the #21 Spahn memorial patch on them all year) It is made of a then-new moisture-wicking tech fabric, the precursor to Cool Base. The fabric has a wide, almost coarse weave. Underarm insert panels in red in a different, smoother fabric, Red piping sewn in along the shoulder seams Braves crest in red embroidered appliqué stitched on white twill, sewn across the jersey front. Tomahawk similarly embroidered in red, Navy, and gold, sewn beneath. On back is the player number 10, in layered red and white twill. Player name "JONES" above, radially arched and using the distinctive short and bold Braves BP-NOB font 2000-2006, sewn to a serged-edge plate made of the similar fabric. The size is correct for the player, and the jersey matches exemplars in our collection. The jersey is signed on the "0" in silver Sharpie on the back "Chipper Jones #10, BP Jersey!" The jersey is accompanied by as JSA serialized card and sticker authenticating the signature. (I have no opinion on the autograph.)

Manufacturer and Team Labeling: The Majestic M logo is embroidered in white on the end of the left sleeve, as appropriate wit team issue, Majestic's standard BP jersey locker tag for 2003-2006 is heat-pressed to the outside bottom of the left shirt tail, size 48 flag tab below. Inside seam tag bears the code A0065, designating team issue and the use of the special moisture wicking jersey fabric. Braves BP jerseys were not team-tagged in 2003-3006. The MLB silhouetted batter logo in red, white and Navy Blue is sewn to the outside back of the collar.

Wear & Repairs: The jersey and the lettering on it look nearly new, there's no puckering, no fading, no loose threads, and most notably no pulls in the fabric. Noticeably, the front heat-applied majestic tag shows signs of deterioration and cracking, and the inside seam tag shows definite signs of fading and wrinkling from wash. This fabric was notorious for its ability to collect pulls and to fade prodigiously in both the sun and the wash. Just brushing up against an object, or even a brush with a stray fingernail would cause notable snags and pulls in the cloth. Typically, jerseys made of this fabric look very ratty after being worn and washed even a few times. If this jersey was worn, it was worn gently and sparingly, but the wear the the front tag is uncharacteristic. I could only possibly explain this as the heat-pressed tag was improperly applied at the factory, allowing it to deteriorate badly with a single washing or two. A light table examination shows all lettering is original and unaltered.

Conclusion: Signed and inscribed by the player as his BP, and properly tagged and lettered every way as Braves on-field issue, I would conclude with my opinion that this jersey is Braves team-issued and game worn by Chipper Jones. Jones was prolific with his signed/game used jerseys, and likely this was worn once or twice.

Letter of Professional Opinion

1998 "Chipper" Jones Atlanta Braves Pro Model Autographed Negro Leagues Game Jersey

Examination Date: November 1, 2021 **Certification Number**: 21-1101J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Atlanta Braves "Negro Leagues" Home Jersey as worn on field in the contest between the Braves and St. Louis Cardinals on August 1-2, 1998. It is an extra-roomy Size 46 and would have been appropriate for the player to have worn. The Braves dressed as the 1940 Negro Leagues Atlanta Black Crackers. Mitchell & Ness "Cooperstown Collection" heavyweight double knit, white with Navy pinstripes, 1/2" wide Navy trim rings the sleeve ends and the placket. Five buttons with supplemental Velcro closure. The inside of the place is lined with nylon mesh. 5" tall bold ABC arched on front, #10 on back. The "0" is signed, and the number bears a serialized JBA authentication sticker A17816 referencing the autograph. No matching certificate was provided to me for examination. I have no professional opinion on the autograph.

There are photos available on Getty Images that shows Jones in on-field photos dated August 2, and he is not wearing this particular jersey. However, given the actionability of collectables from these games, and the fact that these were intended to be auctioned for charity, it is not alt all unreasonable to assume that he may have been issued two different jerseys to wear for the two games.

Manufacturer and Team Tagging: Mitchell & Ness and Cooperstown Collection tail tagging is stitched on the outside left tail, correct for 1998. A machine-embroidered felt tag is stitched their right that reads "Heritage 8-1998", matching exemplars.

Wear & Repairs: The jersey does not show discernible wear, as would likely be expected from a pro-model game jersey worn only once. There is some minor puckering of the placket that could reasonably have been caused by a hot water wash. All tagging is crisp, including the inside seam "Union Made" fabric tag.

Conclusion: This jersey is properly sewn and matches exemplars from the Negro leagues Tribute games of August 1-2, 1998. While it is offered without provenance, it is appropriately sized and lettered, and has the proper tagging as used by the team in the tribute games. Jerseys from those contests wee auctioned by the teams for charity. In my opinion, this jersey is authentic as issued to Chipper Jones of the Atlanta Braves.

Letter of Professional Opinion

Hank Aaron Atlanta Braves 1974 Road Game Worn Jersey

Examination Date: February 15, 2024 **Certification Number**:24-0215J02

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Atlanta Braves pullover jersey. Wilson made, Royal Blue body with white raglan sleeves, customized for #44 Hank Aaron. Size 42 marked, jersey measures very slightly smaller, likely an artifact from washing shrinkage. Aaron wore size 42 jerseys almost exclusively throughout his career. Three-colored sewn "feather" design is sewn on each sleeve. 1" stretchy knit sleeve ends and V-neck. The lettering is two color, dark Royal over white, then is bound to the jersey with a tight "satin" embroidery stitch in red. The same is true of the sleeve adornment, its white edge sewn with a red satin stitch. Red stripe on sleeve trim is woven into the fabric.

A light table evaluation shows that all lettering is original to this jersey and is without contrivance. All elements, including team script and numbers match acceptably examples of another Aaron 1974 jersey I have evaluated that was then photo matched to use in the 1974 season. To perform this evaluation I overlaid scans of the jersey in hand with ones from the photo matched jersey (provided here)

1974 was a historic year for Aaron and baseball. in April of that season he broke Babe Ruth's career home run record. While this is not the jersey he was wearing for that event, any bona-fide Aaron jersey is a relic of The Game, especially one from that 1974 season. In 122 games played that season, Aaron hit 20 home runs, finishing the season with a .268 batting average. In a 23 year career he was the middle of consistency from 1954 onwards. He was selected to 25 All Star Games (In some years there were two such games in each season) selected to the National Baseball Hall of Fame on his first ballot in 1982. At the time of his retirement, Aaron held most of the game's key career power-hitting records. He broke the long-standing MLB record for career home runs held by Babe Ruth and remained the career leader for 33 years, until Barry Bonds surpassed his famous total of 755 in 2007. He hit 24 or more home runs every year from 1955 through 1973 and is one of only two players to hit 30 or more home runs in a season at least fifteen times. He was a three-time Gold Glove winner, and in 1957, he won the NL Most Valuable Player (MVP) Award when the Milwaukee Braves won the World Series. (*Wikipedia, Baseball Almanac*)

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

Manufacturer and Team Tagging: The Wilson manufacturer tag in the proper style for 1974 is stitched inside the back of the neck. Beneath the Wilson tag is a zig-zagged strip of jersey fabric, on which "74 42 Set 3" is chain stitched in white, in the familiar hand of the Wilson factory stitcher. Research shows that there were at least three sets of Braves road jerseys made for the 1974 season; the earlier sets had simpler tagging, but the Set 3 jerseys have tagging that matches this template. Matching exemplar photos are provided here.

Wear & Repairs: Early knit jerseys had issues with shrinkage and uneven fading, and this jersey shows signs of repeated use and washing. While all lettering is still firmly attached, the knit trim of the V-Neck collar is more faded than the rest of the jersey. All the lettering exhibits mild puckering, caused by washing but is partly an artifact of the unusual method of using a tight embroidery stitch to bind the appliqués to the knit jersey. This method causes puckering along the edges of the letters and numbers, and the puckering gets worse with hot water washing. The back numbers show puckering to a greater extent. I would judge the puckering on this jersey to be less compared to others I have examined. The Braves, like every other MLB team in this period sent their used MLB jerseys to the minor leagues for re-use. Again, based on the condition of this example it seems to have been kindly spared that fate. It is unsurprising that Aaron's jersey would have been pulled and not reissued to a minor league player.

The jersey in review showing stitching detail. A photo-overlay of both the front and back numbers between the jersey in review and an on-hand photo-matched exemplar shows a good pattern match for the (likely) hand cut front and back numbers and their stitching. Exemplars of two other 1974 Set 3 Braves jerseys are provided for comparison.

Here, the "Set 3" jersey under evaluation at the top; below it an earlier-season 1974 road jersey that I had previously authenticated and was later photo matched to game action.

Conclusion: The jersey in review is properly sized, tagged, and lettered It is consistent with known exemplars. Therefore, it is my considered opinion that this jersey was issued and worn by Hank Aaron of the Atlanta Braves in 1974.

Letter of Professional Opinion

Dale Murphy 1987 Atlanta Braves Game Worn Home Jersey

Examination Date: December 13, 2023 **Certification Number**: 23-1213J03

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Atlanta Braves, Wilson-made seven-button full weight white knit jersey. 3/8" Navy/red/Navy knit trim sewn on the placket and one half inch from each sleeve end. Lettered for #3 Dale Murphy. Size 44 (both marked and measured), which is consistent with other jerseys worn by the player at this stage of his career. The jersey length from collar to tail is 37"; and is tagged +4" extra length tailoring (measurement is correct). "Braves" in red and Navy tackle twill scripted across the front and underlined, with a tomahawk below which includes gold and Navy embroidery. On back, player number "3" in the proper Wilson Varsity font in the same colors. Name on back above, sewn in one color, Navy blue vertical arched, and on a non-serged-edge nameplate that is simply zig-zag stitched to the jersey, typical of the 1987 Braves. Typical of Wilson MLB on-field jerseys, the inside of the placket is lined with linen for player comfort. All these characteristics match other 1987 Braves jerseys in our photo archive. The player lettering matches our templates in terms of style, colors, placement, and outline-widths. The jersey is autographed on the left front below the tomahawk. I have no professional opinion on the authenticity of the autograph.

1987 was a "career year" for Murphy. He played in 159 games and hit .290 with a career-high 44 home runs and was selected to his seventh All-Star game (*Baseball Almanac*). During an 18-year career in Major League Baseball (MLB) from 1976 to 1993, Murphy played as an outfielder, catcher, and first baseman for the Atlanta Braves, Philadelphia Phillies, and Colorado Rockies; Murphy is best noted for his many years with the Braves. His entire MLB career was spent in the National League (NL), during which time he won consecutive Most Valuable Player (MVP) awards (1982–1983), the Silver Slugger Award for four straight years (1982–1985), and the Gold Glove Award for five straight years (1982–1986). Murphy is a member of the Oregon Sports Hall of Fame, Georgia Sports Hall of Fame, and World Sports Humanitarian Hall of Fame.(*Wikipedia*)

Manufacturer and Team Tagging: Wilson "Prestige Team" style locker tag is sewn on the outer, lower left shirt tail. The manufacturer tag style is correct for 1987. Centered and pinch-sewn under the right of the locker tag is a small cloth flag size tag "44". Centered under the locker tag is a small tag that says 4" X-Length, and the jersey does indeed reflect that special tailoring. Centered beneath the Wilson locker tag is a 1" square of the same knit material with an "87" machine-embroidered on it in the correct style for 1987. All of these observations match other examples in our archives. Wilson was the sole maker of on-field Braves jerseys in 1987, and because in 1987 competitor Rawlings was the newly-licensed manufacturer of

Continued, overleaf

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

Authentics, only Rawlings had the right to sell "Authentic" labeled jerseys to the public, and those were sold with the Rawlings script embroidered on the sleeve end. In 1987, Wilson's only legal right was to make jerseys for the team; they could not market them to the public. So, this is a team issue.

Wear & Repairs: A light table examination shows that all tagging, lettering, and stitching on the jersey is original and unaltered. It shows moderate use and wash wear, with loose threads, minor yellowing and notable sweat staining of the linen lining inside, all indicative of repeated regular use. There is notable puckering around the ends of the (correctly) unbacked, non-serged edged nameplate where it is sewn to the jersey with a zig zag stitch, which is typical of the sewing method more so than from wash and wear. All twill lettering is unfaded but slightly burnished with mildly softened edges from washing. There are no signs of any repairs, alterations or contrivances. This jersey shows honest wear: fading, puckering, sweat staining on the lining and graying of the white fabric from repeated washings. It was clearly autographed AFTER such use occurred, else the autograph would be badly faded and washed out. This also points to prior use.

Conclusion: The jersey in review is in very good condition and appears all original. The jersey has no alterations or contrivances of of any kind. It has a team-issue tagging. It is my considered opinion that this jersey was made to team specifications and worn by Dale Murphy of the Atlanta Braves in 1987.

Letter of Professional Opinion

Rafael Furcal Atlanta Braves 2000 Home Game Jersey, Rookie-Season

Examination Date: December 6, 2024 **Certification Number**: 24-1206J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Atlanta Braves, #1 Rafael Furcal Russell-made, six-button full weight white knit jersey. 3/8" Navy/red/Navy knit trim sewn on the placket and one inch from each sleeve end. Size 42 (marked and measured), which is reasonable for the player (5' 8" 195 lbs.) "Braves" in red and Navy tackle twill scripted across the front and underlined with a tomahawk which includes gold and blue embroidery. On back, player number "1" in the proper Wilson Varsity font in the same colors. Name on back above, sewn in one color, Navy blue and steeply vertical arched, on a serged-edge nameplate, these details correct for Braves Russell jerseys of these years. This is a team-issue model jersey, properly lacking neck size tagging and includes the small fabric size/100% polyester tag pinch-sewn beneath the Russell locker tag. The lettering matches our templates in terms of style, colors, placement and outline-widths. The MLB silhouetted batter patch is sewn to the back of the neck; 2000 was the first year for this feature. The 2000 All Star Game patch is properly stitched to the right sleeve. The nameplate is serged on only the top and bottom edges, then the ends are trimmed and straight stitched hemmed matching other 2000 examples. While Furcal did not play in the All Star Game that year, the Braves hosted the event so the patch was on all player jerseys that season. This jersey was presented without provenance.

Manufacturer and Team Tagging: Russell Authentic Collection locker tag is sewn on the outer, lower left shirt tail in the maker's style used in 2000. Stitched beneath and on the bottom of the locker tag is a small cloth flag that says "42 100% Polyester". There is a red and blue Russell "R" logo embroidered on the sleeve, as is correct with 2000 Russell-made Braves jerseys. Sewn beneath the front locker tag is a 1x 2 1/4" mylar fabric tag with the code 1-00 computer printed on in in black (set 1, 2000) This tagging matches exemplars.

Wear & Repairs: A light table examination shows that all tagging, lettering and stitching on the jersey is unaltered. It shows signs of use; the tagging is slightly puckered and the twill sewn-on lettering is softened and the numbers on back show slight puckering from hot water washing. There are a few extraneous fabric pulls, scuffs and stains on the jersey on the back and around the nameplate area. There are no signs of any repairs.

Conclusion: The jersey in review matches exemplars for a game worn 2000 home Braves jerseys, shows evidence of use and is a reasonable size for the player. There are no apparent alterations or contrivances. It is my considered opinion that this is a genuine game jersey prepared for and used by Rafael Furcal of the Atlanta Braves during the 2000 season.

Letter of Professional Opinion

Dale Murphy 1988 Atlanta Braves Game Worn Road Jersey

Examination Date: December 13, 2023 **Certification Number**: 23-1213J04

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Atlanta Braves, Wilson-made seven-button full weight gray knit jersey. 3/8" Navy/red/Navy knit trim sewn on the placket and one half inch from each sleeve end. Lettered for #3 Dale Murphy. Size 44 (both marked and measured), which is consistent with other jerseys worn by the player at this stage of his career. The jersey length from collar to tail is 36 1/2". Roughly 3 1/2" longer than normal and within the specifications of what Murphy normally received (anywhere from 2" to 4" extra length). "Atlanta" in red and Navy tackle twill scripted across the front and underlined, with a tomahawk below which includes gold and Navy embroidery. On back, player number "3" in the proper Wilson Varsity font in the same colors. Name on back above, sewn in one color, Navy blue vertical arched, and on a non-serged-edge nameplate that is simply zig-zag stitched to the jersey, typical of the 1988 Braves. Customary with Wilson MLB on-field jerseys, the inside of the placket is lined with linen for player comfort. All these characteristics match other 1988 Braves jerseys in our photo archive. The player lettering matches our templates in terms of style, colors, placement, and outline-widths. The jersey is autographed on the back between the player name on back an the numbers, and a PSA/DNA sticker (serial number S60587) assumedly related to the autograph is on the front locker tag. I have no professional opinion on the authenticity of the autograph.

While he played in 156 games for the 1988 Braves, Murphy's performance was down markedly over 1987, a career year for him. In 1988 he hit only .224 with 24 home runs, 69 average points lower and roughly half his prior year's power output. In career retrospect, 1988 was the first year of his decline from elite status as a major league player, and his production declined markedly from 1988 through the end of his career early in the 1993 season. During an 18-year career in Major League Baseball (MLB) from 1976 to 1993, Murphy played as an outfielder, catcher, and first baseman for the Atlanta Braves, Philadelphia Phillies, and Colorado Rockies; Murphy is best noted for his many years with the Braves. His entire MLB career was spent in the National League (NL), during which time he won consecutive Most Valuable Player (MVP) awards (1982–1983), the Silver Slugger Award for four straight years (1982–1985), and the Gold Glove Award for five straight years (1982–1986). Murphy is a member of the Oregon Sports Hall of Fame, Georgia Sports Hall of Fame, and World Sports Humanitarian Hall of Fame.(*Wikipedia*)

Continued, overleaf

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

Manufacturer and Team Tagging: Wilson "Prestige Team" style locker tag is sewn on the outer, lower left shirt tail. The manufacturer tag style is correct for 1988. Centered and pinch-sewn under the right of the locker tag is a small cloth flag size tag "44". While on this jersey there is no special tag denoting the extra length that Murphy typically received on his jerseys, the garment does indeed reflect that special tailoring. Centered beneath the Wilson locker tag is a 1" square of the same knit material with an "88" hand-embroidered on it in the correct style for 1988. All of these observations match other examples in our archives. Wilson was the sole maker of on-field Braves jerseys in 1988.

Wear & Repairs: A light table examination shows that all tagging, lettering, and stitching on the jersey is original and unaltered. It shows moderate use and wash wear, with loose threads, minor yellowing and notable sweat staining of the linen lining inside, all indicative of repeated regular use. There is notable puckering around the ends of the (correctly) unbacked, non-serged edged nameplate where it is sewn to the jersey with a zig zag stitch, which is typical of the sewing method more so than from wash and wear. All twill lettering is unfaded but slightly burnished with mildly softened edges from washing, and very minor puckering. There are no signs of any repairs, alterations or contrivances. This jersey shows honest wear: fading, puckering, sweat staining on the lining and softening of the fabric from repeated washings. It was clearly autographed AFTER such use occurred, else the autograph would be badly faded and washed out. This also points to prior use.

Conclusion: The jersey in review is in very good condition and appears all original. The jersey has no alterations or contrivances of of any kind. It has a team-issue tagging. It is my considered opinion that this jersey was made to team specifications and worn by Dale Murphy of the Atlanta Braves in 1988.

Letter of Professional Opinion

Greg Maddux 2000 Atlanta Braves Road Game Jersey

Examination Date: October 4, 2023 **Certification Number**: 23-1004J01

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: 2000 year-tagged Atlanta Braves Russell six-button full weight gray knit jersey of #31 Greg Maddux. 3/8" Navy/red/ Navy knit trim sewn on the placket and 1/2 inch from each sleeve end. Size 46 marked, but measures as a 44, reasonably consistent with other jerseys worn by Maddux during this time. "Atlanta" in red and Navy outlined tackle twill, scripted across the front and underlined with a tomahawk which includes gold and blue embroidery. On back, player number "31" in the proper Wilson Varsity font in red outlined in Navy. Name on back above, sewn in one color, Navy Blue vertical arched, and on a single-needle serged-edge nameplate The name font is somewhat condensed, and arched typical of 2000 Braves jerseys in our photo archive. All lettering matches our templates in terms of style, colors, placement and outline-widths. The 2000 All Star Game commemorative patch is stitched to the left sleeve, off center compared to the sleeve break; it is sewn about two inches towards the front of the sleeve and not on the natural sleeve break. A straight stitch is used instead of a zig-zag, uncommon but not unheard of. The first-year of use MLB Silhouetted batter patch is stitched to the center back of the neck in red, white and dark blue. The "3" on the back is signed near its top in black marker. I have no professional opinion on the authenticity of the autograph.

Manufacturer and Team Tagging: Russell "R" in red and Navy Blue direct embroidered at the end of the left sleeve. Russell Diamond Collection locker tag is sewn on the outer, lower left shirt tail. The jersey model is one that was prepared for team use, it is not a retail-authentic jersey. The manufacturer tag style is usually seen 2001-2004. (Note the ® mark on this one next to the word ATHLETIC, much more commonly seen in 2000 next to the word RUSSELL The only other examples of this tag style in my library on a 2000 jersey are found on jerseys claimed to have been used in the postseason, and jerseys likely made for player signings post-season. Notably, the Braves were in the 2000 postseason. Beneath the locker tag is a small cloth flag tag: "44 100% polyester". The Russell R logo is embroidered into the end of the right sleeve above the knit trim, in red and blue. A rectangular white mylar-cloth tag is stitched pinched below the Russell tail tag, 2-00 is computer-printed on it in black ink. (Set 2, 2000). It is trimmed slightly smaller than the typical tag seen on 2000 Braves jerseys , but there is no sign of any other tag having been sewn there before and it appears that no other tag had been there prior.

Use and repairs: The jersey shows use and wash/wear. The tagging shows signs of fading and wrinkling and is slightly frayed. There are no signs of repairs. The back number was clearly autographed after the jersey was washed/worn.

William F. Henderson
Major League Baseball Authentications / Author, The Game Worn Guide to MLB Jerseys
bill@TheDream.Shop

Top row: The tagging on this jersey is the type usually seen 2001-2004. Blow left is an example of typical 2000 Russell tagging. Notice the relative sizes of the words "Russell Athletic" and the ® mark location. Notice also the size, shape and placement of the team tear tag.

Conclusion: This jersey is offered without provenance. This jersey is year tagged 2000 and yet has a Russell manufacturer locker tag in its tail that, in our research is rarely seen on a 2000-issue jersey. The team tagging is appropriately placed but is trimmed smaller than typical on other 2000 Braves jerseys in our exemplar library. The sleeve patch is applied slightly off-center and is stitched differently than other examples. The jersey shows some wash wear and is properly sized and lettered for use by Greg Maddux of the 2000 Atlanta Braves.

Letter of Opinion/Authenticity

Dale Murphy 1983-1985 Atlanta Braves Batting Practice Jersey

Description: Royal blue double knit pullover v-neck jersey of Dale Murphy, "Braves" team script screened on the front in white. On back, the player number "3" in Wilson Varsity is screened on in heavy Plastisol ink. Player name "MURPHY" is vertical arched sewn in white twill, stitched to a matching blue nameplate then sewn to the jersey back. Murphy has autographed the back number. We have not validated the authenticity of the signature as a part of this authentication.

Pinpointing the exact year(s) of issue and use of Braves spring training / batting practice jerseys from the early 1980s is always a challenge. This plain style without neck or sleeve trim and with back numbers alone was worn 1983-1986, our research supports that the team used a mix of both Rawlings and Wilson BP jerseys on the field at the same time, some with sewn-on lettering, some with screened on lettering. We suspect that the screened on jerseys were produced earlier than the sewn-on ones. The Wilson neck tag tells us that this was made prior to 1986.

Team and Manufacturer Tagging: The Wilson tag in the neck is the style used 1978-1985. There is no other tagging on the jersey. This specific is consistent with other examples in our archives

Wear and Repairs: The jersey shows signs of moderate use, with minor scuffs and checking of the screened on lettering, loose threads and some pulls of the blue fabric. There are no repairs. Overall it is in very good game worn condition.

Conclusion: I conclude that this is a worn and washed, team-issued "game used" BP jersey made for Dale Murphy of the Atlanta Braves. It is properly tagged, lettered, and numbered. It is consistent with known exemplars. It exhibits use and wash wear, and appears to have no alterations of any kind.

Letter of Professional Opinion

Greg Maddux Atlanta Braves 2000 Autographed Home Game Worn Jersey

Examination Date: October 30, 2021 **Certification Number**: 21-1030J02

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: Atlanta Braves, #31 Greg Maddux Russell-made, six-button full weight white knit jersey. 3/8" Navy/red/Navy knit trim sewn on the placket and one inch from each sleeve end. Size 46, which is consistent with other jerseys worn by the player at this stage of his career. "Braves" in red and Navy tackle twill scripted across the front and underlined with a tomahawk which includes gold and blue embroidery. On back, player number "31" in the proper Wilson Varsity font in the same colors, 8" from the collar. Name on back above, sewn in one color, Navy blue and steeply vertical arched, on a serged-edge nameplate correct for Braves Russell jerseys of these years. This is a team-issue model jersey, properly lacking neck size tagging and includes the small fabric size/100% polyester tag pinch-sewn beneath the Russell locker tag. The lettering matches our templates in terms of style, colors, placement and outline-widths. The jersey is autographed on the top of the "3" on back. (I have no opinion on the signature). The MLB silhouetted batter patch is sewn to the back of the neck; 2000 was the first year for this feature. The 2000 All Star Game patch is properly stitched to the right sleeve. (Maddux did not play in the 2000 All-Star Game, this patch was on all Braves home jerseys that year.)

Manufacturer and Team Tagging: Russell Authentic Collection locker tag is sewn on the outer, lower left shirt tail in the maker's style used in 2000. Stitched beneath and on the bottom of the locker tag is a small cloth flag that says "46 100% Polyester". There is a red and blue Russell "R" logo embroidered on the sleeve, as is correct with 2000 Russell-made Braves jerseys. Sewn beneath the front locker tag is a 1x 2 1/4" mylar fabric tag with the code 1-00 computer printed on in in black (set 1, 2000) This tagging matches exemplars.

Wear & Repairs: A light table examination shows that all tagging, lettering and stitching on the jersey is unaltered. It show signs of obvious use; the tagging is stained and frayed, all twill sewn-on lettering is slightly edge frayed and the numbers on back show slight puckering from hot water washing. There are no signs of any repairs.

Conclusion: The jersey in review matches exemplars for a game worn 2000 Greg Maddux home Braves jersey. It is autographed and shows evidence of use. There are no apparent alterations or contrivances. Therefore, it is my considered opinion that this jersey is genuine game jersey prepared for and used by Greg Maddux of the Atlanta Braves during the 2000 season.

Letter of Professional Opinion

1971 Atlanta Braves Game Worn Home Jersey #36

Examination Date: July 30, 2022 **Certification Number**: 22-0730J03

This letter will serve as the professional opinion of William Henderson regarding the item in review.

Description: 1971 Atlanta Braves, Wilson size 42 (tagged, but measured more like a 44) cream colored seven-button flannel wearing a period-correct but not the original numbers, 36 on the back. 1" spaced Navy chalk pinstripes. Laughing Brave patch sewn to the left sleeve appears original. "Braves" scripted on the front in Navy twill, all original when examined on the light table. Six-hole gusseted underarm panels. All buttons are original. Pitcher Tom Kelley wore 36 on the 1971 Braves, but the current numerals are not original to the jersey. Kelley was 6' 1" and 191 lbs and would likely have worn a larger size shirt.

Manufacturer and Team Tagging: The Wilson manufacturer tag stitched to the outside left tail showing the size "42" is the correct style for use in 1971. It shows original stitching. A rectangular piece of cream-colored flannel is stitched inside the back of the neck with hand-embroidered chain stitch: "1971" in the familiar hand of the Wilson factory stitcher, but lacks a player name and set number below it as seen on other exemplar jerseys. This could signal that this was an extra jersey, unissued at the start of the season. As is correct with an original-issue jersey the neck identification tag has been stitched in place before the collar seams were sewn closed at the factory, making its attachment stitching invisible when looking at the outside back of the collar. Close examination indicates that this tagging is original and untampered with.

Wear & Repairs: The jersey is in good condition without any serious tears or evidence of repairs. There are a few pulls and a tiny pinhead size hole on the right side two buttons from the bottom, and a few small frayed holes on the tails. The fabric has grown evenly thin from washing and use. On the front it wears its original Navy script wordmark, faded to medium violet from repeated washing. The thread holding it in place is faded to an even violet color from exposure to sunlight and detergents. As was commonly done in the day by most MLB Teams, Braves MLB jerseys were stripped of their player numbers to be prepared for reissue in the minors. 1971 was the last year the Braves wore flannels, and following 1971 spring training, nearly all of the flannels were shipped to the minor leagues for reuse. The numbers that are on it now appear to be "take off" numbers from other jerseys, reapplied to this one in the minors. It was a common practice to remove and then reuse stripped numbers on player jerseys as a time and money saver. Both of these digits appear to have multiple sets of stitching holes on their edges and are worn and faded, typical of this practice.

There is ghost- evidence that several different numbers have been on the back of this jersey. The jersey's current owner declined to have me remove the current numbers to learn more, and the thinning of the jersey fabric make the ghosts faint and determining its history more difficult, but with these numbers still in place I can see faint shadows of what may have been a (different) 3 and a 1 in the first spot, and possibly a 3 and a (different) 6 in the second spot. Besides 36, the three other 1971 - issued Braves number combinations that are possible are: #16 Sonny Jackson 5' 9" 155 lbs- possible; #32 Catcher Earl Williams 6' 3" 220 lbs- would not have fit in this; #12 Dusty Baker 6' 2" 187 - possible. The lack of web-published news photos from the era makes attempting a further match difficult but not impossible, if someone wanted to research the archives of the local Atlanta newspapers of 1971. Since this jersey has pinstripes, photo matching is a not unreasonable task. There is edge-stitching evidence of the presence of a removed large rectangular fabric plate on the back above the numbers. It could have been a player nameplate, but player names in the minor leagues were unusual. Sometimes when MLB jerseys were re-issued in the minor leagues, a plate with the city name was added here. In 1972, the Braves had four minor league clubs, all named "Braves". This jersey was likely re-used in multiple seasons after 1971.

Top, above- the neck tag on the jersey in review simply has the year, 1971. Below it, from an exemplar, player team-issued jerseys from the start of the season in 1971 typically included the player name and a set number.

Conclusion: In my professional opinion, this is an authentic 1971 Atlanta Braves jersey from the last year the team wore flannels on the field. It is free of contrivance and it shows signs of game use, and multiple number replacements that would have occurred, in the minor leagues. I was unable to determine its original number set in this evaluation.

Chapter 14

Milwaukee Brewers

Game Worn Guide to MLB Jerseys 1970-2025, Tenth Edition

William F. Henderson

Brewers Uniform History Notes

- The Milwaukee Brewers' first year in Major League Baseball happened like a shotgun wedding. The complete story as related to the team's uniforms is found in the pages that follow. Briefly, the 1970 Brewers were born from the 1969 expansion team Seattle Pilots when the Pilots went bankrupt a mere six days before the start of the 1970 season. The first set of Brewers' home and road uniforms were created—in a hurry—using the existing Pilots uniforms already prepared for the start of the 1970 season.
- "The Milwaukee Brewers, Inc." had existed as a business corporation since 1965, its goal: to attract an MLB club to replace the departing Braves. Likely multiple uniform designs and several prototypes of possible uniforms existed as a part of the planning process. But the sudden way that a team landed on Milwaukee's doorstep didn't leave time to consider new designs. They were forced to use the Seattle Pilots' uniforms on hand, to be ready for the start of the 1970 season, *then less than a week away.*
- The 1970 and 1971 seasons were played in flannels. The Brewers' front wordmarks on home and road uniforms in those two seasons were odd in that they are differently styled from each other. The home jersey has a vertically arched block letter "BREWERS" that could not be plainer. On the other hand, the road jersey features a stylized, bold "Brewers" using a unique combination of lowercase and capital letters in the same word—somewhat resembling the "Seattle" wordmark from the defunct Pilots' uniforms.
- 1972 saw the switch to knit pullovers. The team had the opportunity at this point to change the design to whatever they liked, however they chose to stay with the same simple design and the same colors of royal blue and yellow. "BREWERS" was written now in the same vertical arched font on the fronts of both home and road jerseys.
- Between 1972–1976 the Brewers split their jerseys between Spalding, Wilson, and Sand-Knit. Each company used its own version of Varsity-style numbers on the jerseys they provided.
- The 1977–1986 jerseys were made exclusively by Sand-Knit in nearby Berlin, Wisconsin. These jerseys all featured a type style for numbers I've dubbed "Brewers Varsity," similar to Wilson's standard Varsity, but with some sight differences.
- From 1987–1990, Rawlings made the team uniforms. The number font changed again, this time to the standard Block with Serifs.
- In 1990, names are added to the back of road jerseys, making the Brewers the last team (along with the Red Sox) to do so—though the Yankees still don't.
- 1991–1993 uniforms were an "in between" style featuring a somewhat generic home and road script on the front, with an underline. Block with Serifs continued as the number font.
- 1994 brought a radical change. The team switched to a very stylized uniform with all lettering—including team wordmarks—done in a style that would look at home in a German *Biergarten*: bold, angular letters and numbers, and laid down in a fancy three-color pattern featuring the use of dark green and metallic gold twill. This series of jerseys had two variations. The first, from 1994–1996 had no front numbers. The second, from 1997–1999, featured front numbers. Other differences between the styles are highlighted in the pages ahead. Earlier road uniforms during this period were a pale grayish-green. Alternate navy blue jerseys also appear during this time.
- In 2000, the team changes logo styles again—this time suggesting influence from sponsor Miller Brewing. While this change was meant to coincide with the team's move to brand-new Miller Park, a tragic crane accident killed several workers and delayed the new park's opening by a year. The new uniforms are worn anyway for 2000, the final year at County Stadium.
- A retro-inspired home pinstripe alternate is introduced in 2006, mimicking the popular 1978–1989 style but with a button-down design. The "MB" ball-in-glove logo is used as a sleeve patch. The style lasts through 2019.
- 2020 brings another complete uniform redesign, swapping script and rounded number fonts for squared-off sans-serifs shaped to suggest beer barrels. Yellow replaces metallic gold across the board. Pinstripes return on a home alternate jersey (replacing the 2006–2019 retro inspired version), while the tradition of a navy blue alternate continues with a new angular "Milwaukee" script on front.
- In 2022, the Brewers' City Connect uniforms debut in powder blue with yellow and navy accents—an homage to the team's 1980s road look and local Milwaukee culture. "Brew Crew" appears in bold script across the front, and a grill-shaped sleeve patch celebrates Wisconsin's tailgate traditions. The sleeve patches, hat logo, and jock tag incorporate local identifiers like "MKE" and "414."
- The Brewers like their Turn Back the Clock and special events games, and since 1993 have participated in the most in baseball; by our count 53 from 1993 through 2024.

	Road Gray	Sand-Knit Varsity 2 color	Sand-Knit Varsity 2 color	No	-	-	-	Sand-Knit

Note: There are numerous 1973-1977 year dated McAuliffe-branded Brewers jerseys in the hobby. See them covered in the “Oddball” section of this chapter. Our conclusion is that these were used in spring training and the minor leagues.

Home, Road and Alternate Jerseys

1970 Home

Steve Kraljic collection

Above: *Exhibit 1: 1970-tagged Wilson Brewers jersey featuring the correct wide, nine-banded Pilots-style sleeve trim used in 1970. Note the absence of neck trim and front numbers, and the use of Wilson Varsity back numbers. Its former owner, Guy Hankel, assures us it is in original, unrestored condition in this photo.*

Readers may find it helpful to skip ahead to the end of this chapter and review the pages titled "1970 Brewers Prototypes" to better understand how we arrived at April 1970. For most teams this wouldn't be necessary, but the Brewers are a special case.

1970 Brewers' flannel jerseys are an eclectic collection. A degree in archaeology might help in understanding the varieties a collector can uncover.

Wilson and McAuliffe both produced year-tagged Brewers 1970 home uniforms. Photos and video of the Brewers' first season are uncommon, but the photo below of the team's home opener appears to show everyone wearing Wilson jerseys. There are no set numbers on the Wilson tagging, so we don't know if one or two sets were made. We believe the Wilson jerseys started life as 1970 Brewers uniforms.

Research suggests that many—if not all—of the McAuliffe jerseys began life as planned-for-1970 Seattle Pilots home jerseys, fully lettered for the soon-to-be-bankrupt team. Both manufacturers utilized the same basic template: white flannel button-down jerseys with the Pilots' wide gold and blue banded trim. However, McAuliffe's front wordmark was arched slightly more steeply, and the back numbers used the McAuliffe "Red Sox Font," while Wilson used their standard "Varsity" number font.

Left and right*: Exhibit 2: 1970 Wilson Brewers jersey accompanied by a Certificate of Authenticity stating that it had never been a Pilots jersey, but started life as a Brewers jersey.*

The Brewers' 1970 Opening Day photo reveals Wilson jerseys on all players, identifiable by the distinctive Wilson-spec back number font.

1970 Road

Guy Hankel collection

1969 Pilots road jersey (top)

If you have followed our story so far, there should be no surprise that the Brewers' first road jerseys followed a similarly convoluted path into Milwaukee. All of the road uniforms were made by Spalding. But just like the home jerseys, the first set of Brewers' flannel road jerseys was created by converting Seattle Pilots road jerseys—likely a combination of used 1969 and newly made 1970 jerseys. Interestingly, the road uniforms use a different wordmark than the home set.

The road wordmark is similar in design to the "Seattle" script on the front of the 1969 Pilots' road jersey ***(left)***, especially in the common use of lowercase e's in both designs (a similar, though not identical, font). The 1970 Brewers' road jerseys retained the back number font (a Varsity variant) from the Pilots' uniforms, as well as the wide nine-striped trim at the sleeve ends. No numbers were used on the front of the 1970 uniforms, but 1970-tagged jerseys are sometimes seen with front numbers, because they were recycled into 1971, and front numbers were added to bring them up to spec.

© GameWornGuides.com

1971 Home

Tim Koberg Collection

- For 1971, the Brewers remove the wide banded trim from their sleeve ends—a holdover from the 1969 Pilots. In its place, narrow blue/yellow/blue knit trim are added one-half inch from the sleeve ends and around the neck. Jerseys remain flannel.
- Two-color Varsity numbers are added to the front on Wilson jerseys.
- Evidence suggests that some 1970 jerseys were recycled and reissued for use in 1971.

Above and right: *Year-tagged 1970 jersey with 1971 specification front numbers suggests 1971 re-issue.*

© GameWornGuides.com

1971 Road

Flannel road jerseys for 1971 continue to be made for the team by Spalding.

The only change from the previous year is the addition of front numbers. This font appears on both home and road Brewers jerseys that year and is unique to the 1971 team. It's a wider, differently proportioned variant of Varsity.

The 1971 road jerseys retained the wide sleeve-end trim carried over from the Pilots' days, which had already been removed from the home jerseys.

Back numbers remain a Spalding-specific variant of Varsity, unchanged from the 1969 Pilots.1970-tagged jerseys with added front numbers are not uncommon—they were recycled from the prior year and updated for 1971.

1972-1977 Home

Wilson 1972-1976

1973

1972

The Brewers' first double-knit jerseys are about as plain and traditional as they come. White pullover body, featuring arched blue and gold lettering across the chest, with royal/gold/royal sleeve-end and V-neck trim.

Numbers appear on both the front and back in blue/gold Standard Varsity style. No names are used on the back. From 1972–1976, the jerseys were likely lettered and numbered at the factory by Wilson, and therefore use Wilson's Standard Varsity font. Sand-Knit also supplied home uniforms from 1975–1977. Due to noticeable design differences, their versions are covered on the next page.

1975

© GameWornGuides.com

1972-1977 Home, continued: Sand-Knit 1975-1977

1976

Sand-Knit produced the team's "Set 2" home jerseys in 1975–1976 and was the sole supplier in 1977. These jerseys use a slightly different front wordmark than the Wilson versions, with lettering that is slightly squarer in shape. The numbers use Sand-Knit's own variant of Varsity, which appears bolder and more squat than Wilson's version.

All feature the "Exclusively made for the Milwaukee Brewers" Sand-Knit tagging on the tail, and are player-tagged by Sand-Knit using their distinctive outlined-letter font. The lettering was printed in plastisol ink on long, narrow knit fabric strips stitched to the left outside tail.

1977

Looking for Brewers' McAuliffe home jerseys 1973–1977, as referenced in earlier editions? These are now included in the "Oddball" section toward the end of this chapter.

© GameWornGuides.com

1972-1977 Road

Spalding 1972

The Brewers' first-year road knits are more eye-catching than their home counterparts, made in a darker-than-usual sky blue with blue lettering outlined in yellow. Royal/yellow/royal sleeve-end and V-neck trim completes the look.

No names on back. The blue jerseys are made by Spalding in 1972 only—Spalding's last year in the MLB uniform business. Spalding's jerseys use Wilson's number fonts, leading to speculation that they were lettered at Wilson despite carrying Spalding labels. Most surviving examples in the hobby are in poor condition due to repeated reissue in spring training and subsequent use in the minor leagues, such as the example at bottom right.

Bill Henderson Collection

© GameWornGuides.com

1972-1977 Road, continued: Sand-Knit 1973-1977

1975

In 1973, the Brewers turn to Sand-Knit, a Wisconsin-based manufacturer, to produce their uniforms. Well known as a supplier to the NBA, NFL, and many college teams, Sand-Knit made a play for MLB, starting in 1972 with the Braves.

The blue fabric of these jerseys is slightly lighter than the 1972 Spalding issue, and the cut is less tapered at the waist. Sand-Knit's number patterns were inconsistent in these years, and they substituted their own variant of the Varsity number font. No names used on the back. Tagging also varies year to year.

As with the 1972 Spalding jerseys, most examples in the hobby are in fair to poor condition due to severe staining and fading from repeated reissue in spring training and demotion to the minor leagues.

1986-1989 Road

Sand-Knit 1986

1986

1986

Above: *This 1986 Sand-Knit jersey features Rawlings-style numbers, yet it has been judged to be all-original. Why? Read the linked letter of opinion to find out.*

1986

In 1986, the pullover jersey's body color changes from light blue to gray. Numbers appear on both the left front and back, in two-color royal/yellow. Sand-Knit was the supplier for only the first year of this style, in 1986, and the team continued to use Sand-Knit's version of the Varsity number font. Player names not used on the back. In 1987, Rawlings takes over as the uniform supplier.

© GameWornGuides.com

1986-1989 Road, continued: Rawlings 1987-1989

Above: *The #35 Muser jersey features the rarely seen 1987-only Rawlings red tag variant with diagonal stripes.*

In 1987, Rawlings becomes the official supplier of uniforms to MLB, and the Brewers join in, switching all of their uniforms to Rawlings. Uniform fonts standardized to Rawlings' Block with Serifs, and no names used on the back. The Rawlings script logo is embroidered on the sleeve ends. A red Rawlings jock tag used in 1987, with a new white Rawlings jock tag appearing in 1988–1989.

Right: *A comparison of Rawlings sleeve embroidery—1987 version on top, with the 1988–1989 version below.*

© GameWornGuides.com

1990-1993 Home

Rawlings 1990-1991

1991

1990

For 1990, the Brewers' uniform redesign was more traditional and closely resembled one of the pre–1970 prototypes shown later in this chapter.

The new button-front design features pinstripes, a script "Brewers" with an underline, and no trim on the sleeve ends or neck. Belted pants also return.

All lettering done in two colors: royal blue and gold. Block with Serifs-style numbers appear on the front and back. Player names not used on back 1990–1992.

In 1992, Russell became the official supplier of uniforms to MLB, and the Brewers switched accordingly. Names on back added in 1993, nameplates not used.

1991

© GameWornGuides.com

1990-1993 Home, continued: Russell 1992-1993

The "S.O.B." designation on this jersey's collar tagging refers to its creation for a Muscular Dystrophy Association promotion—"Shirts Off Our Backs"—a fundraiser in which players gave their game jerseys to winning bidders at the conclusion of the contest.

Steve Kraljic collection

Barry Halper Collection

© GameWornGuides.com

1990-1993 Road

Rawlings 1990-1991

In 1990, the pullover jerseys of the 1980s were replaced by button-front jerseys with slightly narrower sleeve-end trim. The "Milwaukee" script added an underline, matching the design of the home jersey. Player numbers continued to use the Block with Serifs font. For the first time, player names were added to team jerseys—arched on nameplates and also rendered in Block with Serifs. The Rawlings script was now embroidered above the sleeve-end trim on the right sleeve, rather than directly on the trim as in previous seasons.

© GameWornGuides.com

1990-1993 Road, continued: Russell 1992-1993

1992

1992

When Russell replaces Rawlings as MLB's official uniform supplier in 1992, the Brewers immediately make the switch. The design remains exactly the same as the Rawlings versions from 1990–1991, and nameplates are still used. Most 1992 jerseys are made of Intera—a short-lived fabric known for wrinkling easily and fading quickly. The use of Intera is discontinued in 1993.

1997-1999 Home

1998

Bill Henderson Collection

1999

The navy knit trim on the 1997–1999 jerseys is wider than the trim used from 1994–1996.

1999

1997

Identify this jersey by the equally sized, evenly curved letters at the beginning and end of the word “BREWERS." It uses a special Brewers style for both names and numbers. Numbers are added on the left front from 1997–1999. Three-color names and numbesr—navy/metallic gold/dark green—are used. Nameplates not used. Front and sleeve knit trim is navy blue, and a team logo patch is sewn to the left sleeve.

1997

© GameWornGuides.com

1997-1999 Road

Bill Henderson Collection

1998

Identify this jersey by the equally sized, evenly curved letters at the beginning and end of the word “Milwaukee.” The fabric is no longer greenish; instead, it is a purplish-gray, and the knit trim changes to navy blue.

The navy knit trim on the 1997–1999 jerseys is wider than that used in 1994–1996. It uses the special Brewers Gothic style for both names and numbers. Front numbers are added on the left side from 1997–1999. Three-color numbers and names—navy/metallic gold/dark green—are used. Nameplates are not used. A team logo patch is sewn to the left sleeve.

1999

© GameWornGuides.com

1997-1999 Alternate

- Identify this jersey by the equally sized, arched-bottom letters at the beginning and end of the word “BREWERS” (compare to earlier style).
- Only 1997 has plain-ended sleeves; white knit sleeve-end trim is added for 1998–1999.
- Uses the special Brewers Gothic style for both names and numbers.
- Numbers are added to the left front from 1997–1999, and the Brewers logo crest moves to the sleeve.
- Three-color names and numbers—white/dark green/metallic gold—is used.
- Nameplates not used.

© GameWornGuides.com

2000-2019 Home

The team adopts a new identity for 2000, originally planned to synchronize with their move to the new stadium, Miller Park. However, construction setbacks and a fatal crane accident delay that opening by a full year, so the Brewers play their final season at County Stadium in the new duds.

The Brewers' new identity appears to draw somewhat from their sponsor's influence—especially the stylized "M" logo, complete with a stalk of wheat to symbolize brewing. On the team patch, the logo is set against a gold silhouette of Wisconsin and is sewn to the shoulder.

A new, ornate Brewers type style is used for both names and numbers. A three-color name and number—navy/white/metallic gold with a 3D drop shadow—is featured. Nameplates are not used. Team tagging is sewn inside the collar. Sleeves feature three-color knit trim at the ends—navy/gold/navy.

© GameWornGuides.com

2000-2019 Road

Bill Henderson Collection

The road gray jersey is very similar to the home jersey. It is made of gray fabric—initially full-weight polyester, later converted to Cool Base. The sleeve patch differs from those on the home and alternate blue jerseys, featuring “Milwaukee” in the team’s new ornate script, laid over the image of a baseball ringed with gold. A three-color name and number—navy/white/metallic gold with a 3D drop shadow—is used. Sleeve stripes are navy/metallic gold/navy, sewn onto knit trim.

With an alternate jersey in the set from the beginning, and the introduction of a road alternate in 2010, this jersey sees less and less use as time goes by.

The Brewers’ new special type style is used for both names and numbers. Nameplates are not used. Team tagging is sewn inside the collar.

© GameWornGuides.com

2000-2009 Alternate Navy/2010-2019 Alternate Home Navy

2001

Bill Henderson Collection

Designed identically to the home white jersey—except for the fabric color and the reordering of twill colors—the navy alternate jersey is a team favorite from the very beginning. Designed for use at both home and on the road, it becomes the Brewers' road jersey of choice more often than not, especially after 2000. In 2010, a road version of the navy jersey is added, relegating this navy alternate to home use only.

As with the other jerseys, player numbers appear on both the front and back. Three-color names and numbers—white/navy/metallic gold featuring a 3D drop shadow. The Brewers' special font style is used for both names and numbers. Nameplates not used.

The sleeve ends feature metallic gold knit trim, in contrast to the three-striped trim used on the white and gray versions.

2006-2019 Alternate Home Nostalgia

Styled to resemble—but not directly copy—the team's home jerseys from 1978–1989, this popular design is brought back at fans' request for use during Friday night home games. That era marked the only sustained period of success in the Brewers' history to that point.

Unlike the original version, this jersey is a button-front design rather than a pullover. It also features the "MB" ball-in-glove logo as a sleeve patch—a detail not present on the original jerseys, but one that had been used on batting practice tops and team caps. The originals did not have player names on the back.

Player numbers appear on both the front and back in the Block with Serifs font. Interestingly, the MLB's official lettering guide calls for a typeface that appears to be identical to the San Francisco Giants' Varsity font, though this is not what the team actually uses. Player names are in Block style, and nameplates are not used.

2010-2015 Alternate Road Navy

The Brewers debut a road alternate jersey in 2010 featuring “Milwaukee” on the front—marking the first time the city name appears on a Brewers road jersey since 1999. The lettering is white, outlined in navy, with a metallic gold 3D drop shadow.
